The harvest—which, except in the north of France is now almost entirely concluded—fully realises, with certain rare exceptions, the hopes entertained for it as regards the grain crops, which are unusually fine and abundant. The second crop of hay, to a certain degree, compensates for the failure of the first; and the quantity of straw also aids to supply the deficiency which, however, must be a good deal felt. Potatoes are small, scarce, and indifferent in quality; the vines, with some exceptions, have suffered much; and the apple crop—which, in Normandy especially, is one of very considerable importance—has proved almost a failure. An immense and increasing reduction in the price of grain—a most unusual circumstance during the actual progress of harvest—continues to reassure the public mind on this most important subject.

The cholera has, we grieve to say, returned with extreme severity in Paris, though the last few days have marked a certain diminution of its violence. During the time of its greatest prevalence, no less than six physicians fell victims to its ravages, and innumerable cases proved fatal within a few hours. At Marseilles, its vehemence, and the panic which attended it, have happily greatly subsided.

A touching instance of the courage and self-devotion of the Sisterhood of Charity is exemplified by the circumstance of five members of that body having started for Boulogne, in order to join the expeditions to the Baltic and the Black Sea.

The theatres are occupied with all the zeal and activity that their administrations can command, in preparing, not only for the winter campaign, but for the longer and more important one that the Exhibition of the ensuing year will render necessary. Many of the houses have taken advantage of the present dead season, to close for repairs and decorations. M. Arsène Houssaye, manager of the Théâtre Français, will, it is asserted, have the glory of presenting once more to the public one of its prime favourites, Mdlle. Plessy—of whose talents choice, not the necessity depending on the loss of both or capabilities, too often deprived the stage. The Français will also, it is stated, represent a new piece from the pen of Madame George Sand. The Vaudeville, which a short time since was declared bankrupt, is now under the management of M. Louis Boyer, occupied in forming a company, reading pieces, and rehearsing three—all the task to be completed within the space of three weeks; and M. Perrin, in whose hands is united the direction of the Opéra Comique and the Théâtre Lyrique, is no less actively employed in seeking compositions for both theatres.

A work by M. Nicolardot, entitled "Ménage et Finances de Voltaire," has excited here a great degree of attention, but not of a flattering sort. The work is a vehement personal attack on the philosopher of Ferney, in which all the details of his private life are brought to light, and grave accusations preferred against his notions—not alone of morality, *ça va sans dire*, and are, Heaven knows, for the most part, but too well grounded—but of probity. These things are, we think, better let alone; posterity has already judged Voltaire pretty nearly at real worth; and these revelations are not likely to alter in any way the opinions of either admirers or detractors; who, at this distance of time, have founded their judgment of his character by his works, and care little for minute details, accompanied by violent abuse of his private life and opinions. It appears that J. J. Rousseau is to follow, and to share a similar fate. But the Ultramontane party, to whom M. Nicolardot belongs, does not seem disposed to stop at attacking the literati of the last century—it has commenced a vigorous campaign against M. de Lamartine. The *Univers* has commenced the fight; and certain provincial journals have taken up arms in the same cause. *Apropos* of the history of Turkey. A Legitimist paper, *l'Indépendant de l'Ouest*, has been so virulent in its terms as to induce the friends of the poet to counsel his adopting legal measures on the subject: this, however, he has not thought it worth while to do. Madame George Sand and M. Jules Simon, *un ancien constituant*, have a plan of producing literary and philosophical reviews.

THE SPANISH REVOLUTION.

The Spanish outbreak has been converted into a revolution by the decision of Ministers to convoke the Cortes. By this step, says the *Nacion*, "The Government have placed themselves at the height of their mission: the country—the great Liberal party—will not be scanty in their applause. The Council of Ministers decided this important question on the 7th inst. The Cortes will meet on the 8th November, one deputy to be elected for every 35,000 inhabitants. For the election, the law of 1837 will be followed, with a slight modification. Nothing is decided as to what shall be done with Queen Christina. A letter from Madrid, of the 11th inst., states that she has resolved to go into a convent until the Cortes has decided as to what must be done respecting her.

AMERICA.

The steam-ship *Niagara*, which left Boston on the 2nd inst., arrived at Liverpool on Sunday afternoon; and on Tuesday the *Pacific* arrived with dates to the 5th inst. The destruction of Greytown continued to occupy a very large share of public attention; the American press almost universally condemn the proceeding, and the publication of documents respecting it had only served to increase the dissatisfaction. The *Washington Union* (Government organ) has a leader distinctly intimating the necessity of placing at the President's disposal some millions of dollars to use during the recess in negotiating with Spain. It refers to existing disturbances in Spain, and closes thus:—"We repeat that a few millions at the disposal of the President during the recess of Congress may bring our negotiations to a peaceful and happy consummation."

The *New York Herald* announces the arrival at New York of Dr. Cottman, an American gentleman, who has lived for several years at St. Petersburg, and who has been entrusted by the Czar with a mission of the highest importance—viz., to propose a commercial treaty, and to dispose of Sitka, the latter on very advantageous terms, to the United States Government. According to the *Herald*, the Czar, "in speaking of our relations with Spain, says, he considers that Cuba is ours by right of her geographical position; and that, as she commands the entrance to the Gulf, we should take her, whether the Spanish Government is willing or not."

On the 3rd inst., the Committee on Foreign Relations of the Senate reconsidered their determination to recommend the 10,000,000 dollars war appropriation. A vote was then taken when the Committee were found to stand three and three. Under their rules the project was defeated, and no report can be made.

THE OVERLAND MAIL.

A large portion of the Bombay papers received by the last Mail is occupied with the proceedings of Dost Mahomed, and the intrigues carried on by Russian agents in Central Asia. A letter from Cabul of the 19th of May states that the son of Mehrab Khan Beloodh had visited Shikarpore, and had arranged with the English authorities to be permitted to build stations in the Bolan Pass. There had been reports that an English officer was engaged at Candahar in drilling the infantry, which possibly may have had some foundation in fact, for a few months ago the Candahar chiefs had agents in Bombay trying to secure the services of some Europeans capable of conducting military operations. News had arrived from Balkh to the effect that the Persians have stationed themselves in Merw with a powerful force, and that the Russian army had possessed itself of Ak Mesjid, a depot of Khokand. The Czar was reported to have given back to Persia territories taken in former years, and the Shah was supposed to be about to move on Bagdad on the one side, and on Herat on the other. Later intelligence, direct from Persia, shows that this is not true. In a Cabul letter of the 5th of May, it is stated that the Russian forces had arrived at Kokan, and had taken possession of that fortress, much to the alarm of the King of Bokhara. It was believed at Cabul that a British officer, accompanied by 100 horsemen, was about to visit that place, in order to conclude a treaty with Dost Mahomed; but the news was not at all acceptable to the people, who feared that an English alliance would only serve to increase the Dost's tyranny. The people are stated to be ill-disposed towards Dost Mahomed, and would gladly hail Russians, Persians, or English, if by doing so they could rid themselves of his tyrannical government. A long document is given by the *Delhi Gazette*, professing to be a copy of a letter received by the Dost on the 8th of May from his confidential agent at Herat, which gives a "lively picture of the intrigues now going on in Central Asia. The most remarkable fact to be gathered from it is the small repute in which British diplomacy stands at present in Central Asia.

The electric telegraph, though liable to interruptions during the monsoon, has been conveying Government messages between Bombay and Calcutta; but owing, we suppose, to the dearth of general news of importance at the former of these places, it has brought no intelligence for the use of the Bombay press. The Governor-General had shown no disposition of being about to make a move. He had appointed a day for humiliation and prayer in connection with the Russian war. It is confidently stated in Calcutta that Lord Dalhousie intends returning home in January next.

The most important news from China by the present mail is the disturbances in the Canton province. The local funds have been arranged, but there was no cash in hand to assist would not disperse, and the disaffected, it seems, have combined in several places, and a general movement has been made, causing great uneasiness and alarm among the authorities and inhabitants of Canton for the tranquillity of the city.

There is nothing later from Shanghai than the 1st inst., and no tidings of Admiral Stirling's squadron off the Russians.

Trade at Canton showed symptoms of improvement; but the present apprehension of disturbances has checked business for the moment.

THE COURT.

Her Majesty the Queen went in state on Saturday to close the Session of Parliament. At one o'clock a guard of honour of the Grenadier Guards marched into the quadrangle of the Palace, with the band of the regiment. At twenty minutes to two o'clock the Royal procession, consisting of six carriages, each drawn by six horses, and the State-coach, left Buckingham Palace. The Life Guards Greenwich and a detachment of the Yeomen of the Guard preceded the State-coach, drawn by eight cream-coloured horses, which conveyed her Majesty and his Royal Highness Prince Albert; who were accompanied in the carriage by the Master of the Horse, the Duke of Wellington, and the Duchess of Wellington, officiating for the Mistress of the Robes. Five other carriages, the Queen's Bays, the Queen's Bodyguard of the Yeomen of the Guard, the Master of the Horse, and Captain Dalrymple Hay, the latter officer having left Buckingham Palace for the House, the Royal party arrived twenty minutes after two o'clock.

On Sunday morning the Queen and Prince, the Prince of Wales, Prince Alfred, the Princess Royal, and Princess Alice attended Divine service at Osborne. The service was performed by the Rev. G. Prothero.

On Monday afternoon the Queen and Prince, the Prince of Wales and the Princess Royal, rode out on horseback. The party at dinner included the Duchess of Kent, Lady Anna Maria Dawson, Sir George and Lady Couper, the Rev. George Prothero, and Mr. Gibbs.

On Tuesday afternoon the Queen and Prince, with the Princess Royal and Princess Alice, attended by the Ladies and Gentlemen in Waiting, cruised in the *Fairy*.

On Thursday afternoon the Queen and the Prince, attended by the Marchioness of Ely, the Hon. Mary Bulteel, and Major-General the Hon. C. Grey, drove to Shanklin.

At the Privy Council, held on the 11th instant, the Earl of Durham was sworn in Lord-Lieutenant of the county of Durham. Sir Robert Harry Inglis, Bart., was also, by the Queen's command, sworn in one of her Majesty's Most Honourable Privy Council. The new seals of office for the Home Department—viz. the signet, the sign manual, and the cachet (executed by Mr. Wyon)—were approved by the Queen in Council, and delivered to the Duke of Newcastle.

The anniversary of the birthday of the Duchess of Kent was celebrated on Thursday in the customary manner; the ringing of merry peals on the church bells, and hoisting the Royal Standard on the Tower. In the evening her Royal Highness's London residence dined together at the King's Arms Tavern, Kensington.

His Excellency the Marquis d'Azeglio, Sardinian Minister, has left town for Germany. The Count Louis Corti is Chargé d'Affaires during the absence of the Minister.

Viscount and Viscountess Villiers, who have been on a tour in Germany, have arrived at Paris, and intend to make a brief sojourn in that capital.

Lord and Lady John Russell left town on Wednesday, for the Lakes.

CHURCH, UNIVERSITIES, &c.

Preferments and Appointments.—*Rectory:* The Rev. J. F. Lingham, M.A., to Lambeth. *Vicarages:* The Rev. J. Phelps to Slapleford, near Wilton; the Venerable J. Rushton, D.D., to Blackburn, Lancashire; Rev. R. D. Duffield to Great Eversden, near Cambridge; Rev. E. Harston to the Abbey Church of Sherborne, Dorsetshire; Rev. H. Milne to Harlington. *Incumbencies:* The Rev. P. F. J. B. Hains, B.A., to Hoylake, near Birkenhead; Rev. W. C. L. Aspinall to St. Mark's, Birmingham; Rev. S. F. Dawson, B.A., to Kingsthorpe, near Northampton; Rev. F. Shepherd, to Oswaldtwistle, Lancashire; Rev. J. Whyte, B.A., to Thorp Hesley, near Rotherham, Yorkshire.

Testimonial.—A testimonial of regard and esteem has been presented by the congregation to the Rev. Godwin Swift, M.A., on his leaving the Curacy of Christ Church, Bradford, Yorkshire.

Settlement of the Omnibus Question.—The threatened withdrawal of the omnibuses, in consequence of the rigid regulations issued by the Commissioners of Police, has been averted, chiefly by the influence of the Chancellor of the Exchequer, to whom Mr. Braddell, on the part of the Stage Carriage Committee, made an appeal.

A Necessary Addition.—Great sensation was made at Madrid on the occasion of the oath taken by the new Ministers by an impromptu addition to the Ministerial oath made by the Minister of Marine, Egaiter's old Aide-de-Camp, General Allende Salazar. On the oath of fidelity being administered to him in the Queen's presence, he did not content himself with the usual formula, "I swear it," but added, "and I swear also to defend the rights of the people." The Queen, who heard this extraordinary breach of etiquette, exhibited no emotion.

THE WAR.

THE ALAND EXPEDITION.

The landing of the Anglo-French expeditionary corps was effected without resistance, in presence of General Baraguay d'Hilliers, and the two Admirals, on the morning of the 8th inst., at three o'clock. The forces, which consisted of 2000 men, landed at three points of Lampar Bay, situated to the north of the Archipelago of Aland. Two Russian marked batteries, apparently raised for the occasion, immediately opened fire upon them, but were speedily silenced by the French steam corvette, *Phlegéton* and H.M. ship *Amphion*. The Russians spiked the guns, buried them in the sand, and retreated. Not a single man of the Allied troops was killed. The enemy's fire was essentially defective, and our gunners did not leave them time to rectify matters.

As soon as the troops were fairly in position, the sailors and sappers began operations. Heavy guns were got on shore, field works were begun, and preparations actively carried on for a successful attack on the forts. When the *Driver* sloop left Bomarsund, with the mails, on the afternoon of Tuesday, the 8th inst., Admiral Parseval was about to establish communications with the General-in Chief, in order to forward him the *matériel* requisite for carrying on operations. The general opinion was, that the circular fort on the hill would be the most difficult to take, and would prove the most annoying to the troops. If properly garrisoned, it was thought that it might hold out against a vastly superior force; and, from the nature of the ground, and the height it is placed upon, the making of intrenchments would be a matter of great difficulty and danger. In that case, the best plan would probably be to attempt an escalade; and this seems to have been adopted, as a telegraphic despatch from Bomarsund, of Aug. 15, says:—

The strongest fort has been taken by the French and English, after several hours' severe fighting. Scaling ladders were furnished last night (Monday), and are to be used to-day against the principal fortress.

The Russians had made a sortie, but were repulsed, with great loss. There were, altogether, 9000 French troops and 2000 English marines in front of Bomarsund. Nothing is said as to what part the ships took during the main attack.

THE CRIMEA EXPEDITION.

It is now two weeks past the time at which the expedition against Sebastopol was to sail, according to the *Times*, and we are still without any precise information as to whether it has sailed or not. A telegraphic message from Vienna, on Sunday, gave the following announcement, which may or may not be correct:—

Ninety thousand Allied troops sailed from Varna to-day, on an expedition against the Crimea. Authentic.

This was eight days later than the date assigned by the *Times* for the expedition. Supposing the telegraphic message to be authentic, we are still without information as to what part of the Crimea is to be attacked. The *Soldaten Freund* affirms, on the authority of English and French engineers, that Anapa is to be invested by sea and land; but it is not at all likely that they know anything of the plan of the campaign. A letter from Odessa, of August 4, says that Admiral Lyons bombarded Anapa for twenty-four hours. This is a sheer fabrication, and equally so is the account of our having landed troops at Balaklava. Both reports have probably arisen from some exaggerated account of the reconnoitring expedition.

Marshal St. Arnaud issued the following address to the army on the 30th July:—

Soldiers of the Allied Armies!—We shall soon advance into the territory of our enemy. I rely on your obedience, on your bravery, and steadiness in the fight. The task we have to complete is no light one. The enemy we have to encounter is strong and numerous. The forty years of peace, passed by us in promoting commerce, industry, and the arts, have been spent by him in the study of the art of war, and in military preparations. From your bravery and energy France and England await a victory. The eyes of all Europe are on you. Show yourselves the worthy sons of your brave fathers. We march into the land of the enemy, resolved on victory. As conquerors must we see our fatherland, or never more return.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

GIURGEVO, July 27, 1854

The change in the relative position of the Turks and Russians has produced a beneficial result in the opening of the Danube steam navigation. The steamers, which hitherto ran no further than Sistova, now come down to Rustchuk, and touch at Giurgevo. It is much to hope, as things go, that the navigation will be opened lower down than this; but the Russians may evacuate Kalarasch as they did Giurgevo, and then another important addition will be made to the working ground of the Danube Steam Company. This opening of the navigation is a great gain in many ways. The corn, which finds an outlet from the countries on the banks of the sea through Galatz will, if the Allies advance, be arrested in its passage and purchased here without the necessity of transhipment, or the payment of heavy dues imposed by the Russians. The harvest has been a good one in this country, and most of it is out, if not already garnered. Why, then, do not the Allied armies advance, at least as far as Rustchuk, and change the large prices paid by them for supplies for smaller ones, with which they may be able to obtain a better article? Vienna, which is within four days' steam of Rustchuk, will furnish as much, and perhaps more, of luxuries than Constantinople, and the diminution of the cost of transport will compensate the heaviness of price paid for articles burdened with the heavy Austrian tariff. It is difficult to conceive the mistake of the Russian Generals in permitting the Turks to gain possession of this bank of the Danube, when the question of supplies is considered. They knew full well that Giurgevo is the port of transit for all the merchandise that enters Wallachia—that they could scarcely have left before trade commenced afresh; and, therefore, that Giurgevo was a point in which to maintain themselves at any price. Had they held Slobodzie, instead of abandoning it, the Turks could not have occupied Giurgevo, and they must have sacrificed a large force to repulse the Russians. It was, therefore, a fatal error of the enemy to abandon this place, the more so as it does not seem to be his intention to quit the country so soon as was expected. It is said not only that he has received from Buzeo reinforcements, which were already on their march inland, but that General Panioff's division from Oltenitza has joined General Soimonoff. In the meanwhile, the Russian Generals, who did not perceive that by their retreat they opened the Danube as a field for supplies, are occupied daily in carting off the harvest from the villages; and, doubtless, they will succeed, if speed be not used, in moving everything in the shape of provender and victuals away.

CLOSE RECONNOITRE OF SEBASTOPOL.

The combined Anglo-French fleet left Baltschik on the morning of the 21st of July, to reconnoitre Sebastopol. On the evening of the 26th the *Terrible*, *Fury*, and *Cacique* parted company, pushing on ahead, having on board Brigadier-General Sir George Brown, General Canrobert, and several English and French officers; and by the morning of the 27th these vessels—particularly the *Fury*—were so close in to the Russian batteries, that these sent a shot right through her at water-line; a second, not so well directed, merely splashed a little spray over her; and a third passed through her main rigging. A shot was also sent through the rigging of the *Terrible*. The steamers and ships of the line in harbour showed signs of giving chase; but, when they saw by what an overwhelming force the steamers were followed, they very prudently gave up the idea. The 27th was a beautiful day, and the ships took advantage of it to go nearer than they had ever done before. From the observations taken, it appears pretty clear that an army might be landed either at Cape Lonkoul, which is fifteen miles to the northward of Sebastopol, or at the Katscha river, which is not more than six miles therefrom. At each of these points there is a break in the red perpendicular cliff which forms the coast line, and is about sixty feet high. The land immediately inside of this is flat, and almost unbroken, from Cape Lonkoul, where its breadth may be about seven miles, down to the northern shore of the harbour, where it is not more than four miles. About midway between the two there is the little winding valley made by the Katscha River, and towards the harbour there are trees scattered here and there. On this flat ground the army would get plenty of water from the Katscha, and their advance could be materially assisted by the steamers, which could go to within a quarter of a mile of the shore, and might keep up a terrific fire on anything on the plain within the range of their guns. The country inland beyond this plain does not rise very steeply until near the harbour, but there seem to be other more elevated plateaux. The fort on the northern shore of the port, about a mile from the entrance, is the only difficulty for the troops; for that once carried, the artillery would destroy the ships and town on the southern shore without difficulty. This important fortress seems regularly built, has guns mounted, and a ditch surrounding it. The forts at the entrance to the harbour are most formidable. The land near Cape Kherson is so low, and the ground between it and the town, inside the bays, so easy for troops to march over, that the Russians have seen the necessity of placing no less than four encampments there to prevent an attack in that quarter. The number of troops under canvas must be full 25,000, and was in fact the only large body of troops visible.

The fortifications of the town appear unimportant; there is a wall running round it, which is loopholed, but has no ditch, and it seems to have only one round battery on it. There is a good part of the hill on which the town stands unoccupied; and if this were gained, the arsenal, forts, ships of war, &c., below could be easily destroyed. The combined fleets returned to Baltschik on the 30th of July, and were still there on the 1st of August. Three ships-of-the-line remained off Sebastopol, in hopes of enticing the enemy out.

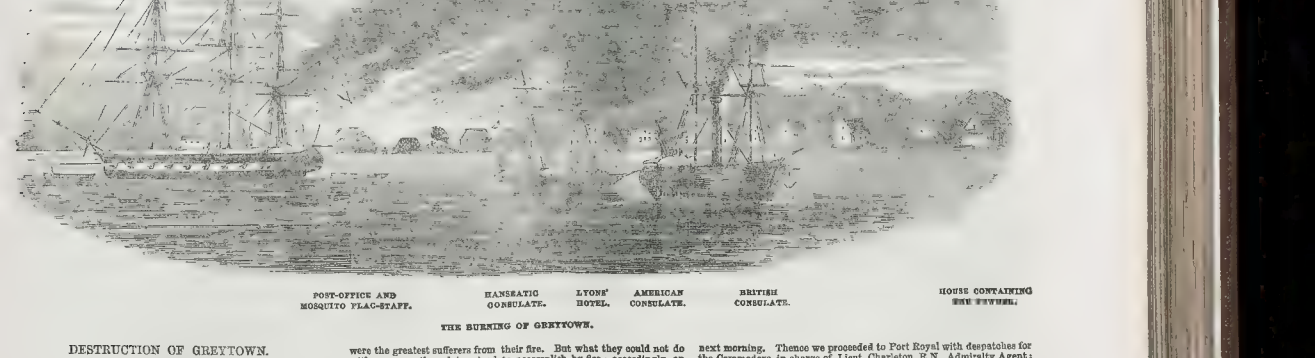
ENTRANCE OF THE TURKS INTO BUCHAREST.

On the afternoon of the 8th inst., Halim Pacha himself, with the corps of occupation, entered the town—the bridge over the Dumbovitza, destroyed by the Russians, having been first restored. The occupation of the Principalities by the Austrian troops was expected to take place about the end of August, respecting which event Omer Pacha has made an official announcement to the Wallachian authorities, and communicated the details of the agreement between the Porte and Austria. By the 10th inst., 10,000 Turks had arrrived, and were quartered partly in the barracks and partly in tents on the plain, outside the town. Zadig Pacha has been named captain of the town, at every point of which Turkish and Wallachian sentinels are posted. There is a great number of refugees in the vanguard of the Turks, under Iskender Bey—Wallachian, Hungarians, Poles, as well as some Italians, who fraternise with the malcontents of the Principality. They have already begun to organise democratic clubs, and incite the Wallachians against the return of Prince Stirbey.

REPORTED RUSSIAN VICTORY IN ASIA.

Advices, dated St. Petersburg, the 14th inst., announce that the Russians, under General Wrangel, were victorious at Bajezid on the 1st of August. If we are to believe their account, 3000 Turks were slain, and four guns, seventeen colours, and two camps captured. The Russians, says the same version, sub-equently occupied Bajezid. Till we have received more trustworthy intelligence, this bulletin may be taken for what it is worth, and that cannot be much, after the numerous lying reports which have come from St. Petersburg.

No other report from the seat of war in Asia comes farther down than the 21st of July, ten days before the alleged victory. At that time the Russian army was said to be about 23,000 men, and that of the Turks nearly 30,000. If this was a correct draft of the strength of the two armies, it is not very likely that the Russians gained a victory. The next mail from Constantinople will, probably, throw some light on the matter.



THE BURNING OF GREYTOWN.

DESTRUCTION OF GREYTOWN.

Royal West India Mail Steamer "*Dee*, Sr. THOMAS W.I.,
August 2nd, 1854.

HEREWITH I enclose a Sketch of the burning of Greytown by the U.S. corvette *Cyane*, 20 guns, Captain Hollins, which has been perpetrated for the most part on defenceless Indians. We arrived from Navy Bay at four p.m., on the 13th July, when a boat from H.M. schooner *Bermuda* immediately informed us that no communication could be held with the town, as the Americans had been firing shot and shell into it from nine a.m. until three p.m., stopping only at intervals to refresh their men, splice the main brace, &c. We were assured, from the best authority, that the *Cyane's* "ball practice" was very inferior; and if we might judge from the appearance of the houses, not one being knocked down, and from the number and distances of shot and shell afterwards picked up, the alligators in the Lagoons, at the back of the town, were the greatest sufferers from their fire. But what they could not do with gunnery, they determined to accomplish by fire; accordingly, an armed boat, shortly after four p.m., went ashore, under their Commander, who found nothing for his Marines to fire at but the cattle, shooting down horses and bullocks; thereby depriving some two or three hundred people in the Bush of the means of subsistence. The upper class of inhabitants, together with the representatives of the British, French, and Hanseatic Consulates, were kindly received, and every attention shown them, by Captain Jolly and the officers of the *Bermuda*.

At half-past four the firing of the town commenced from the windward, and the houses being principally composed of wood, and for the most part thatched—many of the stores, also, containing large quantities of spirits—the fire was most rapid and destructive; so that, by half-past six, there was scarcely a house left.

At six p.m. we weighed and took the *Bermuda* in tow, with the refugees on board, for Corn Island, abreast of Blewfields, where we arrived the next morning. Thence we proceeded to Port Royal with despatches for the Commodore, in charge of Lieut. Charleton, R.N., Admiralty Agent; staying only at Kingston to coal, and returning to Greytown in time to carry out the mail service without derangement.

You will perceive by the Sketch that the *Dee* is just taking the *Bermuda* in tow. Among the houses destroyed was the hotel, recently built by Mr. Lyons, at an outlay of 40,000 dollars; the house at the lower extremity of the town contained some hundred and sixty barrels of powder, which was fired by train and blown up. No respect was paid to the flags at the Consulates—the American flag only being hauled down previous to the house catching fire. Some of the crew of the *Cyane* being Englishmen, positively refused to fire, as they considered the Mosquito flag under the protection of the British Government, having a Union Jack in the corner; they were immediately put in irons, to be tried as mutineers, on the arrival of the ship in the United States. This is the substance of what came under our personal observation. J. S. M.

BUST OF THE EMPEROR OF THE FRENCH.

BY MR. PATRIC PARK, R.S.A.

The Emperor Napoleon III. has recently honoured Mr. Patric Park by sitting to him for his bust, to be executed in marble, a commission from the Duke of Hamilton, a near connection of his Majesty. The model for this interesting work has just been completed, and has been temporarily on view at Messrs. Colnaghi's, in Pall-mall East, where we have had an opportunity of inspecting it; and, at the same time, by permission of the artist, of making a drawing of it, from which the accompanying Engraving is taken.

The bust is of heroic proportions, and heroic in treatment. The likeness is unmistakeable and unexceptionable: the remarkable form of the forehead, in which the central organs are so prominent and closely knit, whilst proportionate breadth is not observed in the other regions; the finely shaped nose; and the compression of the muscles around the mouth, itself concealed by a moustache *très prononcé*—every feature has been carefully studied and realised with admirable discrimination. The moustache and imperial, protruding as they do, present *prima facie* difficulties in the way of sculptural æsthetics; but Mr. Park has successfully battled with these difficulties—throwing the head back, so as to bring the chin appendages into lineal harmony with the rest of the face, thickening the neck at the back of the head, as the appropriate base for this extended outline, and investing the whole with an air indicative of high empire and authority, bespeaking one invested with supreme command; the whole is heroic, striking, and appropriate. Beyond the *pose* and expression of the head itself, there is nothing introduced to indicate the Imperial presence. In this the artist has followed the hero sculpture of the classic days. Trusting all to the speaking attributes of the head, he has simply clothed the stalwart shoulders of his model with the broad folds of a mantle, one edge of which is adorned with fringe.

Mr. Park's portrait subjects of eminent men—and he has portrayed the lineaments and proportions of not a few—have all been eminently real, and, at the same time, remarkable for ideal appropriateness; but, in none, perhaps, has he been more successful than in that now before us, of one of the most remarkable men of his age.

MR. PARK'S BUST OF THE EMPEROR OF THE FRENCH.

NAPOLEON AND THE EMPRESS EUGENIE AT BIARITZ.

The health of the Empress, which had for some time previous to her visit been very delicate, is said to have been greatly improved by the genial climate of Biaritz. The Emperor goes every morning to bathe in the sea, and he makes long promenades daily, accompanied by the Empress, either in the interior of the country or along the coast. A few days ago his Majesty went to visit the citadel of Bayonne. After minutely examining it, he went to the Pont de Nemours, where M. Pereyre explained to him the plan on which a quay, a port, and the viaduct for the railway to Spain, over the Adour, are to be constructed. On entering and quitting Bayonne, the Emperor was greeted with enthusiastic acclamations by the people, who are much pleased at the familiar manner in which he mixes among them. While taking a ride one morning lately, on the beach of Les Basques and Le Port Vieux, near Biaritz, a stout boy of fourteen, dressed as a sailor, advanced close up to him, and taking off his cap, said, "Monsieur l'Empereur, I have the honour to salute you! If you want a pilot, take me!" "A pilot!" exclaimed his Majesty, "what can I want with a pilot?" "To take you wherever you want to go: to the Côte des Fous, to the Port Vieux, to Côte des Basques—wherever you like!" "Well," said his Majesty, greatly amused by the boy's bluffness; "you shall pilot me to Port Vieux; but, before setting out, I must pay a visit to a person whose address you don't know!" "Don't I though! You mean your Minister of Finances. I know where he lives, and I will take you there. But, before setting out, I am determined that you shall see Port Vieux—so come!" "Oh!" said the Emperor, with a smile, "if such be your pleasure, I obey—lead me to Port Vieux!"

On the 3rd inst. the Emperor made an excursion to St. Jean de Luz, close to the Spanish frontier, accompanied by the Empress and her mother, the Countess of Montijo, who had recently arrived from Madrid. After visiting the Church they went to the Mairie, where the Emperor examined the register of the commune, in which is inscribed the notification of the marriage of Louis XIV. with the Infanta Maria Teresa of Spain. They also visited the house in which the *Grande Monarque* resided during his stay on that occasion. On the 15th inst., the anniversary of the birth of Napoleon I., a ball was to be given at Bayonne, in honour of the Emperor, by the municipality of that town, and it was expected that their Majesties would be present on the occasion. A visit to the Basses Pyrenees is also projected, so that the Emperor will not return to Paris before the end of this month. Another report is, that his Majesty intends to take up his abode at Boulogne-sur-Mer for several weeks, and that a hotel has been ordered to be in readiness for him from the 20th of August to the 2nd of October. According to the same report, the King of Portugal, the King of the Belgians, and Prince Albert will pay a visit to his Majesty, to be present at some grand military manœuvres which are to take place about the middle of September. The visit of the Emperor to Biaritz this year is likely to lead to an annual residence in that secluded locality. So much have their Majesties been pleased with the place, that the Emperor has resolved on having a house built at Biaritz; it is to be placed on the rock at the foot of the lighthouse, and about twelve acres of land adjacent have been purchased for gardens. The Emperor has approved of the plans; the building is already in progress, and it is to be terminated by July, 1855, when their Majesties propose to return to Biaritz.

Biaritz is described in Murray's "Handbook" as a little secluded watering-place, about five miles from Bayonne:—

> It consists of a group of white-washed lodging-houses, cafés, inns, traiteurs, cottages, &c., and generally of a humble character, scattered over rocky eminences and hollows bare of trees, on the sea-shore, here fenced with cliffs forty or fifty feet high, excavated by the waves into numberless quiet coves and curious caverns. In these the sea at times roars and chafes, perforating the rock with holes, and undermining huge masses, which are detached from time to time; and some of them, left like islands at some distance from the shore, still project above the waves. From the tops of these cliffs, especially that which bears the ruins of an old fort or lighthouse, you look over the wide expanse of the Bay of Biscay, bounded on the right by the French coast, on which rises the new *Phare*, showing the way into the mouth of the Adour; and on the left, by the shore of Spain beyond St. Sebastian, with peaks of distant sierras rising behind it. The liquid purity of the sea and the smoothness of the sand render bathing in the sheltered bays most agreeable. French ladies and gentlemen *en costume des bains* consume hours in aquatic promenades. The ladies may be seen floating about like mermaids, being supported on bladders or corks, and overshadowed by broad-brimmed hats. The geologist will be interested to recognise in the rocks of Biaritz the fossils of the chalk or green sand, though the rock here assumes an external character very different from that we are accustomed to in England. Beyond its sea-bathing, its rocks, and its view, Biaritz must be the dullest place upon earth, except to those who have other resources of friends, &c., on the spot. Omnibuses and coucous are constantly plying between the baths and the Porte d'Espagne of Bayonne.

The French Embassy.—The *fête* of his Imperial Majesty the Emperor Napoleon III., was worthily celebrated on Tuesday, at Albert Gate House. The Chargé d'Affaires of France, M. Charles Baudin, on this occasion did the honours of the Embassy to the distinguished visitors who were present. The residence of the Embassy had been suitably prepared for the reception. The hall and the principal apartments were brilliantly illuminated and decorated with flowers; the band of the Coldstream Guards was in attendance, and performed a selection of favourite music during the banquet and in the evening. The guests assembled in the grand saloon, containing the magnificent portraits of the Emperor and the Empress, and at half-past eight o'clock entered the banqueting-room. At dessert, the Earl of Aberdeen proposed the health of his Imperial Majesty the Emperor. The toast was received by the company with the most lively enthusiasm. M. Charles Baudin then rose and proposed the health of her Majesty the Queen of Great Britain and Ireland, which was responded to by the guests with the same warm marks of feeling. The company afterwards returned to the reception saloon, and did not quit the Embassy until after eleven o'clock. Among the personages of distinction who had been invited and whose presence in London permitted them to accept the invitation of M. Charles Baudin, were—their Excellencies Vely Pacha, the Belgian, Bavarian, Austrian, Swedish and Norwegian, Danish, Prussian, Netherlands, Turkish, Greek, Two Sicilies, Portuguese, American, and Brazilian Ministers; the Spanish and Sardinian Chargés d'Affaires; the Earl of Aberdeen, the Earl of Clarendon, Lord John Russell, Viscount Hardinge, the Duke of Wellington, Sir James Graham Sir Baldwin Walker, Admiral Berkeley, Mr. Hammond.

BIARITZ.

THE MUNICH INDUSTRIAL EXHIBITION.

(From our own Correspondent.)

THE Exhibition of Industry at Munich was inaugurated on the 15th of July, with all the splendour appropriate to such an event; the programme of the opening of the World's Fair in Hyde-park being the precedent adopted for these industrial festivities, except that the religious ceremony was entirely omitted. Nor has any opposition been raised on the part of the Church to the Exhibition being opened on Sundays, at a very low charge, for the reception of the poorer and labouring classes of the population.

At half-past twelve o'clock the arrival of their Majesties the King and the Queen of Bavaria was announced to the company assembled in the Exhibition building. Their Majesties having been received in the brilliant saloon constructed for the purpose at the entrance of the building, proceeded into the transept, conducted by the Commissioners, and followed by the Royal cortège, the orchestra playing the Bavarian National Anthem. When they had taken their seats upon the throne prepared for them, Mr. von der Piordten, the Minister of Commerce and of Public Works, delivered an address to the King, in which, after having glanced at former Exhibitions, he characterised the present one as "the work of the united strength of the German nation in the arts of peace," adverting at the same time to the happy result to be expected from this Exhibition, in reviving the feeling of unity among the people of Germany, and imbuing them with a higher consciousness of what they would be able to accomplish when united, and working hand-in-hand with the other European nations. The King replied in the same national spirit, warmly congratulating the Minister and the Commissioners (among whom we remark the illustrious name of Professor von Liebig) upon the success of the undertaking, for which he invoked the blessing of Heaven, and expressing the hope that the work of German union, as represented by this Exhibition, would not be merely transitory, but of an enduring character. Scarcely had his Majesty concluded, when three hearty cheers, accompanied by the sounds of the great organ and the splendid orchestra, thundered forth from the brilliant and crowded assembly; after which a procession was formed, and their Majesties were conducted by the Commissioners through the building.

The whole of the Diplomatic body, the Commissioners of the German States, and the high personages present, accompanied the procession. When the Royal personages entered the part of the building appropriated to the machinery moved by steam, the various machines were at once set in motion, and two immense steam-presses began to throw off thousands of copies of verses addressed to their Majesties, and which were distributed amongst the public. The Royal party was about an hour going over the building; and on their Majesties again reaching the throne, they took their seats there for a short time, during which the Minister of Commerce announced that the Exhibition was opened. Their Majesties then directed the Commissioners and Plenipotentiaries of the German States to be severally presented to them; and the King decorated, with the Order of the Crown of Bavaria, MM. Voit and Cramer-Klett, the architects of the Crystal Palace. Their Majesties then left the building amidst loud acclamations, which accompanied them the whole way to the Royal residence.

The building is constructed after the design of the Hyde-park Crystal Palace, and is of glass and iron. It stands in the Royal Botanic Gardens, its western side fronting the Karlsplatz. In plan it consists of a transept, and a double nave. The length of the whole building is 800 feet; the breadth of the nave aisles, 160 feet; length of the transept, 280 feet. Its entire area is 134,000 feet. The nave and transept are divided by colonnades, into five aisles, the middle nave being 80 feet high, while the height of the other aisles on both sides is only 54 feet. The middle aisle does not contain any galleries; but the side aisles have each two galleries, divided into different apartments for the reception of the goods, richly decorated by carpets, tapestry, and other hangings. For the machinery, a special building has been erected. The water runs off from the roof, through the hollow columns, into sewers and reservoirs constructed beneath for that purpose. The eastern and western ends, and northern and southern branches are approached by thirty four steps. The entrance is by the northern arm, the exit by the south. About 30,000 cwt. of iron, and 215,700 square feet of glass have been employed. The force of resistance of the columns supporting the galleries was tried with a weight of 350 cwt.

The interior of the building is very beautiful. At the junction of two of the aisles a colossal fountain has been erected. The articles arranged are tastefully exhibited in a new and striking manner, after the fashion of a chessboard, viz., in the length, after the class of the articles; in the breadth, according to the producing countries. The originator of this useful arrangement, which greatly facilitates the inspection, is Herr von Steinbeiss, one of the Zollverein representatives at the London Exhibition.

With respect to the general character of the Exhibition, according to the *Allgemeine Zeitung*, the want of a stronger national union is visible even in the patterns of the fancy articles. Every town or small principality has its own fashion, and pretends to an industry of its own. On the other hand, the beneficial influence of the Customs' union with Austria is remarkable. Among the different articles, the Literary department, with the beautiful illustrated editions of the German Classics, exhibited by the Cotta'sche Buchhandlung, are very prominent.

The Exhibition of Paintings is in a special building.

During the first weeks of the Exhibition, the performances

THE ENGLISH MEDIÆVAL COURT, AT THE CRYSTAL PALACE, SYDENHAM.—(SEE NEXT PAGE)

THE INDUSTRIAL EXHIBITION, AT MUNICH.

of the classical German drama, by first-rate actors of Germany—under the auspices of the director of the Royal Theatre, Dr. Dingelstedt—proved a great attraction. The same company will appear in London in 1856

In consequence of these and other attractions, afforded by the splendid museums and picture-galleries of Munich, by the hospitality of its inhabitants, and the cheapness of living there, the city and its neighbourhood are crowded with foreign visitors, the number often amounting to 14,000.

THE ENGLISH MEDIÆVAL COURT AT THE CRYSTAL PALACE.

This picturesque compartment of the Palace of Art at Sydenham contains a very interesting assemblage of architectural specimens, copied from our ancient churches and magnificent cathedrals. We select the details from Mr. S. Phillips's excellent "Guide":—

Entering the Court from the Nave, we find, immediately facing us, a door-way from Rochester Cathedral, coloured so as to give an idea of its appearance when first erected. We may remark here that the practice of colouring and gilding was carried to an almost extravagant extent in the Gothic style, although the effacing hand of Time has left comparatively few examples in a perfect state.

The next architectural monument, on the left of the door, is the richly-decorated Easter sepulchre, from Hawton Church, Nottinghamshire, representing the Resurrection and Ascent on Christ. It was used as an altar, various rites being performed before it between Good Friday and Easter-day. Further on, in the angle, is a portion of Bishop Alcock's chantry chapel, from Ely Cathedral; on the other side of the adjoining doorway, which is a good position chiefly from the choir of Lincoln Cathedral. We remark the very beautiful oriel window of John of Gaunt, at Lincoln, and next to it a portion of the elaborate altar-screen of Winchester Cathedral. On the right of the Rochester door is the finely-designed monument of Humphrey de Bohun, from Hereford Cathedral, with the effigie of the knight in complete armour. The door beyond corresponds to the one opposite; and further on, near the cloister, is one of the doors of Lichfield Cathedral, with its beautiful iron-work, the painting of which is remarkably clever; and a portion of Bishop Baldwin's screen-work, from Wells; the door beneath the cloister being from Bishop Alcock's Chapel, Ely. The exquisite niches and canopies round the walls of the Court are from Southwell Minster, Ely Cathedral, Beverley Minster, &c. The niches in the wall, and corresponding to, those on the monument of Bishop Bubwith, are excellent examples of late Gothic work, from Arundel Cathedral. The upper tier, consisting principally of sculpture, presents valuable examples of that art. The large statues beneath the canopies are from the façade of Wells; and the angels in the spandrils of the arches are from the choir of Lincoln Cathedral: they are all of the highest interest with reference to the history of sculpture in England. The door presents a remarkable series of the best sepulchral monuments of the Gothic period which England possesses, viz., those of Queen Eleanor, from Westminster; Edward II., from Gloucester, the celebrated monument of William of Wykeham, from Winchester; and that of Edward the Black Prince, from Canterbury Cathedral

Indeed, all the subjects in this Court are full of value and interest, and the numerous examples of Gothic art here collected—which we have not space to describe in detail—form a museum from which the visitor may obtain no inadequate idea of the rich treasures of our country.

In the Illustration, the central monument is the splendid altar-tomb and recumbent effigies of Edward the Black Prince. To the left is the door of Humphrey de Bohun. The doorway is from Lincoln Cathedral. The upper piece and figures in the angle are from Wells Cathedral; and beneath it is a bracket from Ely Cathedral. The upper spandrils are from the choir of Lincoln Cathedral. The lower figure and niche in the angle are from Westminster Abbey; between which and the doorway is a niche from St. Mary's, Beverley; and next the tomb of Humphrey de Bohun is a niche from Southwell Minster.

The Illustration upon the preceding page has been photographed and drawn on the wood by Mr. Philip H. Delamotte.

CALENDAR FOR THE WEEK.

Sunday, August 20.—10th Sunday after Trinity.
Monday, 21.—Battle of Vimeira, 1808.
Tuesday, 22.—Warren Hastings died, 1818.
Wednesday, 23.—Sir William Herschel died, 1822.
Thursday, 24.—St. Bartholomew. Parmegiano died, 1540.
Friday, 25.—Revolution at Brussels, 1830.
Saturday, 26.—Prince Albert born, 1819. Battle of Crecy, 1346.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 19, 1854.

The attempt of the Emperor Nicholas to persuade the Austrian Government that the evacuation of Moldavia and Wallachia is a return to the *status quo ante bellum*, and a full compliance with all the demands which Austria has any interest or right to urge, has proved a failure. M. Drouyn de Lhuys, in his very able State paper, has once again played havoc with the logic of M. de Nesselrode and the Russian Chancellerie, and held it up to the derision of Europe. Whatever doubts were once entertained of the courage or sincerity of the Emperor Francis Joseph are in rapid process of removal. Austria will not consent to be a party to any delusive and hollow pacification; but will unite with the Western Powers in exacting from the Czar indemnity for the past, and security for the future. Whether the King of Prussia will take the winning side, or whether he will remain as faithful to the Czar in the days of adversity, as he did during the period when it was foolishly and confidently believed that the arms of Russia were invincible, remains to be proved by the course of events; but in either case it will be a matter of no consequence to any but the Prussians. The aid and the advice of Prussia have ceased to be necessary, and will not be asked—and, probably, not accepted, if they be proffered. In a final note to the Czar, dated on the 11th inst., and dispatched from Vienna to St. Petersburg on that day, Austria, in conjunction with the Western Powers, demands of Russia five guarantees or conditions:—First the abolition of the mischievous political Protectorate claimed and exercised by the Czar over the provinces of Moldavia and Wallachia, and, in a minor degree, over Servia; second, the abolition of the still more pernicious religious Protectorate exercised over the Greek Christians in Turkey; third, the unrestricted navigation of the Danube; fourth, the establishment of a free port on the Black Sea; and fifth and last, the revision of all treaties between Russia and the Ottoman Empire. If the Czar should yield to these terms before the capture of Sebastopol or Cronstadt—which is not likely—there will be an end to the war, and peace will be secured at much less cost and sacrifice than could have been anticipated. But while the Czar deliberates, the war will proceed. The attack on Sebastopol has already commenced; and if that place be taken, as we trust it will, the conditions of peace will no longer be so few or so little galling to the pride of the Autocrat. The Allies might even now demand that he should pay the whole cost of the naval and military armaments which they have dispatched against him; but, if Sebastopol fall into their hands, he must expect harder conditions. The five which were submitted to him while his territories remained intact will neither meet the strict justice nor the wider policy of the case, when his fleets shall have been taken and his fortresses shall have been destroyed. It will then become a question whether Russia shall be suffered to remain a naval power, and to menace Europe, either from the Black Sea or from the Baltic. If he knew his interest, the Czar would yield at the present time, and escape vengeance, if he could not altogether escape justice. It is not likely that he will be so wise and clear-sighted; and it will, perhaps, be all the better for Europe that the blind obstinacy which has led him so far should lead him still further; and that the retributive justice which is destined to overtake him should be as mighty as his offences.

An important question of Copyright has lately been decided by the House of Lords; but decided in such a manner as to show that the law of England is sometimes absurd as well as unjust. A short history of the now celebrated case of Boosey against Jeffreys, or Jeffreys against Boosey—for plaintiff and defendant have changed places in the course of the protracted litigation—is a necessary preliminary to any arguments upon the principles involved in the question. In the year 1831, Bellini, the composer, resident as Milan, composed in that city the music of the well-known and beautiful opera entitled "La Sonnambula." Of course Bellini did not consider his work to be public property. He did not write for the pure love of writing—but with some expectation of pecuniary recompense. He looked upon his composition as his own; and expected to live, like other men of genius (and of no genius), by the proceeds of his industry and his talent. He, therefore, in the exercise of his undoubted privilege, disposed of the copyright to a person named Riccordi; and the opera of "La Sonnambula," not having been previously published, became the property of the person last mentioned—as a watch, or a cask of wine, or a bale of cotton, or a new paletôt, might have become, under the same circumstances of *bonâ-fide* purchase. Mr. Riccordi came to England with his property, and disposed of it for a consideration to Mr. Boosey. But, although Mr. Boosey, if he had purchased the watch, the wine, the cotton, the paletôt, or even a quire of blank paper from Mr. Riccordi, would have been protected in such purchase by the whole weight and majesty of English law; and although to dispossess him against his will of either of those articles would have been held to be an act of felony, or at the very least of petty larceny, the law did not protect him in the possession of the work of M. Bellini's genius. Mr. Jeffreys—who had given Mr. Riccordi and Mr. Boosey nothing—reprinted, for his own profit and advantage, au air or airs from "La Sonnambula," relying upon the vague and unsatisfactory state of the law of copyright; and denying, in fact, that Mr. Boosey had, or could, acquire, by purchase or otherwise, any copyright whatever in the works—musical or literary—of a foreigner resident abroad. An action was brought by Mr. Boosey in the Court of Exchequer to establish his right, through Riccordi, and, therefore, through Bellini. It was decided against him; whereupon Mr. Boosey appealed, and a new trial was granted by the Exchequer Chamber. In due course the case came before the House of Lords as the ultimate legal tribunal. Last week, their Lordships finally decided that Mr. Boosey had acquired no copyright—and that Mr. Jeffreys, who would not have been free to appropriate to himself the blank paper on which M. Bellini had determined to write an opera—was free to reproduce the musical notes, which gave the valueless paper a high market price. Such, it appears on the highest known authority, is the state of the English Law of Copyright, except in the case of France, with which country we have an international arrangement consistent with common sense and common justice. If this be really the law—and after the decision of the House of Lords there is no longer room to doubt the fact—practical men will have little hesitation in declaring their conviction that it requires to be changed as speedily as possible. If it does not go to the full extent of treating foreign men of genius like foxes or wolves, as *feræ naturæ*—(for if the foreigner will come and write his work in England, he may sell it in England, and his assignees may set all the race of pirates at defiance)—yet it treats the foreigner generally as a person who has no claim upon English equity. It establishes a difference between more tangible merchandise, such as legs of mutton and broadcloth, and the compositions of men of genius, thereby ignoring the essential fact that men of genius look, like other mortals, to earn legs of mutton, broadcloth, hard cash, and all other necessary supplies of their physical wants. If we look to the practical operation of such a state of the law, we find that Mr. Washington Irving, if he had been a cotton merchant, might have sent over to Mr. Bentley any quantity of cotton—and no man, foreigner or English, could have robbed Mr. Bentley of the smallest quantity of that cotton without incurring the penalty that attaches by the laws of all civilised countries to those who wilfully break the eighth commandment; but Mr. Washington Irving being only an author, who writes immortal books, cannot convey to Mr. Bentley any property in such books, unless it be in the actual manuscript, or sheets of paper, on which his thoughts are written. The thoughts themselves belong to Mr. Jeffreys, or to Mr. Jones, or to Mr. Anybody, who chooses to make a profit out of them. Such a state of the law is rather too scandalous to be tolerated in a civilised country, which is, or ought to be, proud of its literature and its arts, and of the encouragement which it is supposed to afford to them. Possibly this state of things may be remedied by an international copyright—such as has, happily, been established between this country and France. At all events a remedy of some kind ought to be applied. Our intellectual intercourse with Italy is not great, and future Bellinis will, doubtless, avail themselves of a visit to London before they assign their property for publication in this country; but it is in our intercourse with America that mischief and disgrace will ensue if the law be not altered. These great nations will continue to be the mutual pirates that they are at present, and literature in both countries will soon be abandoned as a profession, by every man who expects to perform what the world so erroneously expects of him, that if he can he shall live, and that if he live in society he shall fulfil all the obligations of a citizen. It seems strange that so simple a question should have been made so complicated by the lawyers—or, perhaps, we should say the Judges; but we hope the day is coming when sounder principles will prevail, and when it will be, at least, as great an offence to rob authors, or their assignees, of their literary property, as it is to steal handkerchiefs or watches from the pockets of the passengers in Fleet-street, or the Broadway of New York.

It may be interesting, at the present time, when the intercourse between Great Britain and Egypt is so rapidly increasing, to direct attention to the recent accession of so enlightened a ruler as Said Pacha. The Sultan appears to be fully aware of the merits of his Viceroy—late intelligence from Constantinople announcing that his Majesty has issued a firman confirming to him in all his dignities and prerogatives, and conferring on him the title of Vizier, which is the highest rank in the Turkish Empire.

The policy of Said Pacha, as already developed, offers a favourable contrast to that of his predecessor. Among other highly necessary reforms, he has ordered the produce of the Government farms to be sold by public auction, and has permitted the native holders of produce to sell their property in an open market, free from all Government interference. In fact, his High Pacha has carried out, as far as possible, the principle of Free trade; and put an end to the mischievous monopoly practised by his predecessor, Abbas Pacha—who, not long before his death, ordered every native cultivator to be bastinadoed whenever he should be found making sales or contracts with Europeans, which he declared all such contracts to be null and void. The remonstrances of the European Consuls were disregarded by Abbas Pacha, and numerous claims of Europeans against the Egyptian Government were treated with the same indifference. Said, the successor, however, has given orders to arrange all such matters satisfactorily; and, amongst other boons, which he has granted to the people, is the abolition of the "octroi," or town duties. The new Pacha has appointed as his Chief Secretary Keenig Bey, who was formerly tutor to his Highness, and is highly qualified to fill the appointment. The selection, as well as several others of equal importance, gives every confidence that the viceroy—unlike his predecessor, who employed only those who would pander to his caprice and despotism—will surround himself with men of honour and capacity. Abbas Pacha succeeded, by means of large sums of money and costly presents, in getting relieved from the "Tanzimat," which deprived the Pachas of the Turkish Empire of the power of life and death over their subjects; and it was by retaining that power that Abbas Pacha was enabled to defy the family of Mohamed Ali, as well as the principal personages of his Court and Cabinet, who might have been disposed to quarrel with, or amend, his policy. Providence having placed as the head of the Government of Egypt an enlightened and liberal Prince, we are justified in believing that his aim will be to govern justly, and to endeavour to regenerate his country. The resources of Egypt are great; and only require skilful and patient development to enable that country to assume a higher position than it has ever enjoyed since the days of the Pharaohs.

LATEST INTELLIGENCE.

BOMBARDMENT OF BOMARSUND.

Several private telegraphic despatches with news from Bomarsund, the 16th, have been received, but they are contradictory. One states that an important fort has been destroyed, and that the Allies were to assault the great fortress on the 16th or the 16th; another that the greater part of the main fortress was in the hands of the assailants. According to a third des, atch, only some detached forts had been destroyed. It is affirmed that the French Minister of War has received accounts of success which justify a hope that the next will be that of the complete reduction of the fortress.

The following letter from Ledsund, of August 12, gives a few details about the landing and subsequent proceedings:—

I write in the greatest haste, as the steamer is just leaving, with the previous warning having been given. The troops landed on Tuesday last (8th), at three o'clock, without opposition, and attacked a re five guns, which defended the road. The French took it in front, the Marines in the rear, and carried it in a moment, without any loss. We are now encamped behind some high ground between the village Finly and Sundsbole, about two miles from the main battery, the Chasseurs spreading themselves over the intervening ground to the 800 yards of the wall. A Russian officer came out of the door of about a dozen yards, and was instantly shot by one of them; he was to raise his hand to his breast, and fall, and some men rushed to fort and took him in.

The people from the villages bring plenty of provisions, and civil. The French troops have been slightly attacked by the eleven having died in four days.

The *Penelope* got aground within range of the forts, and was for three hours and a half, but was not much hurt. The small to her assistance, and drew the attention upon themselves. The mann was shot away. The *Hecla* had several shot in her, poor little fellow had his chest torn open by a round shot. The red hot shot.

Lieutenant Cowell, Royal Engineers, has been badly wounded thigh by his revolver going off accidentally. As yet we have no Live men.

It is believed that 600 men have succeeded in crossing from land, and are now on the island of Prastoe, but have not yet got fort. The forts are strong, and it will be a strong tug before it way. time to say more.

The attack, or bombardment will commence to-morrow, or the English and French guns, and five 10 inch mortars, are in po the hill.

THE CRIMEA EXPEDITION.

Letters from Constantinople up to the 5th inst., state that pose of the late visit of Marshal St. Arnaud was to explain to tan in person the object of the great expedition which was on t being despatched against the Crimea. The rumour in the curred was that the combined fleets would be able, wi incurring much danger—as was proved by the experiments made squadron under Admiral Brue—to do the greatest damage fortifications of Sebastopol, and even to destroy the Russian anchor there. The embarkation of the *material* and troops commence on the 6th, every necessary preparation having be there in a day or two; and it was thought that the expedition m actually set out on the 9th or 10th.

General Canrobert has expressed his firm conviction that, if Allied forces can secure a firm footing in a bay to the rear of t the Russian fleet will only have to choose between certain destruc the batteries of the Allies, or turn out and give battle to t fleets; in regard to the result of which battle, though it will, c a considerably one, two opinions do not exist.

A great number of shells which have been lately received fleet proves that the expedition about to be undertaken i Marshal St. Arnaud, who left Constantinople on the 2nd Wednesday, his wife, on parting, that probably they would not some time.

THE VIENNA CONFERENCE.

A despatch from Berlin, of August 16 says:—

The Conference of Vienna is to re-assemble in about a week, under the presidency of Comte Buol.

It is stated that the object of the Conference is to declare the proposals of France and England are in conformity with the last Note of Austria, and to agree upon the best means to obtain the acceptance of Russia, which the general balance of Europe requires.

A despatch from St. Petersburg, dated on the 5th inst., announces the publication by the Emperor Nicholas of the long-expected

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 17.

Month and Day.	Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperatures from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + denotes above the average.

The reading of the barometer decreased from 29·82 inches at the beginning of this week to 29·69 by the morning of the 14th, then increased to 29·81 inches by the 15th; decreased to 29·30 by the morning of the 16th; and increased to 29·97 inches by the end of the week, at the height of 82°. The mean reading for the week was 29·84 inches.

The mean daily temperature was above the average on the 12th, 13th, and 14th; and below the average on the remaining four days.

The mean temperature of the week was 60·9°, which is 0·9° below the average.

The mean temperature of the dew point was 52·2°; and 8·7° difference between this and the mean temperature of the air was 8·6°.

The range of temperature during the week was 34°; being the difference between the highest temperature on the 13th and the lowest on the 17th.

The mean daily range of temperature was 20·9°. The greatest was 29·1°, on the 11th, and the least was 12·9°, on the 12th.

Thunder was heard in the afternoon of the 17th.

Rain fell on the 16 h and on the 17th, to the depth of two tenths of an inch. The rain has been generally misty.

JAMES GLAISHER.

Lewisham, August 18, 1854.

HEALTH OF LONDON.—During the week ending last Saturday August 12th, the births of 868 boys, and of 831 girls, were registered within the metropolitan districts; and within the same period of the deaths of 624 males, and of 528 females. Of the deaths at all ages less than fifteen years; 286 exceeded six, and 401 were between those ages. The average number of deaths in the same week in the ten preceding years, corrected for increase of population, was 1221; and therefore the number of deaths exceeded the estimated number by 611. The number of deaths exceeded the number of births by 330. This is a very unusual. To zymotic diseases, 1093 deaths were referred, of these scarlatina caused 86; diarrhœa, 158; cholera, 644; and typhus, 44. The other classes of diseases caused about the average number of deaths. The present epidemic is on the increase. Its progress, week by week, is shown by the following numbers:—5, 26, 132, 399, and (last week) 644. The deaths from diarrhœa and dysentery in the same weeks were—51, 68, 87, 146, and 210. The number of deaths caused by cholera in the different districts are as follow. In the west districts, including Hampstead, Paddington, Kensington, Chelsea, and Westminster, the number in the last week was 37; in the north districts 96; in the east districts 80; but in the south districts on the north side of the river (Bermondsey, Rotherhithe, Southwark, Lambeth, and Battersea) the deaths were one hundred and fifty-four.

THE OPERATION OF THE NEW PUBLIC-HOUSES ACT IN LONDON.—Sunday was the first day on which the New Beer Bill came into operation, and after ten o'clock at night there was some excitement in the vicinity of the railways. As the hour of ten drew near, most of the licensed victuallers, who had put the hands of their clocks forward some few minutes, so as to clear their houses in sufficient time to avoid the pains and penalties of the new law, had the greatest difficulty in getting their customers to leave. They refused, unless they were turned out by the police, and in obedience to the arrangement made by the respective superintendents of each division, in having constables placed round each house, the various taverns were soon cleared. It was remarked by the police that they never found the trade so anxious to conform to any Act of Parliament as on the present occasion. In the immediate neighbourhood of the South-Western Railway Terminus, in the Waterloo-road, upon the arrival of the last excursion trains from Hampton Court, Richmond, Windsor, and Southampton, it appeared that some of the passengers were ignorant of the new bill having come into operation, and having been refused any refreshment in the towns they had visited, they expected that they would meet with every accommodation on reaching the metropolis. A crowd claimed the right of being supplied with refreshments, on the ground of having travelled by the trains from the country, but were refused admission on the ground of being trade hours, on having refreshments provided after they were served with the cholera bill, without the interference of the police, none of those were served.

ROYAL THAMES NATIONAL REGATTA.—The contest for the Leander cup, badge, and freedom—a portion of the last day's sport at above great meeting—was, on Tuesday evening, brought to a close. It will be remembered that, in the third heat for this race, the contest was throughout most exciting, and ended with Weedon and Poole—the two leading ones, being so level that it was declared a dead heat; and the following day evening was appointed to decide the race. The race was won by Pocock, although there were not more than nine or ten feet between his stern and his opponent's stern.

GREAT FIRE AT CUBITT'S FACTORY.—The most extensive conflagration that has occurred in the metropolis for several years past happened on Thursday morning at Pimlico, at a few minutes before two o'clock. The disaster commenced in a range of premises belonging to Messrs. Cubitt, nearly 200 feet long, which were adjoined by another building, upwards of 200 feet square, used as the joiners' houses. The last-named buildings being in such close proximity to nearly other building, it soon became apparent that unless the flames could be assuaged in their commencement a terrible loss of property must most unquestionably ensue. The watchman employed on the premises, and as many hands as he could collect together, at once endeavoured to confine the conflagration to that part of the well-known and extensive works in which they commenced; for some time their efforts appeared to be crowned with success; but, all of a sudden, the fire, as if fed by some ignitible liquid, rushed forward in four or five directions; igniting, in rapid succession, everything in the immediate vicinity of the spot in which the disaster commenced, and extending from thence to a lofty row of workshops used as the joiners' houses. By half-past five o'clock the fire was said to be at its height, and a more powerful body of flame has rarely, if ever before, been witnessed in this part of the metropolis. A crowd, numbering nearly 20,000 persons, were on Westminster and Vauxhall-bridges, whilst the paths along the river Thames on either side were studded with spectators. The fire was not got under till a late hour on Thursday. No estimate has yet been made of the loss sustained, but, on a rough calculation, it has been rated at £30,000, to meet which there are heavy insurances.

THE CHOLERA IN MILLBANK PRISON.—About twenty deaths from cholera have taken place there; and, in consequence, it was decided on Wednesday, by the Prison Board, that the prison should be closed. About 600 arrived at Dorchester Barracks in one train, by the South-Western Railway, a few days since. An immense number of keepers accompany the convicts.

FATAL RAILWAY COLLISION.—On Monday evening a collision took place on the North London Railway, near Bow-lane-station, by which a number of passengers were seriously injured. The stoker was very much scalded, two assistant guards were dangerously wounded, and the engine-driver was killed.

It appears from the *Moniteur* that an extraordinary credit has been opened, chargeable on the Estimates of the year 1854, for a sum of 8,000,000 of francs, to carry out the testamentary dispositions of the Emperor Napoleon I.

DEATH OF COLONEL MAULE.—Letters from Constantinople announce the death, by cholera, on the 1st inst., of Lieut.-Col. the Hon. Lauderdale Maule, M.P. for Forfarshire, and Surveyor General of the Ordnance. Lieut.-Colonel Maule, who had retired upon half-pay from the command of the 79th Highlanders some two years ago was appointed one of the Assistant Adjutants-General on the formation of the staff of the expeditionary army to the East. He was in his forty-eighth year, and had served a considerable time in the 79th. By his demise, the seat for Forfarshire, the Surveyor-Generalship of the Ordnance, and an appointment on the Adjutant-General's staff are rendered vacant. Colonel Maule was next brother to Lord Panmure, and heir presumptive to that nobleman.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE only subject of any engrossing interest in literature, during the present week, turns on the comprehensive and learned speeches of Lords Cranworth, Brougham, and St. Leonards, on the recent decision in the House of Lords, that a foreigner (an American, of course) included has no copyright in this country. The speeches are evidently corrected by the learned Lords who delivered them, and will be found to repay attention. Authors and publishers should make themselves acquainted with the arguments of the case, as set forth at great length in these able speeches. Indeed, many authors are already masters of the subject, and we have heard the case argued with legal and commercial skill, by both authors and publishers. Some side with the Court of Exchequer, who pronounced in favour of a foreigner's right to a copyright in this country, and others in favour of the recent decision of the House of Lords, which reversed the judgment of the Court of Exchequer.

The Lord Chancellor contends, "*prima facie*, that the legislation of the country must be taken to make laws for its own subjects exclusively;" that he is bound to interpret the laws; not, as Lord Brougham expresses it, with views of expediency or of public policy (which both affect to think influenced in some degree the decision of the Court of Exchequer), but merely as they are to be read by legal lights. A foreigner, therefore, can have no copyright in this country, unless perhaps by residence, and possibly by first publication here.

It has been decided (says Lord St. Leonards), and it is no longer to be disputed, that it is not required to be stated, that the first publication must take place here; but that is only by implication—it is not by express enactment. Publication from the provisions in the Act of Parliament. Well, then, *the first publication must take place here. Must the printing take place here? There is no such actual provision.* It is not said so; but I apprehend it is implied. *I think it is clearly implied from the provisions of the Act, that the printing must take place here.*

There is a difficulty with respect to what is to constitute residence here. Lord St. Leonards attempts a definition, but it is not one likely to meet with general approbation, or, in the Lord Chancellor's words, cut the knot of the matter. Lord Brougham grapples with an alleged difficulty:—

Among a good deal of somewhat popular and declamatory matter which is to be found in this case, may be mentioned that secure public and more showy than solid objection taken, that the consequence of confining the statute to our own territory will be to make a foreign author some over to Dover in order to have the exclusive privilege, whereas, if he stopped at Calais, he could not have it. This is only one of the consequences of any law which is bounded in its operation by extent of territory. We have abundant instances of such results, both in our civil and in our criminal law, and sometimes in both civil and criminal law together, arising out of the same diversity of jurisprudence. Married one foot or even an inch on this side of the middle of a bridge between England and Scotland, the parties have been held by all the Judges guilty of felony, and their issue bastard; when, had the implied contract been made a foot or even an inch on the north, the marriage would have been lawful, and its issue legitimate? The English female owner of an estate in settlement, if she comes to Dover and there lies in, produces issue inheritable, being English issue—if she had been taken in labour at Calais, the issue would have been alien, and could not have taken the estate.

If a fine day at Dover is sufficient to constitute residence, we shall have French authors entitled to a copyright on the score of a dinner at the Lord Warden Hotel; and American authors entitled, in the same way, to the privileges of British authors for a week at Liverpool, including a hurried visit to Stratford upon-Avon.

An author's right is thus stated by Lord Brougham:—

The right of the author before publication we may take to be unquestioned; and we may even assume that it never was, when accurately defined, denied he has the undisputed right to his manuscript; he may withhold or he may communicate it; and, common sense pointing, he may limit the number of persons to whom it is imparted, and impose such restrictions as he pleases upon their use of it. The fulfilment of the annexed conditions he may proceed to enforce, and for their breach he may claim compensation. But if he make his composition public, can he retain the exclusive right which he had before? Is he entitled to prevent all from using the manuscript which he has permitted to confine the use of it to those whom he specially allows so to do? Has he such a property in his composition as extends universally and endures perpetually, the property consisting in the abstract conception? Somewhat such property may be found to exist? In other words, can his thoughts, or the results of his mental labour, or the produce of his genius, be considered as something fixed and definite, which belongs to him exclusively, at all times, and in all places? That is the question.

Well, has he the right? But on this question neither authors nor lawyers agree. What says Mr. Prescott, who has just received from his countrymen ten thousand pounds for the first two volumes of his new work? How, with this new decision, will Mr. Bentley stand with Mr. Prescott?

This important decision, of so much consequence to every author, grew out of an assignment of Bellini, a Milanese; and the condition of the assignment is thus handily put by Lord St. Leonards:—

The first question is, how can a right exist in Bellini, as a foreigner, to copyright in this country? He has it by the law of Milan, because he is a native-born subject, or a subject at all events by residence, and the law of that country gives it to him; but, the moment he steps out of that country, he can have no other right than is involved in the mere possession of the subject-matter in his hands, except so far as any country to which he resorts may give him a right. Then, in order to obtain copyright here, he must come and perform, as I have already shown, the condition annexed to the enjoyment of that right; and I hold it, my Lords, to be perfectly clear, that that condition is, that he must reside in this country. Then, if that be so, as he did not perform the condition, he never had the right to assign, and he could not, therefore, assign that which never existed. Remaining abroad, he could not have the right to the common; law of this country gave him no such right, neither did the statute law of this country give him any such right. Therefore, when at Milan he had a Milanese copyright; but he had not, and could not, acquire a right in this country; and, if he had no right in this country, he could assign none.

It is quite clear that American authors have as much interest in this great question as English authors.

London has not, since the burning of the Houses of Parliament, and the Armoury in the Tower, witnessed a more awful visitation of fire than was seen on Wednesday night last, on the banks of the Thames, between Vauxhall-bridge and Chelsea; when the extensive manufactory of Mr. Thomas Cubitt, the Lord of Belgravia, was in a few hours reduced to ashes. The night was fine—the wind high, and in an evil quarter—the flames fierce and uncontrollable. Like all great fires, it was obscurely bred—making small outlets into open air, and leaping, as it were, from room to roof with prodigious velocity. The silver Thames was seen to roll by a golden stream; while the moon, in her last quarter, sailed silently supreme over the raging conflagration below.

A key of fire ran all along the shore,
And lightened all the river with a blaze.

A few facts of moment for our column may be found in Parliamentary Papers. Thus, we learn from the Post-office Report, just issued, that the Government pays to Railway Companies, for the conveyance of mails, no less a sum than £372 000 per annum. The contracts with the Companies are, we are told, to be more carefully looked after, and "the mail-coach office at St. Martin-le-Grand"—that last association of old coaching days, with the Angel, at Islington, and the White Horse Cellar, at Piccadilly, is to be abolished. There are many still living who can recollect, seventy years since, the first mail-coach.

Antiquaries—Irish antiquaries especially—are talking about the expected sale of the curious museum of antiquities, formed by the late Mr. Crofton Croker. Mr. Croker was rich in Irish antiquities, and especially strong in tobacco-pipes of all ages, shapes, and countries. But a more covetable treasure than any pipe was the autograph inscription of old the author of the "Fairy Queen"—a lease or an assignment of land connected with Spenser's Irish property, and signed by the poet's own hand. The autograph of Spenser is even rarer than that of Shakspeare.

The excuse of the Dean and Chapter of Westminster for not waiving the fees on the erection of the statue of Thomas Campbell is, that the monumental fee fund constitutes the fabric fund for the repair of the building. If this is the case, why, let us ask, is Westmin-ter Abbey with more monuments in it than all the cathedrals in England put together in such bad repair while some of our cathedrals, with no such fund, and statues of no rich value, are undergoing the most careful and conscientious repair? Making the fee fund a fabric fund is an ingenious mode of palliating what is, in some public cases (like this of Campbell, especially), an extortion, unworthy of any Dean and Chapter.

NATIONAL SPORTS.

From twice two hundred thousand throats, rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course, or more.
SIR FRANCIS H. DOYLE.

Just as Newmarket had re-assured itself, by the arrival of a string of Bariegih stud yearlings at Hartlebeck, that the Marquis of Exeter had again prepended him of quitting his much-loved turf, Mr. Greville's intended retirement (was whispered in the Spring) was officially announced. His racing career commenced in 1821, when he succeeded Mr. Warwick Lake as director of the Duke of York's string, which at that time included Banker and some eighteen others. After his Grace's death, in 1826, he became the sole possessor of the Royal "purple jacket and black cap," which, under Arnull's and Nat's auspices, have met Mr. Clark's eye first in many a well-foughten field for upwards of a quarter of a century. One of the first "cracks" he brought out was Whale by Whalebone, who beat Beiram, and ran second to Robin in the Goodwood Cup of 1832. His favourite mare Preserve also did everything that was asked of her as a two-year-old, but had the misfortune to encounter Queen of Trumps on the Oaks day. Two years after, he very unexpectedly won the St. Leger with Mango, who was ridden in a most dashingly courageous style by the late Sam Day, jun.; a result very little expected by those who had seen his heart-breaking finish with Rattrap, at Ascot. Mr. G.'s efforts to secure the Derby, were most fruitless, as Canadian, whom he purchased for 3000 guineas, went lame shortly before the race, and a *mid-prize* trial with a critical sporting paper, was the result, while Alarm threw Nat shortly after starting, and got entangled in the chains near Tattenham Corner. That son of Venison's subsequent triumphs in the Cambridgeshire Stakes, Emperor's Cup, Orange Cup, and 1000 Guinea match with Sorella, quite redeemed his Epsom failure; but he was, in his turn, after proving himself the highest class horse that his owner ever had, cut down, or rather fairly broken down by the tremendous speed of the Traveller in a 1000 Guinea T. Y. C. match. Mr. Greville bred nearly every one of his own two-year-olds; but, in consequence of his confederacy with Mr. Payne, he did not keep an extensive string. Frantic, Torment, Caribou, Adine, and Ariosto, rank among his most successful animals; but his stake winnings have never been very large. As a judge of racing he is almost unequalled, and his recent sale of fourteen yearlings, at an average of 441 guineas apiece, speaks volumes for his judgment in his favourite stud matters. Orlando, whom he purchased for 3100 guineas, at Colonel Lord Ribblesdale's sale, and Alarm, are his principal sires; he is also, we believe, the owner of Slane; and thus his indirect connection with the turf is not likely to be severed, as the first named is quite as much prized by him as ever Touchstone was by the late Marquis of Westminster or old Emilius by Mr. Thornhill.

The meetings at Egham and Wolverhampton were both barren in incident, and the running did not in any way bear upon the York and Doncaster events. Acrobat has come into favour again, and it is expected that he and Dervish will both show at York—one in the North and South of England Stakes, and the other in the Great Yorkshire. At present, Dervish is the "in-nide" of the stable; but, as Frank Butler is staying with Scott at Whitewall, and "waiting" to ride at York, a different decision may be arrived at when Lord Derby calls a Cabinet Council on the subject, after those events. King Tom is supposed to have been stopped in his work by the weak spring which failed him last autumn; and the on dit is, that he cannot be got ready in time. His friends have slightly rallied round him again; but, to our eye, he is more a Derby than a St. Leger horse, and we do not see how he is to beat Acrobat. Our belief is that the Baron's horse has been doing no work for some time past, and that he will never see the post. The Trapper is also said to be very infirm in his legs, and hence the present confidence of Scott's party that the road is clear for Dervish. Their present Goodwood exploit for him is that he was quite unprepared when he ran there. Alan is to be bought, at Richmond, to be better than Tros, and Calamus is not a little fancied by his stable. "The Squire" will probably start Champagne; and, to judge from previous running, there is not a pound between him and Scythian, though the latter has fifteen pounds the best of it in the betting. It is rumoured that Lord Eglinton (whose old favourite, St. Bennett, won a prize at the Ripon show) will not send Dirk Hatteraik to York—where he would have to contend with Mr. Baker's Exeter's rule, would not suit him without Prince Arthur and the remainder of his horses at Whitewall. Apropos of coursing, we may add that Mr. Brown's Doncaster sale includes forty-five lots, and it seems that the Bedlamite litter of six have won twenty-five cups, or stakes, divided eight, and run up for six—feats which quite place to on a par with the celebrated War Eagle litter, and confer double honour on the blood of the coal-black Figaro.

WOLVERHAMPTON RACES.—MONDAY.

Trial Stakes.—Gulcowar, 1. Calot, 2.
Produce Stakes.—Boddicot, 1. St. Clair, 2.
Wolverhampton Stakes.—Newbold, 1. Tas Vet, 2.
Committee Stakes.—Cimicina, 1. Evangeline, 2.
Ladies' Purse of 50 sovs.—Miss Hampton filly, 1.

TUESDAY.

Chillington Stakes.—Cossey, 1. Clara Clark, 2.
Free Handicap. Kennyside Hero, 1. Dagobert, 2.
Tasehill Handicap.—Amalgamation, 1. *Le Juif*, 2.
Cleveland Cup. Pegiry, 1. Defiance, 2.
Borough Members' Plate.—Venusian filly, 1. Red Deer filly, 2.

EGHAM RACES.—TUESDAY.

Betting Stand Plate.—Oxus, 1. Inder, 2
Surrey and Middlesex Stakes.—Sleeping Partner, 1. Diomedia, 2.
Long Chain Stakes.—Sancebox, 1. Wapiti filly, 2.
Runnymede Stakes. Herdeaux, 1. Sir Mark, 2.
Railway Stakes.—Crystal, 1. Oxus, 2.

MEGNA CHARTA RACES.—WEDNESDAY.

Megna Charta Stakes Saucebox, 1. Glenstrae, 2.
Fenchurch-street Handicap, 1 Mayday, 2
Tontine Stakes.—Oxus, 1. Warwick, 2.
Barons' Stakes.—Miami filly, 1. Miss Littler, 2.
Queen's Plate.—Black Swan, 1. Banstead, 2.
Prince of Wales' Stakes.—Chorus, 1. Vestige, 2.

ROYAL YACHT SQUADRON REGATTA.

The Royal Yacht Squadron Regatta commenced at Cowes, on Tuesday. The morning was in a fine degree propitious; but in short, afterwards the sun became obscured, dark clouds were visible around, and were soon accompanied by copious showers of rain and gusts of wind. At 57 minutes past one o'clock the preparatory gun was fired for vessels intending to start for the Royal Highness Prince Albert's Cup, of 100 guineas, for cutters and yachts belonging to the Royal Yacht Squadron. The following yachts were entered to contest for the prize:—

Yachts.	Tons.	Owners.
Arrow	161	.. Mr. T. Chamberlayne.
Julia	111	.. Mr. W. Peacock.
Osprey	90	.. Lieut.-Colonel Harcy.
Aurora	60	.. Mr. Le Marchant Thomas

At 10h. 2m., all being in readiness, the starting-gun was fired, when, as usual, the *Arrow* was the first to get away, but was followed closely by the *Julia*, which in her wake the *Osprey*, the *Aurora* being astern.

On the way down to the Nab Light the *Osprey* obtained the lead, and rounded it slightly in advance of the *Arrow*; but on the return homeward once of the *Osprey* going about and making back towards Appley, she lost the advantage, and took the second place.

After having passed the No-man Buoy, the *Osprey* seemed to have lost her position, for soon she was compelled to give up her second place to the *Julia*, that was close on her quarters, which was the order in which they passed Cowes Castle, on their way to Yarmouth. The *Arrow* was the first to round the mark-boat at this extreme point of the course, leading the *Julia* by but two minutes only; but scarcely had the *Osprey* rounded when one of her crew fell overboard and was drowned. The unseasonableness of the time made no find him, but without effect, and the *Osprey* and *Aurora* returned to Cowes at a late hour.

The course by the *Arrow* was performed, on the return to Cowes, in the most rapid manner we ever remember to have witnessed, arriving at the winning-post under

	h.	m.	s.
Arrow	3h.	35m.	0s.
Julia	3	50	0

The others, from the reasons above stated, were, of course, not timed.

In the evening a grand display of fireworks took place on the esplanade in front of the club-house, which drew together an immense body of persons. In the course of the evening, the *Fairy* and *Eliza*, Royal yachts, came down from Osborne into Cowes Roads, having on board Royal Highness the Prince of Wales, and other members of the Royal family, who had attended the regatta for the purpose of witnessing the pyrotechnic display. The Right Hon. the Earl of Wilton, the Commodore of the Royal Yacht Squadron, gave a dinner on board his splendid yacht the *Zara*, to a select party of friends.

THE FRENCH IMPERIAL GUARD.

(With Two Illustrations by Valentin.)

The splendid painting representing Napoleon bidding farewell to his Imperial Guard at the Palace of Fontainebleau is familiar to every one. On the restoration of the Bourbons to the throne of France, those magnificent legions were bereft of their distinguished designation. The eagles that soared triumphantly over the ensanguined plains of Austerlitz and Wagram, closed their spread pinions and lowered each haughty crest to the combined influence of the supporters of the fleur-de-lis. But, like the phœnix rising from her ashes, the Imperial Guard of Napoleon sprung into re-existence, imbued with additional ardour, to be quenched with the best blood of those devoted soldiers on the ever-memorable field of Waterloo. Long years have passed away since all that remained of the Old and Young Guard has been the memory of unsurpassed valour by which they immortalised the records of their time. But a new era has at length commenced, and the Imperial Guard of France once more starts into being, recalling to mind the exploits of those who in former days so often marched to victory, led by their idolised chief. The Illustrations now published, denoting the various uniforms of the recently-established Guard, are in every particular correct. Each regiment is portrayed in the costume selected by Napoleon III. as applicable to its particular branch. The entire force comprises a division and masters about 10,000 men. These troops are, of course, picked, being chosen on account of their soldier-like bearing and martial carriage; and consequently present, either individually or when in the ranks, an imposing appearance. Their arms and appointments are unexceptionable, and a finer body of troops could not be paraded. They are generally quartered in Paris, unless urgent necessity demands their services elsewhere. It is not possible in these pages to afford space for minute details particularising the minutiæ of dress assigned both for officers and men; but a general outline, aided by the Illustrations, will give the reader a correct idea of the new uniforms.

THE HORSE ARTILLERY

Is clothed in dark-blue cloth and collar, the latter edged with scarlet. The cuffs are likewise blue, with scarlet edging, and stripes of the same colour. The dolman is richly embroidered; and the busby or cylindrical head-dress is very similar to that worn by our Horse Artillery Brigade.

CUIRASSIERS

The uniform is dark blue, with red embroidery. The casque, or helmet, is of a novel description, fabricated especially for the corps. It is ornamented with a profusion of black horsehair, the sombre effect of which is relieved by a scarlet feather.

GUIDES.

This dress greatly assimilates to that worn by the English Hussar, but divested of the pelisse.

HUNDRED GUARDS.

These men compose the especial body-guard of the Emperor, forming the escort whenever the Sovereign moves out accompanied by troops. The portraits given in the woodcut offer excellent specimens of this force. They wear the short frock coat, with cuirass, jack-boots, and helmet. The latter is adorned with a high waving feather.

THE GRENADIERS

Are dressed in dark blue coatées, having white turn-backs in front, which are used, or otherwise, according to the duty they may be engaged on. Scarlet cuffs, and trousers the same colour as the coatée. The cap is black bearskin, with an eagle stamped on a brass plate, and fixed in front.

FOOT CHASSEURS.

The uniform is a blue tunic, cut very short, and grey trousers, extremely full. The men have greaves for the legs similar to those worn in the *régiments de Zouaves*, and spatterdashes or gaiters.

ENGINEERS.

This body closely resembles, in appearance, the *régiments du génie* of the line, except in the head-dress, which is the same as that worn by the Grenadiers.

THE VOLTIGEURS

Are distinguished by coatées of the jonquil colour, the trousers are blue, and the chacos handsomely ornamented.

Those who may desire further information respecting the French Infantry, could compass much knowledge in brief time by perusing Brigadier-General Forrest's "Memorandum for the Review of the Army in Paris, in 1852," published by Parker and Farnivall, Whitehall.

CHESS.

TO CORRESPONDENTS.

Bibliopole. Any information concerning the imperfect copy of Lucena's Treatise which we mentioned as having been sold a few years ago by the late Mr. Rodd, the bookseller, will be a welcomed as a real favour.

W. F. W. When either player is stalemated, the game is drawn.

G. J. Waterloo.—It shall duly examined

A Lover. Get the "Chess-Player's Handbook," and study the openings and endings of games.

G. Mon., Aberdeenshire, is requested to direct his *Problem on Invisible Chess* diagrams to the best we have seen are those published at the *Chess-players Chronicle* office), and to find out the lines by simply writing W. K. for White King, B. b. for Black Knp. &c.

A Beginner, Corpham.—To facilitate reference, you should have given the number of the page, and more full particular variation about which you were inquiring. If you allude to the first variation on Black's 7th move, at p. 68, we suppose that Q to K 2nd was not seriously meant, because it would cost Black a Pawn at least.

G. W., Perth; Rhenish, and Others.—The Solution of Enigma 574 is as follows:—

WHITE.	BLACK.	WHITE.	BLACK.
1. Q Kt to Q 4th	K takes Q Kt, or (a)	3. Kt to K B 3rd	P takes Kt
2. Kt to Kt 7th	P moves	4. B takes P—Mate.	

(a) 1. Kt to Kt 3rd | 1. Kt takes K B P | P to K R 3rd
(Here how...r moves but the result is the same.)
3. Kt to K B 7th—and Kt takes next move.

J. E. W., of Cambridge.—Shall examine and send
B. W. P. in return or two first moves, and then note and for amendment.
J. P. Under consideration. Your Problem is...
Fated-Pawman.—Chess is much more, and not nearly so well, played as it was. The best games of the present day are the Pawn and two moves below those of ten years ago.
Lover.—Any amateur possessing a copy of the Treatise by Lopez, Spanish edition, 1561, which he is desirous of selling may hear of a purchaser by advertising the Number.

SOLUTION OF PROBLEM 546.

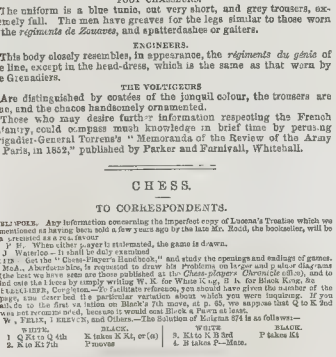
WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q B 4th	K to Q B 4th, or (a)	2. B to Q B 3rd	Anything
2. Kt to Q 4th (dis. ch.)	K to Q 4th	4. B to K sq	Anything
		5. B to Q B 3rd—Mate.	

(a) 1. K to Q B 6th
(If he play P to K R 7th, instead of moving his King, White replies with Kt to Q 4th (ch), and mate, easily in the stipulated number of moves.)
2. Kt to Q 4th | K to Q B 4th | 4. B to Q B 3rd (ch) | K moves
3. B to Q B 6th | B to K sq | 5. B mates

PROBLEM No. 548.

By Mr. W. Grimshaw.

BLACK.



WHITE.

White to play, and mate in four moves.

THE PROROGATION OF PARLIAMENT.

HOUSE OF LORDS.—Saturday.

Her Majesty prorogued Parliament on Saturday with the accustomed formalities. On the opening of the doors at twelve o'clock the seats in the House of Lords were speedily taken possession of by a host of brilliantly-attired ladies, whose presence, as is generally the case on such occasions, formed, with the exception only of Majesty itself, the most attractive feature of the spectacle.

About two o'clock the Earl of Aberdeen arrived, and remained in the House till the guns warned him of her Majesty's approach. Precisely ten minutes past two the trumpets sent forth their sound, and, headed by the Heralds, the procession entered the House—the Earl of Aberdeen carrying the Sword of State, the Marquis of Lansdowne the Crown, and the Marquis of Winchester the Cap of Maintenance; her Majesty entered, accompanied by Prince Albert, and attended by several ladies of her Court. According to the etiquette of the occasion, the whole of the persons assembled rose on the entrance of the Queen and took their places on the throne her Majesty twice or thrice intimated in the ordinary mode, a gracious inclination of the head, that they should be seated, but as the sign was not understood, her Majesty requested the Earl of Aberdeen to announce to them her pleasure that they should be seated. The Speaker of the House of Commons then addressed her Majesty very nearly in the following terms:—

We, your Majesty's dutiful and loyal subjects, the Commons of the United Kingdom of Great Britain and Ireland, attend your Majesty with the last bill of supply for the service of this year.

In reviewing the labours of the past session, we have humbly to thank your Majesty for your gracious permission to bring under our annual review a large amount of the public expenditure connected with the revenue departments, which have hitherto been exempt from Parliamentary control. It will be our duty in future years, with a just regard to economy, to make ample provision for these important branches of the public service.

In obedience to your Majesty's commands, we have endeavoured to dispose an effectual check on ordinary and corrupt practices at elections; and we venture to hope that the Act lately passed, with the early duties thereon, applies to them an adequate punishment. The heavy expenses under the present system will have the effect of preventing a practice which is make demoralising to the elector and destructive of the liberty of representative institutions.

We have given the most attentive consideration to the proposal for the just government and extension of the University of Oxford, by which certain oaths now required to be taken by students have been dispensed with, provision made for the establishment of private halls, and certain powers given both to the University and its Colleges. We have every confidence that these enactments will be received by all concerned in a spirit in which they have been framed, and that they will be able to extend the benefits of academical education to a large class of persons who, from their circumstances or religious opinions, have hitherto been precluded from the enjoyment of this privilege.

Various other measures have been submitted to us, but it has been found impossible to mature them during the session, as the progress of our legislation has been interrupted by the consideration of matters which, notwithstanding your Majesty's unremitting endeavours to maintain peace, has been pressed upon us by the unwarrantable aggression of Russia on the Turkish empire.

Deploring most deeply the necessity of such contests, we recognise the imperative duty of protecting an old and faithful ally from oppression, and of vindicating the rights and liberties of Europe.

And we believe it well becomes the character and honour of this great empire, adhering to the faith of treaties, to frustrate, if possible, the designs of a monarch whose ambition, if uncontrolled, would endanger the security of every nation in Europe.

Entertaining these views, your faithfully Commons have cheerfully, and without hesitation, placed at the disposal of your Majesty whatever supplies have been deemed requisite to carry on this just and unavoidable war, thus enabling your Majesty to send forth fleets and armies complete beyond all former precedent, in discipline and equipment.

The efforts of your Majesty to strengthen the army and aid the cause of Turkey have been cordially seconded by the Emperor of the French; and the joint forces of England and France, their ancient hostility converted into generous emulation, now threaten the coasts and harbours of Russia to the most distant extremity of her vast dominions.

The issue of this momentous struggle is in the hand of the overruling Providence. Confident in the justice of our cause, we look forward with hope to its successful termination, and with unabated energy and fortitude, that whilst war, in all its horrors, is raging abroad, your Majesty's subjects, under your Majesty's well-ordered and beneficent rule, are enjoying the blessings of uninterrupted tranquillity at home.

I have now to pray your Majesty's assent to a bill for the appropriating of the sums voted for the service of the year.

The Royal assent having been given to the bill, as also to the Customs Bill, and to the Russian Government Securities Bill, the Lord Chancellor advanced, and on bended knee, presented her Majesty with the following Speech, which her Majesty read in a clear and distinct voice:—

THE QUEEN'S SPEECH.

"My Lords and Gentlemen,

"I am enabled, by the state of public business, to release you from a longer attendance in Parliament.

"Gentlemen of the House of Commons,

"In closing the Session, it affords me great pleasure to express my sense of the zeal and energy you have shown in providing means for the vigorous prosecution of the war in which, notwithstanding my efforts to avert it, we are now engaged. This liberality in granting the supplies for the public service demand my warmest thanks; and, although I lament the increased burthens of my people, I fully recognise your wisdom in sacrificing considerations of present convenience, and in providing for the immediate exigencies of the war, without an addition being made to the permanent debt of the country.

"My Lords and Gentlemen,

"In cordial co-operation with the Emperor of the French, my effort will be directed to the effectual repression of that ambitious and aggressive spirit on the part of Russia, which has compelled us to take up arms in defence of an ally, and to secure the future tranquillity of Europe.

"You will join with me in admiration of the courage and perseverance manifested by the troops of the Sultan in their defence of Silistria, and in the various military operations on the Danube.

The engrossing interest of matters connected with the progress of the war, has prevented the due consideration of some of those subjects which, at the opening of the session, I had recommended to your attention; but I am happy to acknowledge the labour and diligence with which you have perfected various important measures, well calculated to prove of great public utility.

"You have not only passed an Act for opening the Coasting Trade of the United Kingdom, and for removing the last legislative restriction upon the use of Foreign Vessels, but you have also revised and consolidated the whole statute law relating to Merchant Shipping.

"The Act for establishing the direct control of the House of Commons over the charges incurred in the collection of the revenue, will give more complete effect to an important principle of the constitution, and will promote simplicity and regularity in our system of public accounts.

"I rejoice to perceive that amendments in the administration of the law have continued to occupy your attention, and I anticipate great benefit from the improvements you have made in the forms of procedure in the superior courts of common law.

"The means you have adopted for the better government of the University of Oxford, and the improvement of its constitution, I trust will tend greatly to increase the usefulness and to extend the renown of this great seminary of learning.

"I have willingly given my assent to the measure you have passed for the prevention of bribery and corrupt practices at elections; and I hope that it may prove effectual in the correction of an evil which, if unchecked, threatens to fix a deep stain upon our representative system.

"It is my earnest desire that, on returning to your respective counties, you may preserve a spirit of union and concord. Deprived of the blessings of peace abroad, it is more than ever necessary that we should endeavour to confirm and increase the advantages of our internal situation; and it is with the greatest satisfaction that I regard the progress of active industry, and the general prosperity which happily prevails throughout the country.

"Deeply sensible of these advantages, it is my humble prayer that we may continue to enjoy the favour of the Almighty; and that, under His gracious protection, we may be enabled to bring the present contest to a just and honourable termination."

The Lord Chancellor then declared that it was her Majesty's pleasure that Parliament should stand prorogued till Thursday, the 19th of October, and that Parliament was accordingly prorogued till that date.

HOUSE OF COMMONS.—Saturday.

The Speaker took the chair at half past one o'clock. There were about sixty or seventy members present.

THE WAR.

Mr. Hume having urged some inquiries touching the precise nature of the recent diplomatic communications from Austria, alluded to on a former evening in the Upper House,

Lord J. Russell explained the existing state of our political relationship with the German powers, so far as official discretion permitted him to do.

OBITUARY OF EMINENT PERSONS

THE KING OF SAXONY.

Frederick Augustus, King of Saxony, who perished by an accidental death at Innspruck, on the 9th instant, was the son of Duke Maximilian of Saxony, and was born on the 18th May, 1797. He succeeded, on the 6th June, 1836, his uncle, the old King Antony, with whom, for the previous six years, he had been associated in a co-regency. His father, Duke Maximilian, was next in the death of King Antony, but had renounced his own inheritance to the crown, by a public act, on the 13th of September, 1830. Frederick Augustus was twice married. His first wife, whom he wedded on the 7th October, 1819, was the Archduchess Caroline, daughter of Francis I., Emperor of Austria: she died on the 22nd May, 1832 before her husband ascended the throne. Frederick Augustus espoused, secondly, Maria Anna Leopoldine,

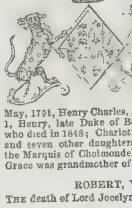
fifth daughter of Maximilian I., King of Bavaria, and twin sister of the Archduchess Sophia, mother of the present Emperor of Austria. King Frederick Augustus had no issue by either marriage, and is succeeded on the throne by his only brother, John Népomucène, now King of Saxony, who was born the 12th Dec., 1801; and married, the 21st Nov., 1822, Amelia, third daughter of Maximilian I., King of Bavaria, and sister of his brother's second consort. By this marriage his present Majesty of Saxony has two sons and eight daughters.

The late King, Frederick Augustus, except in the revolutionary agitation of 1830, when he was made co-Regent, took, personally, little part in politics. He possessed much scientific and literary taste and talent. He translated Dante into German. In his stay in England, a few years back, his high intelligence and educated manners were generally remarked. His successor, the present Monarch, is also a man of learning and letters.

A Portrait of his Majesty appeared in the Illustrated London News.

CHARLOTTE SOPHIA, DUCHESS DOWAGER OF BEAUFORT.

The death of the Duchess Dowager of Beaufort occasioned, after a very brief illness, on Saturday the 12th inst., at Westbrook-hall, near Berkhamstead. Her Grace, who had completed her 83rd year, having been born 11th January, 1771, was second daughter of Granville, first Marquis of Stafford, by Susannah, his second wife, daughter of Alexander, sixth Earl of Galloway; and was sent consequently to the present Duke of Suthe land, the Earl of Ellesmere, the Earl of St. Germans, and the Earl of Harrowby. Her Grace married, 16th May, 1791, Henry Charles, sixth Duke of Beaufort, K.G, and had issue: 1, Henry, late Duke of Beaufort; 2, Lord Granville Somerset, M.P., who died in 1848; Charlotte Sophia, wife of Frederick Lord Calthorpe, and seven other daughters. Of these, Susan Caroline married, in 1830, the Marquis of Cholmondeley, and Blanche, the Earl of Galloway. Her Grace was grandmother of the present and eighth Duke of Beaufort.



ROBERT, VISCOUNT JOCELYN, M.P.

The death of Lord Jocelyn, from an attack of Asiatic cholera, occurred on the 12th inst., at the residence of Viscount Palmerston, in Carlton gardens. He was seized with the fatal illness on Friday afternoon, while fulfilling his duties at the Tower, as Colonel of the Essex Rifles, now quartered in that fortress. His Lordship was born 20th February, 1816, the eldest son of the present Earl of Roden, by Mari Frances Catherine, his wife, daughter of Thomas, Lord Le Despencer. Early in life, he served in the Rifle Brigade, and was on the staff of Lord Saltoun, in the China Expedition of 1842

—the results of which he published in a popular volume, entitled "Six Months in China." Towards the close of Sir Robert Peel's Administration, he filled the office of Secretary to the India Board; and within a few days of the retirement of Lord Derby's Government, he accepted the Secretaryship at War, in the room of Major Beresford; but the break-up of the Ministry, which immediately followed, prevented the actual appointment.

Lord Jocelyn sat in Parliament for King's Lynn. He married, in 1841, Lady Frances Elizabeth Cowper, youngest daughter of Viscountess Palmerston by her first husband, Earl Cowper, and by her, who is Lady in Waiting to her Majesty, leaves two sons and two daughters.

The Airdrie Riots.—The number of persons now in prison for being connected with these riots is twenty-nine. A strong feeling against the Roman Catholics engaged in the mines has begun to show itself. It is said that several of the pits had struck work until they should be expelled.

London Model Yacht Club.—A third-class sailing-match will take place on the Serpentine river, on Monday next, at two o'clock.

The Hampshire Militia are about to be embodied for permanent duty at Winchester, and on Tuesday considerable quantities of regimentals, &c., were forwarded by the railway for their use.

The Miners of Derbyshire.—Festivities at Clay-cross.—Mr. Peto, M.P., Mr. W. Jackson, M.P., Mr. W. Evans, late M.P. for the north division of Derbyshire, and a large number of influential gentlemen interested in the moral elevation and material prosperity of the industrial population in the coal-mining districts of which Chesterfield may be said to be the head, assisted at a very interesting ceremony, on Tuesday last, at Clay-cross. This village is picturesque y situated, about 4½ miles from Chesterfield, upon what was once the great North London road. Twenty years ago not a dwelling-house was to be seen in the neighbourhood, and already it contains between 600 and 700 houses, one church, three chapels, and a population of more than 3000 persons; the greater number of whom are employed in the coal-pits in the neighbourhood. The wages average from 24s to 30s. per week, with constant employment and a continual demand for labour. Hence the cause of the festivities of Tuesday; for the population has long so greatly increased, the school became quite inadequate to the educational requirements of the children, and the Clay-cross Company, comprising Messrs. Peto and Betts, Mr. Jackson, M.P., and Sir Joshua Walmsley, M.P., undertook to build a new school—the laying the foundation-stone of which is recounted in festivities. After the ceremony the company repaired to a tent which had been erected for the occasion, where a very elegant and substantial cold collation was served to about 300 or 400 persons. A number of appropriate toasts was given, and the company withdrew about five o'clock, much pleased with the interesting proceedings of the day.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The French Institute has just lost one of its members, M. Alexandre Langlois, of the Academy of Inscriptions and Belles Lettres. He died on Friday, at Noyent-sur Marne, aged sixty-eight.

Lord Howden has subscribed towards the presentation of a sword of honour to General Evaristo San Miguel. The subscriptions are limited to 100 reals.

The *California Chronicle*, of June 30, announces that Miss Catherine Hayes intended leaving for Australia during the following week.

Mr. Tom Taylor, of the Inner Temple, barrister-at-law, has been appointed Secretary of the New Board of Health—£1000 per annum.

Her Royal Highness the Princess of Prussia has proceeded from Coblentz to Baden-Baden for the benefit of the waters.

The annual regatta at Havre is fixed for the 3rd September. It is to be under the patronage of Prince Jerome. Invitations have been sent to the owners of boats in England, Holland, and Belgium, to take part in it.

The *Washington Union* contains the official announcement of the appointments of Robert B. Campbell, of Texas, as Consul to London.

According to a letter received from Athens, the insurgent chief Hadji Petros will shortly go to St. Petersburg, viâ Trieste and Vienna, where he is expected in a few days.

Mr. Carcen is not attired in the Clonmel prison costume, and he partakes of all dainties he prefers, at his own expense, excepting wine and whisky.

The King of Denmark is out in his yacht. He travels *incognito*, under the name of the Count of Danner. He proposes to visit the estate of Elisholm, near Carlshamn, in Blekting, Sweden, and various other places.

The King of Portugal has in a great measure recovered from his indisposition at Berlin, and will be enabled to continue his journey to Vienna in a day or two.

The Mayor of Pau has publicly announced that the French Emperor and Empress are expected there on August 20th.

Apartments are being prepared at Buchurest for two Austrian Princes, the Duke of Cambridge, Prince Napoleon, Marshal St. Arnaud, Lord Raglan, and Omer Pacha.

The Emperor of Austria left Vienna on the 10th for Ischl, where he will remain until the 20th. His birthday—the 18th—will be celebrated there. There is no longer any idea of his Majesty going to the army.

The Prince and Princesse de Joinville are sojourning at the Victoria Hotel, St. Leonards, for [illegible] or six weeks. The Duke and Duchess d'Aumale are the visitors of his Royal Highness.

A vacancy at the Post-office has occurred during the sudden death by cholera of Mr. J. P. Godby, the chief clerk to Mr. Rowland Hill. The salary is £650 a year.

M. Meyerbeer has received an invitation from Vienna to superintend the *mise en scène* of "Le Prophète" in that city. The great maestro will proceed thither immediately after witnessing the first representation of his new chef-d'œuvre at Stuttgard.

Mr. Charles Compton and Mr. William Greer, the Accountant and Deputy Accountant-General of the Post-Office, have retired, after their respective services of forty and forty-two years.

Captain De Richenberg, A.D.C. to the late Duke d'Elchingen, and M. Michel Ney, son of the deceased, have just brought to Paris from Gallipoli the heart of the General, which will be placed in the family burial-place at Ere in Chaise, after the celebration of a mass to the memory of the deceased in the chapel of the cemetery.

The family of Mr. Wilhem Smith O'Brien received a letter this week from that gentleman, dated the last week in May, from Van Diemen's Land, when he was preparing to avail himself of her Majesty's gracious pardon, and to leave the colony for Europe. Mrs. Smith O'Brien and other relatives will meet the liberated exile at Brussels, where it is probable he will reside.

Experimental trains were to commence running upon the Belgian Railway about the middle of July, and it was to be opened in the beginning of August by Lord Palmerston.

Sir James Graham, who has been suffering from an attack of pleurisy, was so much better on Saturday as to be able to attend a meeting of the Board of Admiralty.

The latest returns of the Canadian Parliamentary elections gave the return of 64 Reformers and 22 Conservatives.

The Norwegian Parliament has granted, by a vote of 58 to 42, a sum of 20,000 dollars for the purchase of an agricultural scientific farm, and [illegible] dollars for buildings on the same; and 3000 dollars yearly for [illegible] agricultural lectures.

Never at any period within the memory of man was there more activity in mining operations in Cumberland than at the present time.

Through the activity of the Prussian police, a gang of Hebrew swindlers have been detected, whose object was to defraud English life-assurance companies.

Garotte robberies have of late been of frequent occurrence in the neighbourhood of Ecklington, in Yorkshire, and the thieves have, in every instance, escaped detection.

A project for building a new theatre near the Hôtel de Ville, Paris, which has been several times entertained, is now said to be seriously on the *tapis*. The new establishment destined to represent Napoleonic melodramas on a grand scale is likely to be opened contemporaneously with the Théâtre Lyrique on the Quai Napoléon.

The directors of the London and New York Steam Ship and Lancashire Railways have contributed £100 towards the formation of a reading room and library for the servants employed at the docks at Salford.

The *Giornale di Catania* announces that the harvest has been most abundant in Sicily, and that good hopes are entertained of the wine crops.

A set of illustrations copied from Dr. Hall's Treatise on Physiology have been recently published at Canton, at the expense of the father of Yeh Kwang-ming, the present Governor of the Two Kwang. These drawings have been transferred to wood-blocks and executed in a style that would do credit to a first-rate European artist.

The *Journal de St. Petersburg* affirms that only "one or two bankruptcies have occurred in Russia since the commencement of the war;" and, as a contrast to the above, a list is supplied of thirteen houses in London alone which have failed for more than £35,000 since the declaration of war, amounting in all to £1,450,000.

A ragged and industrial school was opened in Monday in the borough of Salford. The Mayor of Salford presided, and the Bishop of Manchester, the Hon. Canon Stowell, and many other [illegible] were present.

The great Swedish electric telegraph line is now complete, connecting the Danish and Swedish lines.

During the last four years 97,146,015 lb. of paper rags were imported into the United States, at a cost of 3,283,[illegible] dollars, or 3½ cents per lb.

The British Archæological Association will hold its annual meeting this year at the town of Chepstow. On Monday, the 31st inst., proceedings will commence, terminating on the following Saturday, the 26th.

The expense incurred in taking the Census of Great Britain in 1851 was £.26,487, or not quite 1½d. per head.

The expenses of removing the barricades in Madrid are estimated at £10,000 sterling.

There are now fourteen screw colliers running between the Tyne and the Thames; and during the month of July they carried 21,787 tons of coals to London, equal to 8 per cent of the entire importation by sea.

The Minister of Finance at Buenos Ayres, out of the receipts, has been able to clear off about two millions sterling of arrears, and is seeking permission to expend 2,000,000 dols. in the erection of a new custom-house.

The arrivals of specie last week were to the amount of about £376,000, of which the shipments were very small, the certained amount being under £100,000.

The Bavarian Government has decided that henceforth executions shall take place by means of the guillotine in all the provinces, as has heretofore been the case in the Palatinate.

The last return of the Bank of France, just issued, shows a decrease in its stock of bullion of £905,000, the total held being [illegible] millions sterling.

The concourse of pilgrims this year at the shrine of Jasna Gora was unusually great, and the consequent scarcity and high prices [illegible] produced much suffering. Hundreds of pilgrims, weakened from want of food, were lying in the streets awaiting certain death.

An old woman named Janet Thompson died last week in Stromness, aged 102 years. Within a day or two of her death she was walking about in her usual state.

The number of German emigrants who embarked at Antwerp during the first six months of the present year amounted to 15,895, being more than in the whole of last year. From the 1st January to the 1st July, 19,000 Swedes emigrated, being 1 in 300 of the whole population of that country.

LITERATURE.

THE DRAMATIC WORKS OF MARY RUSSELL MITFORD, "Author of "Our Village," "Atherton," &c., &c. 2 vols. Hurst and Blackett.

Not many months have passed away since Miss Mitford's last tale, "Atherton," appeared—a pleasant story, told with all the simplicity and freshness which had characterised the earlier publications of the authoress of "Our Village." Yet, from the preface, we learnt with regret that, though the intellect remained unimpaired, and the imagination unclouded, failing physical power had imprisoned the lover of nature, and that all the pleasant scenes of "Atherton" were not the fresh impressions of external objects, but the creations of a lively imagination and a faithful memory.

So it seemed that no new work could be looked for from Miss Mitford's pen. Indeed, "Atherton" itself was like the renewing of youth, after that the publication of "Recollections of a Literary Life" had gently and gracefully rounded in and completed her long literary career. And now it falls to our lot to notice briefly another work, which brings Miss Mitford before us as a dramatist—a character in which few of her readers of the present day will be acquainted with her. For, though several of the plays now collected in these volumes were represented on the stage, and met with no doubtful success, nearly a generation in the lifetime of man, and far more than a generation in the lifetime of the drama, has passed away since they were first presented.

A few sentences from the introduction to these volumes may perchance recall to some the period of which Miss Mitford thus writes:—

It was a time of great actors. Jack Bannister and Jack Johnston (they would not have known their own names if called John), Fawcett, and Emery, Lewis, and Munden; Mrs. Davenport, Miss Pope, and Mrs. Jordan, most exquisite of all, made comedy a bright and living art—an art as full as life itself, of laughter, and of tears; while the glorious family of Kemble ravished alike the eye and the intellect, the fancy and the heart. John Kemble was, however, certainly Miss Rowden's chief attraction to Drury-lane Theatre. She believed him—and of course her pupil shared in her faith—the greatest actor that ever had been, or that ever could be greater than Garrick, greater than Kean. I am more catholic now, but still I hold all my admiration, except its excitement. If Keeble's reputation have been injured, as I think it has, by his own double talent as an actor and a mimic; so the fame of John Kemble, that perishable actor's fame, has suffered not a little by the contact with his great sister. Besides her uncontested and incontestable power, Mrs. Siddons had one advantage not always allowed for—she was a woman. The actress must always be dearer than the actor—goes closer to the heart, draws tenderer tears. Then she came earlier and took the first possession; and she lasted longer—charming all London by her reading, whilst he lay in a foreign grave.

Will any one be able, some thirty years hence, to look back, and write in such terms of the "impressions" received of London actors? Certainly, in one point, at least, we are approximating to Plato's ideal state; the drama, whose power he so dreaded, is powerless among us, and we look not, now, the sentence of expulsion which he pronounced against it, deeming its presence, under any restrictions, too dangerous. Kingdoms may again be lost, as they have been, by a song; but we cannot imagine a revolutionary drama fraught with peril to the Throne. And yet, not so very long ago, we learn that "Charles I.," one of the very best of these plays, could not be performed, because "Mr. George Colman, the licenser, saw a danger to the State in permitting the trial of an English Monarch to be represented on the stage, especially as a Monarch whose martyrdom was still observed in our churches." However, it would appear that "It was afterwards produced at a minor theatre, with no ill effect to the reigning dynasty."

All the power which the stage ever exercised over public opinion, it has long ago resigned to the press. The attraction it now holds out consists, mainly, of splendid spectacles to attract the eye, or witty dialogue, not always attempting to conceal its foreign origin, which may amuse one during an hour of leisure, hardly claiming even the name of comedy. But, for the legitimate drama, the drama in grave, or even lively, but still, would once little now, even were it as ably represented as it was in its most palmy days. And the reasons of this may perhaps be, that men in the present day live so much harder—there is so much more wear and tear of all their energies, both of body and of mind, than there was fifty years ago—that they are not willing to buy their pleasure at the cost of having their feelings as strongly excited, and their attention as keenly aroused, by fictitious sorrows, or triumphs, as though they were their own. And, further, when Pope gave his celebrated dictum—

The noblest study of mankind is man—

perhaps the easiest and most interesting way of pursuing that study was by witnessing a good play. But now that the sphere of our inquiry and knowledge has been so incalculably extended, many new truths have been brought to light, and so many interesting questions still remain waiting a solution in physical science, it is permissible almost to doubt the truth of the saying, and to question the right of the philosophy of human nature to so high a position.

Still, the study of men's actions and motives must always possess some interest; and so, though the taste for dramatic representations has declined, plays are more read now than perhaps they ever were before. And there is no lack of modern dramatic writing to meet this desire; indeed, the existence of it has had an injurious effect on very many plays. In writing for the closet, rather than for the stage, they have become too subjective, aim more at the expression of feelings than the development of character; at the analysis of mental processes rather than the natural presentation of scenes and actions. Miss Mitford's simplicity and freshness, no less than her early dramatic studies, have preserved her from this fault: her scenes are before us with all the force of reality, and she is too good a judge of effect to mar a telling situation by too many words.

After reading over the plays contained in the first volume (all of which have been acted), it is easy to understand how the two tragedies of Julian" and "Foscari") fought each other for the palm of precedence during the best part of the season; which was quite much like a duel between one's right hand and one's left."

We cannot refrain from extracting the paragraph immediately following, for it gives a good instance of a kindly and warm-hearted [illegible] which is to be found throughout the introduction. It runs thus:—

Great at the moment were these anxieties and tribulations—the matter that money arrangements most important to those dearest to one than myself were staked on the issue. But it is astonishing how little, in the course of one's own mind, and good to tell to others who may be exposed to such trials, how inevitably, as according to some happy law of nature, the keenest physical pain is known to be soon forgotten, while pleasures light traces are indelible; so, in mental vicissitudes, Time carries away the bitterness and leaves the sweet. The vexations and the injuries fade into the dim distance, and the kindness and the benefit shine vividly out.

A pleasant and truly Christian philosophy this! There follows a most humorous description of a theatre, and all its ways and doings, which we can only recommend to our readers' notice, being too long for extraction as a whole.

To revert to the plays. Despite the popularity which "Foscari" and "Julian" appear to have achieved, we would place both "Charles I." and "Rienzi" above them. Although "Foscari" is, in the construction of the plot, not a little superior to the "Two Foscari" of Byron, still there is some truth in the author's own criticism upon it, though too severe—a womanish play, which acts better than it reads; while in "Julian," though the incident itself on which the whole story turns is probable and effective, there is an improbability in Melfo's still endeavouring to seize the crown, when he knew that his own son Julian was aware of the existence of the rightful heir. True, he counted on Julian's ambition, but he should have known that it could not avail against his honour and loyalty, to say nothing of his affection for his son Adalbert, and had he abandoned the attempt, there re-appearance of the boy king might easily have been explained by a story of ransom from the banditti, his supposed murderers. Still it is a most powerful play. Neither of these objections can be urged against "Charles I." or "Rienzi." The character of *Cromwell*, as conceived in the former, may not be so attractive as the ideal hero of Mr. Carlyle, but it seems truer to history. And the development of the character in the course of the play is most admirable. From the moment when he seizes up the chance word of *Ireton*—

Rather move the Commons
To bring the King to trial—

and endeavours to forget it himself and to persuade the rest to see in it [illegible] he [illegible] to the wicked suggestion has become a fixed idea, till he appears as the active mover, forcing on by all means, fair or foul, those who feared to do what they had planned; and onwards still, to the last, worst state of all, when the evil-doer succeeds in believing that he does God service, and, glorying over the dead, he vouches—

This deed is mine—

the character is one—harmonious and consistent throughout.

Many are the beauties in "Rienzi." Very noble and impassioned is his speech at the secret meeting on the Capitol; but we have not space to give it here. One extract we must give from a very powerfully-written scene, towards the close of the play:—*Angelo Colonna*, the husband of *Claudia*, *Rienzi's* daughter, has revolted, and is doomed to death; the pardon, hardly won for him by *Claudia*, is too late; and *Lady Colonna* enters crying, "He's dead!" The poor wife falls, stricken to the heart: and she resumes, her very anguish at first restraining her vehemence:—

He is dead! I saw the axe, fearfully bright,
Wave o'er his neck with an edgy shine that cut
My burning eyeball; saw the butcher stroke
And the hot blood gush like a fountain high
From out the veins, and then I heard a voice
Cry, pardon! heard a shout that chorused, pardon!
Pardon! to that disjoined corse! Oh, deep
And horrible mockery! so the fiends shall chant
Round my tormented soul, and pardon, pardon,
Ring through the depths of hell!

Terrible, too, is the curse with which she rushes forth to plan revenge—

A widow's and a childless mother's curse
Rest on thy head, Rienzi! Live, till Rome
Hurl thee from thy proud seat! live, but to prove
The extasy of scorn, the proud contempt
That waits the tyrant fallen! then die, borne down
By mighty justice! die, as a wild beast
Before the hunters! die, and leave a name
Portentous, bloody, brief, a meteor name.
Obscurely bad, or madly bright! My curse
Rest on thy head, Rienzi!

Turning to the dramas which are now for the first time given to the public, we have first an opera, founded on the old tale of the "Waters of Oblivion," to which most musical and graceful songs lend an additional charm, being interwoven with the plot, and helping on the action, like the chorus of the old Greek tragedy. And then comes Miss Mitford's chef-d'œuvre, "Inez de Castro"—far the most wonderful play in these volumes. What most strikes the reader in the earlier plays, is the terseness and almost masculine vigour of the diction, and the propriety of the imagery employed; but, in the later play, there is an indescribable grace and elegance which seems to spread over the whole, from the beautiful centre character of *Inez*. She is the most beautiful creation in these volumes—tender and loving, trembling at the smallest danger for her husband; but, when tried for the crime of wedding the Prince, fearless and bold for herself, moving by her courage the stern King; and at last making herself the sacrifice, that her blood might stay the strife of father and son, which the crafty *Manuel* depicted to her. And *Constance*, slighted, hating her successful rival; and yet, true woman after all, coming forward to plead for her life, when condemned. And the stately Monarch *Alphonso*, refusing to answer his revolted son before submission, yet willing to pardon and show grace. And *Pedro*, the frank, rash, fearless soldier, one moment in fierce rebellion, and the next trusting all to his father's mercy. We will give no extract from this play. The reader must find it "one entire and perfect chrysolite." Once begun it will not be lightly laid aside again.

"Gustave Blondeville," the only prose drama, gives an opportunity for considerable powers of humour, which could hardly have been displayed in any of the tragedies. Unfavourable criticisms of the supernatural machinery of this drama is at once disarmed by the frank avowal in the introduction that it was composed for a "spectacle—a play to look at on the stage."

The last play of which we have to speak is "Otto of Wittelsbach." It would require, as the author herself says, an actor powerful both in mind and body, to undertake the part of the haughty impetuous *Otto*, the redresser of wrongs by the strong hand; and then the miserable repentant man, driven from his castle to the caves and coverts of the rocks, till, at last, like the prodigal, he is feasted and he is brought to buy in the halls from whence he went forth. One extract, of great beauty, and we must bring our comments to a close. *Ida*, his devoted daughter, hears of the death of her young brother, worn out by suffering; from the following words of her father:—

Call me—no, there is no word
For my despair conceived sin. The mind of men,
When fanaticism, the myriad sounds that lend
A winged life to thought, never framed a name
For the misery of his children. I was born
To be that first worst murderer. Alas!

Ida. Then he is dead, mine own sweet brother.

Otto. Ay;
I never can speak even by the thin [illegible]
Of [illegible] the [illegible] tender sapling. Thee
The [illegible] I present [illegible]
Ida. Oh, rise! I cannot bear to fall out of him, father!
I will not leave thee. None shall sever us—
Not [illegible] I'll cling to thee in life—
In death, [illegible] ay, and thee in the living words
Around the fallen ones. I'll follow thee
Through the wide world; tend on thee; comfort thee;
Make a home for thee in the savage woods,
Or the caves of the sea-shore! Oh, look upon me
As thou wast wont! Bury not in his grave
All love! Hold me not from thee! Scorn me not!
I am thine own poor child

Otto. Oh, bruised flower,
Whose odorous perfumes breathe the [illegible] sweet!
Around the foot that crushes thee! [illegible]
Wicked [illegible] [illegible] hold on [illegible]
To [illegible]

Such writing [illegible] not with [illegible] This question naturally arises, why have such plays as "Inez," and "Otto" been permitted to slumber in their solitariness so long, when both actors and managers are eloquent in their denunciation of the dearth of original writing fit for the stage? How often are we forced to forsake freshly translating from the French. How few plays worthy the name of the British drama. Which of our spirited managers will manifest their confidence in native talent by producing it for the public? Helen Faucit has once retired from the stage, she has Miss Glyn finally bidden farewell to a London audience. Why may we live there will not be wanting ladies capable of representing [illegible] in a manner the passionate purity of *Inez*, nor the affectionate fondness of the tender *Ida*. While we [illegible] Mitford lays proudly possessed of stirring action according to the stage, they have [illegible] a [illegible] of a well-defined [illegible] the [illegible] of [illegible] for the peaceful retirement of the study.

Of all the dramatic authoresses, "Fair Rosamond" seemed to us the most pleasing; perhaps, because in this case, previous knowledge furnishes all that a dramatic sketch usually has to supply, as best it may, to explain itself. In this, as in all her plays, Miss Mitford shows great judgment as to the time she says not a word too much. If any one wishes to estimate the naturalness and truthfulness of these dramas, let him read the aforesaid "Fair Rosamond," and then we will not say read, but try to read, an opera of the same name, by one Joseph Addison, which those who, like the writer, know Miss Mitford only through her works, will unite in cordially wishing her many years yet—we cannot say of more perfect peace of mind, but of greater ease of body—and that the day comes to which she seems to be looking, we shall feel that a true lover of nature, and therefore a true poet, has passed from our midst.

"THE LAUNCH." BY G. SMITH.

This [illegible] little affair represents an [illegible] Monday life. Amongst a group of [illegible] with [illegible] boats, [illegible] more adventurous than the rest, [illegible] at starting upon a voyage of discovery in a washing-tub. On [illegible] expression of [illegible] and [illegible] of the [illegible] bark with a [illegible] and [illegible] the [illegible] features of the [illegible] [illegible] [illegible] [illegible]

FINE ARTS.

THE LAUNCH."—PAINTED BY G. SMITH.

have some misgivings as to the result of the day's proceedings. The surrounding landscape, and the figures introduced in the distance, are well conceived; and the whole is painted in a free and effective style. This picture was exhibited at the Royal Academy in the season 1853.

AN OLD ENGLISH HOMESTEAD," PAINTED BY R. REDGRAVE, R.A.

(No 212 OF THE ROYAL ACADEMY EXHIBITION.)

It is a characteristic of human nature that it delights in contrasts and contraries. When people think of Mr. Redgrave, they think of the cool saloons of Marlborough-house, and the hot rooms of the School of Design. He is often in them. It is true; but at home he is thinking of other places—of shady glens and green lanes; of trawling brooks, and hedgerow elms; the morning grove; the evening colonnade of trees that overhang one another so thickly that the sun is seldom seen to penetrate through them; of pools abounding in trout; of lane-side cottages from which the smoke is seen to curl with an un-London-like tinge—of spots dear to the heart of the Dutch Hobbema and the English Gainsborough. Mr. Redgrave thoroughly understands what the English comprehend—landscape painting. We feel that he renders truly what is before him; no common merit that he is not attempting to improve on nature. He has little (by choice, perhaps) of the invention of a landscape-painter: he does not poetise; he looks on nature, not as Thomson, or Turner, or Milton, or Claude—with an eye microscopically true, but more alive to results; but views it as Hobbema saw it, and as Cowper saw it. "If we feel," says Coleridge, in his brief but famous parallel between Thomson and Cowper, "that Cowper is the more faithful adherent to nature in detail, we are equally assured that Thomson is the truer poet." So with Mr. Redgrave. We should be content to surrender many an ambitious landscape, by Zuccarelli or Poussin for his tranquil and truly excellent "Old English Homestead," engraved in our present Number.

"AN OLD ENGLISH HOMESTEAD."—PAINTED BY R. REDGRAVE, R.A.

HARWICH.

OPENING OF THE HARWICH RAILWAY.

THIS important line of railway, which will considerably shorten the distance between the metropolis and the Hague and the northern part of Europe, has just been completed and surveyed by the Government Inspector, preparatory to its being opened for passenger traffic. The line branches off from the Eastern Counties, at Manningtree, and the works are of a solid and generally favourable character. The harbour of refuge is making rapid progress; ample accommodation is being provided for the steam boat traffic, and so rendering the port the principal passenger and mail-packet station on the east coast. With a view of seeing what could be done, a trial trip was recently made to Antwerp, by the new iron mail-steam-ship *Aquila*, one of the fleet of the North of Europe Steam Navigation Company. Several gentlemen were on board: among them were Mr R. Stephenson, M.P.; Mr. Peto, M.P.; Mr Bidder, C.E.; and Captain Andrews. The *Aquila*, which is about 200-tons burden, was designed by Mr. John Dudgeon, and is a first-class mail-packet. She is fitted with a pair of oscillating engines of 120-horse power. Her average speed was seventeen miles an hour during the trip, which she accomplished in a very satisfactory manner, proving herself to be an excellent sea-boat. On the return trip the *Aquila* proceeded to Gravesend, which distance she performed in twelve hours, a remarkably rapid run By the opening of this branch line and the running of the steamers, passengers leaving the metropolis in the morning will reach Antwerp or Rotterdam early in the evening.

The line was opened to the public on Tuesday last. The day was only fixed on Monday, when the authorities called a public meeting at the Town hall, at which a resolution was passed calling upon the people generally to regard the next day as a public holiday, and the shopkeepers to close their shops. Meanwhile, arches were erected, banners, &c., were provided, and Tuesday opened with prospects as cheering as the morning was bright. The bells rang early, and a large crowd assembled to witness the departure of the first train, at eight o'clock.

A band of music, having paraded the street, ascended a decorated platform built over the line near the Harwich station; and the train started, amid music, firing of cannon, &c. A large number of the inhabitants were passengers in the train, which passed along the Essex bank of the river Stour, which, with its beautiful scenery, is scarcely lost sight of for the entire distance to Manningtree. On arrival of the down-train at eleven o'clock, an immense concourse had collected to cheer most enthusiastically their friends and the authorities it conveyed. Altogether it was a day of promise for the people of Harwich who are looking for great things from this line and the North of Europe steamers which are shortly to be put on the station. In the evening a large party of gentlemen—including Mr. J Bagshaw, M.P. for the Borough; the Mayor, &c.—dined together at the Cups Hotel.

ORIENTAL AND TURKISH MUSEUM.

THE engrossing interest of the present Eastern crisis, and the sympathy so extensively manifested for Turkey, in her struggle for independence, seemed to offer Messrs. Oseanyan and Arnavour, the enterprising managers of the present undertaking, a peculiarly favourable opportunity for the formation of an Oriental Museum—being a collection of Turkish costumes, armour, figures, &c., illustrative both of the political institutions and social habits of the Osmanli nation. The idea once adopted

THE TURKISH EXHIBITION AND MUSEUM, HYDE-PARK-CORNER.—A TURKISH DINNER PARTY.

was immediately and zealously put in course of execution, but the number and variety of the subjects undertaken involved an amount of work which could not be performed in a hurry. Accordingly, we understand that not less than ten months of assiduous labour, with a proportionate amount of capital, has been bestowed upon getting up the present exhibition. The apartment in which it is held is the St. George's Gallery, Hyde-park-corner, a spacious gallery, which, as our readers will recollect, was built, and first used some years ago, for the Chinese Exhibition, which, at the time, was immensely popular. The present collection—also, as it happens, illustrative of Oriental life—is, in actual material, to the full as striking as the one referred to; and, in point of the immediate interests involved, far surpasses it in importance. Whilst we cannot go along with the framers of the "Guide-book" in their regret "that the magnificent costumes of the Osmanlis have nearly all been superseded by the more convenient, but less graceful, European modes of dress," we admit the picturesque attractiveness of the former, and highly dramatic interest of the struggles which marked the latter days of their supremacy. In examining the various groups of Janissaries and other military functionaries of the bygone time, and then that of the Divan or Council of Mahmoud, surrounded by his Court, and the officers of State—rending as he goes the description and historical matter contained in the well-written "Guide-book," the visitor obtains a very satisfactory notion of the terrible struggle which ridded Turkey of this social pest, the Janissaries or local militia, and of the stern necessity which led to it. He will also obtain a glimpse into the internal organisation of that remarkable corps, which surpasses in novelty and originality anything that has been written of Oriental life.

Nor is the exhibition confined to subjects of political or State interests. The jealous Osmanli, with his domestic character—wherein, as in all other matters, he is so jealous of the observation of foreigners—is followed up, and his habits portrayed in every relation of social life. We have him in the *hamam*, or Turkish bath—the more ludicrous incidents of which have been so judiciously escaped by Oriental tourists; we have him in the barber's shop; we have him in his *kahoh*, or coffee-shop, playing at draughts, and smoking the everlasting tchibouk or narghile; we have him, surrounded by a choice party of "regular horses," squatting at the dinner table; we find him domesticated in the haren of his establishment, where we find fair ladies smoking and sipping coffee, as they lounge upon sofas, while dancing-girls beguile their time with their graceful efforts; we afterwards go with the ladies, in the *caiques arabe*, or Turkish state voyage to the Sweet Waters of Europe, or Asia, where we find a group of Bulgarians, dancing grotesquely, but with wonderful energy and characteristic effect; or a party of wandering minstrels, equalling monstrously for the edification of the fair holiday folk, whilst an old *sherpete*, or confectioner, retails sugar-plums to the rising generation. We then dive into the streets and bazaars, amongst the *patrollos* of the Turkish capital, stumbling first across a gang of *hamals*, or porters, sweating and steaming under capriciously borne burthens; then upon an old Turkish scribe, writing a letter at the dictation of a female, veiled in her yashmak; then across a family of unhappy, universally persecuted Jews; then stroll into the Bazar, where we find a lady awkwardly squatting on a bench, as she tries on yellow slippers; and then with a sharp turn light on a solemn-looking group, representing an Armenian wedding, the lady-bride being carefully enveloped in a bridal costume, with a blaze of tinsel falling from head to foot, concealing the face.

We have said enough to indicate the extent and variety of the present exhibition, and the intrinsic interest of the subjects illustrated. The spectator, however, will be even still more struck with the admirable character thrown into the countenances and figures; every one of which appears to be a distinct and individual study. Their execution, in wax, by Mr John Bell, is highly creditable; the drawings and models supplied by the manager, in addition to the latest peace. Altogether, a more deserving or interesting exhibition has not, for a long time, been opened in our metropolis; and although, at the advanced period of the year, the season being detentively over, the proprietors can hardly expect to reap an immediate reward for their labours, we have no doubt that, as Christmas approaches—when, perhaps, some of our gallant fellow-countrymen will be on their return from the campaign—they will experience a large share of public patronage.

We have enclosed one of the subjects in this exhibition, namely, that of the dinner-party.

THE THEATRES.

STRAND.—Mr. Dickens's last story, "Hard Times," has been very cleverly dramatised for this theatre, and on Monday proved successful, with a crowded house. Its effect on the stage is much greater than might have been expected. The theme of the fable is of some subtlety, and the moral consequently requires delicate and careful application. The insufficiency of utilitarianism for the adequate education of the human being is the leading doctrine of the novel, and the same great social lesson is prominently insisted on in the drama. The task, therefore, has been applied with success to the understanding to be stored with facts. *Louisa* and *Tom Gradgrind* are denied the opportunities of cultivating the former. There are no stage-plays, no closet-poesies, no public vauntings, wrestlings or tumblings, no private spouting or acquisition of the "light fantastic toe," no intellectual instruction. Accordingly, on their first introduction to the world, both stumble—the one makes trial of dissipation, the other marries without loving. The fortunes of this pair, however, form but an episode in the drama; and their characters receive rather than give influence to the action. The lady is tempted to matrimonial infidelity, but finds refuge in the counsels of "her guide, philosopher, and friend"—her husband; thus proving, we think, that a utilitarian education is better than none. She had early acquired the habit of submitting to a teacher, and, in the hour of trial, her recort to him was not in vain. Miss Gordon enounced this scene with much pathos and effect; and we may state in general that the piece was well cast. Mr. Barrett, in particular, in the banker-husband, boastful of his low antecedents, and the manner in which he had pulled through the world, was in great force; and, if he somewhat exaggerated the part, succeeded, at least, in making it specially characteristic; the subordinate parts were well filled by Miss Julia Harland, Mr. Manvers, and Mr. Farquharson. The orchestra and chorus, conducted by Mr. Tully, were good; and the piece, in its ensemble, was put upon the stage in a very creditable manner.

DRURY-LANE has re-opened, but with a great diminution of the strength of the company; for it would seem that Reeves, Formès, Reichart, and Madame Ruderesdorff no longer belong to it. Madame Caradori has re-appeared in "Lucrezia Borgia," and Mdlle. Agnes Bury in the "Sonnambula."

THE WILTS ARCHÆOLOGICAL AND NATURAL HISTORY SOCIETY will hold their first annual meeting at Salisbury, commencing on the 18th of next month, under the presidency of the Right Hon. Sidney Herbert, M.P., who, on the 14th, will receive the members and subscribers at Wilton House. Salisbury abounds with mediæval architecture; the British and Saxon Remains in the neighbourhood are very important; and a temporary museum will be assembled in the Council Chamber; altogether forming a programme of rich and varied attraction.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION will meet at Chepstow, on Monday next, under the presidency of R. Bernal, Esq., M.A. The history and architecture of the castle, church, priory, town, and wall, of Chepstow, will be illustrated in papers, to be read by the members; as will also the antiquities of the principal period found in the district; whilst the excursions promise much for the lover of the picturesque.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The leading feature in the Money-market, this week, has been the publication of the arrangements for the contraction of the new Turkish loan. Its amount is £5,000,000, in a Six per Cent Stock, of which £2,000,000 will be issued at the price of 85, with the option on the part of the subscribers to take another £1,000,000 within a month on the same terms. The remainder will be brought out at 85 within five months. The whole of the revenue of Turkey and Egypt—£3,282,000—will be remitted direct to London on account of the subscribers. These terms being very liberal, and the loan having received the sanction of the Government of England and France, very large amounts have been already subscribed for, and the Scrip has borne a good premium viz., from 2 to 5. As Turkey has no other foreign obligations to meet, there is no doubt whatever that the whole of the five millions will be subscribed for.

As regards the Consol-market, we may observe that it has been firm, considering that three accounts have fallen due; but the actual business doing has been small. In prices, no material change has taken place. On Monday, the Three per Cents were done at 93¾ up to 93⅞; the Three per Cents Reduced, 93⅝ to 94; the New Three-and-a-Quarter per Cents, 94¼ to 94⅜; and Long Annuities, 1860, 4 11-16. Bank Stock was 203½ to 205½; India Stock, 227; Exchequer-bills, par to 2s prem.; Exchequer Bonds, 1858, 98¼; 1859, 98. The business done in National Stocks, on Tuesday, was very moderate: -The Three per Cents Reduced were 93⅝ to 93¾; the Three per Cent Consols, 93⅝; the New Three-and-a-Quarter per Cents, 94¼; and Consols for Account, 93⅝ ⅜; Long Annuities, 1859, 4⅛; Ditto, 1860, 4⅜. Exchequer Bills, 2s. prem. to 1s. dis.; Ditto Bonds, 97½ to 98¼. There was rather more inquiry for the Shares of Joint-Stock Banks on Wednesday. The Three per Cents Reduced remained 93⅝ ⅜ to 93⅝; the Three per Cent Consols, 93⅝; the New Three-and-a-Quarter per Cents, 94⅛ ¼; Consols for Account, 93⅝; Long Annuities, 1860, 4 11-16; Ditto, 1859, 4⅛; Exchequer Bills, 2s. prem. to 1s. dis.; Ditto Bonds, 1859, 98. On Thursday the Market opened steadily, at 93⅝ ⅜ for the Three per Cents, closing at 93⅝ ⅞. The Three per Cents Reduced were 93⅝; and the New Three-and-a-Quarter per Cents, 94⅛. Long Annuities were 4⅛. Exchequer Bills were the same.

The week's transactions in Foreign Bonds have been extensive, viz.—£120,000 from Australia, £134,000 from New York, and £84,000 from the West Indies. There has been a fair demand for gold on Continental account, and about 120,000 has been forwarded to Hamburg.

There has been a moderately steady market for Foreign Bonds, the prices of which have been tolerably firm. The leading quotations are as follow:—Mexican Three per Cents, 24¾; Colombian Five per Cents, 67; Spanish Three per Cents, 28⅜; Ditto New Deferred, 18⅝; Dutch Two-and-a-Half per Cents, 61⅛; Dutch Four per Cents, 94⅛; Brazilian Five per Cents, 104½; Ditto Small Six per Cents, 103; Peruvian Four-and-a-Half per Cents, 70; Ditto Three per Cents, 52½; Russian Four-and-a-Half per Cents, 86⅝ ex div.

Joint-stock Bank Shares have been dull:—Australasia have marked 86. English, Scottish, and Australian Chartered, 19½; London Chartered of Australia, 21; London Joint-stock, 17⅞; London and Westminster, 29; Oriental, 6⅞. In Miscellaneous Securities there has been a fair business done: Australian Agricultural, 43½; Australian Royal Mail, 39; Crystal Palace, 4⅜; General Steam Navigation, 29½; Mediterranean Electric Telegraph, 9; New Zealand, 1¼; Peel River Land and Mineral, 1¾; Peninsula and Oriental Steam, 66; Royal Mail Steam, 56; Scottish Australian Investment, 2¾; South Australian Land, 35; Van Diemen's Land, 1¼; Victoria Docks, 1⅛; St. Katharine Docks, 74. Canal Shares have moved off slowly, as follows:—Ashton and Oldham, 134; Birmingham, 95½; Coventry, 214; Derby, 88; Grand Surrey, 50; Lough borough, 97½; Oxford, 110; Regents, 16; Rochdale, 68; Stafford and Worcester, 107; Stourbridge, 265. Berlin Waterworks have realised 1¾; East London, New, 29; Ditto, Extension, 7½; Kent, 7½; Lambeth, 97; Southwark and Vauxhall, 89½; West Middlesex, 100 ex div.; Ditto New, 15⅜. The following prices have been quoted for Insurance Companies' shares:—Alliance, 18 ex div.; City of London, 32½; Canopy, 1½; Crown, 1⅛; European, 19½; Globe, 129½ ex div.; Imperial Fire, Felinè, 4½; Phœnix, 153; Rock Life, 7½; Royal Exchange, 239 ex div.; Sun Fire, 206; Ditto Life, 58; United Kingdom, 5; Bridge Shares have realised:—Hungerford at 12; Vauxhall, 21; Waterloo, 42; Ditto Old Annuities of £8, 38½; Ditto of £7, 26.

Mock-Railway Shares have been flat, owing to the decline in some of the leading descriptions; nevertheless, the market generally has been tolerably firm. The following are the closing prices on Thursday:

ORDINARY SHARES AND STOCKS.—Caledonian, 62⅜; Caledonian, 62⅜; Cork and Bandon, 1; East Anglian, 1⅞; Eastern Counties, 1¼; Edinburgh and Glasgow, 60; Great Northern, 83½; Ditto, B Stock, 121; Great Southern and Western—Dublin, 97½ ex div.; Ditto, Cork and Limerick, 71; Great Western, Irredeemable, Four per Cent, 95; North British, 60; Oxford, Worcester, and Wolverhampton, 20½.

FOREIGN Great Indian Extension, 1⅞; Ditto, Four-and-a-Half per Cent Bonds, 101¼; Great Luxembourg, Constituent Shares, ⅜; Ditto, Obligations, ⅞.

In Mining Shares scarce y any business has been done, and prices are quite nominal.

Friday Evening.

The Consol-market has been very steady to-day, and prices have been fully supported. The Three per Cents have marked 93⅝ ⅞; the Three per Cents Reduced, 93⅝; and the New Three-and-a-Quarter per Cents, 94⅛ ¼. Exchequer-bills, 1s. dis. to 1s. prem. In Foreign Bonds and Railway Shares only a moderate business has been done.

THE MARKETS.

CORN EXCHANGE (Friday).—A very moderate supply of English wheat was on sale to-day's market; yet the demand for samples of both home and foreign was rather limited, the amount of the sales done in all kinds was small, and on no article was there, at Monday's average. There was a moderate inquiry for foreign wheat, but very little was done. Barley was in request to notice in its value. The imports have been small. Flour and oatmeal were steadily sought after, and full prices, as on Monday's decline in value. The malt trade was dull, and the quotations had a slow, want tendency. There was more business in the oat trade, at full prices. Beans were in good demand, and were readily held at a trifling advance. The imports of the latter continue small.

ARRIVALS.—English wheat, 950 barrels; oats, 710; flour, 410. Irish oats, 1000. Foreign—wheat, 4600; barley, 2050; oats, 3830; flour, 300 sacks, 3180 barrels.

[illegible] last, Essex and Kent, red, 40s. to 48s.; ditto, white, 44s. to 50s.; Norfolk and Suffolk, red, 40s. to 45s.; ditto, white, 44s. to 50s.; grinding barley 24s. to 26s.; distilling ditto, 27s. to 28s.; Lincoln and Norfolk malt, 60s. to 62s.; Ware, 72s. to 74s.; Chevalier, 72s. to 74s.; Kingston and Ware, per 20 lb.

[illegible] potato flour, 37s. to 39s.; Yorkshire and Cork, [illegible] 37s. to 39s.; rye, 30s. to 32s.; beans, 34s. to 36s.; maple, 40s. to 42s.; white peas, 36s. to 38s.; boilers, 34s. to 36s. per quarter. Town-made flour, 55s. to 56s. per sack; Stockton, 52s. per 280 lb.

[illegible] condition, but the business done is by no means extensive.

[illegible] 74s. to 76s.; Baltic crushing, 63s. to 66s. Mediterranean and Odessa, 60s. to 62s. per quarter. In oats, the demand is limited. Yellow Russian, 30s. to 32s.; [illegible] 30s. to 31s.; white ditto, 31s. to 34s.; and tarcs, 30s. to 32s. per quarter. For beans, 36s. to 38s. per quarter. For peas, [illegible] 36s. to 38s. per quarter. For flour, [illegible] 40s. to 42s. per sack.

Bread.—The prices of wheaten bread in the metropolis are from 9d. to 10d.; of household ditto, 8d. to 9d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 77s. 8d.; barley, 34s. 8d.; oats, 24s. 10d.; rye, 40s. 10d.; beans, 36s.; peas, 37s. 2d.

The Six Weeks.—Wheat, 80s. 11d., barley, 36s. 3d.; oats, 24s. 10d.; rye, 40s. 8d.; beans 37s. 8d.; peas, 38s. 1s.

Duties on Foreign Corn. Wheat, [illegible] oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s. Seconds of Grain and Flour.—Wheat, 10,000 quarters; barley, 1000; oats, 1000; flour, 9000 sacks, [illegible] 2000 quarters.

No packages have been sold this week. About 8000 have changed hands, on former terms. Privately, the demand is steady, and common sound coopers are worth 31s. per tun.

Sugar.—Our market has ruled firm, and the quotations are well supported in every instance. Barbadoes has changed hands at from 34s. to 38s.; Demerara, 34s. to 41s. 6d.; Mauritius, 35s. to 41s. 6d.; and Bengal, 32s. to 34s. per cwt. Refined goods are steady, at from 44s. to 46s. 6d. per cwt.

Hay and Straw.—Old meadow hay, £2 12s. to £5 15s.; new ditto, £3 to £4 4s.; old clover, £3 10 to £5 5s.; new ditto, £3 3s. to £4 4s.; and straw, £1 8s. to £2 per load.

Coals (Friday).—Holywell, 15s. 6d.; Tanfield Moor, 16s.; Ridsdale, 15s.; Eden Main, 22s. 3d.; Belmont, 22s.; Hill on, 21s.; Stanley, 22s. 6d.; Cassop, 23s. per ton.

Hops (Friday).—The plants in accounts being rather more favourable, the duty is called £70,000. Our market is very inactive, and the quotations are almost nominal. The following are the imports are:—96 bales from Zealand, 16 from Antwerp, 15 from Dunkirk, 69 from Rotterdam, 66 from Hamburg, and 2 from Genoa. Mid and East Kent pockets, £4 to £6 6s.; Weald of Kent, £11 2s. to £14 10s.; Sussex, £1 to £12 12s. per cwt.

Smithfield (Friday).—We were fairly supplied with beasts in to-day's markets. All breeds moved off steadily, at an advance of prices of Monday of 2d. per 8 lb. Shoep the show of which was moderate, were in steady request, and the quotations were well supported. There was a slow inquiry for lambs, but we have no change to notice in their value. Calves were in good supply and heavy request, at Monday's decline. Scarcely any business was doing in pigs. Much over-night stock was left on hand. Prices:—Beasts, 3s. 2d. to 4s. 2d.; small ditto, 3s. 2d. to 4s. 2d.; Scots, 3s. 8d. to 4s. 4d.; Sheep, 3s. 8d. to 4s. 8d.; Lambs, 5s. 2d. to 6s. 4d.; Calves, 4s. 2d. to 4s. 8d.; Pigs, 3s. 2d. to 3s. 8d. per 8 lb. sinking the offals.

Newgate and Leadenhall (Friday).—Quarters of beef, from 3s. 4d. to 4s. 4d.; middling ditto, 3s. 4d. to 4s. 4d.; prime large ditto, 4s. 6d. to 5s.; prime small ditto, 4s. 4d. to 4s. 6d.; large pork, 3s. 8d. to 4s. 0d.; inferior mutton, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 4d. to 4s. 8d.; veal, 3s. 10d. to 4s. 8d.; small pork, 4s. 8d. to 4s. 8d.; lamb, 4s. 8d. to 5s. 8d.

THE LONDON GAZETTE.

TUESDAY, AUGUST 15.

WAR-OFFICE, AUGUST 15.

3rd Foot Lieut.-General H. Thomas, C.B., to be Colonel.
20th Lieut.-General H. Thomas, C.B., to be Colonel.

[illegible] Major [illegible] to be Lieutenant-Colonel in the Army, Brevet-Major R. G. Handley, [illegible] to be Lieutenant.

BANKRUPTCY ANNULLED.

C. MEE, Bath, Berlin wool and fancy needle repository.

BANKRUPTS.

H. KNAPP, late of Cirencester-place, Now-road, a w of Chalon building.—S. H. [illegible], jun., Stock Exchange City, dealer in stocks and shares.—T. CHANCEY, Sydenham, Kent, builder.—J. [illegible], Leicester, [illegible].—E. THIPP, St. Helen's, Lancashire, and Hanford coal, [illegible], dealer in railway and mining shares.—H. [illegible] Ross, Herefordshire, innkeeper.—[illegible] Wolverhampton, [illegible] carrier, boarding house keeper.—W. [illegible], Huddersfield, draper.—M. RAWKES, [illegible].—H. SAKELET, Huddersfield, common brewer.—T. DEANS, Backfield, Lancashire, draper.

BIRTHS.

On the 13th inst., at Newcross, the wife of Alexander Christie Thomson, Esq., of a son.
On the 7th inst., at Sheriffhales Vicarage, Shropshire, the wife of the Rev. J. Edwards, of a son.
On the 10th ult., at South Kilworth Rectory, Leicestershire, the wife of the Rev. A. Pownall, of a son.
On the 1st inst., Mrs. Percy B. St. John, of a daughter.
On the 4th inst., at Southe d, the wife of the Rev. F. Thackeray, of a daughter.
On the 9th inst., at Ramsgate, the wife of Mrs. H. Forbes, of a daughter.
On the 9th inst., at the Cloisters, Westminster, the wife of the Rev. H. T. Prore, of a daughter.
On the 10th inst., at Sheridge, in the county of Worcester the wife of the Hon. and Rev. C. Colville, of a son.
On the 2nd of May, at the Parsonage, St. Mary's Stunt, Adelaide, South Australia, the wife of the Rev. E. Strong, B.A., late of Wadham College, Oxford, of a son.
On the 17th inst., the wife of Sir G. J. Thomas, Bart., of a daughter.
On the 17th inst., the wife of Col. Cecil Cumberland Smith, of a daughter.

MARRIAGES.

On the 10th inst., at Buckler Farm, [illegible] Berks, Lieut. [illegible], Esq., of Lowside, Yorkshire, eldest son of the late J. [illegible], Esq., of Lowside, to Mary Anne, second daughter of Joseph D. Barker, Esq., of Wakefield.
At the parish church of Old Sampford, on Thursday, the 10th inst., by the Rev. R. W. Eustace, brother of the bride, and Incumbent of Bampton, Devon, the Rev. Alexander Eustace, of the late Richard Bowden, of Formby Hall, Lancashire, to Emma Isabella, daughter of the late W. O. and Lady Eustace, of Saunderton, Bucks, to the county.
On the 3rd inst., at the church of La Forest, Jersey, the Rev. C. F. Cary, Thomas Cary Sandys, youngest son of the late James Sandys, Esq., of the Meadows, to Miss Marion only child of R. Palmer, Esq., late of Mill Mead, Guildford, and Anabella Gurney.
On the 12th inst., at Landley, Dorset, J. W. Bull, Esq., Gidgeham, to Helen Lucy, second daughter of the late Rev. Andrew Bull, of Hatfield Peverel, Essex.
On the 9th of June, at the Residency, Indore, W. Shakespear, Esq., Major Cavalry, to Mary Dundas, second daughter of R. H. Hamilton, Governor-General's Agent for Central India.
On the 15th inst., at St. Mary's, Bryanston-square, R. Lloyd, Esq., 6th Royal Regiment, second son of the late Rev. [illegible] Lloyd, Rector of Llanfair, Montgomeryshire, to Mary Hannah, late Commander, Royal Navy, only daughter of the late Major-General Sir [illegible] Boardman, K.H.
On the 15th inst., at St. George's, Hanover-square, R. S. Holford, Esq., of Westonbirt, to the county of Gloucester, to Mary, youngest daughter of Major-General Lindsay, of Balcarras, in the county of Fife.
On the 16th inst., at St. George's, Hanover-square, W. H. Chetwynd, Esq., of Longden Hall, in the county of Stafford, to Blanche, eldest daughter of the Hon. and Rev. A. Talbot, Rector of Ingestre, in the same county.
On the 15th inst., at St. Peter's Church, Eaton-square, E. Thornton, Esq., H.M. Charge D'Affaires to the Republic of New Granada, to Sophia, eldest daughter of the Right Hon. Sir F. Thurston, G.C.B., to Mary, widow of A. Melville, Esq., of Dumfries, and daughter of J. Maitland, Esq.

DEATHS

Very suddenly, universally respected and regretted, Captain Webster, late 11th Regt., eldest son of the late R. Webster, Esq., of Lt. Dragons Guards, leaving a widow and numerous young family to lament their untimely loss.
On June 10, at Clarence, after twenty-five years' residence in Africa, J. Beecroft, Esq., her Britannic Majesty's Consul, and Governor of Fernando Po.
In June, at Goncora, near Pernambuco, Brazil, Lieut.-Col. Watkins, commanding 22nd N.I., while en route to Mount Abou.
On the 13th inst., at Bridgwater-park, the Dowager Lady Drewer.
On the 30th ult., at Quebec, Lieut.-Col. George Hogarth, C.B., H.M. 26th Regiment, Cameronians.
On the 11th inst., Major Henry Gordon, 38th Regiment M.N.I.
On the 12th inst., at Hay-place, Crayford, Kent, Isabella Bertha, the infant daughter of James Macgregor, Esq., M.P.
On the 11th inst., at Kensington Palace, the Rev. J. Jackson, her Majesty's Chaplain, aged 60.
On the 14th inst., at Bolton Lodge, East Barnet, Maria, relict of the late Lieut.-General Sir Edward Barnes, G.C.B., aged 79.
On the 4th inst., at Nutbrook, near Chepstow, Lucy, third daughter of the late Meredith Jones, Esq., of Clytha Park, Monmouthshire, after a short illness of twelve days, deeply regretted by her family and friends, aged 18.
On the 15th inst., at Tottington, Capt. C. West, Royal Navy, aged 67.
On the 18 inst., at Bonsgrove-ash Rev. Col. Brook of the Retreat Service, Madras Army.
On the 20th ult., at Marine, W. T. Mountain, late of Her Majesty's Indian Navy, aged 50.
On the 11th inst., at Sandfield, Isle of Man, Jessica, relict of the late Rev. J. Cresswell, and daughter of the late Lieut.-Governor Smelt, of that island.
On the 14th inst., at Bolton Lodge, East Barnet, Maria, relict of the late Lieut.-General Sir E. Barnes, G.C.B., aged 79.
On the 14th inst., after a few days' illness, Miss Sarah Lapidmadge, of Wivil anstown, aged 78.
On the 8th of April, suddenly, at Augustus, South Australia, Ann, the dearly beloved wife of E. P. Nesbit, Esq., and younger daughter of the late Four Fairs, Esq., of Priory-road, Wandsworth road, and Battersea-fields.

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—MONDAY, 21st AUGUST, and during the week, the OLD CASTAWAY; the SPANISH DANCERS in a New Ballet, the Gipsy Queen, in which Senora Nena and Senor Rafo will give the Characteristic Dances of the Spanish Gipsies; with AS LIKE AS TWO PEAS.

The Band of the First Life Guards will perform by the kindness of Colonel Packe, every Saturday at Four o'Clock, until further notice. Admission, One Shilling; Monday's Sixpence.

ROYAL PANOPTICON of SCIENCE and ART, Leicester-square.—Chemistry, by Mr. G. F. Ansell, Monday, 3; Tuesday, 3; Thursday, 2; Friday, 3. Positional Equivalents, Wednesday, 3. Light, Saturday, 3. Sounding Glass explained by Mr. W. H. Hirt, Tuesday, 7.45. Natural Magic, by Mr. Malcolm, Monday, 7.30; Wednesday, 7.30. Voltaic Electricity, Tuesday, 3; Friday, 3. Mechanics, by Mr. C. F. Partington, Thursday, 3; Saturday, 3.30. Songs and Sayings of Samuel Lover, by Mr. H. Hirst, Monday, 3.15; Friday, 7.30. Isothermal Lines, by Mr. Hogg. R. A. Workmanship of Exhibition of Machinery and Manufactures, Mon., at and 7.5 [illegible] Tuesday and Thursday, 3.15. Grand Organ, 2 to 5 daily; Tuesday and Thursday, 8.15. Dioramic Miscellany, including Views of Rome, the Pyramids, Disc and Brilliant Chromatropic Effects. Hours of Exhibition—Monday, 12 to 5; Evening, 7 to 10 (Saturday Evening excepted). Admission, 1s. Schools and Children under ten, half-price.

LECTURE on PHRENOLOGY.—On TUESDAY EVENING, at Eight p.m., by Mr. M. DICK, Practical Phrenologist, 2 Wardour-street. Terms to Non-Members of the Institution, 1s. each.

CRYSTAL PALACE.

GENERAL ARRANGEMENTS.

The Palace is opened on Mondays, at 9 a.m., and on Tuesdays, Wednesdays, Thursdays, and Fridays, at 10 a.m. On these days the charges at the doors for admission is as

It is opened on Saturdays at noon, on which day the charge for admission is 5s.

Tickets, [illegible] conveyance from London Bridge and Adelaide to the Palace, may be obtained at the London-bridge Terminus and at the several Agencies in London.

Season Tickets, including conveyance by railway, £4 4s. each; with boat conveyance by railway, £5 5s. (the usual discount allowed to families, may be obtained at the London-bridge Terminus.

August [illegible] By order

BOARD of TRADE.—Department of Science and Art.—Metropolitan School of Science applied to Mining and the Arts.

Director—Sir HENRY DE LA BECHE, C.B., F.R.S.

During the Session 1854-5, which will commence on the 2nd of October, the following course of Lectures and Practical Demonstrations will be given:—

1. Chemistry.—A. W. Hofmann, Ph. D., F.R.S.
2. Metallurgy.—J. Percy, M.D., F.R.S.
3. Natural History.—T. H. Huxley, F.R.S.
4. Mineralogy.—[illegible]
5. Geology.—[illegible]
6. Geology.—[illegible]
7. Applied Mechanics.—Robert Willis, M.A., F.R.S.
8. Physics.—G. G. Stokes, M.A., F.R.S.

Instruction in Mechanical Drawing is given by Mr. Hood.

Persons desirous of being admitted as Associates may pay the sum of £20 for two years, in one payment, or two annual payments of £20.

Pupils are received in the Royal College of Chymistry, the laboratory of which, for practical instruction, is open from [illegible]

The [illegible] Laboratory [illegible] £7, £5, and £3 [illegible] Laboratory [illegible] Laboratory [illegible] Laboratory

H.M. SCREW GUN-VESSEL, "WRANGLER."

This is one of the new class of vessels, just built by Messrs. Green, of Blackwall, for the Baltic; Lieut. Commander H. E. Risk, R.N. Her length is 155 feet, beam 26 feet; her engines, by Maudsley, are 160-horse power; she carries two 68-pounders (Lancaster guns, each weighing 95 cwt.); and two 12-pound howitzers.

We add a few details of other new vessels of the same class. The six new gun-boats, *Pelter*, *Pincher*, *Ronzer*, *Snapper*, *Glowzer*, and *Ruby*—four of which are now building at Pitcher's yard, North fleet, and two at Deptford Dockyard—are of extraordinary steam power, on the high-pressure principle, and non-condensing. These vessels are all of light draught of water, and of very heavy armament, and will in all probability realize more completely the true idea of what gun-boats are required to be in every useful respect.

The *Arrow*, Lieut.-Commander Jolliffe, built by Mare and Co., of Blackwall, with engines by Humphrey and Co., has been tried down the river for a short time. The *Arrow* presents an elegant specimen of a dashing cruiser. She has the fine lines of a wholesome sea-going yacht, with all the substantiality of a strong, stout man-of-war, that can not only fire 98-pounders, but can take her chance in receiving them. Her hull is long low, and sweeping; her masts not very tall, but well-proportioned and raking; whilst her rig, that of a three-masted schooner, sets her off admirably, and gives a saucy character to the handsome craft. Her two guns are new 95 cwt. pieces of ordnance, fitted amidships on slides, and adapted to throw shells of nearly 100 lb. weight. She has also four howitzers. Her machinery, which is all placed under the water-line, upon a recent trial, worked smoothly and efficiently: there was not the slightest heating, and the vibration on board was scarcely felt at ninety revolutions. Lieut. Hore's ship, the *Beagle* (also built by Mare and Co., with Humphrey's machinery), with the *Arrow*, is the first instalment of the despatch squadron. Of their tonnage and class (470 tons and 160-horse power), these vessels are, beyond comparison the best designs ever turned out by the Admiralty. They not only look well and float well on the water, but it can be seen at a glance that they possess those properties that stamp them at once as the real "cavalry of the fleet."

These will be really effective gun-boats, and will throw into the shade the paddle wheel gun-boats of which we have heard so much, and which have been obtained from the Prussians. The difference and value of the two classes will at once be palpable, when it is considered that the screw gun boat has all the machinery protected at six feet draught of water: while the Prussian gun-boats' paddles not only offer a square target to the enemy's gunners, but it leads the marksman also to drop a shot into the machinery, to the ruin or destruction of the vessel.

H.M. SCREW GUN-VESSEL "WRANGLER," BUILT FOR THE BALTIC.

SVEABORG.

This Panoramic Sketch, taken on the 24th of May last, and, in addition to a general view of the Fortress of Sveaborg, and a portion of the town of Helsingfors, represents an interesting incident of the war—the reconnoissance of the fortifications. On the above day H.M.S. *Dauntless*, in company with the *Basilisk*, stood close in under steam to reconnoitre, and counted thirteen ships, three of which were steamers. A three-decker was found head and stern under the batteries, commanding the entrance. There were five large ships anchored behind Bak Holmen, so that, by springing, their united broadsides could be concentrated on the entrance. A two-decker commanded the entrance westward of Langorn; a two-decker was anchored somewhat eastward, opposite Kinggo Sound, with a Blue Admiral's flag at the fore. Three Admirals' flags, red at mizen, were counted.

Mr. Hill, in his "Travels on the Shores of the Baltic," recently published, observes, "The whole of the Gulf of Finland may be termed Russian waters; the coasts upon the north being formed by the province of Finland, and those upon the south by the Germano Russian province of Esthonia. The north side of this gulf seems to have more particularly attracted the attention of the Russian Government, if we may judge from the pains that have been bestowed upon the fortification of its ports and havens.

"If we trace the northern coast from Abo, passing towards the east, the next fort we meet with is that of Gustavsvorn, at Hango Head, which forms the extreme south-western point of Finland. Shortly after, lying north-east of this point, is the port and fortress of Eknas; and next to these, the strong fortresses of Sveaborg, defending the approaches to Helsingfors, the present Russian capital of Finland, beyond which, still proceeding eastward, are the fortresses of Viborg.

"Almost the whole of the coasts of this gulf are encompassed by dangerous isles, which consist, for the most part, of mere granite rock, and are sometimes surrounded by sands and shoals, with narrow and serpentine channels between them, in which lie sunken rocks, often only a foot or two beneath the surface of the water.

"The town of Helsingfors, as we approached, presented much the same appearance as Abo, with everything exaggerated which characterizes

PASSAGE OF THE SHIP "MEDWAY" THROUGH ICEBERGS, ON HER HOMEWARD VOYAGE FROM MELBOURNE.

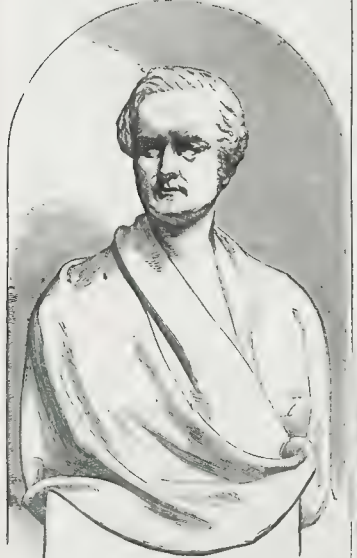
terises the Russian style of building and decorating towns. After passing a series of strong fortresses which defend the approaches to the town upon several islands on our left, our eyes rested upon the same novelties as at Abo, of broad streets, public places, and spacious houses, all upon a larger scale, and more glaring with yellow and green paint, than those which compose the ancient capital.

"The town of Helsingfors is built upon a peninsula, or promontory, and more immediately defended by the two forts of Brabeig and Ulricsbourg, placed on the main land within the port, which is said to be capable of admitting sixty or seventy line-of-battle ships, all riding at anchor under the cover of these forts. The proper strength of the place, however, lies in the magnitude of its outer defensive works, which are of the most formidable description, and go under the general term of the fortresses of Sveaborg They occupy no less than seven islands, several of which are united by bridges. Casemates appear to be formed in them for no less than 6000 or 7000 small arms; and the united fortresses are said to mount 800 cannon, and to possess a garrison of 12,000 men. Some of these formidable works are formed by cutting and fashioning the solid rock; and there are magazines, arsenals, and barracks both upon one of these islands and upon the mainland. There are even docks upon the same tongue of land upon which the town stands, that have been partly cut out of the solid rock."

In the View are shown the Cathedral of Helsingfors, the new church in the form of a Greek cross; each side is terminated by a hand-some portico of Corinthian columns, and a dome rises in the centre. It stands on a large mass of granite, and may be seen some miles from the town. In the lower section of the view is prominent the Observatory.

THE PEEL TESTIMONIAL AT OLDHAM.

The Bust of the late Sir Robert Peel, executed in white marble, by Mr. Alexander Munro, of London, has been lately placed in a niche in the



MARBLE BUST OF THE LATE SIR ROBERT PEEL. BY A. MUNRO.

waiting-room of the Public Baths at Oldham. Several members of the Council and of the Testimonial Committee, present on the occasion, expressed their high approval of the Bust as a work of art, and a faithful likeness of the deceased Baronet: it is manly, and expressive in minute subtleties of feature and character.

On the tablet is the following inscription, in black letters:—

These Public Baths originated from a subscription raised in honour of the memory of Sir Robert Peel, Bart., and were completed by the Corporation of this Borough, A.D. 1854.

The Baths will be ready in a short time, and it is expected that they will be opened by the Mayor with appropriate ceremony. They have cost about £4500.

CATASTROPHE FROM LIGHTNING.

On Thursday week the village of Capel St. Mary, about seven miles from Ipswich, was visited with a terrific storm, by which three children were killed, several others were wounded, and the National School was reduced to the ruin shown in the accompanying Illustration.

The school was situated at the western end of the village, and was a detached building, within an enclosure. It was two stories high, the ground floor comprising the school-rooms—the western end being occupied by the boys, the eastern end by the girls.

Between two and three o'clock from twenty eight to thirty boys, and from fifty to sixty girls, were assembled in the schools, repeating their lessons. At this time the storm burst over-head with awful severity, the rain falling in heavy torrents. In a few minutes the lightning struck the top of the western gable, which was composed of lath and plaster, and descending in a slanting direction to the earth, split the wall open from top to bottom, dashing in the windows, one of which was driven into the middle of the boys' room. At the same moment, the apartment was filled with flames and dust. Mr. Alexander (the schoolmaster) was instantly rendered unconscious, and remained so for two or three seconds; the whole of the children lay upon the floor, some apparently lifeless, and others screaming piteously for assistance. To add to the horrors of the scene, the lightning, which had run along the ceiling had ignited the thatch roof, and the flames, owing to the wind, communicated with the bed-curtains and the furniture.

In the village, flames were first observed by a Mrs. Richardson, in a house distant about one hundred yards: she saw the roof of the school-house on fire, and several of the children rushing into the road screaming for help, and she ran to the spot. Upon entering the school she found three of the boys lying dead upon the floor. The affrighted children were removed to a place of security, and the bodies of the dead were conveyed into an adjacent hovel.

The school house, furniture, and a great proportion of the clothing and work, were entirely destroyed.

Next day an inquest was held upon the bodies, which presented the appearance of abrasions of the skin on the foreheads and ears, with a livid colour of the features, as if produced by strangulation. The scene of the catastrophe was a mass of blackened rafters and charred ruins; the only portion of brickwork remaining consisting of a stack of tall chimneys, with the wreck of the kitchen.

After hearing the evidence of Mr. Alexander, the schoolmaster, the Jury returned a verdict of "Accidental death, by being struck by lightning."

In the accompanying Sketch are shown the remains of the gable struck by the lightning. The portion of the floor upon which the two figures are standing was the spot whereon the three children were killed, as pointed out to the Artist of the Sketch by the master of the school.

PERILOUS SITUATION OF THE SHIP "MEDWAY" AMONG ICEBERGS.

We have been favoured by a Correspondent with the following very interesting account of the homeward voyage of the *Medway* from Melbourne, Victoria:—

About daylight, on the 21st of April, we weighed anchor, and by midnight were off the Otway Lighthouse. We continued our voyage, with baffling winds from the north-east, until we reached about the latitude of 56° 57" S., and longitude 141° 10" W. Here the wind drew round to the westward, which enabled us to make good way. The sea, it was observed, from having been very irregular, with much swell, became smoother, although the breeze continued unabated. A portion of sea-weed had also been seen, indicating something anomalous in our distant position from any land. To the surprise and gratification of the passengers, it was reported early on the following morning (the 17th of May) that some icebergs had been passed during the night; and both to windward and leeward several more were visible. We speedily turned out, and saw to windward three large bergs. On the same day we sighted several others of large size; some a mile and a half in length and a mile in breadth, and with an elevation of two or three hundred feet from the level of the sea. At this time the thermometer stood at 46° on the poop, the wind being from the northward. The atmosphere was humid; and it became necessary to proceed with great caution, as we had evidently got amongst a large field of ice. We passed several huge pieces of drifting ice. The atmosphere became very hazy towards evening, which in these high latitudes and in the winter season closes in very early, it being quite dark by about four o'clock p.m.; a strict look-out was therefore kept, but no casualty occurred during the night. Next day, the weather becoming thicker as evening approached, evidently presented sufficient cause for caution on the part of the captain; and to his cool judgment and discretion is owing (so far as human agency is concerned) the preservation of our lives and of the ship. By his orders the vessel was kept under easy sail, and, according to his own words, as manageable as a boat. Every precaution that experience could suggest under such circumstances being resorted to, we were proceeding very carefully through the thick haze on the night of the 18th of May. The tea had been removed from the cuddy, and the passengers had settled down to their various evening amusements - the dial hand pointed to the hour of seven p.m., when a noise was heard on deck: the Captain sprang from his seat; his quick ear had caught the cry from the look-out; and in a short time was heard distinctly, "Ice ahead!" At this time a large berg was seen right ahead, apparently so near, that it was reported on board that the jib boom had scraped it. The noise of the sailors in shifting the sails, in order to wear the ship round, combined with the general consternation, occasioned breathless emotion amongst the passengers, who momentarily expected a fearful collision. This condition of mind was, however, quickly relieved by the cry of "All's right," and the captain and mate shortly after, assuming all the composure they could, assured us of our narrow escape. The iceberg had so much the semblance of a ship under full sail, as to deceive more than one experienced eye.

After this providential escape, we proceeded under easy sail, until about 8 midnight, when all ahead and to the leeward seemed glowing with reflected light, and on closer examination, an immense expanse of ice presented itself. The captain now determined to remain in clear water until daylight. Large masses of drifting ice were visible and an exten-

REMAINS OF THE NATIONAL SCHOOL AT CAPEL, NEAR IPSWICH, STRUCK BY LIGHTNING.

sive group of immense bergs seemed to be connected by a continuous chain of detached ice. The ship was accordingly put about, and we remained under easy sail in the clear water, until daylight, when the yards being closely braced, we endeavoured to get to the windward of this wide field of ice. About noon it was on our lee bow, when it presented the appearance of one vast continent of ice: this was in the latitude of 60° 14′ S. and in the longitude of 128° 20′ W. We had now passed through a thick cluster of icebergs, extending about 280 miles from east to west; how far it stretched southward, we had no means to ascertain. The thermometer was sufficiently indicative of the absence of much ice to the northward, even which point the wind was blowing, as it never fell below 39°.

Perhaps in no voyage, excepting for the purpose of discovery, or in the whaling trade, has such a vast accumulation of ice presented itself. The last berg we passed was to the northward of this immense field; it was smaller than the rest—perhaps half a mile in length, and a little less in width; we passed close to the leeward of it, not being able to weather it. This was in the latitude of 58° 14′ S., lon. 129° 30′ W., and appeared to be a fraction of the barrier line of ice, which had drifted up from the southward, and had been carried to their respective destinations by the currents. The barometer was closely consulted during the whole time. The atmosphere was throughout very hazy, and the variation was from 39° 20′ to 39° 50′. The wind continued from the north-west, varying a few points to the north.

At length we emerged from this belt of icebergs, and, making as much northward as would serve our purpose to keep out of harm's way, we continued our voyage by the Cape Horn. During the first day we sighted, in a.l, about fifty bergs; on the second day we were close upon two large bergs (but the weather was too thick to enable us to see beyond the distance of a ship's-length; and, on the third day, the vast continent before alluded to probably including a cluster of some hundreds—one of which, in particular, was very conspicuous, occupying about two miles in length, and a mile, or more, in breadth, and towering to a height of probably 300 feet. We now had an opportunity of sketching one berg, which presented a remarkably picturesque appearance, like a colossal Gothic structure resting on the bosom of the ocean. The other bergs included in the sketch, are exact representations of those belonging to the same group.

In our further progress round the Horn, we fell in with more ice. It was the commencement of the winter in these latitudes, and the wind drawing round to the south, the thermometer fell considerably, but did not sink below 29°. For eleven days we were without an observation, so that we were obliged to proceed by our dead reckoning for this period, which, on account of the strong current that prevails here, is liable to a great error. However, on obtaining a sight after this lapse of time, the calculations were found to have been kept with unusual exactness. The only danger to be apprehended by the Admiralty, marked down in our charts, nowhere presented themselves, and the most northern of the Auroras, shown in our charts, we must have sailed over without sustaining the least damage, though thereto, on the evening of the 25th of June, it hited another iceberg, and, the wind blowing from the south and, the cold made a great impression on our Australian constitutions. We continued our course to the north-eastward, and on the following morning fell in with much loose ice in the latitude of 56° 50′ S., and longitude 47° 42′ W. To the windward, the remains of what must have been an immense berg originally, was most distinct, being about two miles from us, the base still occupied a large space of water, perhaps a mile in length, its talus or summit had been washed by the heat, and its irregular surface was washed by the surf which was breaking over it. Immense masses of ice had been detached, and were floating in all directions around us. Our situation was not unattended with danger, although, it being daylight, and the atmosphere clear, the peril was sufficiently apparent to guard against it. The white crests of the waves all around us may, however, have deceived a practised eye, more especially as the great bulk of these dissolving masses lie beneath the surface of the water, and are sometimes very difficult to discern close upon them. We had no choice but to proceed right through them with a breeze, which, under easy sail, carried us along at about ten knots, when we passed one of the masses within a yard. Again the merciful hand of Providence was over us. A fair wind brought us to the verge of the south east trades, and we had thence a fair passage to Old England, after all our detentions and dismal forebodings.

Captain [illegible] account of the Antarctic Regions, describes a great barrier rampart of ice as stretching out to an unexplored distance, and rising to an elevation of 200 feet above the level of the sea. From this region of ice immense masses are continually detached by the divellent movements caused by the unequal expansion and contraction of the mendicants. During the alternations of temperature, the noise that accompanies the operation of these disturbing powers resembles that of thunder; and immense bergs are in this way detached from the barrier range, and carried to the northward by the currents, increasing in bulk by the fresh snow which is continually accumulating on its surface. It is estimated that considerably more than half the mass lies beneath the surface of the water, and it is ascertained that this portion is undergoing continual waste, by the action of the water underneath, the warmer particles of which, rising to the surface in consequence of their specific gravity, whilst the colder particles, that have given off their caloric to the surrounding atmosphere, are descending by the same law. The ascending currents coming in contact with the solid mass beneath the surface, restores it to its former state of water, and by this means gradually liquifies so great a proportion, that eventually the centre of gravity is so changed, that the iceberg turns completely over, and that part which formerly occupied the under surface becomes now the upper, and the process of decay and waste is rendered visible in the cavernous and cellular appearance it presents. To those who have been engaged on whaling voyages in navigated the Polar Regions, the turning over of icebergs is a familiar circumstance. In all probability the remarkable berg, with its gothic arches, has undergone this evolution, and atmospheric influence has effected that process, whereby the structural arrangement has attained to such remarkable perfection.

On board the ship *Meiklejohn*, off Portsmouth,
August 2, 1854. W. B. WILMOT, M.D.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

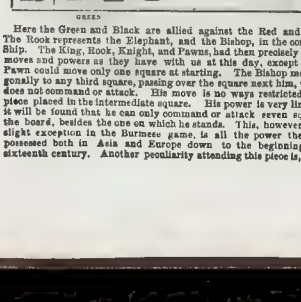
BY DR. DUNCAN FORBES.

CHAPTER III.—CHATURANGA (CONTINUED).

Before commencing the translation, it may be proper to offer a few brief remarks on the Hindû board and pieces, a diagram of which is herewith inserted:—

DIAGRAM OF THE ANCIENT HINDU CHESS BOARD.

The pieces being arranged as they stand at the commencement of the game of Chaturanga, played by four persons.



Here the Green and Black are allied against the Red and Yellow. The Rook represents the Elephant, and the Bishop, in the corner, the Ship. The King, Rook, Knight, and Pawns, had then precisely the same moves and powers as they have with us at this day, except that the Pawn could move only one square at starting. The Bishop moves diagonally to any third square, passing over the square next him, which he does not command or attack. His move is no ways restricted by any piece placed in the intermediate square. His power is very limited, as it will be found that he can only command or attack seven squares of the board, besides the one on which he stands. This, however, with a slight exception in the Burmese game, is all the power the Bishop possessed both in Asia and Europe down to the beginning of the sixteenth century. Another peculiarity attending this piece is, that not one of the four Bishops, allied or hostile, can attack any of the squares on which the three others are allowed to move; hence, we see clearly the meaning of a verse in the Latin poem given by Hyde, from a MS. of the twelfth century, preserved in the Bodleian, viz, "Firmum pactum Calvi tenent, neque sibi noceant," i.e., "The Bishops maintain a solid compact not to hurt each other." Vide Hyde, "Syntagma Dissertationum," 4to, page 158.

TRANSLATION OF THE SANSKRIT TEXT.

Yudhishthira said to Vyâsa, "Explain to me, O thou super-eminent in virtue, the nature of the game that is played on the eight-times-eight squared board. Tell me, O my master, how the Chaturâjî *(a)* may be accomplished."

Vyâsa thus replied: "O my Prince, having delineated a square board, with eight houses on each of the four sides, then draw up the red warring on the east; on the south, array the army clad in green; on the west, let the yellow troops be stationed; and let the black combatants occupy the north.

"Let each player place his Elephant on the left of his King; next to that the Horse; and last of all the Ship; and in each of the four armies let the infantry be drawn up in front. The Ship shall occupy the left-hand corner; next to it the Horse; then the Elephant; and lastly the King; the foot soldiers, as already stated, being drawn up in front *(b)*.

"If, on throwing the die *(c)*, the number should turn up *five*, the King or one of the Pawns must move; if *four*, the Elephant; if *three*, the Horse; and, if the throw be *two*, then, O Prince, the Ship must move.

On the moves of the Pieces.

"The King moves one square in all directions; the Pawn moves one square straight forward, but smites an enemy through either angle, in advance; the Elephant, O Prince of many lands, moves (so far as his path is clear) in the direction of the four cardinal points *(d)*, according to his own pleasure; the Horse moves over three squares in an oblique direction; and the Ship, O Yudhishthira, moves two squares diagonally.

General Directions for Play.

"Let each player proceed in his course with excessive care, and remember that the King is the most important of all. O, Prince, from inattention to the humbler forces the King himself may fall into disaster. The Ship (from a central position) commands nine square squares, but the Horse commands eight; therefore, the Horse bears the higher value *(e)*. The Pawns and the Ship usually be foe, subjecting themselves to capture; the King, the Elephant, and the Horse may be foe without subjecting themselves to destruction *(f)*. O, my Lord, never let a player place his Elephant in front of a hostile Elephant; if any man of sense should do so, he will be deemed guilty of imprudence. Only in three cases, where there is no other resource, should a player place one Elephant *en prise* of another; such is the decree of the sage Gotama *(g)*. Should a player have it in his power to capture either of the hostile Elephants, it is preferable to slay that on the left hand *(h)*. In order to attain those situations (on the board), called the Singhâsana and the Chaturâ, the King is to be preserved at the expense of the whole army, the Elephant even included.

Peculiar situations of the Pieces, conferring certain privileges, &c.

"I will now explain to you, O Prince, the nature of certain situations, &c., that may occur in the course of play, viz., *Singhâsana*, *Chaturâji*, *Nripâdrishta*, *Shatpada*, *Kâkâkshita*, *Vrihannauka*, and *Gâdhâvati*

"1. *Singhâsana.* When a King moves to the square of another King, O Yudhishthira, then to is said to have gained a *Singhâsana* (i.e., a throne). When he gains a Singhâsana by slaying either of the adverse kings, he then wins a double stake, otherwise it shall be a single stake When a king, O Prince, has gained a throne by his own ally, then also he gains a Singhâsana, and thenceforth he commands the allied forces along with his own *(i)*

"2. *Chaturâjî.*—When a player, after having attained possession of his ally's throne, succeeds in capturing the two adverse Kings, his own King still remaining on the board, then he is said to have gained the Chaturâ When the Chaturânga is afoot on the part of a player, by the latter's King slaying the last of the hostile Kings, then he is entitled to a twofold stake, otherwise it shall be a single stake. O Prince, when, in the game of Chaturanga, a King slays the last of the adverse Kings on his own square, then is he entitled to a fourfold stake; and when thus a Singhâsana and a Chaturâ occur both at the same time, then, O Prince, it shall be deemed only a Chaturâ when the Singhâsana likewise.

"3. *Nripâdrishta.*—When a player has got the two adverse Kings into his possession, he own King still remaining on the board, then, should his allied King have been already captured by the adverse forces, he is entitled to reclaim (by law) his ally, which procedure is called Nripâdrishta; but, so long as the two adverse Kings are not in his possession, the captured ally is to be deemed as *Bandhaka*. When an allied King is ransomed, or exchanged for one of the adverse Kings, both of them are thenceforth considered to be out of play.

"4. *Shatpada.*—When all the eight Pawns has reached the opposite end of the board, he is then distinguished with the title of Shatpada (*ṣa*), and assumes the power of that piece (Rook or Knight, or square he may have attained to) the opposing forces of the Rook, or that of the King, is not entitled to the rank of Shatpada, but of Pandu. the player who is still in possession of three Pawns is not entitled to [illegible] as he is deemed a *Bandhaka*.

"5. *Kâkâkshita.*—When, towards the end of a game, a King remains alone, [illegible] his forces have been captured, such a situation is called Kâkâkshita, and the King, being thereby circumscribed, according to the decisions of all the [illegible] is neither entitled to victory nor liable to defeat.

"6. *Vrihannauka.*—When three Ships happen to be in contiguous squares, and the fourth ship can be played into the remaining one, such a position, the situation is called Vrihannauka; and the last player takes possession of all the o hers *(m)*.

"7. *Gâdhâvati.*—When, in the course of the game, a player is left with only the Ship and a single Pawn, the Pawn is then called Gadhâvati (*u*), and is not subject to the restriction on the move of becoming a Shatpada; that is, he may become a Ship, Knight, Rook, or even King, according to circumstances."

REMARKS ON THE PRECEDING TRANSLATION.

(*a*) I have deemed it best, in the first place, to give the Parâsic extract uninterruptedly; and I now proceed to offer a few observations on such passages as seem to me deserving of, or requiring, further notice. Sir William Jones has erroneously stated that this game is more frequently called "Chaturâjî." Now, the term Chaturâjî is not applied to the game at all; it only denotes a certain advantage that may arise in the course of play, which ensures the most complete species of victory, equivalent to our Checkmate. The precise nature of the term Chaturâjî is clearly described in the the original; and, as will be seen in the translation, there is one passage in that very paragraph which for ever decides the point, viz., "O Prince, when in the game of Chaturanga," &c., evidently showing that Chaturanga is the game, and Chaturâjî one of its technical terms. It is needless to add that Sir William Jones's error has been a hundred times repeated by more recent writers.

(*b*) It would seem, at first sight, that this is a mere repetition of the last sentence; but such is not the case: the former sentence would have remained vague and indefinite without the latter.

(*c*) The die alluded to is an oblong, four-sided one, used by the natives of India to this day in some of their own peculiar games, such as the game of Chaupar, in which, according to Abu-l-Fazl, the dice used had "on one side, one spot; on the second, two; on the third, five; and on the fourth, six." In a similar manner the dice for the Chaturanga had the four numbers, two, three, four, and five, thrown by them. Those also the two and five, being opposite each other, so as to make the amount seven, as in our own cubic die. I think it highly probable that the ancient *tessarae* of the Greeks and Romans were so named, not from their square or cubic form, but from their having four faces. The literal meaning of the term, in all its variety of spelling—such as *tettares*, *pessares*, &c.—is simply "the four," or "the fours," which would hardly apply to the cube of six faces.

(*d*) Sir William Jones and his learned friend the Brâhman, Râdha Kant, have fallen into a very serious error respecting the move and power of the Elephant. They have translated the passage, "the Elephant moves in *all directions* as far as his driver pleases;" and further on, it is added, "The Elephant, we find, has the powers of our Queen, as we are pleased to call the *minister* or *general* of the Persians." Now it so happens that the expression used in the original admits of no doubt as to the Elephant's move. It is the adverb *chatushcoṇa*, which simply means, *in the four cardinal directions*—*i.e.*, east, west, south, and north. Had the author intended to indicate the power of our Queen, he would have used the expression *sarvatah*—*i. e., in all directions*, which term he applies to the move of the King. As for the Elephant, then, in the game of Chaturanga, had precisely the move of our Rook; and we may add, once for all, that the present move of our Queen is not of older date than three and a half centuries back.

(*e*) We shall afterwards see, when treating of the medieval game of Chess, or *Shatranj*, that the powers and value of the Rook, Knight, and Bishop, which remained the same as in the ancient Chaturanga, were to one another, respectively, in the proportion of the numbers *six*, *four*, and *two*, or, according to some, *or—and-a-half*.

(*f*) The text of this stanza is at first sight a little puzzling, if not absolutely unintelligible. I take the author's meaning to be, that the Ships and Pawns mutually capture each other, but are not allowed to capture a superior piece. The King, Elephant, and Knight, however, being of higher rank, are allowed certain special privileges: viz., the King can take any piece whatever belonging to his two adversaries; but he is not himself liable to be taken, except by a King, Elephant, or Knight. In a similar manner, the Elephant could capture any of the adverse forces at pleasure, and was liable to be captured only by a King, Elephant, or Knight. Lastly, the Knight could take any of his adversaries within his range, but was himself subject to be captured only by a Knight, Elephant, or King.

(*g*) Gotama, as Sir William Jones has already observed, was an eminent legislator and philosopher. That he should have condescended to record his decision on the merits of certain moves in Chess, is probably a license on the part of the poet, in order to confer the more honour on the game

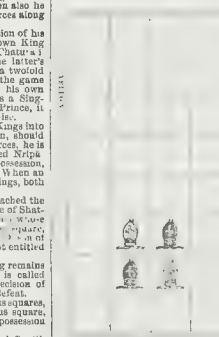
(*h*) Sir William Jones, in commenting on this passage, says, "the last rule is extremely obscure." Now it so happens, that, instead of being obscure, it affords us a ray of light of no small importance. We learn from it that the adverse forces of each party were those on the right and left of the board; consequently those opposite, at the top, were the allied forces. Thus, the Green and Black were allies, as also the Red and Yellow. Indeed, we should have inferred as much, although the author nowhere expressly asserts it, from the nature of the game. Were we to suppose, for instance, that the Red and Green were allies, the battle and danger would fall chiefly, if not entirely, on the Green. The Red would merely have to move forward his Pawns, in comparative security, to the opposite side, through his ally's quarters; but, by remaining on the opposite forces the risk to be incurred is precisely the same for all parties. As to the mere propriety of slaying the Elephant on the *left hand*, it is obvious enough. For example, Green has to pass his Pawns forward, under the protection of his pieces, on the left hand side of the board, where the Yellow Elephant is directly in their way, and much more likely to give them a rough reception than the Elephant of the Red, which is on the right hand, and less able to gain their range, owing to his own Pawns, which stand in front of him. To this we may add, that the very approach of his own allies impede the movements of the Red for attacking the Green when further advanced. Finally, the Red is obliged to keep a sharp look out on his right, from which quarter the hostile Black are threatening to take him in flank.

(*i*) Hence it must have occasionally happened, that only one player on each side remained, to conduct the whole allied forces, and this result very naturally gave rise to the mediæval game of Shatranj, of which more hereafter.

(*k*) The term *shatpada* denotes *six steps*, and corresponds with what we commonly call *guessing* a Pawn. In the Chaturanga, a pawn could only attain one square, to become a Ship, Horse or a Rook; in the Shatranj, as we shall see hereafter, the *shatpada* was compelled to become a *farzin*, or "counsellor," and nothing else.

(*l*) The Râkshasas literally signify demons or giants; but the term was applied to the inhabitants of Lanka, or ancient Ceylon, probably from the gallant and desperate defence they offered against their northern invaders under Râma, the King of Ayodhya, now called Oude. It is further evident from this stanza that the situation called Kâkâkshita was equivalent to what we call a drawn game.

(*m*) The curious situation called *Vrihannauka*, or "concourse of the ships," can occur only in five particular portions of the board, viz, in the four central squares, and also within a square of each of the four corners, as will appear from the following diagram:—



Such a situation may have resulted as follows:—1st. The Red and the Yellow Ships have each made two strides towards the centre, and then one stride more towards the Green's corner. 2nd. The Black has made three strides from his own corner towards that of Green. Now let us suppose it is Green's turn to play his Ship, which as yet is unmoved; he leaps over the Black Ship, which is now close to him, and thus he completes the square. In like manner the same situation may occur within a square of each of the other three corners; and also in the four central squares, after each Ship has made two strides in that direction. From all this we are to infer that he who brought in his ship last, so as to complete the *concourse*, destroyed the two hostile ships, and applied that of his ally to his own use. This Oriental alliance, then, seems to have been rather of a passive kind, and certainly not over cordial; for we have seen two instances in which a player might be coolly plundered by his ally, first of his throne, and secondly of his ship.

(*n*) The term *Gâdhâvati* means "Strong" or "Secure" Pawn. This privilege seems to have been a species of chivalrous courtesy that was shown towards the losing party; of which some traces remain, though of a different kind, in the modern Indian game at this day. It is a rule observed among the natives of India, when playing their own game, that, when the weaker party has only one piece left, that piece cannot be taken as long as he acts defensively in protecting his King. It would further appear that some such rule also prevailed in the Levant during the middle ages, as may be inferred from Twiss, Vol. II., p. 14, where he states—"Pinocnus mentions that in the Levant it is sometimes customary to play with a *Pezzo di Tregua* (Piece of Truce), which Damiano calls *Pezzo Fidato* (Trusted Piece), to which is given the privilege of not being liable to be taken except when it actually attacks the enemy." In Latin Chess Manuscripts of the middle ages we also find a piece similarly privileged—*Per Fiducium*, as it is termed. This, however, we shall enter into more fully when we come to treat of the mediæval period of the game—i.e., of that which prevailed in Asia and Europe from the sixth to the sixteenth century of our era.

THE SWEDISH COURT.—There are good grounds for believing—or rather it is certain—the Imperial Court of France has of late been in direct and frequent communication with the Swedish one, and that this communication is not yet concluded. There are not a few grounds of sympathy between the two. His present Majesty of Sweden is the son of an illustrious French General and of a distinguished French lady, who still lives, and who makes no secret of her warm attachment to her native country. The present King's father always remained a Frenchman at heart, as well as in language, and through that father he is indebted for his throne to that dynasty which is now ably represented by Louis Napoleon. All this will, no doubt, have some weight with King Oscar, particularly as his son, the Crown Prince, appears to have arrived at the conviction that a war with Russia would be popular, not only with the well-disciplined army, but with the great majority of the people of Sweden.—*Letter from Stockholm.*

THE ARCTIC SEARCH.—Intelligence has been received from Captain Kennedy, who had entered Prince Leopold, in the *Phœnix*, at the end of June. The report of the season was highly unfavourable, both as to the preceding winter and present season. For many years it had not been known so severe, and there is some fear that Captain Inglefield may not be able to cross Baffin's Bay, and so reach Beechey Island, in which case the absent vessels, and especially Captains Maclure and Collinson, will not be relieved this year, and we must remain ignorant of what has been done in prosecution of the search for Sir John Franklin's expedition. It seems possible, however, that the unusually large quantities of ice which have been seen in the Atlantic during the spring, and even the summer, may have been occasioned by the disruption and descent of large bodies in the northern part of Baffin's Bay, leaving it comparatively free, while the narrower portion at the southern outlet has been choked. It is thought, therefore, that as Captain Inglefield proceeded to the northward he would find the less hindrance to his progress.

AGRICULTURAL NOTES.

LINCOLNSHIRE FARMING.

THE meeting of the Royal Agricultural Society at Lincoln led to a challenge, by some men of Norfolk, to show half a dozen farms in that county against the same number on the Heath and wolds of Lincoln. It is to be hoped that this challenge will not end in mere talk; because, although wagers could do little towards deciding on the respective merits of the two counties, the report of the judges—which would, or should, be a detailed one—would show the modus of farming in the two first counties of England. In an agricultural point of view, Lincoln and Norfolk are in a totally different position. Norfolk was one of the earliest counties in England in which the important agricultural improvements, which were the result of the Dutch and Flemings, were introduced. From Flanders the turnip—on the cultivation of which all good farming rests—first found its way into Norfolk. Norfolk differs from Lincolnshire, too, in being more amply supplied with labourers, and in having had, before the era of railroads, a manufacturing market close at hand.

Perhaps the best known in connection with the agriculture of Norfolk is that of Coke, of Holkham, afterwards Earl of Leicester, who, during a long life, devoted himself with energy and success to the improvement of a naturally poor soil by good farming and good stock, and long leases. He was one of the great landed proprietors who, following in the footsteps of Lord Somerville, and availing themselves of the experience and example of Francis Duke of Bedford, set the fashion of agricultural-minded landlords—a fashion which has been of such enormous advantage to the country, by spreading through its length and breadth the stock brought to so high a degree of perfection, by Bakewell in Sheep, and by the Collingres in Short-horns. The sheep-shearing of Woburn, and afterwards of Holkham, became famous wherever agricultural improvement was appreciated. At the present time Norfolk has several improving landowners, and some farmers of the first class whose names have a European celebrity.

Coke, of Holkham—for that is his agricultural name—left his mark on Norfolk in the shape of improved live stock than in improved processes of tillage. His introduction of the Devon, superseding an inferior local breed; and he did good service by assisting to render fashionable the new Leicester sheep, by which all the improvements in our Long wools have been effected. But, although Norfolk may, perhaps, boast one of the first, and certainly the largest cultivated farm in the world, the county has had to struggle against the disadvantage of traditions which the improvements of the age have put out of date. For instance, the turnip sown broadcast was a wonderful step in advance, as a root crop, a hundred years ago, when grown by Lord Somerville; but the turnip sown broadcast, as it may still be seen in Norfolk and at the famous farm of Tiptree, is terribly bad farming.

Lincolnshire has not had to contend against old customs and a prejudiced tenantry. The districts which attract attention have been colonised and reclaimed within the last eighty years. The labouring population of the Heath and wolds has always been in number rather under than over the demand, and the supply of tenant-farmers has depended to a considerable extent on migration from other counties. Now it is a well-ascertained fact that in agriculture, as in manufactures, improvements are carried on most vigorously by emigrants unshackled by ancient prejudice.

In 1770 Arthur Young made his first agricultural tour through Lincolnshire; and, at that period, with the exception of a few favoured spots in the vicinity of ancient Church domains, the sea-bordered lowlands were a succession of lakes, where, in winter, the ague-smitten inhabitants carried on their decoys, and, in summer, with the help of stilts and boats, gathered crops of rich rank hay; while on the high ground, the heaths, and wold,—gorse covered—gave sustenance to a few miserable sheep. The lowlands first benefited from the great drainage works, which were vigorously pushed early in the present century. Since that period, the introduction of the steam engine has dried hundreds of thousands of acres, and substituted heavy crops of cole or rape and corn for unwholesome fens, fit only for eels, and wild duck. The hissing of the steam-engine has driven away

The bittern booming in the marsh,

and substituted the partridge and corn-crake.

On the wolds—a bank-bone of sloping hills of light land that ran through the county from north to south a transformation into thriving farms has been effected by "turning down the wolds, fed off with sheep" of the farmers finding courage to spend the money needful for reclamation, under the shelter of a tenant-right custom, established by the great landlords of the county, with the Earl of Yarborough family at their head.

In 1794, as Secretary to the Board of Agriculture, Arthur Young made his second tour of inspection, he found that more than 150 000 acres had been reclaimed by embankment and levelled cuts. The first drainage improvements were effected by taking advantage of the natural fall of the ground to get rid of superfluous water. Windmills, for pumping from a low to a high level, were introduced by, and copied from, the Dutch; but, useful as they were, it not unfrequently happened that the rain fell in summer, and the wind failed in autumn, just when most needed, and the corn, fit for cutting, required reapers in boats, or, if cut, floated away here and there with the floods. The steam-engine has done much toward protecting the fen farmer from these unnecessary losses. Near Boston, Algakirk, Billingborough, Sempringham, Hackenby, there are wide tracts of grazing land, formerly covered with water, which carry a bullock or three sheep to an acre. To drain the lowlands of Lincolnshire, artificial outfalls have been constructed, towards of 400 miles in extent, at a cost of little less than one million and a half sterling. At the Fode-hole Drain, near Spalding, in September and October, 1848, two engines of 80 and 60-horse power consumed 600 tons of coal in pumping from 28,000 acres of land.

It is on these low-lands that the warping process is carried on, by which the alluvial soil held in solution in the Trent and Ouse is, by successive floodings and drainings, made to settle on your land, until a "warp soil" of great depth has been obtained. On this warp soil, crop after crop, even of the most exhausting kinds, may be grown without manure. Those interested in the history of the reclamation of the Fens will find a very good account in a little work published by Mr. Clarke, of Wisbeach. But it is on the heaths and wolds which, within the lives of the fathers of this generation, have been changed from wild gorse to first-class turnip farms, that the agricultural reputation of Lincolnshire chiefly rests.

On Arthur Young's second visit to Lincolnshire the improvements were so great that he thought little remained to do, and he then observed, that, "forty years previously, it was all warren from Spilsby beyond Caistor. A tree was not to be seen, and even a turnip to be seen where thousands of acres now flourish; and the few grown were unhoed, except by gentlemen." At that period Mr. Chaplin, of Temple Bruer, let 3000 to 4000 acres at 2s. an acre, chiefly as rabbit warren. At present one may ride with the hounds from Lincoln to Barton on-the-Humber, and scarcely see such a thing as a rabbit-warren. As for this Temple Bruer estate, Mr. Pusey, in his celebrated tour in 1842, found it converted into a first-rate farm, with a stock occupying, that the eye returned with unsated pleasure to, 126 acres of turnips, to be wintered from 1200 to 1500 sheep, and fed in fold-yards 110 beasts, for which he purchased eighty-five tons of oil-cake. And he observes, "In passing over the Lincoln heath, condemned by the intelligent Arthur Young to barrenness, farm succeeded farm, each appearing to be cultivated by the owner, for example, and not as really the case by a tenant for profit; and so for miles through fields of turnips, without a blank or weed, on which thousands of long-woolled sheep were feeding in netted folds every stubble-field clean and bright, all the hedges kept low and neatly trimmed, every farm-house well built with spacious courts, and surrounded by such rows of long saddle-backed ricks that showed that the yield did not forget to return in August what it had received from the fold in December."

Now, the question raised in 1854, in friendly chat among the farmers of many counties, was not as to the correctness of this often-quoted picture at the time it was written, but whether the Lincolnshire farmers have continued to go ahead, and keep up the distinguished position they held twelve years ago. We think they have. We believe, that with few fancy farmers—such as those who are to be found amusing themselves by experiments made regardless of expense—the general average of tenant-farming is higher in Lincolnshire than in any other county; that more good stock is well housed and fed during the winter; that better implements are used; and that improvements of any kind are more readily introduced into the tenant-farms of Lincolnshire than any other county, although there is no one man who stands in so pre-eminent a position as Mr. Hudson, of Castle-acre, in Norfolk.

After Lincoln heath come the Wolds, which were left to rabbits when Lincoln-heath, with a near market, grew barley and oats, although not wheat. Lincoln-heath now grows six quarters of barley where, in 1799, it only grew three; and four or five quarters of wheat where it was thought the land was too poor to grow any. While, as to the intermediate belt between the sea and the Wolds, Mr. Sidney, in his "Ride through North Lincolnshire, in 1848," says—"The neatness of the general cultivation was as remarkable as the great size of the farm-buildings. The gates, always a sign of good farming, were universally in good order, the fields square, and the corners evenly worked up, the drill system for wheat-sowing all but universal, and the crops consequently well harrowed and clean. On most of the farms the best modern implements were in use; that most useful implement the 'scarifier' was as common as the harrow; Crosskill's clod-crusher passed everywhere; and the wheelwrights' shops had quite a scientific appearance from the number of patent tools and lathes for repair. In every farmer feeds some good beasts, which are to be found with plenty of straw under their feet, not wandering over liquid mud of ill-paved yards."

On a recent visit to the same district, we found no signs of contented agricultural composure. The autumn had been wet, and those pushed in the clay lands in the autumn, and fixed and portable steam-engines were spreading everywhere. On a farm of 1300 acres, of which half was in tillage, the tenant—farming with an agreement for compensation for unexhausted improvements—had laid out nearly £3 an acre for the first two years, on guano, bones, and other tillages, and was then spending upwards of 30s. an acre in the same way. This farm carried 1000 sheep, 100 fat beasts, when to pay the rent, beside some breeding stock. This was not a fancy, but a tenant's farm.

The Wold farms on the Brocklesby estate are, on an average, above 300 acres, having been laid out in the rough by the grandfather and father of the present Earl. Many fields are from 40 to 70 acres; and on one of these we saw magnificent crops of turnips, sown with the liquid manure drill, as a medium for distributing super-phosphate. Now, this new implement was introduced on the Wolds, not by a fancy adventurer, but by one who has farmed the same farm more than forty years, under the Yarborough family, and made turnips succeed gorse, and driven out rabbits with improved Lincoln sheep. It has been remarked by a leading journal that the Lincoln sheep are inferior to the Cotswold. There is no doubt of the fact. The breeder have not, until lately, been under the influence of competition. The Lincoln Royal Agricultural Show will no doubt have its effect. But fifteen years of repeated trials have shown that the fine qualities of the Cotswold cannot be transplanted. They appear to depend on something peculiar to the Cotswold-hills, and to the style of feeding adopted by a few successful breeders.

There are, unquestionably, three points in which Lincolnshire takes a high agricultural position. The customs and traditions of the county make the landlords what is commonly called liberal, but what is in reality wise. They provide the machinery in fit farm-buildings, and secure the expenditure of the tenant by compensation for unexhausted improvements. The tenants are enterprising, not afraid of new implements or new tillages. The labourers are well paid and well fed. The single men and boys live with the foreman. Here is a bill of fare of a Lincolnshire farmer, for the benefit of the "Sheep-shearers and Pitch" counties:—Breakfast: Bread, milk, and bacon. Dinner: Beef or mutton, or bacon, alternately, with vegetables, bread, and cheese. Supper—Bread and cheese. A pint of beer daily." On the Brocklesby estates, it has been Lord Yarborough's endeavour that every married labourer should have enough land to keep a cow.

It is safe to assert that, with room for improvement—where is there not?—the three classes of landlords, tenants and labourers, are better placed, and live in better mutual reation, on the heaths and wolds colonised within the last sixty years; and that the practice of agriculture is, on an average, more steadily progressing than in any other county. The great want is, an intelligent, practically-useful education for the peasantry.

HEALTH OF OUR TROOPS IN THE EAST.—A private letter from Varna, dated 27th July, states that there is much sickness among the troops quartered there. Diarrhœa is general, fever prevails, and cholera has broken out with some little violence. The hospital is quite full, the sick filling not only the wards but the passages, and even the staircase. Eighty new cases were admitted into hospital on the 23rd. It was expected that a considerable number of the sick would embark in a day or two. The sickly season does not ordinarily commence till September. The last formal return, up to the 22nd of July, gave 1507 men sick in the British army at Varna and its neighbourhood, the total force being 25,600—the proportion thus being a trifle under six per cent. In addition, 300 men, the majority of whom were convalescents, remained at Scutari. Between the 22nd and 24th there had been 49 admissions and 16 deaths from cholera in the camps at Devna. The return of cholera cases and deaths from cholera, between the 19th and 25th inclusive, gives—English admissions, 73—deaths, 23; French admissions, 139—deaths, 71.

INDICTMENT AGAINST QUEEN CHRISTINA.—According to the Madrid papers, Maria Christina de Bourbon is about to bring her case of twenty-four millions, which she received unlawfully as Regna Gobernadora, from 1834 to 1840, having married a second time shortly after the death of her first husband; twelve millions which were paid her on her return from France for the three years which she passed out of the country; and thirty five millions, the difference between the money of Spain and that of America, for the ten years that she has drawn her pension on the treasury of Cuba; making a total of seventy-one millions of reals. With the sweat of the people the Ransares family raised their palace of the Calle de las Rejas de Bethencourt; acquired the gold mines of Langreo; made its own a great part of the Gijon railroad; took many shares in the canalisation of the Ebro; took a great number in the company of Las Arenas Industrial de Jouy (stock manufacturing company); entered with Senor Salamanca in the participation of various lines of railroad; and established at Havana engines, and other speculations.

THE FETE NAPOLEON.

THE thunder of the artillery from the Invalides, firing at six on Tuesday morning a salvo of 101 guns, announced that the proceedings of the day had commenced. The weather was most propitious, the horizon without a cloud; and already, long before that early hour, a number of promenaders might be observed in the Champs Elysées watching with curious eyes the busy workmen, who from early dawn had been engaged in completing the varied arrangements.

As the morning wore on the crowd increased, and by ten o'clock every point which presented more than an ordinary attraction was thronged with spectators. The general character of the ornamentation was similar to that of last year, and the ground principally selected comprised the garden of the Tuileries, the Place de la Concorde, and the Champs Elysées, up to the Arc de Triomphe. Perhaps the best spot to see the principal preparations from was some point in the centre of the Place de la Concorde, from which the eye could range without much difficulty, from the front of the Tuileries garden up the main avenue of the Champs Elysées. On each side, the lofty terrace of the garden was surmounted with a long range of arcades of open woodwork, representing the colonnade of a Moorish building. Every part of this vast piece of lace-like architecture was composed of variegated rods, not an inch wide, arranged with so due a regard to harmony of description of open woodwork, but made wide enough to convey the idea of additional solidity. Every part of these constructions was covered over with coloured lamps, to match the shade of the woodwork beneath, and they were to be lit up at night to furnish forth a marvellous illumination. Round the Place de la Concorde similar erections were to be seen, all gaily painted to match the long range of arcades on the terrace, and, like them, bearing coloured lamps on every part of their surface. Perhaps the Place de la Concorde never appeared to greater advantage, its space seeming almost doubled by the removal of the sunk gardens at the four corners, and the heavy wall of the garden-terrace being replaced by a light and elegant balustrade, surmounted at equal distances by Grecian vases filled with living flowers.

During the early part of the day the religious services performed in all the churches of Paris in honour of the Assumption, which Fête is coincident with that of the Emperor, attracted vast crowds. In the course of the morning, also, provisions were distributed at the different *mairies* of Paris to the indigent and aged, and these, by directions of the Emperor, were furnished with a liberal hand.

A little after twelve an immense multitude filled the garden of the Tuileries and the Champs Elysées, the tide generally flowing towards the Pont de Jena to witness the boat-races, and to the Champ de Mars to behold the grand military spectacle of the raising of the Siege of Silistria, of which two representations were given, one at two o'clock, and the other at half-past four. Perhaps no part of the amusements of the day had more attractions for the people of Paris than this representation—first, because everything appertaining to war or its imitation is always agreeable to the French nation; and next, because the sympathy felt for the brave defenders of Silistria has been universal with all classes of the population. The temporary theatre on which this glorious episode of the Eastern war was represented was erected on the side of the Champ de Mars facing the stands of the Jockey Club, and was of such vast extent as to cover a superficies of 25,000 metres. It gave the town and fortifications of Silistria—everything in the foreground depicting the ramparts and bastions of a fortified place, blackened with smoke and shattered by shell and fire; whilst behind stood, bright and clear in the sunshine, the mosques, minarets, and private habitations. A large space of the Champ de Mars was enclosed round these minute fortifications, within which the general of the incidents of the attack and defence took place. The principal bastion of the place was at least 150 metres in length, and upwards of 1500 performers lent their aid to impart verisimilitude to the action. The combat was enacted on that luminous theatre was composed of two parts. The action is supposed to commence at early dawn, and numerous sentinels keep careful watch on the ramparts of the citadel, and from the fort of Abd-al-Medjid, which occupies the foreground. Bodies of soldiers are seen to assemble on the advanced works, which they strengthen with the materials which are lying about. Mussa Pacha, the Governor of the place, comes forward with a numerous staff, and reviews the soldiers. Suddenly an alarm is given; peasants and fugitives from the enemy's camp, one old man, describes the Cossacks by their long beards and lances, and exclaims "Le grand Tzar, at their head of cruelty. Orders are given, and [illegible] upon the alert, when, shortly after, a body of Russians appear, and [illegible] encounters; a stronger corps afterwards appear, with General Gortschakoff at their head, and prepare to besiege the town. The Russian soldiers at once commence the construction of a battery right against the fort; gabions, fascines, and bags of earth are brought forward and arranged, whilst the sharpshooters protect the workmen. At last the assault takes place, but the Russians are repulsed with [illegible] fire then ceases, and a flag of truce arrives from Prince Gortschakoff, with propositions to the Governor. Then ensue [illegible] of a large sum of money offered by the Russians to have the place betrayed, and the indignant refusal of Mussa Pacha. Gortschakoff, who is waiting outside, furious at learning the result of his treasonable propositions, gives the signal, and fresh attack in which the Russians are again repulsed, with heavy loss; the Turks make a sortie, slaughter the enemy at their guns, and seize on several pieces of cannon. Mussa Pacha testifies his satisfaction at the conduct of the Turks; his wife and children cast themselves into his arms; a Turkish envoy brings a sword of honour to the Governor from Omer Pacha; it is intimated that the French and English forces have landed, and are coming to relieve the town; a grand ballet ensues, in which various military dances are given, and so ends the first part of the performance. In the second, the Russians return in force, and attempt a more desperate attack than before, but which proves again unsuccessful. Prince Paskewitch intimates that *cette qui coûte* he will obtain possession of the fortress, and a desperate assault takes place. After a series of desperate attacks the Russians are obliged to give way, the Turks [illegible] a sortie, and complete the rout of the enemy. Mussa Pacha is seen returning thanks to Providence for the success of the [illegible] mortally wounded with a shell, and falls nearly lifeless into the arms of his followers. At this [illegible] his wife and children rush to the scene of desolation, the [illegible] warrior embraces them, looks round once more on his faithful officers, and expires.

Such is a brief explanation of the representation which was received with extraordinary applause by the thousands assembled in the Champ de Mars to witness it. On Tuesday, at the close of the second performance, M. Godard, accompanied by four females in allegorical costumes, personating France, England, Germany, and Italy, ascended in a balloon forty-two metres in diameter; and, immediately after, a flotilla of 500 small balloons was launched into the air, bearing the name of a vessel belonging to the three Allied fleets, and variously blazoned on the sides of the balloons.

The illuminations in the evening were upon the most magnificent scale. All up the Champs Elysées the Road Point was erected at each side a long extending range of arcades, clustered over with many-coloured lamps, the effect of which at night must be splendid. For so long a line remaining uninterrupted—for these arcades were not less than three hundred and fifty-four in number—lofty portiques, placed at equal distances at each side, relieved the monotony, and added to the general effect. The fountain at the Road Point had undergone a complete metamorphosis, its gushing waters being silenced, and over its marble circle an immense celestial sphere, studded with golden stars, was suspended, forming a huge region of illumination, which, being covered over with variegated lamps, gave one blaze of light.

All down the Champs Elysées immense lustres were suspended by ropes of verdure along the centre alley from lofty poles placed at equal distances on the side alleys, on the right and left, similar lustres were to be seen; and from every arcade at each side hung a chandelier of one hundred lights.

In the garden of the Tuileries, as if to form a marked contrast with the varied colouring of the ornamentation outside, the principal characteristic of the arrangement was a certain chaste simplicity. All along the principal walks long lines of globes of glass, rivalling the snow in whiteness, were suspended from gilded poles, and in the distance gave one the idea of serried ranks of invincible pearls. Over the two fountains an orchestra had been raised, of blue, white, and gold; the water bathing every side but that at which the performers passed along a narrow passage to gain their seats. Opposite the Exhibition Palace was erected a circular constellation, in which a military band would perform in the afternoon, and at the nearest corners of the Road Point two others stood, for a similar object. All the three were dressed out gaily with flowers, and produced a much happy effect. The letter "N" and the imperial eagle placed occasionally on shields disposed in various parts of the constructions, served to show in whose honour the Fête was given.

THE MEDITERRANEAN SUBMARINE TELEGRAPH.

THE laying down of the Submarine Telegraph from Spezzia to the island of Corsica—an event of world-wide importance—has been most satisfactorily accomplished.

On the evening of the 20th ult., at ten p.m., the *Persian*, with the telegraph cable, left Genoa, in company with the Sardinian steam-frigate *Constitucione*, having on board His Royal Highness the Prince of Carignan, the Ministers of War and Public Works, the Ministers of France and England, &c., and arrived off Cape Bianco, on the eastern side of the Gulf of Spezzia, at four o'clock the following morning, where she was joined by the Sardinian Royal Navy steamers *Maistanno* and *Tripoli*, which had been previously dispatched from Genoa for the purpose of making preliminary arrangements. Added to boats and crews from each of the two latter vessels, Mr. Reid and his assistants immediately commenced disembarking a part of the cable, which was to be attached to the station at a point of land called Santa Croce, on the right bank of the torrent Magra, which here divides the Tuscan and Sardinian States. This was not effected near the mouth of the river, but at a point about two miles from the sea, where the [illegible] operation was completed, and telegraphic communication established between the vessel and the land. Unfortunately, the telegraphic cable was not then finished further than a few fathoms in the direction of Spezzia from Genoa, and therefore it has been impossible to report progress immediately. The delay occasioned by broken wires of the external covering which, when [illegible] in the machinery used in laying down the cable, [illegible] thread forced into the eye of a needle which [illegible] all for it; and at the same time it was discovered that the machinery was not sufficiently powerful to arrest the run of the cable the moment [illegible] were discovered, particularly in deep water, where the [illegible] more than two tons of hanging over the taffrail in dead weight. The distance from point to point, by actual measurement, is 63½ nautical miles—76 miles English; and the quantity of cable paid out has been 85 English miles, the extra quantity being easily accounted for by unsteady steering, currents, and stoppages. The time passed was 104 hours from leaving Santa Croce, of which much less than half were occupied in laying down, the remainder having been taken up in repairs to the cable and alterations of the machinery.

On Friday, the 21st, after Prince Carignan and his suite, &c., had visited the *Persian*, she commenced steaming, at ten a.m., accompanied by the Sardinian steamers *Maistanno* (Captain Boyl) and *Tripoli* (Captain Trovano), which were placed under the command of Captain the

THE FETE AT PARIS.—REPRESENTATION OF THE SIEGE OF SILISTRIA, IN THE CHAMP DE MARS.—FLOTILLA OF BALLOONS.—(SEE PRECEDING PAGE.)

Marchese Ricci, Adjutant-General of the Sardinian Navy, who himself took a passage in the *Persian*. On the first day, the *Persian* was not under steam more than five hours, and anchored for the night at ten p.m.; the next (the 22nd), only five hours and a half; and brought to for repairs and alterations at four p.m., when about twenty-three miles from the point of starting, and in 250 fathoms of water, where she rode safely moored by no other holding than the injured telegraph cable until 8.30 a.m. on the 24th. On the 24th, twelve hours were employed in laying down; and again at night the vessel remained moored by the cable, when she must have been in very deep water, as the men-of war found soundings in the immediate neighbourhood of 345 and 247 fathoms, with a yellow muddy bottom, resembling the deposit carried down by the Arno. On the 25th, she was once more under way at 4.30 a.m., and continued the work of paying out, with frequent short interruptions for repairs, until 6.30 p.m., making altogether thirty-six hours so employed. During the whole passage, the weather has been most propitious. The greatest benefit gained here has been the certainty of its being practicable to lay down a cable in such depths—a fact which has met with great doubts until now; indeed, Mr. Brett was on this occasion recommended by very competent persons to carry his cable under the island of Gorgona, rather than in the direct line, as the water is more shallow there, and his advisers had serious misgivings of his success in a deep sea; but as he felt that if he failed here he should have little hope of success in his farther undertaking between Sardinia and Africa, where Admiral Smyth, in his work on the Mediterranean, gives 500 fathoms, without finding bottom, he boldly decided on the risk, and has certainly most gallantly won.

The Mediterranean Electric Telegraph, of which the first submarine portion has thus happily been laid down, was originated by Mr. Brett in the beginning of 1853, for the purpose of joining Africa with Europe, with the intention of pushing eastward thence, either by land, or viâ Malta, so as to unite ultimately with the telegraphic system now being established in our Indian possessions. The advantages of forthwith connecting Malta with the Continent and England, by means of telegraph, are too evident to require attention being called to it; such communication, if taken from Cape Bon or Malta, would afford facilities for instantly transmitting orders to Sardinia and Tunis for supplies, and thereby obviate the recurrence of such mismanagement as the garrison being run short of provisions, from want of consideration on the part of the King of Naples or the Commissariat. The present company was formed by Mr. Brett, in 30,000 shares of £10 each; and he obtained a concession from the French and Sardinian Governments for the purpose of laying a telegraph from Spezzia to Bona, viâ Corsica and Sardinia, for which the Sardinian Government guarantees 5 per cent for for fifty years on 3,000,000 f., and the French Government 4 per cent on 4,500,000 f.; but, to induce the shareholders to come forward, Mr. Brett undertook the entire work at his own risk and peril on the above terms.

The great work was consummated by a gun being fired on board the *Persian* by an electric spark passing twice to Santa Croce and back, through the whole length of the cable on board and in the water—that is to say, along 449 miles of wire, awakening the echoes of the Corsican hills with the tidings of their now being joined to the mainland by ties which it may be hoped will be found productive of the happiest results to all parties.

LAYING DOWN THE MEDITERRANEAN ELECTRIC TELEGRAPH CABLE AT SPEZZIA.

DESTRUCTION OF SULINEH, AT THE MOUTH OF THE DANUBE.

DESTRUCTION OF SULINEH.

(From a Correspondent.)

I ENCLOSE a Sketch, which may be considered a pictorial contradiction to the reported depths on the bar of the Sulineh mouth of the Danube, reported at only five feet, and seven feet, or, at the extreme, nine feet water; whereas there are 11 feet, as proved by H.M.S. *Spitfire* crossing the bar, drawing 10½ feet, on the 17th ult.

The *Spitfire* left Varna on the evening of the 18th. ult., towing a brig, having on board some Turks, horses, &c., to accompany an exploring expedition, by Colonel Hon. A. Gordon, Colonel Dessant and his Aide-de-Camp, and the Commander of the *Spitfire*, Captain Spratt, F.R.S. On arriving at Baltschik, the *Sidon* (Captain Goldsmith) took both vessels in tow, and reached the dreary miserable village of Kustendjeh next morning. Horses, baggage, &c., were landed; and on the following day the party started to examine the Dobrudja, having as a guard (in a country infested with Cossacks) twelve Turks, four artillerymen, and two marines from the *Spitfire*, all mounted on horses. Meanwhile, the *Spitfire* was sent on to the blockading squadron off the Danube, and arrived there with despatches from the Admiral on Sunday at noon. The despatches contained orders for the entire destruction of the small town on the right bank of the Sulineh branch. Part of the place had already been destroyed by the boats of the *Vesuvius* and *Firebrand*, headed by the intrepid, brave Captain Parker.

The high reaches and stockades on the banks afford safe protection to ambushing Cossacks, and were fatally destructive to boats pulling against a rapid stream. As such a resistance was likely to be shown again, and the enemy could shelter himself behind houses, &c., Captain Powell, of the *Vesuvius*, determined on sending the *Spitfire* into the Danube, and was zealously seconded by Lieutenant Johnstone (then in charge of the *Spitfire*), and found practicable by the hurried survey and buoying of the bar.

The steamer took all the boats in tow at 12 30, picked up her surveying-boats, and carried a depth of eleven feet over the bar—her draught being ten and a half feet. She anchored in the river abreast of the town, having, when entering, fired shot and shell to appraise the Cossacks of her approach, and to give protection to the boats. However, the enemy was not to be seen; they evidently evacuated the place on perceiving the steamer coming in. Captain Powell landed with a division of small-arm men, and Commander Popplewell took charge of the boats; and the whole place was soon enveloped in dense smoke and flames—the lighthouse and church being carefully preserved. At half-past four the *Spitfire*, accompanied by all the boats, steamed out of the river Danube, leaving behind her surveying-galleys, under Lieutenant Maunsell and Mr. Wilkinson, to make a further examination of the Bar. By sunset, all had returned, and the town of Sulineh was completely destroyed by fire.

BALTSCHIK.

BALTSCHIK, on the coast of Bulgaria, has of late been a point of considerable interest, from its being the anchorage of the English fleet in the Black Sea.

The accompanying View, showing the town in a valley between the cliffs, is from a Sketch taken by Lieutenant O'Reilly, of H.M.S. *Retribution*.

The *Patrie* says:—Lord George Paulet, one of the superior officers of the English fleet, gave a splendid fête on board his ship on July 28. A sumptuous banquet, to which a number of French officers sat down, was followed by a dramatic entertainment, consisting of a comedy of Sheridan's, and "A Visit to Bedlam." This magnificent fête will leave souvenirs of the most unfeigned cordiality among the Anglo-French staff.

The following extract is from the memoranda of a gentleman who

BALTSCHIK, ON THE COAST OF BULGARIA.—FROM A SKETCH BY LIEUT. MONTAGU O'REILLY, R.N.

accompanied the reconnoitring squadron, which left Baltschik on the 22nd ult.:—

"22nd. Fleet in tow of steamers; in the evening cast off, the breeze freshening.

"Sunday, 23rd. Blowing fresh, but foul.

"24th. Ditto.

"25th. Taken in tow by steamers, and came directly in sight of Sebastopol; all lights forbidden, not even the steamers allowed to show their lights.

"*Terrible*, *Fury*, *Descartes*, and *Highflyer* went in with Sir George Browne and staff, and others, to view the works of the town. Signal made to load guns and down bulkheads.

"26th. Close into Sebastopol, which is very like what appears in the ILLUSTRATED LONDON NEWS, and does certainly appear to be rather formidable. However, if we attack, we must take it. The Russian ships are admirably placed across the harbour; the forts are, however, so constructed that after the first round they would be so suffocated with smoke as to be unable to do anything.

"When the steamers stood in this morning, some vessels inside got up steam to come out and attack them, but on perceiving the fleet three signal-guns fired from the height stopped them. It would certainly please us very much to take the place.

"27th. General quarters and reloaded guns.

"28th and 29th. Returning.

"30th. Rather rough; anchored at Baltschik.

"It is reported that a very good place for landing is found near Sebastopol, and preparations will immediately be made for attacking it with 100,000 soldiers."

FRANCE AND RUSSIA.—IMPORTANT CORRESPONDENCE.

COUNT NESSELRODE AND M. DROUYN DE LHUYS.

The *Moniteur* of the 11th inst. publishes the despatches by MM. de Nesselrode and Drouyn de Lhuys, which we subjoin. The first is the Russian answer to the Austrian request that the Czar would recall his troops from the Principalities. The second is the examination of that answer by the French Foreign Secretary. The chief interest of the correspondence lies in the latter part of this—the second document—as M. Drouyn de Lhuys sets forth the views of the two Allied Governments respecting the much-talked-of guarantees.

In introducing these despatches, the *Moniteur* says:—"We lay before our readers the reply of the Cabinet of St. Petersburg to the demand of the evacuation of the Principalities, which was made by Austria and supported by Prussia. Count Nesselrode's despatch, transmitted officially by the Court of Vienna to the Government of his Imperial Majesty, has elicited a reply, which we also publish, by the Minister of Foreign Affairs. The communication of these pieces had preceded and prepared the way for the exchange of notes effected at Vienna on the 8th instant."

After the arguments which Russia has employed to repulse the demands of the great German Powers, the tenor of the proclamations which have been issued in the Principalities, the multiplied checks which its troops have suffered in their retreat, and the concentration of the forces commanded by General Hess in Transylvania and Bukowina, the Cabinet of St. Petersburg cannot honourably represent the evacuation of the Principalities as a diplomatic concession to Austria.

COUNT NESSELRODE TO PRINCE GORTSCHAKOFF, ENVOY FROM RUSSIA AT VIENNA.

St. Petersburg, June 17—29, 1854.

Prince,—Count Esterhazy has communicated to me the despatch in which his Cabinet invites us to put a stop to the actual crisis, by ceasing to extend our trans-Danubian operations, and by evacuating the Principalities at the earliest period possible.

Count Buol, pleading as the reason for this desire the Austrian and German interests, which would be compromised by the prolongation and extension of the struggle on the Danube, goes upon the assumption that our occupation of the Principalities has been the principal cause of the war. We must request him to make some qualifications to this assertion.

The occupation of the Principalities did not prevent negotiations from being opened between the Cabinets of Vienna and St. Petersburg, and the abandonment of the Vienna Note, the rejection of the propositions made at Olmütz, with the concurrence and approbation of Austria, any more than it prevented the conclusion of the interior bases of negotiation; and, although all these endeavours after conciliation have since then failed, [illegible] no ground that this has resulted from incidents and motives [illegible] created, on the subject of which it is proper being silent at present, in order not to [illegible] unpleasant recriminations. We have replied by our silence to the summons of France and England, because it came in an insulting shape, preceded by open provocation, and was destitute of all conditions of reciprocity. If war has resulted, it is but just to impute the cause less to the nature of our answer than to the tone and the terms which provoked it.

However this may be, if, in the opinion of the Austrian Government, the prolonged occupation of the Principalities has been the cause of the war, it should follow that upon the cessation of the occupation war will cease by the very fact, seeing that hostilities will be suspended.

Is the Cabinet of Vienna prepared to give as satisfactory assurance on this point?

It cannot escape the attention of the Cabinet that from the moment when the Porte declared war against us, and particularly since the circle of the war has been transported beyond Turkey to our seas and shores, has been immensely enlarged, the occupation of the Principalities, whatever may have been its original character, has now become nothing else than a military position for us, the maintenance or abandonment of which must be wholly subordinate to strategic considerations. It is self-evident, therefore, that before depriving ourselves, out of regard to the situation of Austria, of the sole point from which, pushing forward on the offensive, we have some chances left of re-establishing in our favour the equilibrium which is universally against us elsewhere, we should know what effect Austria can offer us. For if hostilities continue, if the Powers freed from all apprehension in Turkey are left at liberty either to follow up on the evacuated territory, or to carry all their disposable forces elsewhere for the purpose of invading our European or Asiatic shores, in order to impose upon us unacceptable conditions it is evident that Austria will have asked us to weaken ourselves morally and physically by a sacrifice for which no equivalent is offered.

To demand of Russia to give herself entirely up to the mercy of her enemies when they do not pretend to conceal their intention to destroy or diminish her power, to expose her to all the attacks which it suits their convenience to make, reducing her everywhere to the defensive, to take away from her, in short, every means of procuring a peace without ruinous or dishonourable conditions, would be an act so contrary to all the laws of equity, to all the principles of military honour, that we cannot but believe that such a thought could never enter into the mind of his Imperial Majesty Francis Joseph.

In [illegible]ading to us the protocol of the 9th of April, the Court of Vienna [illegible]ess on the positive engagement which it has made with the Western Powers, to bring about by all its means the final evacuation of the Principalities; but in making this engagement Austria could not [illegible] the privilege of choosing the means best calculated for the fulfilment of [illegible]obligations, and this would be to place Russia in a condition [illegible] to the evacuation with honour and security. The obligation [illegible] which she has contracted, gives her, on the contrary, the right of [illegible] that the other Powers shall not hinder the success of her efforts by [illegible]ersede. The same thing holds with respect to the Austrian [illegible] on the essential interests which have been pleaded against the [illegible]ion of our military enterprises. They authorise the Cabinet of Vienna to make use to the two Powers of the same reasons as those which [illegible] privilege of choosing the means best calculated for the fulfilment [illegible] by her negotiations on the Danube, *a fortiori* they [illegible] more heavily, like those of all neutral states, by the [illegible] brought on by the maritime operations of France and [illegible] the Black Sea, and the Baltic.

Let the Austrian Government, then, after weighing these considerations, [illegible] an explanation with us on the subject of the guarantees of [illegible] which they can give us; and the Emperor may then, in deference to the wishes and interests of Germany, feel disposed to enter into negotiations touching the precise period of the evacuation. The Cabinet of Vienna may be assured beforehand that his Majesty shares in the same degree as itself the desire of putting, as soon as possible, an end to the crisis which hangs over all European affairs at the present moment. Our august master still wishes, as he always has wished, for peace. He does not wish, we have repeated, and we repeat again, either to prolong indefinitely the occupation of the Principalities, or to establish himself there permanently, or to incorporate them into his states still less to overthrow the Ottoman Empire. With respect to this he has no difficulty in subscribing to the three principles laid down in the protocol of the 9th of April.

(1.) *Integrity of Turkey.*—This point is only in accordance with all that has been enunciated by us up to the present time; and the principle will not be threatened for a long time if it is respected by those who are now occupying the waters and territories of the Sultan.

(2.) *Evacuation of the Principalities.*—We are ready to begin with this on receiving fitting guarantees. Such being the disposition of the Emperor on the principal points indicated in the protocol, it appears to us, Prince, that it would not be difficult to accomplish a peace on this triple basis; or, at least, prepare negotiations for it by means of an armistice.

Your Excellency will be so kind as to express a hope of this kind to the Austrian Cabinet in communicating these despatches.

NESSELRODE.

M. DROUYN DE LHUYS TO M. LE BARON BOURQUENEY, MINISTER OF THE (FRENCH) EMPEROR AT VIENNA.

Paris, July 7.

Monsieur le Baron,—I have received the despatches which you did me the honour to write as far as to No. 121, and your telegraphic despatch of yesterday has also reached me.

Interesting as must be to the Government of his Imperial Majesty the double communication which you announce, I have not had to wait for it in order to appreciate the answer of the Cabinet of St. Petersburg, with complete knowledge of the subject. I have already had that document in my possession several days; it having been, as you are aware, remitted by M. Issakof to all the Governments which were represented in the conferences held at Saarberg; and the Emperor had time to examine it, and give me his orders concerning it before he left Paris for Biaritz.

I shall at the outset make but a few words of observation to the despatch of Count Nesselrode. Russia persists in casting on the Western Powers the responsibility of a crisis which she alone has provoked: she takes hold of the form of their summons, and sees the determining cause of the war in an act which her own conduct had rendered necessary. This is forgetting too early the series of long and toilsome negotiations which filled last year; it is to take too little account of the multiplied warnings which France and England gave, under all forms, to the Cabinet of St. Petersburg; it is, finally, an unwillingness to admit that, from the day that the Russian forces crossed the Pruth, peace was so far compromised, that the most loyal and patient efforts could not save it. This being so, M. le Baron, I will confine myself to recalling that the despatch of Count Buol to Count Esterhazy, that very despatch to which Count Nesselrode has just responded, re-establishes, as it could not fail to do, the truth respecting the parts which have been played; and that the conference of Vienna, in the protocol of April 9, has solemnly recognised the fact that the summons addressed to Russia, by France and England, was founded on right. Europe then has pronounced its judgment by its most accredited organs, and for us that is enough.

Now I come to the political part of the Russian communication. That which first strikes me is this, that, even looking at the endeavour lately made by Austria and supported by Prussia, simply as a part of German policy, these two Powers will not be able to declare themselves satisfied with what they have gained. The despatch of Count Buol to Count Esterhazy threw out the following two points into prominency:—

First, the necessity of evacuating the Danubian Principalities within a short period; and,

Second, the impossibility of subordinating that evacuation, which was requested in the name of interests essentially Germanic, to conditions independent of the will of Austria.

But no limit has been fixed (in reply to that demand) to the occupation of Moldavia and Wallachia, and the conclusion of an armistice is put forward as the condition *sine qua non* of the retreat of the invading army beyond the Pruth. The proposition which, by the avowal of Austria and Prussia, Russia brings to the Germanic Confederation, by not returning into its territorial limits, consequently subsists in all its entireness, and is aggravated not only by its duration, but by the fact that the just complaints to which it gives rise remain unredressed.

The Cabinet of St. Petersburg, it is true, adheres, it says, to the principles laid down in the protocol of April 9; but the presence of Russian troops on the Ottoman soil destroys the greater part of the value of this declaration, to which I shall presently advert more particularly. The evacuation of the Principalities is, in fact, the first condition for the integrity of the Ottoman Empire, and the fact of their occupation constitutes a flagrant violation of European right. The crisis which now troubles the world has its true source in the pretensions it is attempted to contest it—dates its commencement from the passage of the Pruth; and Russia cannot now make that first and prevalent reparation of an act which general opinion has stigmatised, except by putting an end to a situation in which she has placed herself by her own act. I cannot understand what Count Nesselrode means to imply when he announces that the integrity of the Ottoman Empire "will not be attacked by Russia as soon as it shall be respected by the Powers which now occupy the territory and the waters of the Sultan." What parity is there between the invader and the protected? Has the preservation, by the concert of the Allied troops, asked for by the Sultan, authorised by a diplomatic act, and the effects of which are to terminate by a common agreement, any analogy whatever with the violent entry of the Russian army on the Ottoman territory?

Further, M. le Baron, the paragraph of Count Nesselrode's despatch where he speaks of the situation of the Christian subjects of the Porte, signifies—or I am very much deceived—that the Cabinet of St. Petersburg places among the number of those ancient privileges which the Greeks of the Eastern Church are to preserve, all the concessions, both civil and religious, of the protectorate which it claims over them; and, even admitting that this protectorate were to be diluted into a European guarantee, I am at a loss to understand how the independence and sovereignty of the Sublime Porte could co exist with such a system. The Government of his Imperial Majesty assuredly does not mean to say that Europe can share itself between the two rayas; it thinks, on the contrary, that it ought to cover those populations with its active solicitude, and agree to encourage the benevolent dispositions of the Sultan in their favour; but it firmly believes that the reforms capable of being introduced into the *regime* to which the various communities of Turkey are submitted must, to be efficacious, proceed from the Ottoman Government, and that if any foreign action at all be combined with their introduction, it is an amicable action, manifested by a concurrence of good and sincere counsels, and not by an interference founded on treaties which no state can claim the right to invoke in its injurious sense.

This examination of the reply of the Cabinet of St. Petersburg would not be complete were I not to remark that Count Nesse.rode is extremely careful to avoid making the least allusion to the whole of all the passages of the protocol of April 9th which best deserved to fix his attention, and the only one, in our opinion, which had a capital importance, since it implies the necessity of a European guarantee for the new relations of Russia with Turkey.

France and England cannot, then, consent to a suspension of arms upon the vague assurances given by Count Nesselrode touching the pacific dispositions of the Cabinet of St. Petersburg. The sacrifices which the Allied Powers have made are so great, the risks which they run are so important, that they cannot lay down as the basis of a peace so much upon eventualities for no indication of them here, and on this point they reserve the expression of their opinion.

At the same time, M. le Baron, the Government of his Imperial Majesty is very willing already to make known some of the guarantees which appear to it indispensable, in order to re-assure Europe against the return of a new disturbing perturbation. These guarantees result from the very situation which has given a source of danger through their absence.

Thus Russia has profited by the exclusive right of surveillance which threaten conferred on her over the principalities bordering on Wallachia and Wallachia, and the suzerain power to enter these territories as if they were her own territory.

Her privileged position in the Black Sea has permitted her to found establishments in that sea, and to develop a system of naval forces which, through the want of counterpoise, are a standing menace to the Ottoman Empire.

The uncontrolled possession of the mouths of the Danube by Russia has created moral and material obstacles to the navigation of that great river which affect the commerce of all nations.

Finally, the articles of the treaty of Kustchuk Kainardji relative to the religious protectorate have become, through their abusive interpretation, the original cause of the war which Turkey is waging.

On all these points new rules must be established, and important modifications applied to the *status quo ante bellum*. I believe we may say that the common interest of Europe requires—

First—That the protectorate hitherto exercised by the Imperial court of Russia over the Principalities of Wallachia, Moldavia, and Servia, shall cease, and that the privileges granted by the Sultans to these dependent provinces of their empire shall, in virtue of an arrangement with the Sublime Porte, be placed under the collective guarantee of the Powers.

Second—That the navigation of the Danube, as far as to its outfal into the Black Sea, shall be delivered from all restriction, and submitted to the operation of the principles consecrated by the acts of the Congress of Vienna.

Third—That the Treaty of July 13, 1841*, shall be revised in concert by the high contracting Powers in the interest of the European equilibrium, and in the sense of a limitation of Russian power in the Black Sea.

Fourth—That no power shall claim the right to exercise any official protectorate over the subjects of the Sublime Porte, to whatever rite they may belong, but that France, Austria, Great Britain, Prussia, and Russia shall lend their mutual co-operation, in order to obtain from the initiative of the Ottoman Government the consecration and observance of the religious privileges of the various Christian communities, and turn the generous intentions manifested by his Majesty the Sultan to the account of their various co-religionists, so that there shall not result therefrom any infringement of the dignity and independence of h s crown.

Should the conference re-assemble, I hope it may be able to recognise that none of the ideas which I have just expressed deviate from the protocol of April 9, and even that it was difficult to include within more moderate limits the research which France, Austria, Great Britain, and Prussia formally engaged at that date to make on the subject of the most proper means of consolidating the Turkish empire, and bringing it into the general equilibrium of Europe. The recent communications of Baron Hubner authorise me already to say that the opinion of Count Buol will coincide with mine, and that he regards, as I do, the guarantees which Europe has a right to demand of Russia in order not to be exposed to the renewal of the same complications.

Such, M. Le Baron, is the reply which the Emperor has ordered me to make to the contents of the despatch of Count Nesselrode. You will be good enough to give a copy of it to Count Buol, and ask him, if there is an opportunity, to convoke the conference to hear it read.

To sum up, the document which emanates from the Cabinet of St. Petersburg does not in anywise change the respective situations; and, in the opinion of the Government of his Imperial Majesty, it will serve only to define them with much greater clearness. Since Russia has yet to make known her intentions in a practical and positive manner, France and England persist in their attitude of belligerent Powers: and since the Prin ipalities are not yet evacuated, Prussia and Austria will doubtless judge that the obligations which result from the treaty of April 20, and which are fortified in so far as Austria is concerned by her special treaty with the Porte, subsist in all their integrity, and that the time for their fulfilment has arrived.

Receive, &c. (Signed) DROUYN DE LHUYS.

* Excluding Europ[illegible] ships of war from the Dardanelles except in time of war.

ANGLIA REDIVIVA.

I.

They told me that her day was fled,
And cold the blood that nerved her sires;
The hand that freed the stranger's bread
Was sluk in shame at her home-hold fires.
They asked me, storming, where was now
The ploughman's share, the victor's steel,
And dared me list with cloudless brow
The poor man curse the shade of Peel.

II.

They told me lanes were railroads now,
And harvest spurned the reaper's tears,
That old high names must lowly bow
To northern loons and mushroom peers.
They asked, though science ruled the day,
And labour lent what art requires,
That land should mourn who cast away,
For cotton kings her sored squires.

III.

I heard them, and I turned away:
My country, are thy lovers these?
Fit selions of a bygone day,
They cannot read thy destinies.
So even on Arab-a's wild,
The lying hare behind him spread,
Seems lovelier to the desert child,
Than sands which bear his sister tread.

IV.

Though elfin carols sound not now
O er hills, the haunts of outlawed men,
Spring daisies grace the mountain's brow,
And Autumn wheat the lairies' glen.
Our harvest-homes they are not dead;
Nor airs that light the reaper's toil,
Are careless of his daily bread.

V.

Nor deem our nation's hopes are flown,
Though not in the sons of later day,
But trust these latter years may own
Our God-made kings were such as they.
A mighty spirit guides them still,
A soul that bartered place for truth,
And stamps the bigot's doom of ill,
The age of England's second youth.

VI.

The hero bands go proudly forth,
The empire squadrons plough the sea,
And nobly join in east and north,
The war of Runa and Crescent.
Hearts hostile once breathe mutual vow,
Hands clenched in hate are clenched no more,
For England's arms are France's an[illegible]
And Nelson's flag the crucior.

VII.

Then here's to him of happier vein,
Who reads, who hopes, who lays with me—
Thou soul that ask'st a nobler strain,
A hearty health to thine and thee!
One hope is ours, though nations bleed;
One prayer, that Heaven may speed and destroy—
A fervent hope for Europe's need,
A ceaseless prayer for England's joy.

A. M. MORGAN.

ELECTION INTELLIGENCE.

MARYLEBONE.—The election for the borough of Marylebone—a vacancy in the representation of which was occasioned by the appointment of Sir B. Hall to the office of Minister of Health—took place on Wednesday morning at the hustings erected at the top of Portland-place. Shortly after twelve o'clock, Sir Benjamin Hall, accompanied by the Rajah of Coorg, Sir J. Y. Buller, Mr. Ayrton, M.P., Mr. Hume, M.P., Lord Dudley Stuart, M.P., Sir James Duke, M.P., Lady Hall, and some other friends, arrived in an open landau, and was warmly cheered by a large body of his supporters, who crowded around the hustings Mr. Hume, M.P., nominated Sir B. Hall, and was received with loud applause. He said, the men of Marylebone had known Sir Benjamin Hall for a quarter of a century as a consistent and progressive reformer; and he hoped, therefore, to find that he would be returned unopposed (Cheers). Mr. Stockton, of St. Pancras, seconded the nomination. No other candidate was proposed, but several electors addressed the crowd, commenting upon the proceedings as a mockery. The returning officer having announced the election of Sir Benjamin Hall, the latter addressed his constituents at some length, replying to the charges of alleged tergiversation, and assuring them that he was as firm a friend of the Ballot, and of every other beneficial measure of reform, as he had ever been.

CAMBRIDGE.—The nomination of candidates for the representation of this borough took place on Wednesday. There were four candidates—Lord Maidstone and Mr. Slade, of the Western Circuit, on the Conservative side; and Mr. Shafto Adair and Mr. Mowatt (formerly unsuccessful candidates), returned by the Liberals. The show of hands was in favour of the Liberal candidates. The polling took place on Thursday, when Messrs. Adair and Mowatt were returned.

MALDON.—The nomination took place on Wednesday. The candidates were—Mr. Bramley Moore (Conservative), Mr. Quintin Dick (Liberal Conservative), Mr. Leonard, (Liberal), and Mr. M'Enteer (Radical). The show of hands was in favour of the Messrs. Leonard and M'Enteer, and a poll having been demanded, which took place the following day, when Messrs. Peacocke and Moore were elected.

BARNSTAPLE.—There are three candidates for the representation of this borough. Mr. Tite (Liberal), Mr. Gaimess and Mr. Laurie (Conservatives). The show of hands was in favour of Messrs. Tite and Laurie.

KING'S LYNN.—Mr. John Henry Gurney, the head of the firm of Gurney and Co., bankers, Norwich, has been invited to stand for King's Lynn, in place of the late Lord Jocelyn, and has accepted the invitation. He is a young man of great talent, large fortune, and of thoroughly Liberal principles, and is highly esteemed throughout the whole county of Norfolk.

T. COX SAVORY and CO. respectfully solicit an inspection of their extensive Show-rooms, to which a recent addition has been made, including the various articles of the DINNER and TEA EQUIPAGE, in Silver, Sheffield, and Electro-Plate. The following quotation of prices refers to the important item of Spoons and Forks, Electro-plated on hard white metal, a material much recommended for its durability and resemblance to silver.

For the facility of reference, and to aid in the selection of a Service of Plate, an Illustrated Pamphlet of Prices has been published, and will be transmitted, post-free, on application.

T. COX SAVORY and CO., Working Silversmiths, 47, Cornhill, London, seven doors from Gracechurch-street.

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 338, Strand, as above mentioned, which cannot fail to very much please the public. Upon receipt of a Post-office Order, payable to JENKINS & CO., one will be sent free. Jones's Sketch of Watches sent, free, for 3d.

F. DENT, 61, Strand, and 33 and 34, Royal Exchange, CHRONOMETER, WATCH, and CLOCK MAKER, by appointment, to the QUEEN and PRINCE ALBERT, sole successor to the late E. J. Dent, in all his patent rights and business at the above shops, and the Clock and Compass Factory at Somerset Wharf, Strand. Chronometers, Watches, Ecclesiastical, Turret, and other Clocks. Dipleidoscopes and Patent Ship's Compasses used on board her Majesty's yacht. Ladies' Gold Watches, Eight Guineas; Gentlemen's, Ten Guineas. Strong Silver Lever Watches, £4 10s.

HAWLEYS, Watchmakers and Goldsmiths, 129, Oxford-street, and 284, High Holborn (from 75, Strand and Cavendish-square), established upwards of half a century. Elegant GOLD WATCHES, lavished in four holes, horizontal movement, £3 10s. Gold Lever and Duplex Watches, highly finished, from Twelve Guineas to Thirty-five Guineas. Silver Watches, jewelled in four holes, manufactured expressly, eight-ounced cases and Glass, £2 10s. Silver Lever Watches, from £3 15s. to Ten Guineas. Fine Gold Chains, commencing at £1 8s. each. Bawley respectfully leaves the assurance that they are the only genuine watchmakers of the name in London. Gold, plate watches, and diamonds, purchased or taken in exchange. Chronometers, clocks, and watches cleaned, rated, and adjusted by scientific workmen.

SARL'S ARGENTINE SILVER PLATE.—No. 17 and 18, Cornhill. The beautiful metal continues to stand unsurpassed amongst all the substitutes for Silver. Its curious coralline, combined with its brilliant appearance, defies all competition. It is upwards of fifteen years since this manufacture was introduced by SARL and SONS to the public, and, notwithstanding the many spurious and imported imitations, the present demand exceeds all former precedents; thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing the chief qualities and appearance of real silver, at a moderate cost. The magnificent stock has recently been enriched with many splendid novelties in dinner, tea, and dessert services, in every manner patronised as the present time. The Spoon and Fork department includes exclusively the use of a warranted quality of silver. A large assortment of Dressing and Writing Cases is set published, and every article may be obtained gratis by applying at the Manufactories—Sarl and Sons, 17 and 18, Cornhill. Caution—The public are hereby cautioned that no article is genuine unless supplied by Sarl and Sons. No other parties are authorised to sell it.

H.R.H. PRINCE ALBERT'S ROYAL LETTERS PATENT for valuable and extraordinary improvements in the most brilliant TELESCOPIC CAMP, PERIscopic, and SEA-GLASSES, to know the distance, position, and movements of ships at great importance to the Navy and Army, by S. SOLOMONS, Optician, 39, Dean-street, Soho. The extraordinary powers this astonishing eye-piece, with short distinctly Jupiter's Moon, Saturn's Ring, and the Dog-Star's Belt, with its extra Telescope can be seen a person's countenance at a great distance, and an object at the Mile. Their superior every other kind for the whole-and glass, with increasing power and clearness, very portable, with case—the use of a walnut-by a ball instrument. The Telescope is 14 inches. They are 14 inches. They are 14 inches. They are

THE ILLUSTRATED LONDON NEWS

No. 699.—VOL. XXV.] SATURDAY, AUGUST 26, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE FIRST BLOW.

THE first blow has been struck at Bomarsund. The bombardment of Odessa was only a slight chastisement to teach the Russians not to be guilty of such cowardly acts as the firing upon flags of truce. The capture of Bomarsund, and the eighty inhabited islands of the Aland Archipelago, is a more serious business. It is not meant to be a mere lash of the whip, but a mortal thrust. Whether it be considered in a strategical or political point of view, or whether it be regarded as the first occasion in which the sailors and soldiers of England and France have fought side by side—animated by the same cause, the same enthusiasm, and the same generous emulation—the event is one of the highest interest and importance. Bomarsund was a strongly-fortified place; but it fell an easy victory to the skill which planned and the bravery which directed and supported the assault. Its formidable walls were unable to withstand the steady fire of the fleets. The old controversy between ships and stone walls has been settled. "The large blocks o. granite that formed the face of the fort," says the diary of an eye-witness, "and which in appearance offered an immense resistance, fell out in masses, and the rubble with which the wall was filled in tumbled out in heaps." This experience will not be lost. Though, to use the language of the Emperor of the French in his pithy and eloquent proclamation to the army, "the Russian ships of war remain disgracefully in their ports," their prudence, or cowardice, will not avail to save them. What has happened at Bomarsund will happen at Helsingfors and Cronstadt, whenever Sir Charles Napier shall find it convenient to attack them. There is no longer room for cavil at the inaction of the Baltic expedition. The long and skilful preparations that have brought the war to its present issues, have reached maturity. Fleets and armies are mighty machines to construct and put in motion; and indolent, as well as factious critics are but too apt to forget what the Scotch farmer said of the genius of the Duke of Wellington, "that it is no easy matter to drive a hundred thousand sheep to the Falkirk tryste;" much less to lead a hundred thousand men, with stores, baggage, artillery, and ammunition, to the field of battle. The immense armaments in the Black Sea and the Baltic have begun work. Upon the very day that Bomarsund and the Aland Islands fell into our possession the invasion of the Crimea was commenced. The walls of Sebastopol may offer a more protracted, but not a more effectual resistance. Assailed in the rear by the largest army that was ever employed for such a purpose within the historical remembrance of the modern world, and attacked in front by a fleet that never had an equal except that under the command of Sir Charles Napier in the Baltic, the granite fortifications of Sebastopol will crumble as surely as those of Bomarsund; and the work of Peter the Great

THE 5TH (FRENCH) REGIMENT OF THE LINE PASSING THROUGH THE PORTE DES DUNES, ON THEIR WAY TO THE CAMP OF BOULOGNE.—(SEE NEXT PAGE.)

and of nearly two centuries of successful intrigue and daring rapacity will be undone, until some new Peter, greater than the first, shall arise to repair the mischief, and restore Russia to her ancient supremacy.

No one during the progress of a war can say what will be done at its termination, but public opinion is generally enlightened enough to know what ought to be done. When Sebastopol shall be taken, it will be time enough for the Allies to decide what they shall do with the Crimea; but, having actual possession of the Aland Islands, they ought at the present time to be able to decide whether they will turn the capture to the utmost possible account. The power of Russia to disturb the peace of the world has grown at the expense of Sweden and of Turkey. The Czar is only enabled to build and maintain fleets because his predecessors managed to rob Sweden of Finland and the Aland Islands, and to despoil Turkey of the Crimea. England and France, having it in their power to render Russia innocuous in the Baltic, would be unwise to neglect the opportunity. They have only to restore the Aland Islands to Sweden to secure a new and powerful ally to their cause, and to annihilate that supremacy in those seas which Russia has turned to such mischievous account.

The sympathy of the Swedes has from the first been in favour of England and France, for the wrongs of Turkey, if not identical with, were similar to, those which Sweden had suffered from the rapacity of the Czars. But Sweden, weakened by Russian aggression, and standing in such close proximity to her dangerous neighbour, is not in a position to join the anti-Russian alliance, however lively her sympathies may be, unless some inducement be offered to her by those who have both the power to protect and to reward her. If England and France will but say the word;—if they will but determine that the Aland Isles and Finland shall be restored to their rightful possessors, the enthusiastic aid of Sweden will be secured, and the Finlanders will rise to a man, to drive out the last Russian from their territory. In such a case, if the ships now sheltered behind Cronstadt should escape destruction or capture at the hands of Admirals Napier and Parseval, the Czar would have no further use for them. He might sell them to the highest bidder, burn them as fire-wood, or arrange them as dummies behind his useless batteries, as the sole memorials of a glory that had departed.

Simultaneously with the news of this important victory—the first, but not, it is to be hoped, the last, of a decisive and brilliant series—we learn the particulars of the complete adhesion of Austria to the policy of the Maritime Powers. It was stated last week, on the authority of the Electric Telegraph from Vienna, that the conditions upon which France and England would be prepared to listen to any overtures of peace that Russia might feel disposed to make, amounted to five. It now appears on the certain authority of the diplomatic correspondence, which has been just published by the British Government, and distributed to the members of both Houses of Parliament, that the conditions amount to four. But these four include the five on which we commented in our Journal of last Saturday; and are important, not because they fix the maximum, but because they define the minimum of concession, which would have satisfied the Allies before their arms had achieved a triumph. They are also important because Austria, which is not yet at war with Russia, concurs in their justice and necessity, and pledges herself to support them. On the 8th of the present month, after Russia had commenced that evacuation of the Principalities which she has now countermanded, diplomatic notes were interchanged between Austria on the one hand and Great Britain and France on the other, which plainly showed that no mere evacuation of the Turkish territory would satisfy even the least implicated and most lukewarm of the Three Powers. The conditions, succinctly stated, amount to these: First,—that the Russian Protectorate over Moldavia, Wallachia, and Servia, shall cease; second,—that the navigation of the Danube shall be free to all nations; third,—that the Black Sea shall be equally free to commerce, and that the power of Russia shall be limited in those waters; and, fourth,—that the religious freedom of the Christian subjects of the Porte shall be guaranteed by the Great Powers of Europe, with the consent of the Sultan, and without any exclusive right of interference on the part of Russia. These form, as we have already remarked, the minimum that Russia must yield. The maximum will depend on the fortunes of war. Already the capture of Bomarsund has altered the aspect of the question. The Sybilline leaves have turned,—and the annexation of Finland to Sweden will, in all probability, form the fifth stipulation on which two of the Allies will insist, and which the third will not be in a temper or a condition to oppose. The capture of Sebastopol, which we cannot but consider as certain to occur within a very few weeks after the first landing of the French and English upon the Crimea, will make the conditions of peace still harder. The Sybilline leaves will turn again,—and if the Russian naval power be not as effectually crushed in the Euxine as in the Baltic, the Czar will be more fortunate than he deserves to be, and more leniently dealt with than the interests of the world demand.

As for Prussia, she has dropped out of the question. The King is not likely to show sufficient courage to make common cause with the Czar. If he did, his people would speedily make an end of his inglorious reign. As a neutral power, the King will, probably, so shape his policy as to disgust his subjects quite as effectually as if he boldly supported Russia by force of arms. In the meantime, Prussia counts for nothing, and the world ceases to take the slightest interest in her proceedings.

THE CAMP AT BOULOGNE.

The English residents and visitors at this favourite watering-place have been much interested of late in the formation of the French Camp in the neighbourhood. The large numbers of soldiers that are constantly marching in, from the provinces, as well as those from Paris by railway, make the usually quiet town a continuous scene of bustle and excitement. Our Artist has furnished a stirring picture of a familiar subject—at the Porte des Dunes—in which the picturesque costumes of the French soldiers are admirably contrasted with the neat appearance of the English visitors. Nearly all the regiments forming the camp pass through this gate. The long marches, burning sun, and dusty roads, all contribute to the peculiar character of the French troops: their large moustaches and thick beards are covered with dust, as well as their clothes; their trousers turned up, more for comfort than appearance, display the white gaiter. The lively roll of the drums, and the martial sounds of the bugles, enliven the weary soldier, and appear also to have a peculiar effect on the various *gamins*, who evidently imagine themselves already on their way to fight *les Russes*.

The balls and other gaieties constantly going on at the Camp make it the great rendezvous of the people of Boulogne, and opportunities are thus afforded of witnessing the life of a French soldier in camp. The attention and politeness of the French officers to the English visitors in particular, is deserving of our highest commendation.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The continuation, or rather the renewal, of the heat, and the absence of all those who can leave Paris, render it as dull as it is possible for it to be—more especially now that the conclusion of the long-expected Fête leaves nothing in prospect. The theatre of the late festivities—the Champs Elysées, Place de la Concorde, &c., present the dreary aspect that meets the eye of the spectator, who, remaining in his box after the conclusion of the play and the departure of the audience, sees the stage in its undress, and beholds the naked machinery that produced all the now-vanished illusions. This is the worst of the public rejoicings; for at least a fortnight or three weeks before, and for nearly as long a period after them, the most beautiful and frequented parts of the capital are utterly disfigured and encumbered with scaffoldings, posts, planks, and the tawdry, wretched looking preparations for, or *débris* of, the decorations, which have themselves displayed their fleeting glories for but one day. Upwards of twenty thousand persons were obliged to be sent away from the doors of the different theatres, which were open gratis—so great was the crowd of spectators, most of whom had assembled round the house many hours previous to their opening; but, fortunately, owing to the measures taken by the authorities, no accidents occurred.

The stay of their Majesties at Biarritz is prolonged to the end of the month, the health of the Empress rendering this delay an object of the greatest importance. The Emperor and Empress have accepted a ball at Pau; and it is said her Imperial Majesty purposes giving one at Bayonne previous to her departure. A report exists that the younger daughters of Marie Christine are expected at Biarritz, but we give the rumour without further comment.

The cholera, we are happy to state, is rapidly disappearing from Paris; it is only in the Quartier Mouffetard, one of the most miserable in the metropolis, that it continues to be at all severely felt. It is to be hoped that the heat, which during the last week has returned with considerable force, may not produce an unfavourable effect in retarding its retreat. A private letter lately received from Prince Napoleon speaks so slightly of the disease, that it is to be hoped that the accounts from the East are exaggerated, more especially as relates to the army.

The watering-places continue to fill yet more and more daily. Dieppe seems to be the most popular, from its comparative vicinity to Paris, and the rapidity and facility of the transport. The races and steeple-chase which took place there on Sunday went off most brilliantly; the first prize was 10,000 francs.

A report that one of the most skilful and eminent members of the science of surgery, Dr. Ricord, had died suddenly, caused much regret and alarm here; the rumour was, however, found to be wholly without foundation. Dr. Ricord not having even been indisposed. A celebrity of another sort, Madame Chéri, mother of Mdlle. Rose Chéri formerly an actress of considerable talent, has died from the effects of a cold bath, being seized, on leaving the water, with such violent cramps, as to cause death almost immediately. The report that she had died of cholera rendered her decease a matter of still more attention

It is rumoured that Madame George Sand has withdrawn her grand five-act drama from the Ambigu, where it was to have been represented, and has given it to, we believe, the Gymnase. The *Presse* announces that its *feuilleton*, from the 4th October, is to give the memoirs of this celebrated woman. The work, which is to form five volumes, similar to those of the "Girondins" of M. de Lamartine, has cost upwards of 100 000 francs—£4000. The first edition of M. Emile de Girardin's pamphlet, "Le Droit," was exhausted at Paris before the demands of foreign and provincial subscribers could be satisfied. A second edition is selling with little less rapidity.

It is with sincere regret that we have to announce an accident, the effects of which it is difficult to foresee, to one of the most gifted sculptors of the day, and one whose youth gave promise of a long and brilliant artistic career. M. Clesinger, the son-in-law of Mdme. George Sand, while engaged in chiselling a block of marble, received a portion of the stone in his eye, which caused so severe a wound, and penetrated so deeply, as to necessitate a most painful and dangerous operation, which it is feared may have affected the brain. We are told, however, that there are great hopes the result may prove less serious than was dreaded, and that time and care may entirely repair the evil. This is the second accident of a similar nature which has occurred to M. Clesinger within a space of less than a month. The first, however, though sufficiently severe, was much less alarming than the present one.

Great difficulties and opposition arise to the *exploitation* of the Opéra Comique and Théâtre Lyrique by M. Perrin. The statutes of the Society of Dramatic Authors and Composers forbidding any manager uniting the direction of two theatres, the members of the society—headed by MM. Scribe, Adam, Auber, Viennet, &c.—have addressed a protest to the Minister of State on the subject. M. Perrin, however, vigorously supported by the administration, declares his intention of standing firm. The occasion will be favourable for young composers, who will thus have opportunities which could not otherwise so certainly, or so often, have occurred of having their works produced—*reste à savoir* whether the public will also be gainers. It is stated that a new theatre is to be founded in the neighbourhood of the Hôtel de Ville. For a long time the project has been talked of, and again abandoned; but it seems that the prospects opened by the Exhibition of Industry have given a new impulse to the plan, which there is now but little doubt will be speedily carried into execution. The tendency of the theatre is to produce, almost exclusively, the *souvenirs* of the Napoléon era, and the direction is, it is expected, to be confided to the care of M. Dennery, one of the most successful and popular of modern French dramatists.

A statue representing France, executed in white marble, by M. Feuchères, is to be placed in the centre of the Place du Corps Legislatif, formerly Place du Palais Bourbon.

SPAIN.

The latest news from Spain is of a gloomy character. The present state of tranquillity is said to be only apparent. The new Ministers work not well together, and the provincial Juntas are in fierce opposition to each other. Clubs are being organised, where the acts of the Government are freely discussed, and the decrees of the Queen trampled under foot. Catalonia has become the place of resort for violent political refugees, and their movements are both watched and feared. At Cadiz, Malaga, Algesiras, and other places, the aspect is not more cheering; and there is evidently a feeling in operation that is intended to effect another revolution, which, it is believed, the Government will be unable effectually to resist.

PREPARING FOR THE CRIMEA.

According to the latest intelligence from Constantinople, Marshal St. Arnaud is now in a position to commence operations against the Crimea with 80 000 men. The embarkations are going on without intermission at Varna, Baltschik, and Mangalia and in a fortnight we may receive accounts of operations undertaken on the Russian coast of the Black Sea. General Canrobert, in concert with the English Generals Brown and Boxer, will first be charged with an important mission, and as soon as they have set their foot in the Crimea, any point which has not been made public, Marshal St. Arnaud and Lord Raglan will follow with the army. The Marshal will afterwards direct in person the operations, by land, against Sebastopol, with the support of the fleet commanded by Admiral Hamelin. General Bosquet, who commands the auxiliary troops in this place, will advance at the head of the divisions of Prince Napoleon, and of the Turkish corps of Mustapha Pacha, towards the Danube by the Dobrudscha in order to enter Bessarabia, after having taken Galatz and Ibrail, which the Russians are not likely to give up without a struggle. The Marshal attaches much importance to this operation of General Bosquet, and it is thought this General will be at Odessa within a day determined on.

The last intelligence brought by the German journals seems to intimate that Ibrail has not been evacuated, as was stated, and that the Russians are directing reinforcements on that place, and on Galatz. It is even said that a part of the *corps d'armée* which was effecting its retreat through Moldavia, has received orders to return towards the Lower Danube, and that fresh troops have arrived from Bessarabia, by Reni. General Lüders is said to be at the head of considerable forces, collected between Ibrail and Galatz. It may, therefore, be with a view to the projected operations of the Allies, and to endeavour to arrest the movement of the French and Turks, that the Russians have concentrated in haste rather numerous forces on the Lower Danube.

The last intelligence from Varna on the 9th instant, and nine or ten of the immense flat-bottomed boats made at the Turkish arsenal for special service were lying with them: but the artillery had only six boats fit to land heavy guns in. Only a part of the French siege train had arrived. Thirty guns of the British siege train were in Varna Bay. No concentration had been ordered, but an order to be ready to march somewhere on the 12th had reached the Light Division. The Commander-in-Chief were at Varna, General Brown at Constantinople, and the Admirals at Baltschik.

THE ALLIED TROOPS IN TURKEY.—THE CHOLERA.

The numerical force of the British army in Turkey was, at the beginning of the present month, 32,000, including the sick and invalided. Of these it was thought that more than 28,000 men could be brought under arms. The French, it was reckoned, had a disposable force of 45,000 men, including cavalry and artillery. But the army has, since that date, received reinforcements. The *Himalaya* had disembarked the Scots Greys, at Kouleli, in the Bosphorus. Only one of the 373 horses of that regiment had died on the passage. The 20th and 68th Regiments had arrived. The English steamers *Orinoco*, *Colombo*, and *Avon*, with troops on board from England, were lying in the Bosphorus, awaiting orders. In the event of the expedition taking place at the period originally intended, it was thought that these ships would convey their troops directly to the coast of the Crimea without touching at Varna.

The British forces were thus distributed, according to the latest intelligence:—The first division (Duke of Cambridge), at Alaiyn; the second division, between Devna and Aladyn; the third division, at Monastir, near Pravadi—at which place was also encamped the Light Division, under Sir George Brown; the brigade of British Cavalry was quartered near Jeni-Bazar, and the Artillery is distributed between Devna and Aludyn. The depôt at Varna was composed of companies of various regiments, and four regiments of infantry were quartered at Galata Burna (mostly Highlanders). One French division was stationed at Varna; the three others were encamped at Basardschik, Kustendje, and Karasin. The health of the British army is better than it was, and their rations have been increased one-half. Each man now receives daily half an ounce of tea, an ounce of coffee, and the same quantity of sugar. Yet with this improvement the accounts of the ravages of cholera were still very saddening. Up to the 9th the British army had lost about 600 men from the fatal disease. The troops were at that date losing 30 men a day. The French losses from cholera were frightful. The disease was not much on the wane among them, and there are divisions in which they were dying at the rate of 70 and 80 a day. In the French general hospital, from the 14th July, 720 men had died of cholera, and only 78 men had been sent out cured. General Canrobert's expedition was most unfortunate. He went up to Kustendje on the 1st of August, thinking to improve the health of his corps by change of air, but sickness soon broke out among his men, and the division had left nearly 2000 men behind it.

The Emperor Napoleon has addressed the following proclamation to the Army of the East:—

SOLDIERS AND SAILORS OF THE ARMY OF THE EAST,

You have not yet fought, and yet you have already obtained a brilliant success. Your presence, and that of the English forces, have arrested the progress of the enemy: he pauses to make the Russian ships remain disgracefully in their harbours. You have not yet fought, and yet you have bravely struggled against death. A terrible scourge, though of fleeting rage, has just checked your ardour. France, and the Sovereign whom she has chosen, do not witness without the deepest emotion, without making every effort to aid you, so much energy and so great self-devotedness.

The First Consul said in 1799, in a proclamation to his army:—"The first quality of the soldier is constancy in enduring fatigue and privations; courage is only the second." The first, you exhibit at this moment; the second, who shall dispute with you? Moreover, our enemies, distributed from Finland to the Caucasus, await with anxiety to see on what point France and England will direct the attack, which they feel before-hand must be decisive; for right, justice, and warlike spirit are on our side.

Already have Bomarsund and two thousand prisoners fallen into our hands! Soldiers! you will follow the example of the Army of Egypt. The conquerors of the Mount Thabor had, like you, to contend with experienced soldiers and with disease: but, notwithstanding the pestilence and the efforts of three armies, they returned full of honour to their country.

Soldiers! have confidence in your Commander-in-Chief and in me. I watch over you; and I hope, by the help of God, soon to see your sufferings diminished and your glory increased.

Soldiers! farewell, till we meet again.

(Signed) NAPOLEON.

A RUSSIAN VICTORY IN ASIA.

All the authentic news we have had from the seat of war in Asia, lately, have been of a discouraging nature. Several excellent opportunities of attacking the Russian army had been lost, owing to the cowardice or treachery of the Commander; and much cavilling among the Polish and Hungarian leaders was said to have discouraged the troops. Towards the end of July the Russian and Turkish armies were face to face, between Kars and Alexandropol; the former consisting of 36,000 men, with 60 guns; the latter of 40,000 men, with 66 guns. Under these circumstances, if we can rely upon Russian bulletins, the Turks have sustained a total defeat; indeed, their army has been annihilated. A despatch from Vienna gives the following brief notice of this victory, which is said to have taken place on the 1st inst.:—

General Bebutoff has totally defeated the great Turkish army near Kars.

The Russians took 18 guns, a great quantity of munitions of war, 84 staff and other officers, and 2300 of the Turkish troops.

Three thousand Turks were left dead on the field of battle; the remainder fled to Kars.

This is from a Russian source.

POSITION OF THE GERMAN POWERS.

On the 17th instant Austria and Prussia submitted to the Bund the Russian answer of June 5 to the Austrian summons, the correspondence that took place between the Cabinets of Vienna and Berlin and those of the Western Powers, and the sketch put forward by the latter of the necessary conditions of a peace. Austria has further delivered to a copy of the note of August 8th, in which she forwarded the above to Russia, and declared herself bound to adopt them. Prussia also has given in a copy of her note of the 12th inst., in which she recommends the demands of the Western Powers as the favourable consideration of the Czar, but without acknowledging herself to be bound to abide by them in virtue of the protocol of April 9. The two German Powers, in submitting these documents to the Bund, and moving to have them referred to the Special Committee, recognise the evacuation of the Principalities as offering an important incident on which to re-establish peace.

A circular has been forwarded by the Austrian Government to its foreign diplomatic agents, of which the following is the sense. After

alluding to the propositions made by Russia on the 29th June, and by France on the 22nd July, the Austrian Minister observes, that, although the position of this Empire is considerably changed by the evacuation of Moldavia and Wallachia, two most important facts must not be lost sight of:—1. Notwithstanding the evacuation of the Principalities, the war continues between Russia on the one side, and England, France, and the Porte on the other. 2nd. That all treaties between Russia and the Porte have been abrogated by the present war, and have not regained validity by the evacuation of the Principalities. The Austrian Government, in principle, approves of the conditions of peace proposed by the Western Powers, and conditionally agrees to them. The Austro-Prussian treaty of April 20 is, in spirit, in accord with the stipulations in question, not exactly in word. It is hoped that the Court of Berlin will not be of another opinion, but should such unfortunately be the case, it will lead to no change in the foreign policy of Austria. For the present Austria will maintain an armed neutrality.

THE AUSTRIANS IN WALLACHIA.

The long-promised occupation of the Danubian Principalities by Austria appears to have begun at last. A telegraphic despatch from Vienna, of Tuesday, makes the important announcement in the following terms:—

The Austrians entered Wallachia on the 20th. The whole corps of occupation will have passed the frontier by the 23rd.

Two brigades have marched from Hermannstadt, and another brigade from Kronstadt.

Bucharest, Krajova, and Lesser Wallachia will be occupied.

The Kronstadt guard will reach Bucharest on 5th of September.

Three brigades of the army of Count Coronini are preparing for a similar movement into Moldavia.

The Russians, who are still in force on the line of the Sereth, have destroyed all the bridges on the roads leading to the Moldavo-Transylvanian passes, and the Austrians would hardly be able to get into Moldavia from Transylvania if they felt inclined to do so. The probability is that the Imperial troops have crossed the frontiers into Wallachia from Hermannstadt through the Rothenthurm pass, and from Kronstadt through the Törnoch pass.

It is not clear that any regularly documented foreign Protectorate over the Danubian Principalities will be constituted, but the following remarkable passage occurs in a proclamation addressed by Omer Pacha to the Wallachians on the 8th, from Giurgevo:—

In order that we may be able to act with more energy and force against the enemy, Austria has, by means of a treaty with the Sublime Porte, bound herself to occupy the Danubian Principalities. The Austrian army, which will for the time exercise our rights among you, takes on itself the maintenance of order and security in the country, and de facto receives the Protectorate over the Principalities, which Russia, by her exaggerated claims, and by having over-rated her power, has for ever forfeited.

Halim Pacha has issued a proclamation inviting all the absent civil and military Wallachian officials to return and re-occupy their former positions, assuring them of complete forgetfulness of past events. Respecting the organisation of the Government of Wallachia, Halim Pacha has given the Administrative Council to understand that the Emperor of Austria, in conjunction with the Turkish Government, has pledged himself to the re-establishment of the constitutional administration and laws of the Principality.

Mr. Colquhoun, long the British Consul at Bucharest, has re-established himself in his former position, to the great satisfaction of the inhabitants of the city.

AMERICA.

The steam-ship *Africa*, which left New York on the 9th inst., arrived at Liverpool on Sunday morning; and on Thursday the steam ship *Alp* arrived with dates from New York to the 12th. The political news is unintesting. Very little interest was felt in the result of the trial of the Greytown affair. Members were so busy with other things that they could not spare time for a matter not looked upon as important. Out of doors, public opinion was unanimous in denouncing it. Greytown and Puerto Arenas have been taken in possession of by British authority. Lieutenant Jolly, of her Majesty's ship *Bermuda*, has proclaimed martial law.

In reference to Dr. Cottman's reported mission from the Czar to the United States Government, referred to last week, the *New York Mirror* says, "Dr. Cottman must be ubiquitous. He arrived in Europe for the first time, if we mistake not, in December, 1853, and had not left Paris up to the middle of March last. Since he could have passed 'several months' at St. Petersburg, 'six weeks' at Cronstadt, learned so much and won such favour, and returned here in so short a time, is, therefore, remarkable."

At Havannah a speedy change in the Government of the island was anticipated. A large number of additional troops had arrived at Havannah.

Several destructive fires have taken place. At New Orleans a million dollars' worth of property has been destroyed; and at Sacramento, half a million dollars' worth. At Washington the Navy-yard has been totally destroyed.

INDIA AND CHINA.

The steamer *Bombay* arrived at Trieste on Wednesday, the 23rd, at eight a.m., in 119 hours from Alexandria. The overland mail has been in Alexandria since the 16th, with advices from Calcutta of the 14th July; Madras, 21st; Shanghai, 26th June; Canton, 4th July; Hong-Kong, 6th July; Singapore, 14th July; Bombay, 20th July. There is no particular news.

WARLIKE PREPARATIONS continue at Copenhagen on a large scale. The pretty tree and bush groups along the Langa Linie are ordered to be cut down, so as not to hinder the cannon; and two regiments of cavalry are to be quartered round the capital by the last of September.

WARLIKE PREPARATIONS FOR 1855.—A Dantzic paper mentions that contracts have been entered into in that town and elsewhere for the supply of the French troops about and where all species of provisions during their stay in the Baltic and the Gulfs of Bothnia and Finland. These contracts are understood to extend over the whole campaign of 1855.

MORE TROOPS FOR THE EAST.—Another regiment is is on its way to the East, the 34th having embarked on board the *Mauritius* steam transport at Portsmouth on Monday. The 34th do not proceed to the seat of war, but will be stationed at Corfu in place of the 57th Regiment, which is in a more effective condition for active service than the 34th, and which will be taken on immediately in the *Mauritius* to the Black Sea. The *Mauritius* will call at Queenstown for detachments, and then proceed direct for Corfu, not calling at Malta. The 34th embarked 650 men and 22 officers on board the *Mauritius*. The 34th, in marching from their barracks to the dockyard, were preceded by their own band, playing many national and inspiriting airs; and on arriving in the dockyard were received by "Cheer, boys, cheer," from the band of the *Colossus*, 80, which vessel lay off the yard. This compliment the troops acknowledged by hearty cheers.

FESTIVITIES AT MOUNT EDGCUMBE.—LORD VALLETORT'S MARRIAGE.—On Tuesday week a grand festival was held in the gardens of Mount Edgcumbe, to celebrate Lord Valletort's having attained his majority in November last, and to strengthen the tie between his lordship and that tenantry with whom he may, in future years, be more closely associated. For so important an occasion the preparations were on the most magnificent scale, and the beautiful grounds in which the fête was held corresponded admirably with the princely entertainment. A dinner was given in the orangery, which had been tastefully fitted up for the occasion. Two hundred noblemen and gentlemen dined on the occasion, including the Marquis of Lansdowne, Admiral Par er, Lord Rolleston, Lord Carnarvon, Sir Harry Smith, Sir John Buller, Lord Vivian, &c., &c. The Hon. George Edgcumbe presided, in the absence of his brother, the Earl of Mount Edgcumbe, whom ill health prevented from being present. A display of fireworks took place in the evening, and last of all, the pavilion having been cleared for the occasion a ball took place, and dancing was kept up with much animation till a late hour, when the company broke up much delighted with the entertainments of the day.

THE BEER ACT.—At the Marylebone Police-court, on Saturday last, a case of considerable importance both to the public and publicans, under the new Beer Act, was tried; the question being, whether it is lawful for those persons who leave London on a Sunday, and visit the suburbs, to obtain refreshments at an inn or not. The proprietor of the Castle Tavern, Hampstead heath, was summoned by the police for keeping his house open for the sale of spirits, &c., between the hours of half-past two and six o'clock. Mr. Long, in deciding the case, said it was evident that the Act had not defined the meaning of the word "traveller," but had left that to be decided by the Magistrates before whom the evidence was brought. If a person were to go from Cheapside to Piccadilly, and dine there, he should not conceive such a person to come within the meaning of the word "traveller;" but, if a person left London to go to Hampstead, Richmond, or any of the suburban villages, and dined there, he should consider such a person a *bonâ fide* traveller. In the present case he thought there was sufficient evidence to prove that the persons in the defendant's house were *bonâ fide* travellers, and he should therefore dismiss the summons.

NAVAL AND MILITARY INTELLIGENCE.

TRIAL OF THE NEW GUNBOAT.—EXTRAORDINARY RESULTS.

Some experiments were made on Wednesday afternoon, in the presence of the Queen and a large number of distinguished and official persons, to test the qualities of one of the new screw gun-boats which have been recently built for the Baltic, and of the famous gun on Lancaster's principle, from which so long a range is to be got with a missile of exiraordinary power. The *Arrow*, commanded by Lieutenant Jolliffe, was the vessel with which the experiments were made. The place selected for the trials of her Lancasterian gun, was at the cliffs adjoining the Needles Rocks, at the western extremity of the Isle of Wight; and on the previous day the *Dasher* steamer had been sent down there to measure off the distance at which the firing was to take place. It was known that the gun could carry a distance of 3000 yards, but one of 4000 was chosen in this instance, in order the better to ascertain the destructive effects of the shot. The Lancaster gun is an oval one, and the shells are still more egg-shaped; the gun being a 68-pounder, 10 feet long and weighing 95 cwt., whilst the shell weighs 100 lb., and has a charge of 13 lb. of powder.

At a quarter past three on Wednesday afternoon, her Majesty embarked from Osborne on board the *Victoria and Albert*, with Prince Albert, the Prince of Wales and Prince Alfred, the Princess Royal and Princess Alice, and the Ladies Frances, Micheal jah Bulkeley Sloane, with attendants. Sir James Graham also went on board the *Victoria and Albert*, on her Majesty's invitation, and remained on board for the remainder of the day.

The squadron arrived at the Needles at five o'clock, and the *Arrow* at once took up her position off the spot on a declivity of the cliff at the distance of 4000 yards. She was not long there before the first shell was fired, but no one could say what the effect was. Another shell was fired, but still the shell did not fall, nor did any portion of it seem to be struck. This was accounted for afterwards by the information that these two first shells had burst in the gun. The third, fourth, and fifth shells were fired; but still the mark was not hit, nor was it seen where these shells burst, or what became of them. Something ominous was, however, indicated by the fact of the flag at the well-known lighthouse at this part of the Isle of Wight, and which is one of the most important in the British Channel, being suddenly lowered.

After the fifth shot, too, a party of spectators, consisting of the attendants of the lighthouse, coastguardsmen, and their wives and families, who had taken up a good position, on a rising piece of ground near the light, all at once disappeared in a most hurried manner. In the course of about a quarter of an hour all was easy again. A boat was then seen to be stealing round the Needles Rocks, carrying a white flag. This was declared to be a flag of truce, and firing was ordered to cease, whilst the *Fairy* was sent down to meet the boat and ascertain its object in venturing on such dangerous ground. The flag, as the boat neared, was made out to be that of the Trinity-house, and the three men in it proved to be the attendants of the lighthouse. The message they gave to the *Fairy* was—"The two last shells have nearly blown down the lighthouse." They also told of the fright of the inhabitants, and the breaking up of a gipsy party, who had taken up their position in an adjacent bay. The *Fairy* communicated the message to the Royal yacht and the *Arrow*, and the next shell was fired accordingly. It fell in the sea, to the right of the Needles, the only one whose disposing of had been seen from the squadron. This closed the trials; six shells being the number ordered to be experimented on.

It will thus be seen that not one shell struck the mark, or even went near it. But much of this is to be attributed to the heavy swell on the water at the time, and which rocked the *Arrow* about like a piece of cork. In addition to this, the gun was fired from the side of the vessel, by which, from her rolling so much, it appeared utterly impossible to take any thing like a fair aim especially at the distance be considered. The vessel is fitted to fight this gun either fore and aft or from her sides; and Wednesday's trial would appear to prove that, excepting in a smooth water, the latter mode cannot be adopted with advantage. This was also the first trial on board ship of Lancaster's gun, and, from its peculiarity, six shells can hardly be called a fair or ample trial. At the range of 3 Wednesday, the shells from its own and the fore of the gun, is said to have a windage or deflexion to the left hand of fifty yards. This was increased by the strong wind and the direction in which it was blowing, so that in one circumstance, on a first trial, ought to be taken into account. With regard to the length of the range there can be no question; this was amply proved, as was also the ability of the vessel to bear the discharge of so heavy a piece of metal.

On the completion of the trial—it being then seven o'clock—the Royal squadron returned to Osborne. In doing so they fell in with the screw steamer *Mauritius*, with the 34th Regiment on board. The troops cheered their decks, and gave the Queen some hearty cheers. She was standing on the paddle box of the Royal yacht at the time, and waved her handkerchief to the gallant fellows in return. The Royal yacht was then saluted by Majesty at eight o'clock; all the yachts remaining off Osborne for the night, as did also the *Arrow*.

THE 2000 Russian prisoners taken at Bomarsund will be brought home in some of the ships of war that took out the French troops from the Dewns to the Baltic. Already preparations are being made for their reception and the *Devonshire*, at Sheerness, is being got ready, to take 500 of them on board.

DURING the past week the coastguard-men at Exmouth, on the Devonshire coast, have been practising with long range guns, under the command of Lieutenant Bailey, R.N. The distance averaged about 1200 yards.

THE new police corps for Turkey, to be named the "New Staff Corps," are to have the tunic front-coat, the Russian helmet, black leather, with a spike on the top, dark trousers, with leather cantions, pouch-belt, with sabre sword, and Colt's revolver pistols.

THE Russian ships *Caroline* (prize to her Majesty's ship *Amphion*) and the *Card* (taken by the *Arrow* have both been condemned by the Court of Admiralty, and ordered to be sold for the benefit of their captors.

THE ARMY TELEGRAPH.—Among other stores for the fleet in the Black Sea and the army in the East, there are now ready for embarkation at Portsmouth two large waggons filled with large reels of copper gutta percha wire, covered with gutta percha, and intended as a means of communication between the camp of the army in Turkey. There is a small two-wheeled carriage for each waggon, and a small hand-plough for opening the ground in which the telegraphic wire is inserted as it is rolled off one of the large reels, which revolve horizontally, and contain about a mile in length of the wire. The plough is so constructed that the wire can be deposited on the ground as it is turned easily covered over, and requires no other help. On the camp ground being their position, the wire can be rolled on the reels again, and be made available on the new ground.

THE WINDSOR COURTS-MARTIAL.—The Court-martial has not yet pronounced its decision upon the charges upon which Lieut. Perry was brought to trial a second time. The Court-martial of Lieut. Greer, it is understood that the finding of the Court-martial has been sent down from the Horse Guards. The charge against Lieut. Greer was for assulting Lieut. Perry, on the 14th of June last, and the acquittal from of the charge. This verdict has been disapproved by the Horse Guards, and her Majesty, to whom it has been submitted, Lieut. Greer, however, cannot be further taken upon the charge, upon which he has been finally acquitted; but, it is said, that another Court-martial will be directed to assemble for the trial of Lieut. Greer upon other charges which have come out in the course of the preceding investigations. At the instance of the Horse Guards a Court of Inquiry has been ordered to assemble in the Infantry barracks, at Windsor, composed of officers of the 46th Regiment to inquire into the statements contained in the pamphlet of Lady Scott, of the 9th Lancers, which was read during the last Court-martial on Lieutenant Perry.

DUNCAN DUNBAR'S new ship, the *Hougomont*, proceeds to the Baltic for the conveyance of French troops, in compliment to our allies, and with the sanction of Mr. Dunbar, Government alters her name.

THE following regiments have just been ordered home from North America:—54th Regiment, 68th Regiment, 71st Reserved Battalion, 72nd Regiment.

LIEUTENANT NAESMYTH, who distinguished himself at the siege of Silistria, has not been promoted to the rank of Major, as has been generally supposed. His name has merely been recorded for that rank by Brevet, after his previously attaining regimental rank for Captain. This event may not happen for many years in ordinary courses; so that, substantially, Lieutenant Naesmyth has not received any promotion for his heroic conduct at Silistria.

THE plans for a new dock, 600 feet in length, in Portsmouth Dockyard, are ordered to be immediately prepared by the Engineer department of the Admiralty; the Board having, at their visit just terminated at Portsmouth, resolved to construct a dock of the above dimensions, to communicate from the harbour to the steam-basin dock now in use.

Four hundred thousand rounds of rifle amunition and 112 tents were embarked in the *Golden Fleece* for Turkey.

PRUSSIAN PREPARATIONS ON THE BALTIC COAST.—The garrison of Swinemunde has been reinforced by a part of the 9th Regiment. Reinforcements of Artillery have been ordered to Dantzic, Pillau, Strasrund, and Kolberg. Peenemunde and Stralsund are to be immediately placed in a state of defence. An order has arrived for arming the fortress at the mouth of the Vistula and the fort of Neufahr. The sailor battalions already being den odished, and a number of labourers are engaged in digging trenches and erecting palisades.

NATIONAL SPORTS.

YORK AUGUST MEETING.—WEDNESDAY.

Dunnas Stakes.—Bourgeois, 1. King of Trumps, 2.
First Great North and South of England Biennial Stakes.—Minstrel, 1. Ivan, 2.
Yorkshire Oaks.—Virago, 1. Adelaide, 2.
Convivial Stakes.—Hilleman, 1. Cavalier, 2.
Chesterfield Handicap.—Ellermere, 1. Snowdon Dunbil', 2.
Her Majesty's Plate.—Hermit, 1. Merry Monk, 2.
Junior Stakes.—Vindex, 1. Sittingbourne, 2.
Selling Stakes.—Tadcaster, 1. Jenny Wren, 2.

THURSDAY.

Filly Sapling Stakes.—Dame Judith, 1. Mosquito, 2.
Juvenile Stakes.—Capucine, 1. Vandal, 2.
Prince of Wales Stakes.—Jack Sheppard, 1. Dr. Cooke, 2.
Black Duck Stakes.—Hamsling Kaine, 1. Myrtle Bud, 2.
Great Yorkshire Handicap. Grand Inquisitor, 1. Amalgamation, 2.
Eglinton Stakes.—Cerosbus, 1. Lord Aifred, 2.
Hopeful Stakes.—Horatio walked over.
Ebor St. Leger.—Pauline-stone, 1. Stanley Hill, 2.
County Plate.—Ellesmere, 1. King of Trumps, 2.
Lottery Plate.—Medley, 1. Revolver, 2.

FRIDAY.

Consolation Scramble.—Comfort, 1. Sir Rowland Trancbard, 2.
Colt Sapling Stakes.—Crown Pigeon, 1. Vandal, 2.
Great Yorkshire Stakes.—Acrobat, 1. Ivan, 2.
Gimcrack Stakes.—Nettle, 1. Dame Judith, 2
Queen's Guineas.—Hunca Munca, 1. Adelaide, 2.
Two Stakes.—Priestess, 1. General Peel, 2.
Members' Plate.—C. by Pitsaller, 1. Sweet to Bottom, 2.
Knavesmire Stakes.—Boiardo walked over.

THE WATTLED TALEGALLA, OR BRUSH TURKEY, AT THE ZOOLOGICAL SOCIETY'S GARDENS

A REMARKABLE and very interesting circumstance has recently occurred within the Gardens of the Zoological Society of London—interesting, because it could hardly have been deemed probable under the circumstances; and because it proves the truth of an extraordinary account given by Mr. J. Gould, F.R.S., on his return from Australia, which was not only doubted by many, but even positively contradicted

The fact to which we allude is the exclusion from the egg of a curious bird, called the Wattled Talegalla, or Brush Turkey (*Wee'ah*, of the aborigines of the Namoi). We must premise that there are certain birds in Australia which do not incubate in the ordinary mode; they do not make nests, nor sit upon their eggs. All have heard of the egg-hatching apparatus, called "Eccalobion" (a Greek word, meaning *caller into life*); of the celebrated egg ovens in certain districts of Egypt; and some perhaps, may have read of M. Réaumur's manœuvrepits, or hot-beds, in which (not without trouble) eggs realised their natural products. Now these birds act very much on M. Réaumur's principle. They are hot-bed makers; and in these beds or mounds, of no trifling size, they bury their eggs—not at random, but upon a definite plan—and there leave them, knowing (so instinct teaches) that in due time the young will emerge, not naked and feeble but strong, full-feathered, energetic, and capable of taking care of themselves.

These birds constitute a family called the *Megapodes*, from their large and powerful feet—feet fashioned for scratching, grasping, or even throwing Mr. Gould has favoured the writer with an inspection of the skeletons of these birds—the young—and of the eggs. The skeleton, which have the general characters of those of Gallinaceous birds, are very extraordinary, and are sculptured in the case of the eggs, which are of no ordinary dimensions. We may here state the species to which we allude. First, the Wattled Talegalla; second, the Ocellated Lipbis-Maleo, or Ayam Gemaling of the colonists; third, the Mound-making Megapode, or Jungle Fowl of the colonists. With respect to the size of these eggs, the intent is evident. They are destined to imprison and afford nutriment to the chick till it has grown to a comparatively large size, and acquired a due degree of strength and independence. When it breaks the shell, it emerges in full and perfect plumage, works its way through the sub tance of the mound, and fearlessly means the light of day.

Our present concern is with the Wattled Talegalla; but we may observe that specimens of the Leipsia, or Malleo, are living in the Zoological Gardens, where they display all their native mound-making disposition, and may, perhaps, depo it eggs; they prefer sand and dried leaves to other materials.

The Talegalla (*Talegalla Lathami Gould*) has an extensive range throughout the bushes and scrubby forests of Eastern Australia: it was shot by Mr M'Gillivray, as was also the Megapode, in the thickets at Port Bowlle. Mr Gould says that he has not been able to ascertain the extent of its distribution, but that it is known to inhabit various parts of New South Wales, from Cape Howe on the south, to the Namoi on the north. Everywhere, however, it is subject to the assaults of the cedar cutters and others, who hunt through the bushes; so that in some districts, as Illawarra and Maitland, it is now scarce. It is, however, still p'entiful in the dense and little trodden brushes of the Manning and Clarence, and in the scrubby gullies and sides of the mountains that branch off from the great range into the interior. Mr. Gould procured specimens on the Brest range, and ascertained that it was abundant on all the hills on each side of the Namoi.

The Talegallas is a bird of gregarious habits, generally moving about in small companies, very much after the manner of most of the Gallinaceous group. It is extremely shy and diet rustful, and, when disturbed, eludes pur-uit by gliding through the tangled brush, which it does with great facility. Should, however, the company be hard pressed, or run down by their great enemy the Dingo, or native dog, they make for a neighbouring tree, spring upon the lower bran hes, and then by a succession of leaps, from branch to branch, ascend to the top, and either perch there, or fly off to another part of the brush. They are also of the habit of resorting to the branches of trees as a shelter from the mid day sun—a peculiarity that tends to their destruction, for not only do they afford a fair mark to the sport-man, but, like the ruffed grouse of America, they will even allow a succession of shots to be fired at them, until most or all of them are brought down. Hence it is, that unless some measures be adopted for the preservation of this bird, its extinction, at no remote date, may be anticipated. Its flesh is extremely tender, delicate, and juicy.

Mr. Gould has given us no account in detail the habits of the Talegalla as a hot-bed maker—the constructor of a mound for the reception of its eggs. The bird collects together an immense heap of decaying vegetable matter, and it is by means of the heat engendered during the process of decomposition that the chick in the egg becomes developed and matured. This mound, however, is not the work of one pair of birds only, but is effected by the united industry of several, which labour in concert for some weeks previous to the per od of laying. It varies in size from two to four cart-loads, and is of a perfectly pyramidal form. It would seem, from the great size of the mound, and the entire decomposition of the lower part, according to Mr. Gould's observations, that it is resorted to for several years in succession, the birds adding a fresh supply of materials on each occasion previous to laying.

The mode in which the materials composing these mounds are accumulated is not a little curious. The bird never uses its bill, but grasps a bunch of leaves, sticks, &c., and nearly at an erect length, in the substance of the mass; they are covered up as they are laid, and allowed to remain until hatched. Mr. Gould states that he was greatly informed, both by natives and settlers, living near the haunts of the bird, that it was an unusual event to obtain nearly a brood of these at one time from a single heap, and as they are deposited at days are rarely sought after. Some of the natives informed him, that the females are constantly in the neighbourhood of their mounds; but Mr Gould that time when the young are likely to be hatched, and breaks open the eggs, and again cover them up, as if for the purpose of assisting frequently uncovers young that may have emerged. By others, with the same purpose of assisting any was assured that the eggs, after being placed in the mound, on the contrary, Mr. Gould left undisturbed—the young forcing their way, unassisted and uncovered up, are the latter in the mode in which the young when well-matured, its way to the surface. young emerges, but that the eggs are from the powerful and full-fledged (equally true—most probably) for the purpose of admitting the air and re-

NEST OF THE BRUSH TURKEY, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

gulating the temperature; this does not imply that the eggs are disturbed or their position altered. With regard to the site chosen for these breeding heaps, Mr. Gould, who saw many both in the interior and at Illawarra, says, that in every instance, they were placed in the most retired and shady glens, or on the slope of a hill, in which latter case the ground above the nest was scratched clean, while all below remained untouched, as if the birds had, by experience, found it more easy to convey the materials down than to throw them up.

The eggs are perfectly white, and of a long oval form, nearly four inches in length, and two and a half in diameter.

While roving about through the brush, the Talegalla utters a rather loud clucking noise; and the male ever and anon dilates the caruneulated naked skin of the neck to a great extent, as we see in the turkey-cock, and repeats a sort of booming note, expressive, perhaps, of self-satisfaction. The Talegalla has a habit of dusting itself in the earth, after the manner of our common fowl; and Mr. Gould saw several depressions, which the natives assured him were thus effected.

The male Talegalla is equal to a small turkey in size; the female is about a fourth less, and has the wattle, or naked skin of the neck less developed.

So much for a general sketch of the natural history of the Wattled Talegalla—a bird which, from its stature, and the delicacy of its flesh, would make a valuable addition to our list of domestic poultry. We have it on proof that it is easily capable of domestication; and that, with due care, it will breed in our country. With regard to the pair at the Zoological Society's Gardens, which h .ve proved to the most incredulous the fidelity of Mr. Gould's narration, we have only a few observations to make. It is some time since they began to collect materials to heap up a mound; but it is not ascertained at what precise time the female deposited her eggs: it is supposed to have been five or six weeks previous to the sudden appearance of the young, which, full-feathered, scratched out its way, ran about, and flew, and had, in fact, nearly made its escape.

While the eggs were under process of chick-development, they were several times visited by the male (not by the female), who uncovered them, and soon again covered them up. Was this for the purpose of ventilation? But what is more singular, the male seems to look after the young bird, and even keeps the female in the background. For the first few days the young one, on the approach of evening, scratched a hole in the mound, and, retiring within it, was covered up for the night by the male, and there lay snug and warm till the morning. There are other eggs in the mound, but whether they will prove productive has yet to be seen. The young feeds upon chopped boiled egg, bread, &c.; but it also catches the insects which abound on the heap.

The male is very proud, struts about with an air of dignity, inflates his wattles to an enormous degree, and booms incessantly. It is strange that he should take upon himself duties which, among Gallinaceous birds, are always performed by the female. This may, perhaps, be, in the present instance, an accident, the result of captivity; it, however, confirms the account given to Mr. Gould by some of the natives, that the birds frequently uncover and again cover up their eggs, although this solicitude respecting them was attributed to the females. Had there been several females, it is probable that the male in question would not have troubled himself, but left the duty of watching the eggs to their united care.

W. C. L. M.

Since writing the above, we have learned that two additional young Brush Turkeys have emerged from the mound, so that three of these birds are now natives of the Zoological Society's Gardens. This fact strengthens the foregoing observations.

CRICKET-MATCH ON THE GOODWIN SANDS.

"The Goodwins," which have been from time immemorial associated with peril and destruction, have just been the scene of exhilarating sport. It appears that on the 10th inst. a party—got up by Mr. Morris Thompson, Mr. Hammond, and others, at Walmer—visited the Sands for the purpose of playing a game of cricket. Captain Pearson and a picked crew of the *Spartan*, one of the finest luggers on Deal Beach, were selected for the occasion. The day was beautifully calm, and the party (twenty-four in number) arrived, and were safely landed on the Sands at five in the evening. After walking about a quarter of a mile, a place sufficiently high and dry was found; when the match commenced, and continued until nearly sunset, the winning party obtaining fifty-seven runs. The Sands were intersected in every direction with narrow but deep gullies, or, as they are termed by the sailors, "swatches," with swift running streams, into which it was dangerous to step. A sad association of ideas crowded the mind on looking over this awfully melancholy place. Here thousands of gallant fellows have been entombed—here millions of property have been engulfed; and here was a picture contrasting vividly with the present scene of pastime.

The party returned home safely about ten at night. The evening was fine, and the ripples on the surface of the sea, as the lugger ploughed homeward, were most beautifully illuminated with phosphorescent light.

"MONT ORGUEIL CASTLE, JERSEY."—PAINTED BY J. WILSON, JUN.

"GIVING AN ORDER." PAINTED BY J. H. MOLE.

Such is the fanciful title given to a simple but agreeable rustic subject, exhibited by Mr. Mole, in the New Water-Colour Society's Exhibition of the past season, and which is painted with the clear and harmonious pencil which we generally remark in this artist. The intelligent expression of the dog must not pass without commendation: he appears to understand what he is told, though we do not.

MONT ORGUEIL, JERSEY. PAINTED BY J. WILSON, JUN.

This spirited sea-piece was exhibited at the British Institution last year, and was purchased by one of the Art-Union prizeholders. Mr. Wilson's picture merited this distinction; for it is a beautiful scene, pure in colouring, and effective in general treatment: the transparency and motion are well rendered in the heaving sea and the fleeting clouds; and the fine old Castle upon the high rocky promontory is very picturesque. It is distant about fourteen miles from the coast of France, of which it commands a splendid view for many leagues; and is said to derive its name of Mont Orgueil (Mount Pride) from the Duke of Clarence, brother to Henry X., one of its Governors. It is a place of considerable extent, and, before the perfection of artillery, was of vast strength. Indeed, its great size and strength, its position, and some historical re-

"GIVING AN ORDER."—PAINTED BY T. H. MOLE.

collections attached to it, form its chief attraction; for it seems to have been constructed at the lowest possible expense compatible with its solidity as a fortress. It is built of irregular pieces of the stone of the island, without much regard to regularity of proportions; by which, however, it is recommended for artistic effect. The Castle has its many stories of siege and captivity; and, as one of the prison-houses of Charles I, is especially interesting. The keep, or main fortress, is an immense oval building.

CALENDAR FOR THE WEEK.

SUNDAY, Aug. 27.—11th Sunday after Trinity. Admiral Blake died, 1657.
MONDAY, 28.—St. Augustine. Robespierre executed, 1794.
TUESDAY, 29.—St. John the Baptist. Dr. Paley born, 1743.
WEDNESDAY, 30.—Slavery abolished by Act of Parliament, 1833.
THURSDAY, 31.—John Bunyan died, 1688.
FRIDAY, Sept. 1.—Partridge shooting commences. Lafayette born, 1757.
SATURDAY, 2.—London burnt, 1666.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING SEPTEMBER 2

TO CORRESPONDENTS.

A MILITIA OFFICER.—Nothing has yet been officially promulgated regarding a change in the uniform of militia regiments. Should an alteration be decided on, no notice to that effect will indispensably be made known with as little delay as possible.

FELTA.—We prefer Webster's "English Dictionary."

R. D., Mayfair.—We are not in possession of the information.

A WEST INDIA PROPRIETOR should apply to a railway company.

W. B. W., Bristol.—Apply to Mr Bell, pawnbroker, Fleet-street.

A CORRESPONDENT, who inquires as to the Smithsonian Institution, will find an excellent paper upon that "establishment for the increase and diffusion of knowledge," in "Putnam's Monthly" for the present month.

W. B. D., Sockbridge.—We have not received the impressions.

*** In part of our early impression last week the Bust of Sir Robert Peel was erroneously described as the Manchester, instead of the Oldham Testimonial.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 26, 1854.

THE Austrians, under the command of General Hess, have entered Wallachia, and we may daily expect to hear that they have established their head-quarters at Bucharest. This movement commenced on the 20th instant. It is added, by the Electric Telegraph from Vienna—which, upon Austrian affairs, is more to be depended upon than in its recitals of events at a distance—that another Austrian corps, under General Coronini, is in full march through the Bukowina to occupy Moldavia. We have little doubt that the fact is as stated; and that the Austrian and Russian armies will, ere this, have come in sight, if not in collision, with each other. The Czar, hard pressed as he is on every side, is not likely to be driven to the extravagance of declaring war against Austria for acts like these, although they virtually amount to a declaration of hostilities. It has suited the purposes of Nicholas, throughout the whole course of his mischievous proceedings, to represent himself, or cause himself to be represented, as the party aggrieved. He did not even declare war against Turkey, but only committed an act which he was certain would compel the Turks, if they had any sense of national honour and dignity, to declare war against him. He did not declare war against Great Britain and France, but left those Powers to assume the offensive. In like manner, he will not declare war against Austria, but will leave it to the Emperor Francis Joseph to take the decisive step. "Holy Russia," as the Czar calls his country, is thus placed by its Government in a position of quasi-martyrdom in the eyes of the Russian people. If the sentiment of patriotism cannot be excited by the spectacle of a world in arms against Russia, the Czar hopes that the still deeper sentiment of religious fanaticism may be called into activity. Russia, he takes care to inform the Russians, is assaulted on every side by infidels and heretics, because her sons are the only true and orthodox Christians. This is the untruth that he promulgates, and this is the feeling that he desires to inculcate, and on the aid of which he has cunningly calculated, not only in the progress of the war, but in the remotest origin of the quarrel that he has fomented against the Sultan. It does not appear, however, that he has derived any very striking advantage from it. Austria will take her own course, with whatever colour the Czar may clothe it, when made known to the Russians. There are many persons who even yet persist in doubting the good faith of the Austrian Government. Such persons are hard to be convinced. They cherish their foregone conclusion, and endeavour, as best they can, to pound and amalgamate the stubbornest facts in the crucible of their prejudice. Not even a formal declaration of war by Austria against Russia would satisfy them that the Emperor Francis Joseph was not playing a perfidious part. But the course of events, we confidently believe, will silence the most incredulous of those Englishmen who have been led to form erroneous views of the policy of Austria by the insidious eloquence of M. Kossuth. The Hungarian patriot is blind to the importance and real bearing of the Turkish war, and sees nothing in the Austrian Government but the power which prevented him, by Russian assistance, from continuing to be the Dictator of Hungary, or from transforming himself into the President of the Hungarian Republic. The world, however, has greater matters in hand than the affairs of Hungary. M. Kossuth may consider them all important; but Englishmen and Frenchmen, as well as Turks and Austrians, have other business to attend to, and Hungary is neither *apropos* nor convenient. It ought to silence the objections of all who honestly continue to doubt the *bonâ fides* of Austria, to know that the entry of the Austrians into Moldavia and Wallachia takes place in virtue of a solemn and well-considered treaty between Austria and the Porte, signed on the 14th of June last, with the full concurrence of Great Britain and France; that Austria does not enter as a mediating, but, if need be, as a belligerent Power; and that the presence of the Austrian armies will not in the least degree interfere with or impede any movements in those provinces which the Allied armies, whether British French, or Ottoman, may deem it advisable to make; and that General Hess will connect and combine his operations with Lord Raglan and Marshal St. Arnaud. The formal declaration of war is alone wanting to define the actual position of Austria towards Russia as well as towards the Allies. If the Czar consents to the four propositions which Great Britain, France, and Austria have declared to be the *minimum* upon which negotiations for peace can be entertained, there will be an end of the war. If he do not consent, the whole power of Austria will be directed against him.

THE only beneficial legislation of recent years has consisted in Acts of Repeal. Almost every positive enactment of Parliament has either proved a failure, or a vexatious and mischievous interference with the rights and comforts of the people. The Repeal of the Test and Corporation Acts—the Repeal of the Laws affecting and afflicting the Roman Catholics—the Repeal of the Corn Laws—the Repeal of the Navigation Laws—the Repeal of Customs and Excise Laws—the Repeal of Window Duties;—all these, and many other acts, of which the object was to undo and annul the over-legislation of past times, have proved of salutary operation, and been received with public gratitude and approval. Parliament has a good deal of similar work before it. A variety of restrictive Acts clamour loudly for repeal—not among the least important of which is one that was hastily passed during the late Session, and which, in the few weeks that have elapsed since it came into operation, has inflicted a large amount of annoyance, if not of suffering, upon great multitudes of people. We allude to the measure smuggled through the House of Commons, in thin and rapid sittings, for closing all public-houses throughout the country, on Sundays, except during the hours from one to half-past two in the afternoon, and from six to ten in the evening, and prohibiting the sale of liquors or refreshments of any kind, at other hours of the day, to all persons who cannot prove that they are "*bonâ fide* travellers." This Act has the double disadvantage of being oppressive to the poor, and of being so vague as to be incapable of comprehension by all who are most deeply interested in understanding it. In the first place, it seems not only exceedingly invidious, but unjust, upon the part of members of Parliament and the other promoters of the bill, as well as of the more wealthy classes who support it, to deprive the poor of that necessary refreshment upon the day which is called "the Sabbath" by Jews and Scotchmen, but which Englishmen and Christians in general call either Sunday or the Lord's Day. The wealthy classes, if they choose to remain at home after coming from church, are not obliged to send to the neighbouring tavern for their wine. They have generally a cellar well stocked with all that they require—whether their tastes lead them to encourage the vintages of Portugal, Spain, France, and Germany, or the more familiar British compound of malt and hops. Not so the poor man; and not so the great bulk of the middle classes, who have neither the convenience nor the means of laying in supplies of liquors, but who trust to their friend, the landlord of the nearest public-house, to supply them at the moment of need. The Free Church minister in Glasgow may drink his tumbler of toddy and his "ake" at eleven o'clock on Sunday evening, and think it no sin; but practically the law denies the same right to the poor working-man, who can only buy his whisky by the glass. A just law ought to apply equally to rich and poor. If it be desirable that wine, beer, and spirits should not be consumed within certain hours upon the Lord's Day, the law ought to prevent noblemen, Members of Parliament, Bishops, Deans, Rectors, landed proprietors, rich merchants, successful barristers, fashionable physicians, and thriving tradesmen, from indulging at home in those luxuries of which it seeks to deprive their humbler fellow-citizens. Legislation does not make people sober; it cannot coerce them into being religious. But the principal difficulty of the new Liquor Law is its vagueness. It was felt by the promoters and framers of the enactment to be rather too despotic and unreasonable that travellers should be deprived of necessary refreshment on one day out of the seven; and they, therefore, in the exercise of their mercy and judgment, condescended to exempt "*bonâ fide*" travellers from its operation. But the question has arisen, and demands solution—What is a traveller? Neither magistrates nor policemen can define what is meant by the word. The dictionaries say that to travel is "to go," "to pass," "to walk," "to march on foot," "to ride to a distant place," "to make a journey," "to make a voyage;" and Mr. Long, the police-magistrate, has wisely decided that a man who goes from Cheapside to Hampstead-heath, on a Sunday, in search of health and recreation, is a *bonâ fide* traveller, and may, as such, insist upon being supplied with refreshment at Jack Straw's Castle, or any other tavern in the vicinity, after the hours allowed by the Act of Parliament. But, if the traveller to Hampstead be entitled to refreshment in Hampstead, he is equally a traveller when he returns from Hampstead to his native Cheapside or Spitalfields, or until he chooses to re-enter his own domicile. And if the man of Cheapside may do this, why may not the man of Poplar or Walworth, who "goes," "passes," "rides," "walks," or "travels," from those crowded localities to St. James's-park, Hyde-park, or Regent's-park, demand refreshment at any of the numerous public-houses in those neighbourhoods, upon the same plea, and with the same right? Mr. Luce, the proprietor of the King's Arms Tavern at Hampton Court, has, it appears, been summoned by the police for supplying refreshments on the Sunday, before and after the prescribed hours; and has very naturally applied to the Commissioners of Police, who are charged with the duty of carrying out the law, to define what is meant by a traveller. Sir Richard Mayne can, however, give him no information. Mr. Luce produced a book for the inspection of the Commissioner, containing the signatures of ladies and gentlemen from nearly all parts of the civilised world—from Egypt, Italy, Germany, France, the United States of America, and from various parts of England, Scotland, and Ireland—who had visited his house since the passing of the Act, and who all protested in indignant terms against its inconvenient and oppressive character; but Sir Richard Mayne could do nothing for his relief, or even consolation, except to express his hope that the meaning of the word "traveller" might be speedily decided by the proper legal tribunals. Mr. Simpson, of Cremorne Gardens, a place of public resort, which the Chief Commissioner himself, declares, after personal inspection, to be one in which "good order prevails," finds a difficulty—not only as regards the "travellers" from Wapping or Islington, who may visit his establishment—but in clearing out so many as 1500 people, as soon as the clock strikes ten. Though good order and decorum are preserved by the efforts, or mere presence, of one policeman, amid averages of seven, eight, and ten thousand people, it is impossible, if a party of persons be served with refreshments at five or ten minutes to ten o'clock, to compel them to consume it within the time prescribed by the Act of Parliament; and for every minute after ten o'clock that his guests persist in drinking the beverages for which they have paid, the landlord is liable to a fine. Such a law is a gross interference with public liberty. It serves no good object. It is contrary to English notions of right. It leaves the wealthy unscathed, and vents all its terrors upon the poor, the struggling, and the hard-working population. It was not passed with the deliberate sanction of a full Parliament, but was forced through its various stages before there was time or opportunity for the public, or the bulk of the members of the Legislature, to become acquainted with its real character, and the stringency of its provisions. Such an Act will not be allowed to stand; and we trust that, until Parliament has an opportunity of repealing it, the police will obey the prudent intimations of Sir Richard Mayne, and carry it out with the utmost possible moderation.

THE COURT.

The Queen and the Prince Consort, with the Princes and Princesses of the Royal family have continued to enjoy the pleasures of their marine residence during the week just closed. Among the distinguished visitors partaking the Royal hospitality, this week, have been the Maharajah Duleep Singh, attended by Dr. Login; the Duke of Newcastle, and Viscount Hardinge.

The Queen and Prince gave their annual fête on Wednesday in honour of his Royal Highness's birthday, which happens on Saturday (this day).

On Thursday Prince Albert laid the foundation stone of St. Thomas's Church, at Newport, Isle of Wight, in the presence of Lord Heytesbury, the Governor of the Island, the Bishop of the diocese, the county and borough members, the nobility and gentry, and town council.

Mr. Albert Smith has been honoured by the Queen's commands to attend at Osborne this day (Saturday).

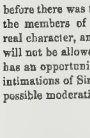
The Hon. Flora Macdonald has succeeded the Hon. Mary Bulteel, as Maid of Honour in Waiting.

During the progress of considerable alterations, which are being carried out at Whippingham Church, by her Majesty's command, to provide increased accommodation for the Royal Family and Royal household, Divine Service is performed at Osborne.

Her Royal Highness the Duchess of Gloucester received the Countess of Jersey and Lady Clementina Villiers, and a select circle, at dinner, on Sunday evening, at the Ranger's Lodge, Richmond-park.

OBITUARY OF EMINENT PERSONS.

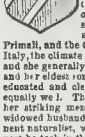
THE PRINCESS OF CANINO.



ZENAIDA-CHARLOTTE JULIA BONAPARTE, Princess of Canino, died lately at Naples. Her Imperial Highness was the elder daughter of Joseph Bonaparte, King of Spain, by his consort, Julia-Maria Clary, sister of the present Queen Dowager of Sweden, the widow of Bernadotte. The Princess Zenaida was born in Paris on the 8th of July, 1802, and was married at Brussels on the 20th June 1822, to her cousin, Prince Charles, the eldest son of Lucien Bonaparte, Prince of Canino, which title Prince Charles now bears, since the death of his father on the 30th June, 1840. By that marriage, the Princess Zenaida has had twelve children. Eight of them are still living, three sons and five daughters; the three eldest daughters are the Marchioness of Roccagiovine, the Countess Primoli, and the Countess de Campello. The Princess Zenaida dwelt in Italy, the climate of which country was deemed necessary for her health, and she generally resided at Rome, where her three married daughters and her eldest son, the Prince de Musignano, live. She was a highly-educated and clever woman, speaking Italian, German, and English, equally well. The charitable disposition, the goodness of her heart, and her striking mental qualities, rendered her society delightful. Her widowed husband, the present Prince of Canino, the learned and eminent naturalist, was, it will be remembered, exiled from Rome for the part he took in the late insurrection there.

MILES THOMAS, LORD BEAUMONT.

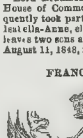
THE death of this nobleman occurred at his residence, in Bruton-street, on the 18th inst.



His Lordship, born June 4, 1805, was eldest son of the late Thomas Stapleton, Esq., of Carlton, by Maria Juliana, his wife, daughter of Sir Robert Gerard, Bart., and represented a distinguished branch of the great Yorkshire family of Stapleton. In 1839 he succeeded to the estates at the decease of his father, and in the following year was summoned by writ to the House of Peers—the absence of the old Barony of Beaumont having been terminated in his favour as representative of Joane Lovell, eldest daughter and co-heir of Joan, sister of William, Viscount Beaumont, who died 23 Henry VII.

Lord Beaumont had previously unsuccessfully sought a seat in the House of Commons, by contesting the borough of Rochester. He frequently took part in the debates in the Lords. He married Sept. 9, 1844, Lucilla-Anne, eldest daughter of John Cavendish, Lord Kilmaine; and leaves two sons and a daughter. Of the former, the elder, Henry, born August 11, 1846, is now Baron Beaumont.

FRANCES, DOWAGER BARONESS DYNEVOR.



THIS venerable lady died at Barrington Park, Gloucestershire, on the 13th inst., aged eighty-two. She was the third daughter of Thomas Townshend, first Viscount Sydney, by Elizabeth, his wife, daughter and co-heir of Richard Fawys, Esq., of Guilsham, Suffolk. Her marriage with George Talbot, third Lord Dynevor, took place 7th October, 1791; and its issue consisted of one surviving son, George Rice, present Peer, and six daughters.

DEATH OF LILLYWHITE.—The admirers of the manly game of cricket will be sorry to learn that the favourite son of the bat is no more. He died at his house in Islington, on Tuesday, of cholera. The deceased was much respected by the cricketing world, who gave him the title of "The Nonpareil." Lilly white introduced the round bowling.

THE CHOLERA IN THE EAST.—We regret to learn, from good authority, that the French have lost 2000 men by disease out of 5000, in the vicinity of Varna. The statement that 7000 have perished appears to be an exaggeration. The English Commissariat has also suffered under the influence of cholera, and many were on the sick list at the date of the last returns, being dispatched from the East.

LATEST INTELLIGENCE.

DEPARTURE OF THE CRIMEA EXPEDITION.

Letters from Constantinople of the 15 h inst., state that 60,000 troops had sailed from Varna on the 14th, for the Crimea, with pontoons and other materials of war. The second division was to sail on the 20th. Great preparations were still going forward at Varna and Constantinople. The bay of Varna was filled with vessels of all sorts, to the number of 500; and an immense fleet of transports had assembled at Baltschik. Large numbers of flat-bottomed boats for the landing of troops and heavy guns had also arrived at both places. The latest accounts from Odessa give the number of Russian troops round Sebastopol at 40,000. The Russians are said to have evacuated Braila, Galatz, and Fokshani.

THE ALLEGED RUSSIAN VICTORY.

The *Invalide Russe* contains an official announcement of the reported victory obtained by the Russians over the Turks in Georgia, alluded to in the Vienna telegraphic despatch which we have given in another page. Whether such an achievement has been accomplished we will not undertake to say until further accounts come to hand from a more disinterested source; for Russian bulletins and Russian despatches are so fabricated, distorted, or exaggerated, that no dependence can be placed upon any of them until they are corroborated by more respectable testimony. Supposing, however, that the statement above alluded to is minutely accurate in all its details, the affair has not been so disastrous to the Turks as was grossly described in the Vienna telegraph. That lying communication stated that 8000 Turks had been left dead on the field, the remainder having taken to flight; and that the Russians had taken 15 guns, 34 officers, and 23,000 troops, besides munitions of war. Now the Russian General, in his own account of the battle, estimates the army (the Turks) in the field altogether at less than 12,000 men, including infantry and cavalry, out of which 2000 were killed, and 370 were taken prisoners; and that four pieces of cannon only were captured, with flags and ammunition The great disparity between the two statements will be seen at a glance.

INCENDIARY FIRE AT VARNA.

A fire, supposed to be the work of incendiary Greeks, broke out at seven o'clock on the night of Thursday, the 10th inst., and destroyed a number of houses appropriated as quarters for the troops, together with stores and magazines. Everything moveable, however, was fortunately saved, except the hay, wine, and some camp utensils. Several Greeks have been arrested upon suspicion of being the authors of the conflagration.

The cholera is abating at Constantinople and Varna, increasing in the Dardanelles, and has disappeared at Gallipoli.

THE BALTIC.

A telegraphic despatch, dated Dantzig, Thursday, says "that the *Vulture* has just arrived, having left the fleet at Ledsund on the 22nd. The troops in the occupation of Bomarsund are likely to be embarked again, for service elsewhere. Several British and French steam line-of-battle ships and frigates had sailed in a south-easterly direction, as if going to Hango or Sveaborg."

Since the fall of Bomarsund, it has been reported that the second division of the French Baltic army is to winter at Stockholm.

The Convocation of the Prelates and Clergy of the province of Canterbury was prorogued on Thursday, at the Jerusalem Chamber, by the Very Reverend Dr. Twiss, under a commission from his Grace the Archbishop of Canterbury, Primate and Metropolitan, to Friday, Oct. 20th.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 24

Month and Day.	Corrected Reading of Barometer at 32° A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			
Aug. 18	29.075	66.0	49.2	55.2	— 2.6	84	W.S.W.	0.00
„ 19	29.672	73.1	48.2	62.5	+ 2.8	66	S.W.	0.00
„ 20	29.939	76.5	56.4	64.8	+ 4.8	79	W.S.W.	0.00
„ 21	29.786	76.0	52.2	63.2	+ 2.8	81	S.W.	0.01
„ 22	29.619	72.5	50.0	62.6	+ 2.3	59	W.	0.00
„ 23	30.072	72.0	47.0	57.8	— 2.9	84	W.S.W.	0.04
„ 24	29.691	72.5	54.0	62.9	+ 2.8	72	W.	0.09

Note.—The sign — denotes below the average and the sign + above the average.

The variation of the barometer decreased from 30.10 inches on the afternoon of the 17th to 29.71 inches by the afternoon of the 21st; then increased to 30.07 inches by the morning of the 23rd, and decreased to 29.85 inches by the 24th. The mean corrected reading for the week, at the height of 82 feet above the level of the sea, was 29.84 inches.

The highest temperature of the week occurred on Monday, and was 76½°; the lowest was 47·2°, on Thursday. The mean of all temperatures within the week was therefore 59·2°.

The mean temperature of the week was 61½°, which is 1° nearly above the average of the corresponding week in 88 years.

The mean daily temperature was below the average on Friday, by as much as 5·6°; and above it on Monday, by 4°.

The mean daily range of temperature during the week was 23°. The greatest was 29·9° on the 19th, it was as large as 25·8° on the 18th, and of 25° on the 22nd.

The direction of the wind has been a compound of the west, and the air has been frequently in quick motion; at times there have been periods of calm of some duration.

Rain has fallen to the depth of five-hundreths of an inch only.

The weather during the week has been for the most part fine, but very variable. The mean daily amount of water in a cubic foot of air has varied from 3½ grains on the 22nd to 8½ grains on the 20th. The 22nd was a remarkable day; during the afternoon the temperature of the dew point was nearly 30° below that of the air, and the degree of humidity for the day, as stated in the table above, was 59° only.

JAMES GLAISHER.

Lewisham, August 25, 1854.

HEALTH OF LONDON.—During the week ending August 19, the births of 813 boys and of 788 girls were registered within the metropolitan districts; and, within the same period, the deaths of 1339 persons were also registered; the number of deaths exceeding that of the births by 526. The number of deaths in the preceding week was 1337. In the ten weeks corresponding to last week, of the years 1845—53, the average number was 1115, which, if raised in proportion to increase of population, becomes 1224. The present return exhibits an excess of 679 above the estimated amount. Cholera was fatal last week to 729 persons, of whom 214 were children under five years of age, 426 were 15 and under 60, and 88 were 60 years and upwards. During the cholera epidemic of 1849 the total deaths registered in the week that ended August 18th were 2230, and those from cholera 1320. In the six weeks of its present appearance the deaths from diarrhœa and cholera have been successively 5, 26, 133, 399, 664, and 729. The deaths from diarrhœa last week were 192. From the Registrar General's return it appears that the present epidemic has prevailed with great irregularity over London, and that in some districts its ravages are inconsiderable. Imperfect drainage, proximity to the cirtiest parts of the Thames, bad water, and poverty, are still, as they were in 1849, the chief circumstances that make cholera fatal.

MARYLEBONE FREE LIBRARY.—During the six months this institution has been open, it has received no less than 17,937 visits, and issued 13,163 volumes. A concert in aid of the leading department will take place on Monday next.

ROYAL POLYTECHNIC INSTITUTION.—Under the new system of management pursued by Mr. Pepper, the resident director, a course of scientific lectures, for the educational improvement of the labouring classes, has been commenced at this highly-interesting institution. The inaugural lecture was delivered last week by the Rev. Bath Power—on the advantages of knowledge; and, on Monday last, Mr. Pepper himself entertained a large audience, in his usual popular and interesting style, with an instructive lecture upon the chemistry of the non-metallic elements. The result of this new experiment has been so far successful, that Mr. Pepper may fairly augur well for the future.

ENTERTAINMENT TO THE LORD MAYOR OF LONDON.—The Lord Mayor of London, in his civic capacity of chief magistrate of the metropolis, was entertained, on Tuesday night, at a dinner in the Shirehall of Stafford, his native town. The entertainment was at the cost of Mr. Thomas Boulton, the Mayor of Stafford.

THE RECENT ELECTIONS.—BRIBERY AGAIN.—Within a few hours of the return for the boroughs of Barnstaple, Maldon, and Hull, Mr Kewin James, Q.C., was retained in support of petitions against the returns, upon the ground of corrupt practices having procured such returns, and to defend the seats of the sitting members for the borough of Cambridge, against a petition threatened by the Conservative party in that town.

DRAMATIC RESUME.

We have hitherto found it convenient to take advantage of the closing or opening of new theatrical seasons to gather up the experiences of the past, in order to form an estimate of the progress of theatrical reform or dramatic talent. We took occasion when we last addressed our readers this subject to suggest the great use to which the appointments of the stage might be turned in communicating knowledge of the distant or the ancient. Mr. Read, in his drama of "Gold," had brought the riches of California on the boards, and indoctrinated the audience in the mysteries of the diggings, to which he had been materially assisted by the scene painter and stage-machinist. We found, soon after, our suggestion fully carried out in the magnificent production of "Sardanapalus" by Mr. Kean, at the PRINCESS'S THEATRE. Mr Lloyd's experience was put in requisition; and the fidelity of the picture to the truth of history was not to be doubted. Moreover, the illustrations accompanied a fine poem, and enabled the public to appreciate Byron's dramatic genius in one of his best works. The benefit to the popular taste likely to result from such a performance was obvious. So strong had theatrical prejudice set in against the poetical play, that during Byron's life, there was no rational hope of his dramas being successfully acted. Indeed, it was tacitly assumed that the genius of the noble Childe was necessarily undramatic because decidedly poetical; and the same rule of judgment was applied to other poets, who had, accordingly, no chance of a public hearing. The evil consequent upon this unfortunate state of theatrical opinion is incalculable; it has weighed like a nightmare on the worthiest efforts, and crushed the hopes and broken the hearts of many true and genuine poets. But in this glorious revival, Mr. Kean succeeded in demonstrating that, in a truly poetical subject, there is a capacity of interest which, when properly developed by the aid of histrionic talent, may be almost infinitely worked. Nor was the histrionic talent employed unequal to the task. Mrs. Kean's *Myrrha* was a purely classical conception; and the Assyrian Monarch, as represented by her husband, found an actor capable of feeling the beauty of the poetry, and enunciating it with a graceful emphasis that left nothing to be interpreted, and gave to each sentiment its relative significance. The same system of adornment has been since applied to the tragedies of "Richard the Third," "Faust and Marguerite," and "The Courier of Lyons," and, generally, in its appropriate degree, to all the new productions at the Princess's. A noble field lies open before Mr. Kean, to produce the poetic drama of the country, both old and new, with such appointments as may ensure its reception by gentle and simple. Spectacle may thus be employed for the education of the popular taste—a worthy object either for man or manager. All classes of society are now sufficiently instructed to value such efforts; and we have not the shadow of a doubt that success in this direction will be in proportion not only to the costliness of the scenic illustrations, but to the substantial merits, as literature, of the works on which they may be made to attend. It is, therefore, that we not only commend most heartily the past efforts of Mr. Kean; but are solicitous to encourage him in still more deeply-thoughted projects, by which the minds of the audience may be both elevated and instructed, and the stage assume the high moral position which is rightly its due.

THE HAYMARKET Theatre has taken a new start under the management of Mr. Buckstone, who, at the commencement of his direction, had serious difficulties to contend with, but from which he is now gradually recovering. To his praise it must be recorded that his stage has been devoted to the production of several poetical dramas, as well as to some original pieces of lesser pretensions, but of considerable merit. These have all been by authors of some note; and in more than one case the experiment has been marked by an amount of daring indicative of managerial courage. It may be doubted whether it was prudent, in the first instance, to pass from one extreme to another—such as was witnessed in the performance by Miss Faucit of Mr. Browning's "Colombe's Birthday." This venturing on the boards of an abstract poem, the dramatic structure of which had not been purposed by the author, but whose design in its composition was probably altogether different, showed perhaps an excess of zeal; but it was a step, nevertheless, in the right direction. In the recent attempt at placing Mr. Chorley's tragedy of "The Duchess Eleanour" on the stage, with the advantage of Miss Cushman's strong acting, the same zeal was manifest; and the failure of the experiment was due to the same cause. An action, treated in the abstract spirit of poetry cannot, in any state of the stage, be successful. A certain amount of melodramatic incident and situation must enter into every piece likely to be prosperous. Shakespeare's plays are all of this class; they are essentially melodramatic in the right sense of the word; but they are, besides, invested with the "singing robes," such as become the poet, and, in this splendid attire, the stage-interest becomes still more effect ve. It is by the mixture of metals that the galvanic battery accumulates force; and thus a poetically lay, melodramatically constructed, will be found to have more potency with the popular mind than a merely pro ais one can possibly exercise. Tals is proved by the success which invariably attends the production of the poetical dramas as have been thrown into the saloons, and the taste influenced by the caprices of fashion, the popular heart beats in accordance with that old spiritual harmony which "o'er-informed the minds" of the great dramatic poets of England. This ancient form, from Æschylus to Knowles, has survived all changes of opinion, and proves, under the wind and wave, and still lives in the supra-human of all young poets, and will so live to the end of time. Every effort to establish a theatre upon the basis of such a principle, should be supported by the intelligent. Mr. Buckstone has been fortunate in the production of his last piece, "The Knights of the Round Table"—a piece into which the melodramatic element abundantly enters, but of which the dialogue, nevertheless, is exceedingly polished, and the action throughout most carefully maintained. From a writer so experienced as Mr. Planché, much of this was to be expected; much also has been derived from a foreign source; but it is to the playwright's own author-craft after all, that the happy result is due. Wherever skill is recognisable, there critical praise merited, and it is with no niggard hand that we are disposed to award it, in this instance.

WE have just alluded to the success of the poetical drama at the suburban theatres. So firmly establi-hed has this been at SADLER'S WELLS, that little novelty has been required for two seasons. "The Midsummer Night's Dream" had a most extraordinary run, and also served to exhibit the great talents of Mr. Phelps in a new light. His *Bottom* was a rich treat—a perfect portrait—all flesh and blood and high drollery. The manner in which this completely poetical play was produced was beautifully pictorial. The wood near Athens had never been so exquisitely painted; and such was the admirable attention to the *mise en scène*, that the groupings were charmingly picturesque, and every stage business came out with proper effect. It is in this last department of the scene that Mr. Phelps' excellence as a stage manager consists. It should be generally understood, that not only is this judicious actor entitled to credit for the intelligent reading of his own particular part; but that to him and his intelligence is due generally the entire scene of the play, and adjusts all the relations of the characters, and the salience—so to speak—of the various situations. Hence the completeness of the whole, and the harmonious working together of the company, that distinguishes a performance at this theatre.

AT the MARYLEBONE, under the sway of Mr. Wallack, the same system has been pursued; and here it has been proved on trial that the poetic play has been most successful. Crowded galleries have attentively listened, night after night, to the delicate numbers of "Ion." The exquisite refinements of the diction have been thoroughly enjoyed—a rebuked not by noisy demonstration, but by an evidently sympathetic interest, the reality of which has been tested by the same crowds attending the many repetitions of the play. But in this case, we have in Mr. and Mrs Wallack two performers who, as *Ion* and *Adrastus*, have never been excelled. *Great* acting is, indeed, their forte; and that by which they are distinguished from their competitors. In them the poet may rest assured his lofty conceptions of his most ideal creations will be worthily rendered. In their second season, we may rationally expect that, nothing by experience, they will pursue with steadiness the intellectual plan which is announced as their rule of conduct. A populous and intelligent neighbourhood like that in the midst of which this theatre is situated, is possessed of ample means for the support of an establishment so well regulated; and, when its merits become fully known, there is no reason why it should not prove remunerative.

THE LYCEUM and OLYMPIC Theatres are conducted with a less lofty aim, and one of them has learned a lesson from experience that, we hope will lead to its ultimate advantage. The latter, with Mr. Wigan at its head, has been remarkably successful. Its character under the new management was at once established by the production of an excellent play; after the run of which, three popular farces, admirably acted, have maintained their place from night to night. Few changes of performance seem, indeed, to be demanded. This is, to some, a mystery; but the explanation lies in the admission of the excellence which is thus appreciated. A permanent popularity may be safely predicted in our huge and multitudinous metropolis, for whatever is first-rate in its way. Witness the seven hundred nights of Mr. Albert Smith's *Mont Blanc*, and other instances of similar success, in cases where the merits lie not so much in the kind of the entertainment as in the degree of excellence attained. Whatever is worth doing at all is worth doing well; and to this adage the state and condition of public amusements at this moment bears ample testimony.

Such is the narrative of progress up to this period, when the approaching signs of a new season as usual, introduce us to new endeavours on the parts of the various managements. Its chief value is to indicate what the Germans call the "stand-point," according to which our future criticism in relation to matters theatrical is likely to be regulated. The past has been one of manifest improvement; and we shall expect that, in "the coming on of time," the morrow will not falsify the promises of yesterday.

THE THEATRES.

THE BOWER.—The engagement of Mr. Ryder at this saloon appears to have excited uncommon interest in the theatrical profession. The object of the conductor seems to be not only the redemption of this place to dramatic purposes, but to constitute it an arena for the exhibition of provincial talent and the convenience of London managers, who may thereby be enabled to test the qualifications of candidates for employment on the metropolitan boards. On Monday Mr. Ryder played *Othello*, and was assisted by a company composed of actors from the country, who, for the most part, performed carefully and respectably. Mr. Ryder, of course, looked the *Moor* grandly, and in many passages was, by reason of his sonorous elocution, remarkably effective. There is little of the artificial in Mr. Ryder's style of acting; and, though he played like a well practised and studious actor, the energy and expression of the passion was purely natural, leaving the poet's text to impress its own meaning on the audience. In this absence of all trick—a thing so rare with performers of long standing—there is to itself something refreshing, without regarding more positive merits. A pure histrionic style is one of the *desiderata* of the stage, and is particularly wanting at a time when the public patronise familiar subjects and domestic actions in stage-arguments. There is a difficulty, however, in taking it up into tragic themes and metrical dialogues, with which only the initiated in the acting art are fully acquainted; and to do it with a facility and grace realised by Mr. Ryder, requires extensive experience. Among the performers of the other parts, we particularly distinguish Mr. Silverton in *Brabantio*—an actor, though young, of much judgment, full of promise, accurate in his study, and forcible in his delivery—one who not only takes pains, but manifests power. He merits attention.

HAYMARKET.—The Spanish dancers continue yet in the ascendant, and are indeed so successful that Mr. Buckstone has been able to suspend his free list. On Monday evening they took a fresh start in a new ballet, entitled 'The Gipsy Queen "—Senors Perea Nena, being, of course, the heroine. These dances are of the peasant class, and are more national in their characteristics than those by which they were preceded. The rapidity of movement is even greater, the glancing copious, humour, and gaiety are indeed as surprising as the vivacity of the action appears to be exhaustless. The audience was fashionable and numerous.

MARYLEBONE.—On Wednesday Mr. Frederic Robinson made his appearance, for one night only, in *Hamlet*; and was welcomed in his attempt by a numerous audience. Mr. Robinson's *physique* is not favourable to the part, his person is progressing, his manner pleasing, and his style so neat and precise, that, as an actor, he is perfectly "safe." But his merits amount to much more than this—his action is as vivid as his conception is correct, while his extreme youth in such parts as this, is chosen for his present benefit, especially fit him for their representations. He was deservedly applauded.

IRISH PORTFOLIO.—Mr. George Hodson, late of the Strand Theatre, has taken the Upper-hall, Regent street Quadrant, for an entertainment under this title, and which consists of racy specimens of Irish character, conveyed in the most unmistakeable of Irish tongues. The humour of these is throughout of the broadest, and the laugh is provoked by every and any means that "he convenient." Anything more decidedly Hibernian has not been witnessed for a long time; we could have desired, however, a more careful selection of topics—more originality, and more elegance.

THE WATT MONUMENT.—The first contribution to the great Watt monument about to be erected at the cemetery at Greenock, at the suggestion of John Gray, Esq., has lately arrived at Montreal. It is a very large block of granite, weighing several tons, and is the gift of Robb Campbell, Esq. the editor and proprietor of the *Montreal Pilot*, a gentleman who formerly resided in Greenock.

THE RUSSIAN ARMY.—A new levy of recruits is about to be ordered throughout the Russian empire. This will be the fifth since the commencement of the Oriental complications, and will raise the total amount drawn to about forty per 1000 souls. This shows the enormous waste of life in the army, and proves, besides, that the reserves are already exhausted. The loss from desertion is said to be enormous, nor is this confined to the common soldiers merely. On the evacuation of Bucharest, more than a third of officers exchanged their uniforms for civilians' clothing, and deserted from the army.

KARS AND ERZEROOM.

THE city of KARS, near which the Turkish army was encamped at the end of July, is situated on the Arpa chain, in Asiatic Turkey, about 165 miles to the north-east of Erzeroom. It is partly walled; but many of its principal buildings, including the citadel and several Armenian churches and convents, are in ruins.

Before the occurrence of the warlike events which have lately turned the public attention to the West, the city of Erzeroom was little known by name, and its geographical position was scarcely defined. It has, however, now become a place of considerable notice from being a military position, to which the Sultan's troops arrive from various parts of Asia Minor and Syria, as well as from Constantinople, viâ Trebizond, to be then distributed between the divisions of the army at Ardahan, Kars, and Bayazid. Some accurate knowledge respecting Erzeroom, must, therefore, now be interesting, especially as there appears a probability of this neighbourhood being soon visited by an Anglo French army.

The town of Erzeroom is commanded by a citadel, surrounded by a double wall, but the fortress is overlooked by heights. It is in this respect of no great strength, having been built before the invention of artillery. In the Russian invasion of 1828 9 Erzeroom surrendered to Paskiewitsch after the first few guns were fired. The fortifications are supposed to have been constructed by the Republic of Genoa, when that enterprising mercantile country was allowed by the Armenian Sovereigns to erect buildings for the protection of its trade with India viâ Trebizond, Erzeroom, Tabreez, Ispahan, &c. In many parts of this country are still existing, more or less perfect, remains of khans, bridges, causeways, castles, and other buildings, in hewn stone—so massive and imposing in their proportions, as to argue well for the importance of the commerce, and the vast capital at the disposal of the traders.

From amidst the citadel rises a massive brick tower, called the *Tousee minaret*, crowned by a wooden roof of two stories; the upper one being smaller, like in a pagoda. This building once contained a clock, which was constantly out of repair, and the Turks then ignorantly imagining that all Europeans knew how to make and mend watches, the services of every chance traveller were called into requisition to put the venerable mechanism into order. The Russians carried it off to Odin, where it is probably now in. Among other buildings of importance may be mentioned the *Tchifté minaret*, formerly a college, and now an ordnance store. It is remarkable for its elaborately and peculiarly ornamented Saracenic entrance, and for two fluted columns beautifully inlaid with blue glazed bricks. There are other buildings of a similar kind, with Cufic inscriptions, and several curious old *koombets*, or mausoleums, with conical roofs. Several of these are sostrongly cemented, that, although in ruins, the hewn stones forming the roofs, are in some places held together by nothing but the air solely through the excellence of the mortar. (See Sketch).

The population of the town of Erzeroom may be guessed at about 40,000; consisting of 20,000 Turks, 5000 Armenians, 2000 Roman Catholics, 1000 Russian subjects (chiefly Armenians, with a few Georgians and Jews), 2000 Persians, and a few hundred Greeks. Statistics being scarcely known in the East, it were impossible to make more than a rough estimate; but what appears certain is, that Erzeroom was once much more populous. At the close of the war between Russia and Turkey in 1829, a large number of Armenian families were either forcibly obliged or were enticed by deceptive promises, to migrate from Erzeroom and the surrounding country, and to settle in Georgia.

THE CITY OF ERZEROOM, IN ASIATIC TURKEY.

They at first enjoyed some liberty; but, after a few years, they were brought to the same low level to which all Russian possessions are, sooner or later, infallibly reduced; and though there are now many Russian Armenians who would willingly return to Turkey, they are unable to do so, the Russian Government having encouraged them to purchase lands in Georgia, which would be confiscated on their departure; besides which, their wives and families are very rarely allowed to re-enter Turkey, being kept in Georgia as security for the return of the male relatives.

The transit trade of Persia, which has so much enriched the provinces of Trebizond and Erzeroom, through which it passes, dates from the year 1830, and originates in British enterprise. Previous to that period Northern Persia was supplied with British manufactures, viâ India and the Persian Gulf. The transit trade has, since its commencement, steadily increased, and has now, probably, attained its maximum. More than 80,000 packages, principally of British manufactures, destined for Persia, were imported into Trebizond in 1850. The direct British trade of Erzeroom, which was formerly carried on solely by European merchants, has now become quite a retail traffic, though it has increased in extent. This arises from the facility afforded to the natives, by steam communication, of resorting to Constantinople for the purchase of merchandise which, by severe economy—not to add, by defrauding the Custom-house—they can sell cheaper than the European; and they can, moreover, unite the wholesale with the retail profit.

The articles of consumption are chiefly British and Swiss manufactures, bar and nail iron, tin, madder-roots, indigo, nut-galls, and colonial produce. The exports consist of various furs, hides, and skins, goat's and sheep's wool, tallow, and WAX, tobacco, nut-galls, and gum-tragacanth; copper and lead; but most of the hides, and some of the furs, are brought from Georgia to be exported to Constantinople.

The trade between Erzeroom and Georgia is much shackled in consequence of the prohibitions occasionally issued by the Russian authorities against the entry of certain merchandise into Georgia. Were trade between the two countries allowed to be free, both would be immensely benefited. The Russian Government has long observed, with a watchful and jealous eye, the advantages accruing to Turkey by the transit trade with Persia; and it has more than once endeavoured, though fruitlessly, to encourage that trade to pass through Georgia, by admitting transit merchandise duty free; but the risk attending the landing of goods at Redout-Kalé (which is an unsafe roadstead), the numerous vexatious Custom-house formalities and fees, and the delay caused by bad and circuitous routes, have occasioned a unanimous preference to be given to the Trebizond and Erzeroom road, though a transit duty of three per cent be levied. The usual means of transport is on mule or horseback: camels are also employed to carry loads to and from Tabreez and Erivan; asses convey bar-iron and charcoal; and even oxen are used as beasts of burden for the transport of grain, which is carried in large saddle-bags girthed to them. The road between Erzeroom and Trebizond is only carriageable half way, and then solely for the rude native carts, which can go over ground that no European vehicle could attempt.

THE CITY OF KARS IN ASIATIC TURKEY.

FIELD-MARSHAL BARON VON HESS,

GENERALISSIMO OF THE AUSTRIAN ARMY OF THE EAST.

The name of General Hess is but little known out of the range of Austrian military opinion. Although highly esteemed in his own country, he has been scarcely heard of elsewhere, save as an officer of high rank and useful qualities; and then only in the particular localities where his services with the army were required. In the records of the later wars of Austria his name does not appear associated with any command; and even in Austria some surprise was felt when it was announced that officers who had so much more distinguished themselves, or who at least were so much better known, had been passed over by the Emperor in his favour, when it became necessary to select a Commander-in Chief for the forces about to operate in the Principalities. A solution of the enigma is afforded by the fact that those other Generals have always manifested a preference for a pro-Russian policy, while Baron Von Hess is of the contrary opinion, or is at least too good a courtier to run counter to the views of his Imperial master.

At the same time, Baron Von Hess is an officer of the highest rank, who has rendered the most important services to his country. Like Lüders, in the Russian army, he has a reputation among soldiers, transcending that of his own former superiors. Having passed through the several grades of the service, he found himself, at the commencement of the year 1848, chief of the staff of Marshal Radetzky in Italy. At that time, the feverish excitement produced by the revolution in Paris extended elsewhere, and, for the moment, the Austrian dominion in Italy was threatened by the spirit of Italian independence, fomented by Republican agents, who arrived from all parts for the purpose. The disaffection of the population at length broke out in open insurrection at Milan, and Marshal Radetzky found it prudent to retire on Verona. Then came the armed interference of the King of Sardinia, and the advance of Radetzky, followed by the battle of Volta, the abandonment of Milan by the Piedmontese troops, and the armistice which temporarily restored the dominion of Lombardy to the Austrians. In all these movements, Baron Von Hess, as chief of the staff of Marshal Radetzky, took an active, indeed, the most important part. To his energy, and his admirable grasp of the evolutionary machinery of the army were mainly owing the vigour and celerity with which the Piedmontese invasion was repulsed.

At the commencement of the following year the armistice was broken. The Piedmontese, excited by the aspect of Europe, and stimulated by the attitude of the Italian patriots, again forced their King to take the offensive. Marshal Radetzky was not slow to accept the proffered combat, and the decisive battle of Novara soon concluded the campaign. Then came the operations against Genoa, and the bombardment of Brescia; after which a peace was concluded.

In all these operations, Baron Von Hess, although his name does not appear in the ordinary histories of the campaign, took a part somewhat analogous to that of the present Lord Raglan in the Peninsular War. Marshal Radetzky conceived the highest opinion of his military talents, and profited throughout by his strategical knowledge and skill. Subsequently, Baron Von Hess was engaged in reorganising the Austrian army in Italy, and contributed mainly to put it on its present effective footing; after which he returned to Vienna, where again his services were required as a military administrator. He stood so high in this respect that to his influence may chiefly be attributed the restoration of the Austrian army to a condition commensurate with the dignity of the monarchy. Its morale had been much impaired by the various events of the period from 1848 to 1850.

In proportion as the Eastern question began to assume a menacing and warlike aspect, Baron Von Hess increased in importance, as it was felt that his services might be required. One of the early acts of the Emperor was to appoint a Council of War, of which he was himself the President, with Baron Von Hess as principal member, and the Archduke Albrecht and General Schlick. It is stated that when all hope of a diplomatic settlement with Russia on the Eastern question seemed at an end, the Emperor summoned to a general council his chief Generals, among whom were Counts Schlick, Clam, and Schaafgotsch, and Baron von Hess. He demanded their opinion on the general question of peace or war. With one exception, they were opposed to an actual war with Russia; but Baron von Hess—whether from conviction, or because he knew the warlike tendencies of the young Emperor—was of a different opinion. In a few days after, on the 23rd of June, he was appointed Generalissimo of the Army of Operation on the Eastern frontier, called the Third and Fourth Armies. The Archduke was appointed to command under his orders in Transylvania, and General Schlick in Gallicia. Originally, the Emperor had proposed to take the supreme command, and subsequently there was some idea of nominating the Archduke Albrecht to the post; but it was decided that to adopt either course would be to give the war a personal character as against Russia; and Baron von Hess was confirmed as sole Commander-in-Chief. He received his general orders on the 29th June, and he soon after left the capital on a tour of inspection of the army. Before his departure the Emperor gave him a dinner; as also did Count Buol. To this last entertainment were invited the Ambassadors of England, France, and Prussia.

FIELD-MARSHAL BARON VON HESS, GENERALISSIMO OF THE AUSTRIAN ARMY OF THE EAST.

A QUASI-RUSSIAN PRIZE.

(From a Correspondent.)

On Sunday evening, June 25th, Madras was thrown into a state of great excitement by the appearance of a ship bearing Russian colours, approaching Fort Saint George. Governor Lord Harris, who is a regular attendant at St. Mary's Church, in the Fort, was met on the evening in question, at the entrance to the church by the Town Major; and, on being made acquainted with the fact, immediately ordered a party of her Majesty's 43rd Foot and a detachment of Artillery veterans to proceed and capture the ship. Nothing, however, was done until next morning, when the steamer *Bengal* fearlessly "boarded and captured the stranger" which had anchored a little outside the Fort, pulled down her colours, and, in lieu thereof, hoisted the British flag, and took her in tow (vide Illustration), and anchored her nearly opposite the Custom-house.

The following description of the affair appeared in the *Madras Athenæum*:—

A sight more ominous than that of the *Flying Dutchman* to the storm-tossed sailor—than the notice of bankruptcy to the struggling tradesman—than the collector's camp to the Indian ryot—than the examining committee to the palpitating Ensign—was offered to the gaze of the inhabitants of Madras on Sunday evening, in the guise of Russian colours, fearlessly displayed at the peak of a goodly vessel standing in, as it appeared to the various spectators, for the fort, Black Town, St. Thomé, and, in short, every spot on the coast where there were houses to be knocked down, and treasure to be lifted. The major portion of the European population were at church, and ignorant of danger, but the alarm spread through the native quarters with the marvellous rapidity that has been so often commented on, and every kind of vehicle was put in requisition to convey master, mistress, and the misses and masters Ramasawmy to places of safety. The Governor, with a wise appreciation of the real character of the peril, ordered the Town Major to go on board the steamer with a party of her Majesty's 43rd and a detachment of artillery veterans, and Captain Thompson, "whittling" the danger down to a "point," contented himself with merely ordering the men to be kept in readiness, whilst he prepared to pass the night on the *Bengal*, which kept a good look out, and dispatched a boat to keep the enemy in sight. We can answer for it that there were sleepless pillows in many dwelling-places where the roar of the surf penetrated; and, at daylight, the shore was dotted with eager spectators, straining with anxious eyes to discern whether the intruder was, as we had surmised in our extra, a harmless trader, or a disguised ship of war, waiting with her accomplices outside, to rain bombs and bullets from Covelong to Coromandel. The doubt was soon dispelled. The *Bengal*, having first ascertained

THE BRITISH STEAMER "BENGAL" BRINGING A SUPPOSED RUSSIAN PRIZE INTO MADRAS HARBOUR

that the lady passengers had been duly furnished with their morning cup of tea, a scared forth on her dubious mission, and to the lasting honour of the Peninsular and Oriental service, challenged, boarded, and captured the stranger, whom she took in tow, and anchored within musket-range of the Custom-house. The crew, sixteen in number, and all natives of Finland, were brought on shore, and the Chief Magistrate was appealed to, to find a place for their safe custody; when, to the infinite disgust of the captors, Mr. Elliott proceeded her to be "no prize." On inspecting the ship's papers, it turned out that she was the *Ideale*, from Hartlepool to Madras, laden with coal, and out from England 146 days. She was consigned to Messrs. Binny and Co; and the London agents had written that they intended to apply for leave for her to go on to Moulmein, under the provisions of the recent Order in Council. When these documents were produced, there was nothing for it but to release the ship and crew, and inform the Town Major, and Captain Bowen, of the *Bengal*, that their labour had been all in vain. Whilst obliged to record this harmless termination of a fight—which was far more general than the public cares to own—we should be sorry to be suspected of a design to ridicule the efforts made to avert an apparent danger. Nothing was more likely than that a Russian man-of-war, disguised as a trader, should be sent in to reconnoitre the fort and town; and, in that case, the steamer might have found her heels not quite nimble enough to save her from capture or destruction. It is half a century since an enemy has threatened Madras; and the Government owe it to the timid natives, as well as to the brown Christian portion of the community, to save the capital of the Presidency from the disgrace of being braved with impunity by a single vessel of war, steamer, or sailing ship. But for the accidental presence of the *Bengal*, our rulers would have been obliged to hand the *Ideale* from a manuhal boat, or allow her to come and go at discretion.

Fort St. George, 1st July, 1854. W. E. F.

THE CAPTURE OF BOMARSUND.

On the 21st of June an experimental attack was made upon the forts at Bomarsund by the *Hecla*, *Odin*, and *Valorous*, when a well directed fire was kept up for some time against the Long Fort, which was said to have suffered considerably during the action. Since that time nothing was undertaken against this place until the end of last month. On the 21st ult. Sir Charles Napier and Admiral Parseval cast anchor in Ledsund, about eighteen miles from Bomarsund, having left Rear-Admiral Martin with a squadron in the Gulf of Finland, to watch the movements of the enemy at Helsingfors and Cronstadt.

The impatience of the fleet, while waiting day after day for the arrival of troops to invest the place, may be easily imagined. At the end of July, the first detachment of French soldiers reached Ledsund in English ships, and shortly afterwards General Baraguay d'Hilliers arrived from Stockholm to command them. Still, however, nothing could be done without the siege artillery, which did not reach the scene of action until the 5th instant; and it was not before the 8th that a body of troops, and another of marines, were landed at different points, when operations commenced in form.

The fortifications of Bomarsund lie on the eastern point of the largest of the Aland Islands. The principal fortress stands at the head of a semicircular bay; its sombre-looking casemates, like blank eyes, staring over the waters, and armed with about eighty cannon in two tiers. At the back, or northern, side of the fort the land rises considerably, and the defence on that part consisted of three round towers—one on the highest ground to the west, a second in the centre, and a third to the east. A fourth work had been erected on the Island of Prasto, east of the fortress, and a mud battery was thrown up on the beach to the west. Across the bay, running east and west, lay such of the ships as could make their way through the narrow, shallow, and intricate passages leading from Ledsund to Bomarsund. As the western tower commanded the main fort on the landward side, it appeared expedient—and, forming on the beach, they marched over the heights, and encamped against the western fort. This was done on the morning of the 8th August.

We have received the following two letters, which contain many interesting details relating to the bombardment:—

Ship *Herefordshire*, off Bomarsund, 10th August, 1854.

The day before yesterday we landed our troops, under the fire of a two-decker, the *Edinburgh*. We were towed through these very numerous islands by a steamer; the scenery was most picturesque, some of the natives came on board with offerings of strawberries, &c., to propitiate us. One whole family came in the first instance: a mother brought her children, and knelt down, pointing to two fine boys. I suppose she thought their last day had come. I held my hand on one of her sons; he looked most piteously at his mother and aunt, and went on his knees beside them. We soon reassured them; and when they found no harm was intended them, they rose, and stood in mute astonishment at the sight of so many armed men. We gave them money; they bowed, and shook hands, and left us. At length we reached this strong toll of the Russian Emperor, and landed our share of 12,000 men. You must understand that we are in a large bay, in the very centre of a cluster of islands, and that the island of Bomarsund almost joins the main land of Finland. We soon found there were no troops to oppose our landing—that was ascertained by the *Edinburgh's* fire amongst the trees and into the bush.

The land is low, but the shore is all granite; no sand or clay. You would think that an earthquake had forced it up out of the bowels of the earth. Thick forests of small fir or pine-trees cover every island, but a mile inland the bare rocks rise to a very great height. I send the outlines of the scenery. Our troops sat fire to the forest, thus forming a road; and the Sappers prepared to get the artillery onward; but the bush is so thick, that, although they have been landed three days, they have not marched as many miles. But all is burning—farm-houses, barns, &c. To add to this, the Russians set the town of Bomarsund on fire last night. We are lying close in. Whole streets were in a blaze. Fancy all Greenwich and Deptford on fire, and you will have some idea of this little Moscow. Nearly one quarter of the town was burnt last night. They set fire to their houses at night, and drive the wretched inhabitants into the forest, to be devoured by the bears, or harpooned by the soldiers. It is an awful sight. About ten this morning, Old Charley sent a bomb-shell from the *Bulldog* war-steamer, where he had hoisted his flag, on to a very large half-moon battery, that mounts 102 very heavy guns. This salute was immediately returned; and as that vessel and two sailing frigates opened their fire on the fort, a fort placed on an almost inaccessible rock, very high, also opened its fire, and the action became more general. The *Amphion* and a French frigate were much nearer than Napier, but they never fired a gun at them; and, as we did, they remained passive spectators of the fight, which lasted about three hours. What they intend by burning the whole town and its neighbouring villages, I know not; but it is a horrid sight to witness. I must cease, for we are going to have a fight of it. I will write again to-morrow.

Our ships shelled the low fort in several places; but until the large fort (No. 1) is stormed, and the garrison put to the sword, nothing will be done of importance. The bearing from the *Herefordshire* of No. 1 Fort, the very high one, is N.E. by N.; that gives the position of the others; also of our men of war, &c. Observe that all the islands are covered with wood. I am again interrupted. Now that the devastation of the fire, which has been burning in the forest for three days, has bared the side and top of the rock—for soil there is none—the rise from the bases of the different islands to their summits, is like steps of granite. As far as I can judge, Fort No. 1 can fire 82 or 92 guns, heavy pieces—25 or 26 at the same time; the lower fort (No. 2), I should say, from 16 to 24; and the half-moon battery presents three tiers of very heavy guns. I count 90 pointed in the direction of our ship. We are very quiet to-day; many must have been killed in this lower battery, yesterday and last night; both parties are bored. However, something is preparing, for we have been ordered to approach close to the shore, for the purpose of being ready to receive the wounded French. Observe, they are not yet wounded; but the high fort is to be breached, and carried by assault, to-morrow, August 15.

J. G. HARTLEY.

Ship *Herefordshire*, Saturday Morning, Aug. 12, 1854.

Captain Stevenson had a very narrow escape, just about six: a red-hot 24-pound shot fell within a fathom of him; he gave a very smart jump out of its way, and when it cooled—which water soon effected—he took up the ugly customer and placed it in his cabin. It came from the high fort (No. 1).

About ten last night the solemn measured stroke of a 24-oared barge, followed by three boats belonging to the *Penelope*, passed us, and the ships near us—the dead were being conveyed to the islands ahead of us. No guns were fired, but every ship hoisted her flag half-mast. Scarcely was this scene over, than the Russians set fire to the pine-trees and villages round Fort No. 4, that they might see the ships expected to

FORTIFICATIONS OF BOMARSUND.

attack that particular fort. The flames were awful, running up the trees; by this light the fight began in the middle watch. At present it has ceased on both sides; and I am not yet cognizant of the result, but I shall soon know. Victory at this place will be dearly bought; and, if not obtained by the possession of No 1 Fort, we shall come away in disgrace, and without honour to the united flags of England and France.

Captain Stevenson has gone on shore to dine with the Colonel, &c., of the regiment we had on board. I shall be informed by him of the result of our last night's fight, and of what has to be done; but that result you will be made acquainted with in my next letter, dated the 13th August.

Sunday Morning, Half-past Four.

With the rising of the sun the fight has commenced. Half an hour since I was aroused from sleep by the heavy fire from the high fort (No. 1), returned by the *Amphion* frigate.

The previous night's fight was a skirmish between what was *supposed* to be some Russian reinforcements, but which, most unfortunately was a picket from the 48th French, and 51st, also French, *mistaking each other, in the night.* Before the mistake was discovered, six men were killed and many wounded. The forts, being alarmed, fired in the same direction—hence the partial action.

After breakfast I will continue my narrative. Both Nos. 1 and 2 Forts are keeping up a very heavy fire on an English and French mortar battery, erected within rifle-shot. One of the bomb-shells has just fallen into No. 1 Fort. The grand effort both by land and sea, will be on Tuesday, the 15th inst.—the birthday of the great Napoleon. It will be a sight I shall ever remember; for on that event a great deal will depend. Our people will succeed, but a fearful cost of life and limb.

E. G. HARTLEY.

THE CAMP, BOMARSUND, Monday, Aug. 14, 1854.

The French had been blazing away all day (Sunday, 13th), from their battery of four 16-pounders and four mortars (brass), placed behind sand-bags; the Russians returning their fire; when about five in the evening they (the Russians) hung out a flag of truce. The loud cheering of the French took everybody hurriedly up from the English camp to see what it was about. Passing the French Battery, we came up with a crowd, who, like ourselves, were rushing up to get a look at the Russian Fort while the truce lasted. A party of French Chasseurs had been posted close to it, and the officer in command of it informed me that no further approach would be allowed until the Aide-de-Camp of their General (a Colonel, who had gone up to communicate, and inquire what they intended) should return. Nothing could be more reasonable than this, and the whole party came to a halt, in a line, upon the rocks immediately below the fort, to await the result; every one expecting that, in a short time, the French would have possession, and that we should go right up to, and, perhaps, see the inside of it. In a short time, however, the Chasseurs came running down, the officer calling out to the men to get into their position again. The Artillerymen quickly took their stations round their guns; the Chasseurs, with their Minie rifles, spread themselves again amongst the rocks from under which they had been firing all day into the embrasures of the fort; and it was evident that the fighting would soon recommence. The great crowd of sight-seers (officers on leave from the ships) and amateurs began quickly to clear away from the line of fire; and, as we went down the hill, a French officer who had been up to the Fort told us that they had asked for two hours to communicate with their General in the lower, or main fort, and that the answer of the French had been that only one hour could be allowed. In about twenty minutes after this, something having been done on the part of the Russians (I think one of the forts below firing while the flag of truce was flying) which excited the suspicion of the French, they opened again, and the firing on both sides went on.

Soon after ten in the evening, two other forts opened fire upon a part of the bay, where it was said the English intended landing some guns; but by midnight the firing had ceased from all the batteries—French and Russian. By way of recommencing, the French fired four guns at the fort. No answer being made to this, the French called for volunteers to go up and get into it. The first party to advance consisted of twenty of their 51st and some of the Chasseurs de Vincennes, selected from a great number who volunteered. These got up silently, and scrambled in through the lower embrasures, without any opposition being offered to them: and some of the 51st, and an officer, found themselves in the very quarters of the Commandant of the fort, who drew his sword to defend himself, refusing to surrender, when one of the 51st ran him through the side with his fixed bayonet, and having got him down, was upon the point of shooting him, when the Russian officer handed him his sword. We saw and had this account from the man himself, who wore the sword suspended in front: he described the whole scene in the most animated manner, and, drawing out the bayonet, showed the stains of the officer's blood upon it. The party then proceeded through the different parts of the fort, and found the Russian soldiers down upon their knees, offering no resistance. In the hospital of the fort were a number of wounded, who were being attended to by the Russian surgeons. Early in the morning the Russian Commandant of the fort was taken to the headquarters of the French General by a party of about twenty French soldiers; and in this hour of misfortune, and evident pain, he walked with the dignified courage of a man who had fought to the last, as becomes a brave soldier; both English and French officers, who passed, saluting him with all the respect to which his gallant defence entitled him.

These are briefly the circumstances of the taking of the Western Fort of Bomarsund, which commands all the others; these latter, however, have not up to the moment of writing this (ten at night of the 14th, Monday), given in; but during the greater part of the day continued to fire shell at the captured fort, and at the positions taken by the French around it. In the evening, soon after five, the *Edinburgh*, *Amphion*, *Driver*, and a French two-decker, fired at the main fort generally single guns, which were

replied to slowly and ineffectively, the shot from the ships evidently telling; consequently on the battery. This firing ceased on both sides about sunset, but both the northern tower and main fort continued to fire shot and shell for some time after at the French.

Tuesday, 15th.—There was a general attack to-day on the forts here which still held out: there are the main fort, and two smaller ones. Thirteen vessels, English and French, were engaged during the day in attacking from the water; while batteries of English and French guns attacked on the land side. A single gun from the *Blenheim* —fired under direction of the Hon. Capt. Pelham—within easy range of the enemy, annoyed them much, and a constant fire was directed towards it from some of the guns of the main fort, but without hurting any one about it. The great feature of the day was the blowing up, at 11 30, of the fort captured yesterday, which had been on fire all the morning. The forts were terribly knocked about and injured in places when the general firing ceased this evening, but had not given in.

To-day (Wednesday), it is said that the block ships go in to finish the work. Nothing can save the place now.

We hear that Mr. Brierly is at Bomarsund, busily at work getting Sketches, both in the camp and from the ships, of all that is going on there.

On the 14th the most considerable of the two flanking towers was taken, after a resistance of four hours, and the scaling ladders were prepared for a general assault on the following day. On the 15th the third tower was taken, and the garrison had no longer any prospect of relief or reinforcement—all the approaches to the island being vigilantly guarded by steam-ships and armed boats. The details of what took place on the 16th are wanting; but the "great fact" is known that, on the afternoon of that day, the fortress—by which may be understood the "principal battery, built of stone, in a curved shape, along the shore, and mounting nearly 100 guns"—surrendered to the Allied forces, together with 2000 of its defenders. A despatch from Admiral Parseval, of the 16th, states that as soon as the squadrons began their fire in support of the land forces, the fortress surrendered. One thousand prisoners have been embarked for Brest, and a thousand placed at the disposal of Admiral Napier.

The rapid success of taking the first tower has entirely destroyed the illusion about granite walls being impregnable. The fort looked most solid and unapproachable, and yet a few hours' firing completed its destruction. A private letter thus graphically describes the effect of Captain Pelham's "beautiful fire:"—

Three or four shots set the great stones visibly *chattering*, as I could mark by a pocket telescope; one block then fell out, then another, then a third, fourth, &c., and these were followed by an avalanche of loose rubbish, just as you see macadam-ing stones pour out from the end of a cart when the back-board is removed

This corresponds precisely with Mr. Oliphant's account of the material of the Odessa fortresses, except that a soft calcareous stone, or concrete of shells, is at Odessa substituted for *granite*, and we believe that this is also the case at Sebastopol. Be the facing stone, however, which it may, there is no reason to suppose the construction of the works at Sebastopol better than at Bomarsund or Odessa, or more capable of resisting "the beautiful fire" of our ten inch guns.

The following despatches appeared in the *London Gazette* of Tuesday:—

ADMIRALTY, AUGUST 21.

Despatches, of which the following are copies, have been received from Vice-Admiral Sir C. Napier, K.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Baltic:—

CAPTURE OF TWO TOWERS OF BOMARSUND.

(No. 384.)

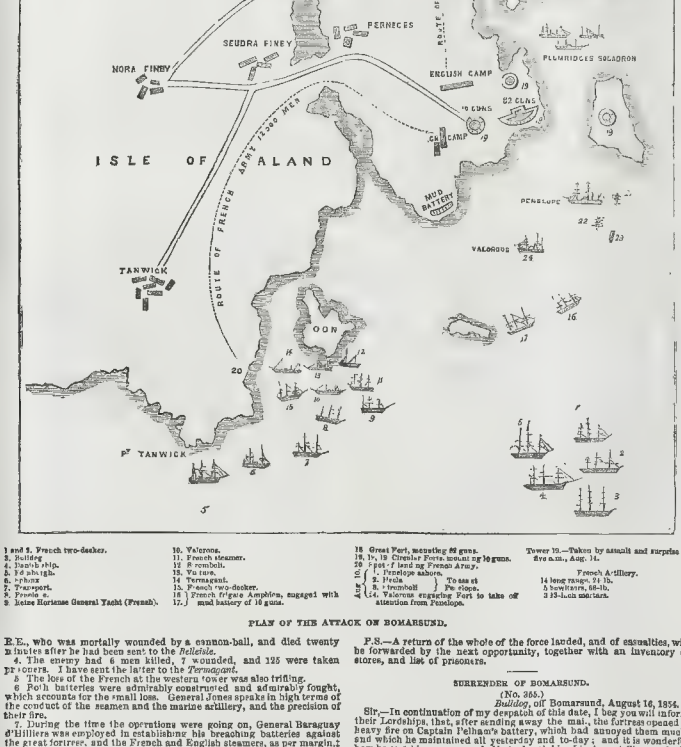
Bulldog, off Bomarsund, August 16, 1854.

Sir,—At four o'clock in the morning of the 15th instant the French battery of four 16 pounders and four mortars, opened a splendid fire on the western tower, which commands the fortress of Bomarsund and the anchorage. A white flag was displayed in the afternoon, which led to nothing; but on the morning of the 16th the tower was surprised by the Chasseurs. General Jones's battery of 32-pounders was finished in the night and ready to open; but, not being wanted, was turned against the eastern tower, and on the morning of the 16th he opened his fire. The battery was manned by seamen and marine artillery from the four ships named in the margin,* under the direction of Captain Ramsay, of the *Hogue*, assisted by Commander Preedy, Lieutenant Somerset, of the *Duke of Wellington*, and the officers named in the margin;† their fire was beautiful.

2. At six p.m. one side was knocked in, and the tower surrendered.

In the attack on the western tower, the Chasseurs, with Minié rifles, were employed so successfully that it was difficult for the enemy to load their guns; in the attack on the eastern tower we had no Chasseurs, and they were enabled to load their guns with more facility.

3. Our loss has been trifling: one man killed, and one wounded. But I have to lament the death of the Hon. Lieutenant Cameron Wrottesley,



1 and 2. French two-decker.
3. Bulldog
4. Danish ship.
5. Edinburgh.
6. Sphinx
7. Transport.
8. Fossile e.
9. Reine Hortense General Yacht (French).
10. Valorous.
11. French Steamer.
12. H rnbull.
13. Vo ture.
14. Termagant.
15. French two-decker.
16. French frigate Amphion, engaged with mud battery of 16 guns.
18. Great Fort, mounting 80 guns.
19, 19. Circular Forts, mounting 16 guns.
20. Spot of land on French Army.
{ 1. Prentice ashore.
{ 2. Hecla } To assist
{ 3. Ironbull } Pelorus.
{ 4. Valorous engaging Fort to take off attention from Penelope.

Tower 19.—Taken by assault and surprise at five a.m., Aug. 14.

French Artillery.
14 long ranges, 24 lb.
3 howitzers, 86-lb.
3 13-inch mortars.

PLAN OF THE ATTACK ON BOMARSUND.

R.E., who was mortally wounded by a cannon-ball, and died twenty minutes after he had been sent to the *Hellebiale*.

4. The enemy had 6 men killed, 7 wounded, and 125 were taken prisoners. I have sent the latter to the *Pervagant*.

5. The loss of the French at the western tower was also trifling.

6. Both batteries were admirably constructed and admirably fought, which accounts for the small loss. General Jones spoke in high terms of the conduct of the seamen and the marine artillery, and the precision of their fire.

7. During the time the operations were going on, General Baraguay d'Hilliers was employed in establishing his breaching batteries against the great fortress, and the French and English steamers, as per margin,‡ were towing the ships of the line of both nations, and the steamers. The narrowness of the ground on which the General has established his breaching battery, very much circumscribes the space; the greatest caution will be necessary to prevent firing on his troops, and the little space in the anchorage before Bomarsund, and the intricacy of the navigation, will prevent ships approaching the main fortress so near as could be wished; but when the batteries are established, acting in the rear of the fort, and supported by the shell-guns in front, it cannot hold out more than a few hours.

8. I have put off to the last moment, the departure of the mail, but I shall send an extra courier at the moment the fort surrenders.

10. The western tower was fired, either by accident or design, I do not know which, and blew up at eleven a.m., yesterday.

11. I am sorry to add that Lieutenant Cowell, Royal Engineers aide-de-camp to Brigadier-General Jones, was unfortunately wounded in the leg by the accidental discharge of his pistol; he is on board the *Hellebiale*, doing well, but the loss of his services is much to be regretted.

I have &c.,

(Signed) CHARLES NAPIER, Vice Admiral and
The Secretary of the Admiralty, Commander-in-Chief.

F.S.—A return of the whole of the force landed, and of casualties, will be forwarded by the next opportunity, together with an inventory of stores, and list of prisoners.

SURRENDER OF BOMARSUND.

(No. 385.)

Bulldog, off Bomarsund, August 16, 1854.

Sir,—In continuation of my despatch of this date, I beg you will inform their Lordships, that, after sending away the mail, the fortress opened a heavy fire on Captain Pelham's battery, which had annoyed them much, and which he maintained all yesterday and to-day; and it is wonderful how he and his men escaped. He had with him Lieutenant Close and Mr. Wildman, mate, of whom he speaks highly. Seeing his position, I immediately ordered the ships and steamers named in the margin,§ who were within range with their 10-inch guns, as well as the French mortars on shore, which had been playing on them for some time, to give them a shot and shell every five minutes; and their fire was so well directed that the enemy held out a flag of truce.

2. I sent Captain Hall (of the *Bulldog*) on shore, who was shortly joined by Admiral Parseval's Aide-de Camp and two of General Baraguay d'Hilliers's staff, and the troops in the fortress agreed to lay down their arms, and march out.

3. After I had landed I was joined by the French Admiral and the Commander-in-Chief of the Army; the prisoners (about 2000, I believe) were marched out and embarked in steamers, and proceeded to Lee Sand, to Commodore the Hon. Frederic Grey, who will conduct them to the Downs, to wait for further orders.

4. I beg to congratulate their Lordships on the fall of this important fortress—which will be followed by the submission of the Garden of Islands—with so small a loss; and I am happy to say the greatest cordiality has subsisted between the French General and Admiral and myself, as well as between the soldiers and sailors of the two nations.

5. As soon as I can collect a list of the stores captured, it shall be forwarded to their Lordships; and a commissary has been named for that purpose

6. This despatch will be delivered by my Flag Lieutenant (Lieutenant John de Courcy Agnew) whom I beg to recommend to their Lordships for promotion. I have, &c.,

CHARLES NAPIER,
Vice-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

THE NORTH LONDON RAILWAY ACCIDENT.—At an inquest held on the body of the engine-driver who lost his life by the collision on the North London Railway, last week, the jury returned the following verdict:—"We find that the deceased has died an accidental death; and respectfully call the directors of the North London Railway Company's attention to the fact of no provision for the widow and children of deceased. We also suggest that longer time should be allowed between the luggage and passenger trains; and also that sufficient steam power should be allowed at the Haydon-square station for the conveyance of the traffic."

FATAL ACCIDENT ON THE BRIGHTON RAILWAY.—On Monday afternoon an accident took place on the Brighton and Dover Railway, near the Croydon station, by which two lives were lost, and several persons dangerously injured. The collision appears to have been caused by some negligence at the Croydon Station, where a truck engine had been left on the line of rails, on which an excursion train from Dover to the Crystal Palace was about to pass. As soon as the driver of the truck engine saw the excursion train coming forward, he turned on the steam, and did his best to get out of the way, but it was too late. The Dover train was going at full speed, and the result was that it came into collision with the engine almost midway between the Croydon Station and Windmill-bridge. The shock was so great as to force the engine against the line of ballast-trucks, heavily-laden with gravel, on the adjoining rails, and these were almost thrown off

FIRE AT CUBITT'S BUILDING WORKS, THAMES BANK.—(SEE PRECEDING PAGE.)

on the upper stories offices for the collector and other officers of the Market.

The entrance to the Market from Thames-street is beneath a colonnade and range of warehouses, which have been erected for storing dried fish, in barrels.

A plentiful supply of water is insured to the Market by means of a fountain, and a cast-iron basin fifteen feet in diameter—one entire casting, the lip of which is ornamented with figures of dolphins, from whose mouths water is continually flowing.

For the purpose of cleansing, and assisting in the ventilation both of the Upper and Lower Markets, a continual flow of water is supplied through a series of iron gutters in the pavement, covered with trellis gratings, the water in which being stopped at the outlets when the Market is cleansed, rises over the surface of the paving, which is then swept, and the water allowed to escape into the drains.

The water is supplied from a large brick tank beneath the pavement of the west colonnade of the river front, filled from the river at the rising of each tide. The drainage of the Sub-Market is thrown into the river beyond low-water mark, through large iron pipes, by means of a centrifugal pump, worked by a steam-engine.

The Upper and Lower Markets are ventilated by a fanner five feet diameter, also worked by the engine; this draws the vitiated air from the Lower Market, through brick flues in the walls, and beneath the pavement; and from the Upper Market through perforated troughs formed on the apex of the roofs, which deliver the air thus abstracted into channels also beneath the pavement, connected with an outlet above the roof.

Every other requisite convenience is provided, in connection with which, Homer's self-discharging cisterns, plentifully supplied with water, are applied, which together with the water for the fountain, is thrown up by means of centrifugal pumps, worked by the steam-engine.

The works have been executed from the designs, and under the superintendence of Mr. Banning, the architect to the Corporation of London, by Mr. Jay, of the City-road, and Mr. R. Walker, of Grange-road, Bermondsey; and the engine, and fountain, and water supply, by Mr. Besemer, of Fanoras-road. The entire cost has been about £30,000.

BILLINGSGATE NEW MARKET.

OPENING OF THE CENTRAL SOMERSET RAILWAY.—PROCESSION IN THE ABBEY GROUNDS, AT GLASTONBURY.

NEW SCHOOLS AT YARMOUTH, ISLE OF WIGHT.

The erection of a National School has just been commenced in the small maritime borough of Yarmouth, in the Isle of Wight, in special connexion with the Church, but intended for the use of the labouring and middle classes, and at a low rate of charge.

The site is a beautiful spot on the banks of the Estuary. The first stone was laid on the 20th ult., by Miss Catharine Leigh, who, with the Corporation of Yarmouth, gave the land for the site. Mr. F. W. Fleming, of Stoneham Park, and the Provincial Grand Lodge of which he is Master, lent their assistance, and did due honours to the occasion, and Mr. Fleming addressed the company, as did the Rev. E McAll (the Rural Dean) in an admirable historical speech; and the Rev. Mr. Blackburn, the Rector; who closed the proceedings with prayer and a hymn composed by the late James Montgomery.

The building contains one school-room 41 feet by 18, another 27 by

NEW PUBLIC SCHOOLS, AT YARMOUTH, ISLE OF WIGHT.

18, a class room 17 by 13, with separate porches for boys and girls; and a teacher's house, facing the river Yar, having a beautiful view of the sea, and the woods of Norton, and Church of Freshwater. The style of the building is in harmony with the parish church of Yarmouth, which was built in the reign of Henry VIII. The architects are Messrs. Flockton and Son, of Sheffield; the contractor is Mr. Edmund Smith, of Woolwich, who is engaged in extensive Government works in the neighbourhood.

OPENING OF THE CENTRAL SOMERSET RAILWAY.

The ceremonial of the opening of this line, which carries a road of iron into the very heart of pastoral Somerset, took place on Thursday (last week), under very interesting circumstances. It is a single line, and about twelve miles and a half in extreme length, connecting the port of Highbridge on the Bristol and Exeter line with the ancient and picturesque town of Glastonbury; and it is contemplated, at no distant period, to extend the line to Wells and Castle Carey on the one hand, and on the other to Burnham, a port at which it is proposed to establish a line of steamers to ply daily to and from Cardiff on the Welsh side of the Channel.

The existence of the railway is due to the landed gentry of the district. The entire capital of the company was £20,000. Out of this £8000 was paid for the purchase of the Highbridge and Glastonbury Canal, leaving £82,000 for the work, including costs of surveying, engineering, Parliamentary, and all other expenses or £6560 per mile. It is, therefore, one of the cheapest lines in the kingdom.

There are neither tunnels, nor costly bridges, nor viaducts through the sea, nor other engineering works of magnitude perceptible to the eye; but the project was, nevertheless, beset by engineering difficulties of no ordinary kind. The district through which it runs for miles is a reclaimed waste from the sea—a peat moor. When the works were commenced, the "navvies" could not walk upon the bog to use their spades without sinking knee-deep into it.

But Mr Gregory has succeeded in fixing across the quagmire a substantial railway. The course of the rail having been dug out, layers of bushes, with gravel and clay, were placed in the holes, and upon these again were used layers of trunks of trees. Wherever the bog was particularly soft, floating frames were provided, upon which the rails may be said, in some degree, to float.

The directors having invited the directors and officials of the Bristol and Exeter Railway to be present at the opening, on Thursday week, those gentlemen proceeded by early train to Highbridge, where they were met by the Hon. P. P. Bouverie, Chairman of the Somerset Central Company; Mr. Gregory, the engineer-in-chief; Mr. Slessor, sub-engineer; Mr. Rigby, the contractor; and others.

The country through which the line passes is exceedingly level The canal, the course of which the rail to some extent follows, is overhung by willows, and crossed every here and there by Flemish-looking wooden bridges; the marshy soil is covered with tall rank weeds; the few cottages to be seen are small and slightly built. For some distance, the rail runs through a regular peat moor, rendered somewhat picturesque by the grotesque shapes of the black mounds of cut peat which are piled preparatory to removal After passing some distance beyond Shapwick station, the country begins to assume a more cultivated and fertile character, and the traveller soon finds himself at his journey's end, amidst the rich pastures of Glastonbury.

The station at Glastonbury was gaily decorated with flags and banners. Upon the directors of the Central Somerset Railway alighting, the Mayor of Glastonbury (Mr. Perch) congratulated the Chairman, the Hon. P. P. Bouverie. A procession was then formed of the railway officials, clergy, and gentry, and the Mayor and corporation, accompanied by banners and music. Having halted for awhile at the back of the Abbey-house, the residence of H. D. Seymour, Esq., M.P., the procession wended its way through the ruins of the Abbey, from which it crossed by a temporary bridge to a spacious tent, in which a splendid cold collation for near 300 persons had been provided. The beings of whom the procession was composed looked pigmies when contrasted with the gigantic remains of the Abbey. "One part of the scene (says the *Bristol Mercury*) alone bespoke a harmony between things present and past—it was the kitchen-garden. On one side, the abbot's kitchen, an octagonal building of stately dimensions, raised its pyramidal form, and with its vaulted dome and quaint old lanthorn, recalled stories of 'the monks of old,' when sleek abbots and portly friars spent jovial hours in the refectory, discussing capon and pasty, and draining flagons of wine with epicurean gusto On the other side stood the more light and fragile form of the marquee, with its ample spread of fare."

THE ABBOT'S KITCHEN, GLASTONBURY.

At two o'clock the trumpets sounded, and the company sat down to the repast. The Mayor of Glastonbury presided; and was supported, among others, on his right and left by the Right Hon. and Right Rev. Lord Auckland, Bishop of Bath and Wells; Sir Ivor Guest, Bart., the Hon. P. P Bouverie, &c. A number of elegantly dressed ladies graced the festival with their presence. The repast was admirably served by Mr. Baily, of the George and White Hart Hotels A long list of toasts followed. Eloquent and appropriate speeches were also delivered by the Right Hon. and Right Rev. the Bishop, by Sir Ivor Guest, the High Sheriff, the Hon. P. P. Bouverie, Major Reed, and the Mayor of Wells; and by Messrs. H. D. Seymour, J. W. Buller, Ralph Neville, Rocke, Naish, Gregory, Warry, Pogood, Rigby, Crawfurd, Castle, Dunnison, and others, and the company rose at five o'clock.

About 800 of the working classes of Glastonbury were entertained at dinner in another large tent. Some thousand or more operatives of Street were afterwards regaled with tea, besides which the committee, previous to the festival, distributed cake and tea to upwards of 1500 females. The day, which will be long remembered by the inhabitants of Glastonbury, closed with a brilliant display of fireworks, by Gyngell.

The railway will be opened for regular traffic on the 28th inst.

In the course of the proceedings the Bishop of Bath and Wells pre-

sented to the directors a memorial from the inhabitants of Gaston-bury, in which he said he entirely concurred, praying that they would not allow the quiet of the town to be disturbed by excursion-trains. The Chairman of the Bristol and Exeter Company, Mr. Buller, subsequently stated that it had ever been the practice of his board to run on the Sabbath-day such trains only as the Post-office and the public convenience absolutely required.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

THE Bank of England has just made an accession to its collection of coins out of circulation. The Directors have bought, with wise liberality, the fine collection of coins and medals formed during the last forty years by Mr. Haggard, of the Bullion Department of the Bank. The Directors were already rich in good things in this way. Some twenty years back a very choice collection of Roman coins dropped into their coffers, through a Mr. Austin; to whom the Bank, it is understood, had made an advance which Mr. Austin was unable to meet, and to his coins—to use the language of those little goldsmiths, the pawnbrokers—were unredeemed. Their second accession of moment was the far-famed collection of Mr. Borrell, of Smyrna, bought by the Bank for £3200. Other purchases, not less judicious, though smaller in amount, have brought the Bank cabinets of coins out of use to a collection of European consequence. The Haggard acquisition will give it another feature. A larger series of English historical medals in gold and silver, and the baser metals, has never been brought together than Mr. Haggard's skill, diligence, and liberality have been the means of exhibiting in one cabinet. The noble-tion is especially rich in the medals of the Pretender; the Haggard cabinet containing between eighty and ninety specimens illustrative of the hopes, fears, and unfulfilled expectations of the exiled house of Stuart. We may read the history of the old and young Pretender in the Haggard medals.

Now that the Bank has acquired this additional treasure, people are again asking, "Will the Bank Directors allow their collection to be more accessible to collectors seeking information than it is at present?" A well-known collector, who rejoices in an Otho, complains, in common with others, that the Bank collection is all but invisible. It is true that, on the order of a Bank Director, the Chief Accountant (in whose custody the collection of coins out of circulation is placed by the Directors) is bound to unlock his cabinet, and reveal his treasures. But the antiquary soon feels that he is, unfortunately, interfering with the time of a great functionary of the day, who has other duties to perform than exhibit coins of extinct dynasties unknown to the Governor of the Bank and the Chancellor of the Exchequer. A few specimens, therefore, are only seen; and what the collection is like no creature knows thoroughly—not even, we suspect the Chief Accountant himself. After the possession of useful knowledge the next great pleasure is the power of communicating it. The Bank Directors should no longer allow their collection to be hemmed in with as many needless difficulties as surround the far-famed Peypsian Collection of books and old ballads. They should at once appoint a curator. The rest at the Bank will not be sensibly decreased by a salary to a well-informed and honest guardian and exhibitor.

The Obituaries of the week contain the following entry:—

On the 12th inst., at Richmond, Mrs. Jane Langton, last surviving daughter of Bennet Langton, Esq., of Langton, Lincolnshire, and of the Countess Dowager of Rothes.

Mr. Jane Langton was the god-daughter of Samuel Johnson. Her birth is mentioned in Boswell under the year 1777. "Langton," says Johnson, writing to Boswell, "has another wench. Thrale is in hopes of a young brewer." How strange soever it may seem, Miss Jane Langton, who died at Richmond on the 12th inst., was the correspondent of Samuel Johnson, who died seventy years since. In "Boswell" may be seen a beautiful letter from Johnson to his little god-daughter, acknowledging a pretty letter he had just received from her. It begins "My dear Miss Jenny;" is full of good advice for a girl of her years, conveyed in words exquisitely simple for the great lexicographer; and written withal, as becomes a man, in a large round hand, nearly resembling printed characters, that we might have the satisfaction of reading it herself. "When you are a little older (it is thus the great man concludes his letter to Miss Jenny) I hope you will be very diligent in learning arithmetic, and, above all, that through your whole life you will carefully say your prayers and read your Bible." Simple words these, but from how great a man! Miss Jenny remembered the injunction of her illustrious godfather, and was proud of showing the letter which the great moralist had sent her—framed and glazed in her favourite apartment at Richmond. If *Queeny* Tarale afterwards Baroness Keith, is no longer living, Mrs. Jane Langton (*My* dear Miss Jenny) was the last survivor of all the persons mentioned in Boswell's delightful biography.

The twelve days' sale, at Sotheby and Wilkinson's, of part of the public stock and part of the private collection of the late Mr. Pickering, brought close upon £4000. We have already observed that Mr Pickering was an extreme enthusiast about Izaak Walton. He bought every book he could obtain possessing the least scrap of Izaak's handwriting. He brought together in this way some thirty volumes. The old angler was fond of giving away copies of his "Lives," and of inscribing the name of the person therein. He seldom signed his name, but delighted in subscribing himself "Your Friend." He would not appear, from Mr. Pickering's collection, to have presented any copies of his "Complete Angler" to his friends. Was old Izaak mean with his "Angler," or did he feel (as is now generally felt) that his "Lives" is the better book? The Walton volumes sold at good prices, the followers of the fly and worm contending against one another with long and open purses.

It is not often that a spurious article obtains a high price under the hammer of Mr. Wilkinson; or that a choice copy of a book escapes receiving a note in the catalogue, from the pen of his partner. The Pickering sale, however, contained a specimen of both—Mr. Toovey giving £3 8s. for a little volume called "The Packle Club," containing the names in the autograph hand of "A. Pope," and "J. Swift," upon the title-page. Oddly enough these great names as writ'en in Mr. Pickering's volume bore no resemblance whatever to the handwriting of either Pope or Swift. And yet this sum! The volume that escaped Mr. Sotheby's eye was sold, with other quarto tracts, to Mr. Cunningham, for one shilling. It was a thin quarto volume of Dryden's Poems, containing on the fly leaf the name "Alexander Pope," in Pope's exquisite printing hand. Pope learned to write by copying printed letters. His rough draft of the "Iliad," contains some good examples of his skill in imitating print.

As few epitaphs are better known than Gray's exquisite epitaph on his mother, we shall print the *first* draft of it for the *first* time. Here it is:—

> In the same p'ace confiden e,
> Beside her sister, and faithful friend,
> Sleep the remains of
> DOROTHY GRAY,
> Widow; the careful and tender mother
> Of many children; one of whom alone
> Had the misfortune to survive her.
> She died, &c.

As finally altered by Gray, it reads thus:—

> Beside her friend and sister,
> Here sleep the remains of
> DOROTHY GRAY,
> Widow; the careful tender mother
> Of many children; one of whom alone
> Had the misfortune to survive her.
> She died, &c.

Gray was a master in English composition, and every alteration he made merits to be studied.

We have had our attention called to a new shop-front now in course of erection five doors west of Bow-church, in Cheapside. It is in imitation of Wren's great master-piece, and bids fair to run as high as the design on the top of Bow-steeple. We are surely in want of some Committee of Taste to control not only the height but the general appearance of our street architecture. Our district surveyors have, we fear, no power; and if they had, they are generally too much interested in a large expenditure of stone and brick to restrict height, and too barren of taste to forbid excrescences.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent).

The transactions in the Consols-market this week have been devoid of interest; nevertheless, prices have been well supported, considering our position abroad and the fact that £5,000,000 sterling will be speedily absorbed by the Turkish loan. There has already been a payment made on account of it of £500,000, notwithstanding the last statements have been published to the effect that the Egyptian Tribute has a treaty been negotiated with the Bank of Constantinople for advances made to the Ottoman Government. We are correct in saying that the whole amount has been subscribed for. The Scrip has commanded a premium. This is certainly a good speculative figure; but we are decidedly of opinion that the loan has come out at too low a price to ease the present financial position of Turkey.

There has been an improved demand for money; yet we find that the discount houses have reduced the interest on money "on call" to four per cent. No doubt the supply of cash seeking a profitable employment is large; but we are somewhat apprehensive that the present comparatively low figure will not be long maintained. The imports of the precious metals have been under £200,000; but several vessels are close at hand from Australia, with large supplies of gold on board. The exports have shown a slight falling-off.

On Monday, the transactions in National Stocks were very moderate. The Three per Cents Reduced marked 94¾; the Three per Cent Consols 94¾; and the New Three-and-a-Quarter per Cents, 95¾ 94½; Consols for account being done at 94¾. Ex Exchequer-bills were 1s. dis. to 2s. prem.; and Exchequer-bonds, 1858, 98¾. There was rather more firmness in the market on Tuesday, when the Three per Cents Reduced were 94¾; the Three per Cent Consols, 94 to 94¾; and the New Three-and-a-Quarter per Cents, 94¾ ¾. Long Annuities, 1860, 4¾; Ditto, 1859, 4 7-16. Bank Stock realised 203¾ to 204. India Stock, 229. India Bonds were 5s. to 2s. premium; Exchequer-bills, 1s. dis. to 3s. premium; Exchequer-bonds, 1858, 98¾. The variation in prices in the following day were trifling. The Three per Cents were 94¾ to 94¾; the Three per Cents Reduced, 94¾; and the New Three-and-a-Quarter per Cents, 94¾ to 95. India Bonds realised 2s. premium; Exchequer-bills, 1s. dis. to 1s. premium; Ditto Bonds 98¾. On Thursday, the Consol Market was steady. The Three per Cents were 94¾ for money, and 94¾ ¾ for time. The Three per Cents Reduced were 94¾ to ¾; and the New Three-and-a-Quarter per Cents, 94¾ ¾. Bank Stock, 203; India Stock, 228.

For most foreign securities, the Market has been tolerably firm. Brazilian Five per Cent have been done at 101; Ditto, New, 97½; Mexican Three per Cents 24¾; Peruvian Four-and-a-Half per Cents, 71; Ditto, Three per Cents, 54¾; Spanish Five per Cents, 19¾; Sardinian Five per Cents, 85¾; Spanish Three per Cents, 38; Ditto, New, Deferred, 15¾; Belgian Four-and-a-Half per Cent's, 92; Dutch Two-and-a-Half per Cents, 67; Dutch Four per Cents, 88¾; Austrian Scrip, 5s. premium; Exchequer-bills, 1s. dis. to 1s. premium; Ditto Bonds 98¾. On Thursday, the Consol Market was steady. The Three per Cents were 94¾ for money, and 94¾ ¾ for time. The Three per Cents Reduced were 94¾; and the New Three-and-a-Quarter per Cents, 94¾ ¾. Bank Stock, 210; India Stock, 225.

For most foreign securities, the Market has been tolerably firm. Brazilian Five per Cent have been done at 101; Ditto, New, 97½; Mexican Three per Cents 24¾; Peruvian Four-and-a-Half per Cents, 71; Ditto, Three per Cents, 54¾; Spanish Five per Cents, 19¾; Sardinian Five per Cents, 85¾; Spanish Three per Cents, 38; Ditto, New, Deferred, 15¾; Belgian Four-and-a-Half per Cent's, 92; Dutch Two-and-a-Half per Cents, 67; Dutch Four per Cents, 88¾; Austrian Scrip, 5s. premium; Exchequer-bills, 1s. dis. to 1s. premium; Ditto Bonds 98¾. On Thursday, the Consol Market was steady. The Three per Cents were 94¾ for money, and 94¾ ¾ for time. The Three per Cents Reduced were 94¾; and the New Three-and-a-Quarter per Cents, 94¾ ¾. Bank Stock, 210; India Stock, 225.

The transactions in Joint Stock Bank Shares have been comparatively small; never heless, prices have ruled tolerably firm. Australasia have marked 64¾; Chartered of Asia, ex div., 6; Colonial, 17; Commercial, 30; English, Scottish, and Australian Chartered, 1¾ dis.; London Chartered of Australia, 21¾; London and County, 33 ex. div.; London Joint Stock, 17¾; London and Westminster, 46; Oriental, 47¾; South Australia, 6¼; Union of London, 24¾. Miscellaneous Shares have been rather neglected. Australian Agricultural, 41¾; Berlin Water-works, 3¾ prem.; Canada 6s per Cent Bonds, 107¾; Crystal Palace, 3¾; Electric Telegraph, 6¾ ex new; Peel River Land and Mineral, 4¾; Peninsular and Oriental Steam, 56; Van Diemen's Land, 11¾; Canal Shares have ruled dull:—Ashton and Oldham Shares are now 15½; Coventry, 215; Derby, 80; Grand Surrey, 48, Leicester, 68; Loughborough, 87½; Neath, 49; Oxford, 11½; Rochdale, 65; Stafford and Worcester, 407; Stourbridge, 286; Worcester and Birmingham, 32. In Water-works Shares very little doing:—East London, 92 prem.; Grand Junction, 77 ex div. 78; Lambeth, 97; Southwark and Vauxhall, 85¾; West Middlesex, 100 ex div.; Ditto, New, 14¾. Gas (Light) Companies have marked the following quotations:—Brighton, 15; Equitable, 26; Great Central, 11¾; Imperial, 86; Phœnix, 25¾; Ratcliff, 70; United General, 92; Westminster Chartered, 30. There has been a dull market for Insurance Companies Shares at 8s, 18 ex div.; City Offices London, 2¼; County, 126; Crown, 15; European, 19¾; Globe, 12¾ ex div.; Guardian, 5¾; Hope, 3¾; Imperial Fire, 35s ex div. and bonus; Law Life, 50½; Pelican, 46; Phœnix, 18½; Royal Exchange, 180 ex div.; Sun Fire, 25s. Hungerford Bridge shares have realised 12¼; Vauxhall, 2¾; Waterloo Bridge, 5; Annuities of £8 25s; Ditto, New Annuities of £7 25.

The market for Railway Shares has been dull, owing to the falling off in the traffic receipts, and prices have shewn a tendency to decline. The following are the closing prices on Thursday:

ORDINARY SHARES AND STOCKS.—Aberdeen, 8½; Bristol, and Exeter, 96¾; Caledonian, 68; Eastern Counties, 11¾; Edinburgh, Perth, and Dundee, 54¾; Great Northern, 84¾; Ditto A Stock 83; Great Southern and Western (Ireland), 97¾; Lancaster and Carlisle, 97; Lancashire and Yorkshire, 89¾; London and Brighton, 105; London and North-Western, 103¾ ex div.; Ditto, Eighths, 1¾ ex div; London and South-Western, 82 ex div.; Manchester, Sheffield, and Lincolnshire, 22¾; Midland, 85¾; Newmarket Bury Extension, 5¾; Norfolk, 47; North British, 33¾; North Eastern (Berwick), 76¾; Ditto (York) 59; North Staffordshire, 10¾; Oxford, Worcester, and Wolverhampton, 54; South Eastern, 65.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 96 ex div.; Midland Bradford, 94.

PREFERENCE SHARES.—Great Northern Five per Cent, 116; Ditto, Redeemable at 10 per cent pm., 111, Manchester, Sheffield and Lincolnshire New £10 Shares, 11¾, Oxford, Worcester, and Wolverhampton, 11¾.

FOREIGN.—Grand Trunk of Canada A issue, 4; Great Central of France, 1¾; Great Indian Peninsula, 8½; Great Luxembourg, Constituted Shares, 3¾; Madras, 1¾; Paris and Lyons, 37¾.

Mining Shares have been very dull. Imperial Brazilians, 3½; St. John del Rey, 37; Cobre Copper, 42¾; Linares, 8¾; Santiago de Cuba, 5¾.

Friday Evening.

We have had a flat market for Consols to-day, and prices have had a downward tendency. The Three per Cent Consols is are 94¾ ¾; the Three per Cents Reduced, 94¾ ¾; and the New Three and-a-Quarter per Cents, 94¾. In Foreign Bonds and Railway Shares very little is doing.

THE MARKETS.

CORN EXCHANGE (Friday).—There has been a moderate arrival of English wheat up to our market this week, and we find to-day (as at last) that there were several samples of new on offer on-day. The price realised were from to 70s. per quarter. Old wheats were very plenty in sale, at barely Monday's decline in value. The supply of foreign has been 7 or 8 quarters. Good heavy qualities mostly sold at late rates; but the value of all other kinds had a downward tendency. In the sale for the week, however, the value of all but to sound fall took place to prices. We were but moderately supplied with new, to which only a limited inquiry was given during the week. In beans and peas very few transactions took place. The flour trade was dull, on former terms.

ARRIVALS.—English: wheat, 1160 barley, 401 malt, 7990 oats, 1120; flour, 790. Irish: oats, 1320. Foreign: wheat 7250, barley, 6,581; oats, 1075 flour, 1,501 sacks, 820 bags.

English.—Wheat Essex and Kent, red, 68s. to 68s.; ditto, white 68s to 73s.; Norfolk and Suffolk, red, 68s to 68s.; ditto, white, —s. to —s.; rye, 38s. to 40s.; grinding barley, —s to —s.; grinding ditto, —s. to —s. malting, ditto, 36s to 38s.; Lincoln and Norfolk malt, 64s to —s.; brown ditto, 58s. to 63s.; Rouen Cakes and Ware, 68s. to 70s.; Chevalier, 70s.; Tartarian, 68s.; white and Lincolnshire feed oats 22s. to 24s.; potato ditto, 20s. to 23s.; Youghal and Cork, black 19s. to 20s.; ditto, white 22s. to 24s.; ditto, mixed, 18s. to 21s.; grey peas, 36s to 38s.; maple 42s. to 44s.; white, 42s. to 45s.; boilers, 50s. to 54s. per quarter. Town-made flour, 52s. to 56s.; Suffolk, 46s. to 48s.; Stockton and Yorkshire, 46s. to 50s. per 280 lbs. American, —s. to —s. per barrel.

Seeds.—Since our last report, about an average business has been done trading in seeds at our quotations. Cakes continue steady.

Linseed, English, sowing, 70s to 75s; Baltic, crushing, 50s to 67s; Mediterranean and Odessa, 52s to 61s.; hempseed, 40s. to 44s. per quarter. Coriander, 16s. to 18s. per cwt. Brown mustard, seed, 10s to 12s.; white ditto, —s. to —s.; and tares, —s. to —s. per bushel. Rapeseed, refused, 39l. to 42l. per last of ten quarters. Linseed cakes, English, 11l 10s. to 11l 15s. ditto, foreign, 11l 0s to 11l 5s. per ton. Rapeseed cakes, £— —s. to £— —s per ton Canary, 48s to 50s. per quarter. English clover seed, red, —l. to —l. per cwt. ditto, white, —l. to —l. per cwt.

Bread.—The prices of seconds bread in the metropolis are from 5d. to 10d., of households 6d to 9d. per 4 lbs. loaf

Imperial Weekly Average.—Wheat, 64s. 6d.; barley, 34s. 6d.; oats, 27s. 8d.; rye, 43s. 1d.; beans, 40s. 10d.; peas, 44s. 6d

The Six Weeks' Average.—Wheat, 67s. 10d.; barley, 35s. 10d.; oats, 28s. 2d. rye, 45s 6d.; beans, 47s. 11d.; peas, 44s 6d

Quarterly Average of Grain last week.—Wheat, 65,915; barley, 2813; oats, 7693; rye, 43; beans, 343; peas, 192 quarters.

Imports.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—Our market is very inactive, and prices are barely supported. We have sellers of common to sound congou at 10½d. per lb.

Sugar.—The demand for all kinds of raw sugar has been rather heavy, at in some instances, a turn of mention in prices of per cwt. Refined goods have ranged from 51s to 56s. for 2-loaves; 51s 6d to 53s. 6d; 3 do ditto, 54s to 55s 6d; Mastico, 55s to 57s 6d; lumps, 58s to 60s 6d per cwt. Crushed as ready. Refined goods are from Brown goods are to 45s 6d; good low to fine grocery, 46s to 48s per cwt. The trade clearances to-day were 4 hhds 99 bags, and in 4 175 474 lbs to 1853

Coffee.—About an average business has been doing to this account, and good ordinary has sold freely at 60s. to 62s. per cwt

Rice.—Our market has continued flat, on former terms. About 3000 bags Bengal have sold at 14s. 6d. to 15s. per cwt

Provisions.—There has been a fair demand for the best Irish butter, and, in some instances, prices have further advanced 1s. per cwt. Foreign and English qualities have ruled nearly as former quotations. The demand for bacon is steady, and per on Waterford parcels have risen 2s per cwt. In other kinds of provisions, very little is doing

Tallow.—The demand is fair, at 58s. 9d. to 67s. per cwt. for P.Y.C., on the spot; and 56s 6d for the last three months. The imports are good

Oils.—Linseed oil has risen to 30s. per cwt. All other oils are in but moderate request, at last week's quotations. Turpentine moves off steadily, at fully the late advance Spirits are worth £12s per cwt

Spirits.—The sale for rum is less active, yet prices are fairly supported. Proof Leewards, 2s to 2s 1d; East 2s 3d, to 10d to 1s 11d per gallon. The brandy market is firm, at very full prices. Sales of cognac, best brands of 1851, 6s to 12s. 3d. per gallon. Genevas and cordials are flat.

Hay and Straw.—Old meadow hay, £3 0s. to £4 10s; new ditto, £3 10s. to £4 4s.; old clover, £4 4s to £5, new ditto, £4 0s. to £4 5s. 0d.; and straw, £1 13s to £1 15s. per load.

Wool.—English wool is in request, and rather dearer. In foreign and colonial, very little is doing.

Potatoes.—The demand is steady, as follows:—Regents, 75s. to 90s.; Shaws, 60s to 70s. per ton.

Coals (Friday).—Hetton Lyons, 22s.; Lambton, 22s. 9d.; Lumley 22s. 9d.; Stewart's, 21s.; Tees 22s.; Holywell, 19s. 6d.; Wylam, 19 6d.; Hall, 21s 6d per ton.

Cloves (Friday).—Although the great-ion accounts are unfavourable, and the duty is to be reduced to only £36,000 to £40,000, the demand is heavy and prices are hardly so low. This week's imports are said to 104 bales from New York, 264 from Hamburg, 164 from Rotterdam, and 100 from Antwerp. Mid and East Kent pockets, £12 0s. to £18 0s.; Weald of Kent, £11 0s to £14 12s.; Sussex, £ 0s to £13 0s per cwt.

Hops.—The Farnham (Surrey) Hop Fair market was very moderately supplied with samples, the general quality of which was inferior. All breeds moved off slowly, and at quite 10s per cwt. decline on the prices realised on Monday last. The best descriptions were worth 5s per cwt. Of the supply of sheep on offer. The demand for them was tolerably firm, at nearly Monday's quotations. Lambs were in good request, and in the same demand as last week, with a declining tendency. Although the supply of calves was limited, the veal trade was heavy, at 5s per stone less than on the quarter's previous market. The supply of pigs was very small. Milch cows sold slowly, at from £14 to £18 per head, including small calf

Per 8lbs. to sink the offal:—Coarse and inferior beasts, 4s 6d to 5s. 6d.; second quality ditto, 5s. 6d to 6s. 6d.; prime large ditto, 6s. 8d to 7s.; prime small ditto, 6s. 8d to 7s.; large coarse calves, 5s. 6d. to 6s. 8d.; prime small ditto, 6s. 8d to 7s. 4d.; small sheep, 6s. 8d to 7s. 4d.; inferior mutton, 5s. 4d to 5s. 8d.; middling ditto, 5s. 8d to 6s.; prime ditto, 6s. 4d. to 6s. 8d.; veal, 5s. 10d. to 6s. 2d.; small pork, 6s. 8d. to 6s. 8d.; large ditto, 4s. 6d. to 5s. 6d.

Per 8lbs. to sink the offal:—Coarse and inferior beasts, 3s. 6d to 3s. 8d.; second quality ditto, 3s. 10d to 4s. 6d.; prime large ditto, 4s. 8d. to 5s.; prime small ditto, 4s. 8d to 5s.; middling sheep, 4s. 8d to 5s.; prime ditto, 5s. 2d to 5s. 4d.; large coarse calves, 3s. 6d. to 3s. 8d.; prime ditto, 3s. 10d to 4s. 6d.; inferior mutton, 3s. 4d to 3s. 8d.; middling ditto, 3s. 8d to 4s.; prime ditto, 4s. 2d to 4s. 4d.; large pigs, 3s. 6d to 3s. 8d.; small ditto, 3s. 8d to 4s.

Newgate and Leadenhall (Friday).—Each kind of meat sold slowly as follows:—

Per 8 lbs. by the carcase:—Inferior beef, 3s. 8d. to 4s. 6d.; middling ditto, 5s. 8d. to 5s. 10d.; prime large ditto, 6s. 0d. to 6s. 2d.; prime small ditto, 4s. 4d to 4s. 6d.; large pork, 3s. 2d to 4s. 6d.; inferior mutton, 3s. 4d to 3s. 8d.; middling ditto, 3s. 8d to 4s.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 10d. to 4s. 2d.; small pork, 4s. 8d. to 5s. 6d.; lambs, 4s. 6d. to 5s. 6d.

MANN, Cold Harbour, Peckham, Walworth, engineer.—S. HENCH, Bermuda-buildings, Bedford-row.—H. WILSON, Old Swinford, Worcestershire, grocer.—R. SMITH, Kirkwick Farm, Allerton, worsted spinner.—A. I. SMITH, Liverpool, merchant.—H. BROWN, Liverpool, merchant.

SCOTCH SEQUESTRATIONS.

J. NOBLE, Edinburgh, hotel-keeper.—J. M'AIR, Glasgow, impressario & tied-keeper.

FRIDAY, AUGUST 25.

WAR-OFFICE, Aug. 25.

To be Ensigns:—

1st Foot: R. H. Cates, J. A. Cumming.
3rd: J. J. Gubbins.
5th: C. Cole.
11th: E. J. Dupre.
9th: W. H. Isted.
11th: F. J. Hewitt.
13th: R. O'Neil, W. Williams.
16th: J. D. Bradley.
19th: W. G. Hawkins, T. F. Dickson.
17th: F. C. S. Dear, A. H. Ommaney.
18th: W. Kemp, F. Mayberry.
19th: J. Little.
23rd: J. Lowe, W. Beere.
24th: B. Bayley, G. G. Cowper.
26th: T. Bushnay, T. Annand.
30th: J. G. Smyth.
40th: J. R. Messenger.

To be Lieutenants:—

47th: H. P. Hickes, W. C. de Saldhand.
49th: J. J. Gubbins, T. Murphy.
51st: A. Bing-ocks, R. H. Swalland.
54th: T. Parr, J. Stephenson.
57th: F. B. Orr.
59th: S. M. Widdams.
63rd: D. Joy.
66th: L. K. Cumberg, J. J. Collins.
71st: R. A. Thompson, A. S. Kent.
80th: A. B. Tew.
82nd: H. G. Spearman, J. B. Shark.
86th: F. P. Johnston.
89th: H. H. Fane.
77th: C. H. Legg-tt.
79th: W. J. M. Gresford.

Flower Stands, Garden Arches, Trellises, Vases, &c., &c., Bird Cages of all kinds. Conservatories and Aviaries fitted up in a superior manner.

CRYSTAL PALACE.

GENERAL ARRANGEMENTS.

The Palace is opened on Mondays, at 9 a.m., and on Tuesdays, Wednesdays, Thursdays, and Fridays at 10 a.m. On these days the charge for admission is a shilling.

It is opened on Saturdays at noon, on which day the charge for admission is 2s.

Tickets for the day conveyance from London-bridge and adm season to the Palace, may be obtained at the London-bridge Terminus and at the several agencies in London.

Return Tickets, including conveyance by railway, 2s. 6d. each; will be at the same time issued at 2s. 6d. for the Season Ticket, entitling to admission on any day.

By order,
CRYSTAL PALACE.

CRYSTAL PALACE.—Many inquiries having been made by the patrons of the Crystal Palace, Mr. GOWLAND begs to announce that he has been their supplier of Perfumery, Fancy Soaps, Fans, and Toilet Requisites, and that his present display of novelties is to be found in the Fancy Hall, Nearest Wheel of Transept, to the right of the Fine Arts Court. Mr. Gowland is also the sole manufacturer of the articles they supply with gold, and who have the patterns taken against him by Parties who have sold him fabricated imitations, the goods for which their house is celebrated, will therefore be obliged if they will call at their establishment, 102, Regent-street, and wholesale at 56, King-street, Pattern-by-gone, London.

Sea Breezes, from 21 7s. 6d. to twenty guineas

Open Cane, a fresh throughput, 4s. 6d. to 6s. 6d.

Man in, Barleys, and Balsarine Dresses, from 2s 9d. the robe.

Jet Jewel Patterns, 5s. 6d.; and Sleeves, 3s. 6d.

Hi th Mexirian Wa k Canes in 4 lid., worth 9s 9d.

Fine Cut Crystal Handles, 4s. 6d. the dozen.

OSLER'S CRYSTAL GLASS CHANDELIERS for GAS and CANDLES.—A great variety of newest and richest designs always on view, also, a large assortment of Gas Lustres, Cream ars, Wine Glasses, Decanters, and every description of Table Glass, at very moderate prices. ORNAMENTAL GLASS of the newest and most beautiful description, suitable for Presents. Furnishing orders executed with dispatch.—Osler, 45, Argyll-street, Manufactory, Broad-street, Birmingham Established 1807.

GAS-FITTING.—GARDNERS' Twelve-Shilling Gas Stoves, for close-roomed houses, involve abundance of the most elegant designs, for fitting an Drawing-rooms, Halls, Lanthorns, Library, staircase kitchen, and bed-rooms—comprising in all, fifteen Chandeliers, by appointment to her Majesty, 53 and 54, Strand, Charing-cross. Manufactory, James-street, Seven Dials.

IF YOU REQUIRE FAMILY ARMS, send Name and County to the HERALDIC OFFICE. Fee, one shilling and sketch, 3s. 6d.; or postage stamps. ARMS, painted, 1 quarter and engraved on SEAL, Great Turnstile (Lincoln's-inn-fields

LOSS of HAIR.—Mr. PURKISS may be consulted upon the HAIR (Scalp), and will guarantee, by means of his new treatment, to restore the Hair, and stop its falling off.—12A, Pall mall East, next door to the National Gallery.

FREQUENT TRAVELLERS can INSURE against RAILWAY ACCIDENTS by the YEAR, for terms of YEARS, or for the whole of LIFE on application to the Booking Clerks at the Principal Railway Stations, and at the Offices of the RAILWAY PASSENGERS ASSURANCE COMPANY, 3 Old Broad-street, London. WILLIAM J. VIAN Secretary

LOOK to YOUR LEGS.—If they swell, or if the veins are enlarged, get one of BAILEY'S ELASTIC STOCKINGS or KNEE CAPS, to draw on without lacing. The prices commence at 7s. 9d.—W. H. Bailey, 418, Oxford-street, London.

MERSEY LINE OF AUSTRALIAN PACKETS. Sailing from Liverpool regularly to Port Philip, Sydney, and Adelaide, landing Passengers and Goods Free.

Ships	Commander.	Tons.	Destination.	To Sail.
Caralyne	D. Carlyle.	1000	Port Phillip	September
Dundee Catherine		1200	Sydney	

These A 1 ships are approved of by her M. Inst's Emigrants to Australia, &c. Apply to W. M. BARNETT and Co., 85, Pitt-pot-lane, London

LIVERPOOL BLACK BALL CLIPPERS.—These celebrated Ships SAIL EVERY FORTNIGHT, for MELBOURNE, Geelong, Sydney, Adelaide, and Launceston. They are all first-class, and have made the fastest passages on record. Cabin orders issued in Australia from £1 upwards, and parcels forwarded. Apply to Jas Jeffreys and Co., Cornhill, London; or to the owners, James Baines and Co., Cook-street, Liverpool.

STEAM COMMUNICATION with the BRAZILS and RIVER PLATE ROYAL MAIL STEAM PACKET COMPANY.—One of the Company's Steamers will leave Southampton on the 8th of every Month, with Mails, Passengers, and for MADEIRA, Teneriffe, St. Vincent, (Cape de Verds), Pernambuco, Bahia, and Rio de Janeiro, and from thence by branch steamers to Monte Video and Buenos Ayres, returning by the same route to Southampton.

Passengers are to retain of Fares, Freights, &c., may be had on application at the Company's Offices in London, or at Southampton, from whom Handbills may be obtained. Superior cabin of the Cargo Steamer recently despatched from Southampton, have room for no more than 200 Tons each. No Steamer calls at Vigo, Pernambuco, Bahia and Rio de Janeiro, from those to Rio de Janeiro, Bahia, Pernambuco, St. Vincent (Cape de Verds), Teneriffe and Madeira.

Passengers are recommended to make early application for securing proper berths.

Return Tickets issued, available for twelve months, with an abatement of 25 per cent on the passage-money.

55, Moorgate-street. E. CHAPPELL, Secretary.

LINCOLN LUNATIC ASYLUM.—To Patients of limited incomes the Asylum affords the best treatment combined with comfortable residence. The house is in the country, only 1 mile from the Lincoln station, and possesses extensive grounds, including the kitchen garden and pleasure walks. The domestic arrangements are recommended to make every application for securing proper berths.

Steerage fares

PARIS FASHIONS FOR SEPTEMBER.

We are still in the season in which beautiful white dresses of *mousseline*, of jaconet, and of brillantine, are worn. These materials alone compose the toilets of the day, from the dressing-gown of the morning to the graceful robe *de bal* of the evening; for young girls, indeed, nothing can replace them. The dresses are generally worn with from five to seven or nine plain plaits upon the skirt, with corsages *à la Vierge*; or in the form of *fichu à la paysanne*, with a fold edged with Valenciennes lace, forming a brace; bows of ribbons with flying ends complete this charming toilet. Ladies whose dresses require additional richness, add ornaments, or flounces, the tops of which are ornamented with puffs having light-coloured ribbons passed through them. Others wear plain skirts without flounces, and with three puffs of white muslin upon the front width, and forming the apron. A *rose bleu*, or *tricre*-coloured ribbon, according to the shade of the dress, is passed inside; the corsage is likewise ornamented with a puff, while the sleeves have three, trimmed with Brussels lace.

Flounces have, for some little time past, gone somewhat out of fashion; and plain skirts are coming in again. The elegance and richness of the toilets lose nothing by this, for they are replaced by embroideries, braidings, and *découpures à jour*; and also by the enormous fullness of the skirt, which assumes the development of the hoops of the time of Louis XV. The skirts are, besides, worn very long behind, and form a half-train In short, next winter, this fashion will be adopted for all full-dress robes. The mantelets are always of the same shape, *i. e.*, small, forming a scarf behind, and rounded off before. They are made half of taffetas and velvet alternated; and each band is trimmed with a little *effilé mousse* —a charming novelty, which adorns the mantelet without rendering it heavy; the bottom is ornamented with *guipure*, or with one or two lace flounces. China crape shawls have also come in again with the coolish weather. The white are always best worn, though superb ones of *chamois rouge*, embroidered colour upon colour, or covered with bright hued patterns, may be seen in the shops.

Robes of *foulard écru*, embroidered with a wide apron on the front, are much worn for the morning. The black mantelet, simple, and trimmed with a fringe, complete a toilet at once simple and in good taste.

Bonnets preserve the same shape: they are still small, and worn on the back of the head. The flowers are disposed as usual, and in accordance with the season; black and white grapes are worn as ornaments, either for the exterior or interior. For ball dresses the *feuillages* and the *fleurs des eaux* are adopted; these pale and almost entirely white flowers, with the long sea-weeds which adorn them, form charming trimmings for the skirts in long hanging tresses. The head-dress is always composed of the same flowers and of the same leaves. Fuschias and heaths are much in vogue.

THE ILLUSTRATIONS.

Robe de taffetas rose, with three flounces embroidered on tulle rose. The embroidery is *à point de chainette*; the rounded pinkings are embroidered the same. The basques are also ornamented with pinkings, between each of which is placed a knot of ribbon. The front of the corsage is likewise set off with two or three bows of the same, which join a plaited ribbon passing along the edge.

The Sleeves have likewise three flounces pinked, and worked like those of the skirt, as have also the lace sleeves, fichu, and cap Caps are replaced by simple fanchons of guipure, and fixed on the head by two long gold pins with diamond or coloured-stone heads, adapted to the shade of the hair.

PARIS FASHIONS FOR SEPTEMBER.

Robe and *Manielet* of pearl grey, braided in front.

Bonnet of *paille lustrée* (shining straw), with feathers, and trimmed inside with flowers.

Country Bonnet en paille d'Italie, with a single ribbon knotted flat upon the calotte. This charming head-dress has replaced the frightful béguines of flowered material that were brought in for the summer season. Under-petticoat of muslin, with worked apron. Blue taffetas robe, with large white stripes, strewn with bouquets of natural shades, and open in front; the robe is attached to the muslin petticoat by bows of ribbon to match.

Jackets or *Frock coats* of drill, or Marseilles, with large mother-of-pearl buttons. The rest of the dress of similar materials.

ST. JOHN'S WOOD BARRACKS.

The site whereon the present Barrack at St. John's Wood stands was originally part of an extensive farm, which, in 1823, was rented by Government, it being deemed an eligible locality for a military riding establishment. One uniform system of equitation being considered desirable for adoption throughout the cavalry, Colonel Peters, who was greatly patronised by his Majesty George IV., was entrusted with the arrangement. On the edifice being completed, that officer assumed the charge of the management of so essential a necessary to that particular branch of the service. At the period in question, two or three men were selected from each corps, for the express purpose of being perfected in the method of riding by balance, in imitation of the mode practised by the German troops. On becoming thoroughly initiated and acquainted with the *manege*, these soldiers rejoined their regiments, where they were employed as instructors; while others supplied their places at St. John's Wood. The numbers occupied in this description of drill being few, the accommodation required for men and horses was restricted within a small limit, and presented the reverse of an imposing appearance. The leading feature in the barrack was the riding-school, which is the only portion now remaining of the buildings originally erected for cavalry. In 1832-3, the lease having expired, the premises were re-taken by Government; and, as the continuance of a riding department in this vicinity was not considered any longer necessary, the quarters were, at various periods, altered and increased, so as to be adapted for the reception of infantry. This, however, was not effected without considerable opposition being raised. The measures of Government were cavilled at as the commencement of an intent to hold London in subjection, by encircling the suburbs with troops—a ridiculous fallacy, which in this more enlightened epoch would not be credited by the most determined Oppositionist. The accommodation at St. John's Wood Barracks is yet small, and was recently, at the date of the accompanying Illustration, occupied by about 150 men of the second and third battalions of the Grenadier Guards.

FOOT GUARDS AT SQUAD DRILL, ST. JOHN'S WOOD BARRACKS.

PATRIOT SONG OF THE FINLANDERS.

OUR LAND; OR, THE SONG OF THE FINNISH PATRIOTS.

(Translated from the Swedish of J. L. Runeberg.)

Our land, our land, our Fatherland!
Thou glorious word, ring forth!
No mountain rises, proud and grand,
Nor copse a vale, nor sweeps a strand,
More dear than thou, land of the North—
Our fathers' native earth.

Our land is poor, as all can tell;
No gold our rivers hold;
A stranger scorns its heath and fell.
And yet this land we love full well;
For us—with mountain, wood, and wold—
'Tis still a land of gold.

We love our rivers' thundering tide,
Our streamlets sparkling bright;
The murmuring of our forests wide;
Our starry nights, our summers' pride:
All, all that e'er, with sound or sight,
Has filled us with delight.

'Twas here our fathers fought the fight,
With thought, and sword, and plough;
Here—through moments dark or bright,
And fortune's smile, or fortune's spite,
The Finnish people's heart would glow,
"I would bear both weal and woe.

And who could count the struggles dire
Which that brave people stood,
When battle raged with sword and fire,
And frost and famine spent their ire?
And who could mete their outpoured blood—
Their patient, dauntless mood?

It was for us their life-blood flowed,
Here, here upon this shore:
'Twas here with joy their bosoms glowed:
'Twas here in sorrow they abode:
Long ere we lived, in days of yore,
Our burdens here they bore.

How blest, how precious is this spot,
All that we love is here,
However hard fate may cast our lot,
A land—a fatherland—we've got:
Oh, what on earth can e'er
Be to our hearts more dear?

And here, yes here, we see this land—
Oh, sight how full of bliss!
We need but stretch our good right hand,
And joyous point to sea and strand,
And say, "Behold this country—this—
Our fatherland it is!"

And were we called to dwell in light,
Midst golden clouds of morn;
Where thousand stars are glittering bright,
Where tears ne'er flow nor sorrows blight;
Still, for this land so poor, so stern,
Our longing souls would yearn.

Oh, land; thou land of thousand lakes,
O, song and constancy;
Against whose strand life's ocean breaks,
Where dreams the past, the future wakes;
Oh! blush not for thy poverty
Be hopeful, bold, and free!

Thy blossom in the bud that lies
Shall burst its fetters strong;
Lo! from our tender love there shall rise
Thy light, thy fame, thy hopes, thy joys;
And prouder far shall sound ere long
Our Finland's patriot song!

NOTES OF A RAMBLER.—No. II.

EDINBURGH.

After the drenching rain of the previous night it was pleasant to draw up the blind and look out upon Arthur's Seat, the Castle Rock, the Calton Hill, and the distant shores of Fife, bathed in the early sunlight, and every rock and risi.g ground burnished and glowing with golden light. Instead of looking out on a dead level and dreary monotony of streets, to find the eye lifted towards the mountain-tops, is the first peculiarity that strikes the senses and impresses us with the marvellous difference between the city of London and the city of Edinburgh. When we enter the streets the contrast is still greater; instead of being pushed hither and thither, or ruthlessly whirled into the eddying recess of a sheltering shop door, by the unceasing current of the living tide of the streets of London, we find ourselves with "room and verge enough" to gaze and stare at pleasure, on every attractive object, without incurring the risk of a black eye or a fractured limb. Instead of the noise, the hubbub, and glare peculiar to London, we find ourselves in the comparative repose of a quiet provincial town. Instead of the practical joke or saucy observation of the London errand-boy, we find crowds of bare-footed urchins enjoying their undisturbed game appropriate to the season. Along the kerb-stones are found rows of boxes, barrels, hampers, and hand-barrows, or whatever may happen to be the form of package or of truck required by the tradesmen before whose doors they stand; while, between the footway at the side and the carriage-way in the centre, there is a refreshing line of verdant grass growing—as a proof of the scanty traffic—in even the most frequented streets. The pedestrian saunters along as if he had nothing to do with time, and time had no business to shorten his enjoyment. Groups of people are found discussing, in no excited manner, the ordinary affairs of life. Everybody seems to know everybody, and, whether the object be business or pleasure, we always observe the same inflexible and imperturbable spirit which characterises the Scottish nation in its ordinary everyday pursuits. The gay troop of tourists that come flocking along the pavement seem entirely out of place. Their merry laughter sounds like an impertinent intrusion, arousing into life the silence of the prevailing repose. Yet, there is a fashionable promenading, in harmony with the people. Instead of the easy freedom which distinguishes the metropolis of England, we witness a number of persons stalking with a stately solemnity, as if engaged in some sacred work, where the most peaceful and unbroken silence was essential to give the funereal procession its due effect.

Since we last visited this learned city, many changes and many improvements have been effected. The old picturesque houses of the ancient town—whose rears displayed an innumerable array of irregular windows, which, when lighted and looked upon from the terrace of Princes-street, produced a magical effect—are being gradually removed, and new structures raised in their places. The summit of the Castle Rock, and the unfinished appearance of the barracks retain all the dirty characteristics which have ever distinguished that lofty locality. Heaps of rubbish and filth mingling with accumulating masses of rough material, the make-belief of some improvement that is never effected, cover the height of the acclivity in this situation. The stillness of the Princes-street gardens is now awakened by the life of the world beyond, as the rushing train and its wi.rling trail of steam agitates the neighbourhood, though it hardly arouses from his accustomed torpor the unexcitable native.

Having on my arrival at the terminus left a small package in the carriage I had occupied, I hurried back to secure it, and the conduct of the officials there, as contrasted with the manners of the same class in England, illustrates the habits of the people of the two kingdoms. In England, if a question had been asked, the porter or inspector would have placed you at once in contact with the proper officer. Not so here. Meeting at the entrance a person connected with the company, I inquired the place at which, and the person to whom, I should apply to recover my property. "I'm no that sure," was his reply, as if afraid to commit himself, "but I think if you cross the ha', and gang doun the stair, ye'll maybe meet wi' somebody that can tell ye." I crossed the hall, went down the stair, and on the platform met with an intelligent person, who, with a precision that surprised me, told me I must go up the stair, and in the booking-office I would see some clerks, any of whom would show the room where such left parcels were kept until the morning; and that, if unclaimed, they were removed to another place and duly registered, with a card attached, showing the date on which, and the number of the carriage in which, the packet had been found. I re-ascended the stair, and met with an officer with a bag of money in his hand. I asked to be directed to the room referred to. "I dinna know," was his answer. I explained the circumstances, and told him that it was a matter of importance, as I wished to leave early the following day. "I canna help that," was his reply, in a tone as if his dignity as bag-holder was offended by having any rude, impertinent question asked of one in his responsible position; and off he moved. I was then accosted by a man, who asked my business there. I told him. "Step this way," said he; "and I followed him across the hall, and down another stair, and on to the opposite platform, where he had a mysterious whispering conference with an elderly man seated on a trunk. I could not divine what the long and tedious interview would lead to; but, from an occasional nod of the head, it was evident that I was the object of interest, and I occasionally detected monosyllabic ejaculations, such as "aye," "hem," "deed," "so," "just so," "weel," "doubtna," "maybe," which seemed to form the staple of their conversation. Tired, hungry, and impatient, I ventured to inquire whether there was any probability of my obtaining any satisfactory solution of the mystery that night. "I think no," was the response. "Then what am I to do?" I asked. "Gang up the stair again," quoth my stolid companion, who afterwards proved to be the night watchman employed by the Company. And in my haste I did not bless the Company of the North British Railway, but thought it would be as well if their *employés* were civil and intelligent. Next evening, however, all was well, and the package found.

Another anecdote will show the contrast between the London and Edinburgh cab-driver. In the former there is a daring, dashing imposition, which almost excites our admiration of his rascality. In the latter there is a reasoning process adopted as if to satisfy the hire and justify the imposition. "How much have I to pay?" I asked the blue-cheeked, blear-eyed, whisky-seasoned driver. "Well, sir, ye see the hotels are ower far; we've ded at several; it has taken a lang time, and——" "Never mind the time, what is your charge," I interposed. "Ye see, sir, the roads's wat, an' no that comfortable for the puir beasts, and——" "Confound the fellow, what's your fare?" "Weel, weel, sir, sin ye seem in a hurry, ye see there was a gye heap of luggage there were. Let me see—there was, I think, a trunk, a portmantel, a bonnet-box—ye see, leddies canna travel without their bits o' braws—and there was"——"There was a most tiresome cabman," said I, retreating, and leaving it to the waiter at the hotel to settle the sum, by which I have no doubt I benefited considerably.

Considerable discussion has recently taken place with reference to the consolidation of all railways, so far as the observation of accommodation in regard to time is concerned. It would be a great advantage to travellers, were all railways to have a central station, where such an arrangement is possible. At Edinburgh, such a plan is not only practicable, but is nearly effected. However much I have condemned the management of the North British Railway, in its perfection when compared with the Edinburgh, Leith, and Granton, where you are driven to an inconvenient corner, hurried on to a subterranean platform, dirty, dark, and odorous of horse manure;—no order or regularity—no command or proper control by an efficient inspector—no person to whom a difficulty can be referred, while a perfect Babel of noise and confusion make up a scene not to be encountered twice. The extreme distance of three miles is accomplished in the short period of a fraction within the hour, enlivened by the introduction, at the Leith Junction Station, of a bevy of drunken sailors, bound to Fife to enjoy themselves.

Liberated from the "durance vile" of that ever-to-be avoided railway, the fresh breeze of the beautiful Frith of Forth comes with a soothing power; while the surrounding country, far as the eye can reach, and the shores and gem-like islands set in the silver of the breaking waves, make up a scene never to be forgotten; and the historic memories graven on every hill produce to the contemplative mind endless themes for reflection.

While in Edinburgh, we could not help wondering why it has so long suffered from the imputation of dirtiness, and how it first obtained that unenviable distinction. Judging from the industry of the people, they seem to adopt every effort to wash out the stain. At all hours of the day—morning, noon, and night—you find myriads of bare-footed women mopping, slopping, splashing, and washing down steps, passages, and entries, to the terror and discomfort of every passer-by. Were they to confine their endeavours to a specified hour in the morning, one would think that every requirement of police and sanatory regulation might be efficiently secured. Yet, with all these obtrusive demonstrations of cleanliness, how is it that from every street and open entry there pours forth a loathsome, reeking, and stifling stench, sufficient to breed disease on the summit of Ben Nevis? As in their houses, so there is an obtrusive display of their efforts at personal cleanliness accomplished as questionably. In almost every street of the older parts of the city, and in many of the newer portions, they have attached to almost every window a crane-like apparatus, from which is suspended all manner of body clothing to dry. It is neither pictorially pleasant to the eye, nor agreeable to our sense of decency, as the falling drops rattle on our hat, or bedew the glossy paletot of which we feel so proud. The habits and manners of a people are frequently modified and improved by the strictures of strangers: let us hope that the good folk of Edinburgh will not overlook those of a

RAMBLER.

French Specifics for Cholera.—The common people in Paris regard rum as a specific, and many cures have certainly been produced by it; but perhaps any other spirit, if taken to excess, would have produced the same effect. Contrary to the ideas of the physicians, alcoholic stimulants taken to a large extent, by persons who at other times live very soberly, have saved nine persons out of ten who have used them. In one of the first families of Paris, a female, sixteen years of age, who had been a water drinker, was last week attacked by cholera. On the fourth day, when the physicians declared that nothing could save her life, her friends gave her *half a bottle of rum and two bottles of strong wine.* Reaction commenced—first there was fever, then a copious perspiration, and in twelve hours the patient was out of danger. She is now perfectly recovered. A curious case of a very different kind is mentioned in the *Gazette des Hopitaux* of yesterday. This may be called a cure, by mistake or punning upon the word *meprise.* Dr. Reger (de Dôle) was called to a patient in a very advanced stage of cholera. He had not the slightest hope of being able to save the patient, but thought it was his duty to order something. He prescribed an emetic of one grammne and a half of ipecacuanha, a third of each to be taken at intervals of half an hour. The prescription said, "*en trois prises*" (in three doses). The person who was charged to administer the medicine, being probably a snuff-taker, and knowing of no other *prise* than a *prise de tabac* (a pinch of snuff), thought the ipecacuanha was a sort of snuff, and that the patient was to take it by the nostrils. He gave a third, and desired the patient to snuff hard. He did so, and began to sneeze with convulsive violence. The whole nervous system was dreadfully agitated, reaction came on, and before the time arrived for a second *prise* the patient was out of danger. The reporter of this case says whether the ancients, when they administered stimulating powder for many violent diseases, did not know what they were about, and imagines that this mode of treatment has been abandoned without proper reflection.—*Letter from Paris.*

FINE ARTS.

RIO ON THE "POETRY OF CHRISTIAN ART."*

This essay of M. Rio's, though published many years ago in French, has been "hitherto little known," the translator states, "beyond a comparatively narrow circle of readers:" and is now for the first time presented in an English garb, as an aid to the Art education of the country; and, as a tribute to the "daily increasing taste and appreciation for early Italian Art" now manifested by the public. In this light the work, though small in size, and unpretending in appearance, is entitled to careful attention, in the interests of Art as well as of Christianity, which are sought by the author to be united in common cause.

And, in the first place, we must demur altogether to the propriety of the term "Christian Art," and the ideas and principles which it involves. Viewing Art as a means of express on, as a universal language, we cannot allow it to spring out of, or to be simply attendant upon, Religion; neither can we allow Religion to be responsible for the performances of Art, or to be necessarily dependent upon the appliances of Art, as an element of its vitality, or a means of its progress. No doubt the noblest effor s of Art are well employed in illustrating the sublime truths of Biblical history, and even the mysteries of Revelation. No doubt, Art, in worthy hands, will derive inspiration from such subjects. But Christian Art—that is, the art of a Christian community—is not to be restricted to such themes; nor, in treating of them, may she presume to a higher ministry than that which may properly attach to the exercise of any other intellectual gift or technic accomplishment.

Not so, however, the organised body of theorists and essayists who, under the name of "Christian Art" (*vulgo*, "pre Raphaelitism") claim Art as a handicraft in the service of Religion; to be exercised within certain limits, and according to certain "types" and formularies, prescribed by the Church. The purposes to which this handicraft, so limited and tutored, has been applied, are the production first, of representations of the Events and Mysteries of Religion: and, secondly, of Religious Personages, as the Virgin Mary, the Saviour, the various Saints, &c.: the former being intended as a means of popular instruction, the latter as subjects of devotion and worship. It will be obvious that there is a clear and very wide distinction between the two subjects and purposes indicated in the last sentence; and, whilst we admit the complete orthodoxy and great usefulness of Art applied to purposes of instruction, we dissent altogether from its application to the purposes of image-worship. Further, we are prepared to maintain that the former purpose was one recognised and carried out in the earliest and purest days of Christianity, whilst the latter belong to a debased Art and a debased worship.

In the first examples of Christian Art—those in the Catacombs at Rome and Naples, for instance—the mysteries of the new faith were dimly signified by symbolic representations, as those of the Cross, the Ship, the Lamb, the Dove, Fishes, &c; and, although the principal events in the Old and New Testament were also treated, the representations produced were intended simply to record the traditions of the religion to which so many of the dwellers in those underground tombs had fallen martyrs, and to keep alive the faith in them amongst their followers. As incentives to, or objects of, worship, they were of little need with men who carried their religion in their hearts, and who were daily sanctifying it with their blood

So, also, in later periods—in the various Basilicas, and notably in the St. Mark's, at Venice—the spirit was called upon to cover the walls, and after wards the windows also of the bui ding, with Scriptural subjects, for the use of the great mass of the people, who were unable to read. Speaking of the Byzantine and Italian works from the ninth to the thirteenth century, M. Rio says:—"Its tendency was rather historical than mystical, which would necessarily be the case with a people but little familiarised, as yet, with the charms of contemplation:" in other words, the abstractions of the cloister, and the worship of the chapel image. Again:—"The Synod of Arras, held in 1260, had, in some measure, consecrated this tendency, already so consonant to the national taste, by declaring that painting was the book of the ignorant, who knew not how to read in any o.her, and the characters of the popular writing were therefore multiplied without end, in every size, and under all forms," and in this spirit the Curé of St. Nixier, at Troyes, "recorded in an inscription, which was formerly legible above the principal doorway, that he had caused three windows to be painted *pour servir de catéchisme d'instruction au peuple.*"

The personages introduced into these historical paintings were treated subjectively, and not objectively. They appear simply as exponents of the event represented; and as no relations were pretended to be established between them and the spectator, so, amongst themselves, their relative importance was justly maintained, and a prevailing modesty of character observed in their general treatment. Of one of these personages in particular, it behoves us to say a few words, as a great deal of error has been propagated on the subject—error, fatal alike to Christianity and to Art, as associated with it. Mrs. Jameson, who has written certain "popular" essays upon Art, states in one of them: "We must bear in mind, once for all, that from the earliest ages of Christianity *the Virgin Mother has been selected as the allegorical type of Religion in the abstract sense;* and to this, her symbolical character, must be referred those representations of her enthroned, in which she appears, as trampling on the Dragon; as folding her votaries within the skirts of her ample robe; as interceding for sinners; as crowned between heaven and earth by the Father and the Son."

Now this, as all who have examined the remains of early Art very well know, is far from the truth. Rugier, who has studied his subject, and writes with authority, informs us very differently: "The Virgin Mary," he says, "occurs so seldom in the earlier paintings of the Catacombs, and then only subordinately, that in those times no particular type had been established of her." For example, in the Adoration of the Shepherds, one of the mosaics at St. Maria Maggiore, at Rome, (dating from A.D. 432 to 440) "the Infant Christ is seen seated alone upon the throne, while His Mother stands among the crowd." Innumerable examples of a like kind might be pointed to, wherein the Virgin Mary appears not only not as an object of homage, but herself paying homage to her Divine Son; or, at most, as partaking of reflected light and glory from the latter, whom she holds reverently and modestly in her arms. Of the former treatment a remarkable, but little-known, instance occurs in a "Nativity" by Sandro Botticelli (who flourished as late as the end of the fifteenth century), in the collection of Mr. W. Y. Ottley, and engraved in his "Early Florentine School"—the Virgin, kneeling on the ground in the stable, with her hands reverently clasped, as she joins with the Shepherds in adoration of the Divine Infant. So in the large mosaic at St Mark's, at Venice—the Saviour is represented as enthroned in glory, with the Virgin Mary and St. Mark kneeling on either side in adoration. As an example of the other mode of treatment referred to, may be instanced Cimabue's famous "Madonna and Infant Christ." Here the Virgin Mary, sitting in a simple and unassuming attitude, supports the Infant Christ upon her knee, whom she elevates, so as if to give him greater prominence. In her simple garments are no ample folds for "her votaries" to lie *perdu* in; in her face there is no pretension to intercede for Sinners, or for sinners. Her expression is that of retiring feminine modesty, yet indicative of a mysterious sentiment of mixed awe and pride, as she beholds the child, who acknowledges her as his mother, with three fingers uplifted, giving benediction to mankind

But M. Rio takes up the same position as Mrs. Jameson; and this position we have to contest. It is not for us to trace the changes which, in course of time, occurred in the destines of Art, nor in the religious sentiments which it assisted to nurture; we merely observe that in the primitive days of Christianity, and of "Christian Art," the production of "the image of Christ and of the Virgin," as objects of veneration, forming an "integral part of religious worship," was not known. How this vicious manufacture and image-worship originated, and how increased, concurrently with the decoration of tombs and effigies with gold, silver, precious stones, &c, and how all these doings laid the Church open to the rude attacks of the *bonne sapelle*, at the revival of Art and letters in the sixteenth century, are matters of history, and cause of regret to all men of healthy thought. M. Rio gives "an episode in the lagunes of Venice," which affords a melancholy example of the absurd excesses into which this abstract sentimentality, may be known. How the votaries:

A circumstance which occurred in one of my excursions in the lagunes of Venice, and the recollection of which is dearer to me than that of the magnificent monuments I most admired there, will serve to illustrate the importance which attaches to observations of this kind, particularly when they are accompanied by a mass of circumstances calculated to render them still more valuable. We were rowing, one beautiful spring morning, towards the ruins of Torcello, when, on passing out of the canal which traverses the whole length of Murano, we perceived a small island covered with trees in full blossom, and shortly after a modest cottage, which was concealed behind them, met our view. Near the

* "The Poetry of Christian Art," translated from the French of A. F. Rio. Bosworth.

spot where our gondola touched we perceived a Madonna sculptured in the wall, with a lamp burning before her, flowers freshly gathered, and a purse suspended to a long pole to collect alms of the gondoliers and fishermen. In landing to visit the garden, we found an old man seated on the threshold of the door, and the gentleness of his voice and the serenity of his noble countenance having encouraged us to inquire into the kind of life which he led in this solitude, we learnt from him the most interesting details of his own history; of that of his island, formerly occupied by three secular Monks, who had been driven from it by foreign invasion; and of the Madonna, which the profane hands of the French soldiers had vainly attempted to drag down from her tabernacle of stone—and he laid greater emphasis upon this last part of his recital than upon the rest. For more than twenty-five years he had lived almost constantly alone on this confined spot; and when we inquired if this solitary existence did not sometimes weigh upon his melancholy, he replied, with a smile of confidence, accompanied by a very expressive gesture in pointing to the Madonna, that, having always had the mother of God so near him, he had never felt his solitude; that the proximity of such a protectress was sufficient to make him happy; and that his sweetest occupation consisted in supplying the lamp and renewing the flowers before her image.

The author adds:—

Assuredly, it was *not the work of Art alone* that cheered the tedium of his voluntary exile, but its influence was necessary to sustain in him that sentiment of inward poetry which is the most enviable privilege of pure and simple souls.

Assuredly not: there was the purse "suspended to a long pole to collect the alms of the gondoliers and fishermen," which also required looking after, and afforded some consolation.

Confining ourselves, at present, however, to what concerns Art, we wholly dissent from the position asserted by M. Rio, that converts are the "real sanctuaries of Christian painting," and that "the traditional types" of Jesus Christ, the Virgin, and the Saints, preserved in the cloister—those timid, joyless, unreal, and inanimate—are necessary ingredients of Christian Art, or that the "fusion of life into human forms," "the affectation," as M. Rio terms it, "of attempting to develop muscles and veins," in them, to give them roundness, and to make them stand on the soles of their feet, instead of on the tips of their toes, are to be denounced as innovations "fatal" to the "unity of Art," or to its noblest purposes.

M. Rio laments "the revolution effected by Giotto" whereby "Art was constrained to ally itself more intimately with Nature;" he denounces the tendency to "Naturalism," which began early to show itself amongst the artists of the Florentine school, and the "Pagan inspirations" which came in the sixteenth century, contemporaneously from Rome and from the discovery of the Medici, and the rifles from Masaccio, Michael Angelo, and all of their kind, to the orthodox cloister painters "in the modest villages of Tuscany, in the little towns scattered along the sides of the Appennines, from Fiesole to Spoletto." Here—in the Umbrian schools, to wit—the "mystic," or "transcendental," method yet remained unassailed—unchanged; and men continued to paint their fellow-men, not as God made them, but as monkish fathers had fashioned them, through many dark ages, in the gloomy recesses of the cloister. Of course, in the opinion of M. Rio, Pietro Perugino was an immeasureably finer painter than his pupil Raphael, and the latter was only "respectable," so long as he remained a dutiful imitator of his first master, the said Pietro. As soon as he became impressed with the grand conceptions of Michael Angelo and Leonardo da Vinci, and adopted the vigorous method of treatment of the Florentine school, he became a lost man; and all that he produced afterwards—including the celebrated Cartoons, his famous "Bible," his Saint Cecilia, the greater number of his inimitable Holy Families, and his last great triumph, "The Transfiguration"—all is to be rejected as unworthy of Art—at least Art as regulated by "Umbrian traditions." The author is precise in this: dating poor Raphael's excommunication from and after the execution of his fresco of "Theology" (by some called the "Dispute of the Sacrament"), the first of his great works in the stanze of the Vatican; executed in the year 1508-9; in fact the very first of the works of what he known as the artists "third," and by all except M. Rio, and his pre Raphaelite friends, considered as his most glorious period. The reader, uninitiated in what constitutes the spirit of "mysticism" in Art, and the prejudices with which it is associated, will scarce believe his eyes, when he casts them over the following passage:—

Must we, then, consider the decline of this transcendant genius to have commenced immediately after the completion of "The Dispute on the Sacrament," at the very time when a new world seemed to open before him, when he was placed at the centre of all Christian inspiration, under the immediate patronage of the Court of Rome, and consequently in a then fit to which he might command the admiration of the whole of Christendom. It will be time enough to reply to these questions when we have occasion to speak of the Roman school, which was founded by Raphael at this time, when he irrev. ably quitted the Umbrian traditions in order to place himself in harmony with the changes the public taste, and perhaps his own heart, had undergone. The contrast between the style of his first works and that which he followed during the last ten years of his life [he died April, 1520] is so striking that it is impossible to regard the one as the development of the other. We find an evident solution of continuity—the former fallen into abeyance, and a new creed embraced. *Consequently, the admirers of his first manner regard the productions posterior to the epoch of which we are speaking with indifference, or even with a sort of reprobation*, while the reverse may be remarked of the exclusive partisans of his second manner.

This, in brief, may be taken as the creed of pre-Raphaelitism; and by pre-Raphaelites will be looked upon as very sublime and very convincing. For ourselves, upon the strength of this very passage, we now take leave to drop M. Rio and his "Poetry of Christian Art." The translator, in his preface, asseverates that "the exquisite taste and genuine love of art displayed by the author will not be disputed;" they will certainly not be further disputed by us.

We consider that we have performed a useful task in pointing out some of the extravagant positions of those who seek to regenerate Art upon certain antiquated types; and in so doing, to make Art itself a means of propagandism in matters of religious tenet. In the name of common-sense, in the name of civilisation, and of humanity, let us pursue Art as a wide field of relaxation from the asperities of life: a field teeming with images inspiring pleasant and grateful thoughts, lifting our hearts to admiration of God through His works; but to this end let Art breathe the pure and healthy spirit of Nature in a free and fresh development—Nature on the mountain top, on the wide ocean, in the still forest, in the busy haunts of men—such scenes and such haunts as Christ and his disciples were wont so frequent and to hallow with their presence; and not the dark, unwholesome atmosphere of the cell, infected by the "traditions" of "mysticism."

LUCY'S PICTURE OF "CROMWELL RESOLVING TO REFUSE THE CROWN."

It is an encouraging sign of the times that the taste for historical pictures and historical portraiture is increasing. We have recently had occasion to notice many such works, which have all enjoyed a considerable share of popularity; and the one now before us, though simple in the extreme in its materials, is one which we have little doubt will command a large share of attention and patronage. It is intended as a companion picture to Delaroche's celebrated portrait picture of "Napoleon at Fontainebleau," deliberating upon his abdication of the crown—a painful process, which took him twenty-four hours, in solitude, with locked doors, to resolve. The present subject, though a companion to the former, is a c. . . nation, as it were, by contrast. In the one we have the struggle of disappointed ambition; in the other, the mighty resolve of a great mind, into which no selfish ambition ever entered. The story is well known, but deserves to be perpetuated in letters of gold:—"On Tuesday, the 31st March, 1657, the House rose at eleven o'clock, and Speaker Widdington, attended by the whole House, repaired to Whitehall, to present this same petition and advice, engrossed on vellum, and with the title of King recommended to him in it." Cromwell, in a calm and dignified answer, took three days to deliberate upon the matter, observing: "Should I give any resolution in this matter suddenly, without seeking to have an answer put into my heart, and so bring my mouth, by Him that hath been my God and my guide hitherto, it would give you very little cause of comfort in such a choice as you have made in such a business as this. It would savour neither of the fear of the flesh, to proceed from lust, to arise from arguments of self. And if, whatever the issue of this 'great matter' be, my decision in it have such motives in me, have such a rise in me, it may prove even a curse to you and to these three nations."

Three days after the foregoing speech, Oliver Cromwell gave his final decision to the Parliament—that, however it might be in accordance with his feelings as a man, to accept the honour of Kingship, proposed to him by them, still, his firm conviction of his duty to the Protestant religion and his country, prevented him receiving a crown he had never been ambitious for, and that he never would have thought of had they not forced it on him.

Mr. Lucy represents the great Commander in private meditation, in some part of the interval fixed for his deliberation on the momentous proposal submitted to him. The sturdy warrior and stanch commoner is seated in his chair at Whitehall, in a loose leather jerkin and boots, having just cast aside his corslet and sword; he has read again the petition, pretending to thrust Royalty upon him; and, after crumpling it, has cast it resolutely to the ground at his feet. His clenched hand, his rough, honest, manly expression, show that in the sense of duty and consistency, he has rejected the glittering, but delusive prize. The face is, we believe, an accurate portrait, studied from the original miniature by Samuel Cooper (the Protector's limner), and a mask taken for the Duke of Savoy; but beyond the merit of accurate portraiture is the fine ideal character thrown into it, which fully entitles this picture to take high rank as a work of historic art.

This picture is intended to be engraved by Mr. R. Graves, A.R.A., in the finest line manner, in the same size as the "Napoleon" of De la Roche, before alluded to. Meantime, it is in view at the Gallery of Arts, 23, Cockspur-street, previous, as we understand, to a tour of inspection in the provinces.

CHESS.

TO CORRESPONDENTS.

G. J., Waterloo.—Thanks. It is, however, hardly up to our mark.
H. HOLSON.—It shall be examined.
G. MEA.—It is marked for publication.
ADMIRER.—The unpublished games from the recently-discovered MS. of Greco will appear in due time.
F. A., Worcester.—A communication, vid Belgium, was dispatched to you above a month ago. Did it come to hand?
S. T. W., J. P. W., and others.—The Pawn at Black's Q R 2nd in Problem No. 547, is worse than an offence, for it prevents the mate being given. Remove it, and the position of which we gave a woodcut last week is very ingenious.
BEFFINGS FENET, GREGORIUS.—A I much too simple and obvious.
J. P. of Hanson.—Lapsed and complained in the extreme, but very deficient in point and elegance.
SECRETARY.—The British Chess-club will open for the winter campaign early next month: and it may be well, therefore, to defer the publication until then.
FRANCHOIS, Ely.—Greco's gems will probably appear first, and *quoad dignitatem*, but because they are already in hand. P. G. mate is neither very rare nor very precious prize. We believe the maligned copy of Lewis, to which we have called attention, is still in the country; but its "whereabouts" remains a mystery.
SOLUTIONS OF PROBLEM of No. 545, by A. P., Exeter, Sub, Opal, E. H., Honiton, G Mea., F. F. L., Rowy, are correct.
SOLUTIONS OF PROBLEM No. 547, by S. P. Q. R., School-boy Kennet, P. P., G. Mea., R. H., Wo. y, Hampton, K. M., R. F., Woolwich, Peter, Tynehaton, Chas, P. T. W., Bon Mass, are correct.

SOLUTION OF PROBLEM No. 546.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to K 2nd	B (K or P) (best)	3. R to K 2nd	R to K 6th (best)
2. Kt to Q B 3rd	B takes Kt	4 R takes Q B P	

And mates next move.

[The Solution of Problem 547 (accidentally Numbered 546) was given last week.]

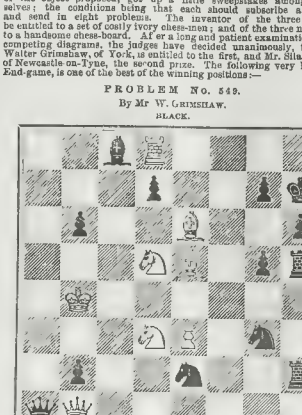
CHESS PROBLEM TOURNAY.

This affair, which at the outset excited a good deal of speculation and promised much amusement, fell to the ground, it will be remembered, through the refusal of foreign composers to submit to the entrance-fee required from each competitor. Subsequently, however, a few of our own leading Problem-makers, determined not to be altogether disappointed of the object proposed, got up a little sweepstakes among themselves; the conditions being that each should subscribe a guinea, and send in eight problems. The inventor of the three best to be entitled to a set of costly ivory chess-men; and of the three next best, to a handsome chess-board. After a long and patient examination of the competing diagrams, the judges have decided unanimously, that Mr. Walter Grimshaw, of York, is entitled to the chess-men, and Mr. Silas Angus, of Newcastle-on-Tyne, the second prize. The following very beautiful End-game, is one of the best of the winning positions:—

PROBLEM No. 549.

By Mr W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN BELGIUM.

The two following games were played recently between Mr. de Rives and Mr. Allix:—

(Scotch Gambit.)

WHITE (Mr. A.)	BLACK (De R.)	WHITE (Mr. A.)	BLACK (De R.)
1. P to K 4th	P to K 4th	16. K B takes K R P	Q Kt takes P
2. Kt to K B 3rd	Kt to Q B 3rd	17. Kt takes Kt	B takes Kt
3. P to Q 4th	P takes P	18. Q takes B	R takes B
4. B to Q B 4th	B to Q B 4th	19. Q R to Q sq	P takes P
5. P to Q B 3rd	P to Q 6th	20. P takes P	Q to K B 4th
6. P to Q Kt 4th	B to Q Kt 3rd	21. Q R to Q 6th	B to Q B 2nd
7. P to Q Kt 5th	Kt to Q K 4th	22. Q R to K 6th	B to K B sq
(a)	(b)	23. P to Q Kt 6th	B to Q sq
8. B takes Q P	P to Q 3rd (c)	24. B takes P (e)	P takes B
9. Castles	P to Q B 4th	25. Q R takes P	Q to K R 3rd
10. P to Q B 6th	P to Q R 3rd	26. K R to K sq	Q takes Q Kt P
11. Q B to Q Kt 2nd	P to K B 3rd	27. Kt to K Kt 5th	Q to K R 3rd
12. P to Q R 4th (d)	Kt to K 2nd	28. Kt to K 6th (ch)	R to K R sq
13. Q to Q B 2nd	Q B to K 3rd	29. Kt takes B	K takes Kt
14. Q Kt to Q 2nd	Q to Q 2nd	30. Q R takes Kt	K R to K R sq
15. P to K 5th	Q P takes P	31. Q to Q 8th (ch)	

And Black resigned (*f*).

(a) This move was first given by Mr. S anton, and occurred in a match between him and a well-known German player.
(b) Mr. Heydebrand recommended this as the best reply to White's last move; but it is not satisfactory.
(c) Here the writer just named advises P to Q 4th, which is, perhaps, stronger.
(d) P to K 5th; and, if the K P were taken, sacrificing the Kt afterwards would have been good play. (e) Well played.
(f) Mr. Allix. If we are rightly informed, is a chess pupil of Mr. de Rives; and the first of his losing skills in common open open terms with such an adversary—from whom but a few weeks since he received the odds of the Pawn and move—is a striking proof of the master's attention and the pupil's aptitude.

BETWEEN THE SAME PLAYERS.

(Scotch Gambit.)

WHITE (Mr. De R.)	BLACK (Mr. A.)	WHITE (Mr. De R.)	BLACK (Mr. A.)
1. P to K 4th	P to K 4th	15. P to Q R 6th	K B to Q R 2nd
2. Kt to K B 3rd	Kt to Q B 3rd	16. Q to K Kt 3rd	P to K Kt 4th
3. P to Q 4th	P takes P	17. Q to K B 3rd	K R to K R 2nd
4. B to Q B 4th	B to Q B 4th	18. Kt takes B	Q takes Kt
5. P to Q B 3rd	P to Q 6th	19. Q B takes P (b)	P takes B
6. P to Q Kt 4th	Q to K 2nd (a)	20. Kt takes P	K R to R 3rd
7. Castles	K B to Q Kt 3rd	21. Q B to Q sq	Q to K 2nd
8. P to K 5th	P to K R 3rd	22. Q takes Q Kt P	Q R to Q sq
9. K R to K sq	Q Kt to Q sq	23. Q R takes R (ch)	Q takes R
10. P to Q R 4th	P to Q R 3rd	24. Kt takes Kt	P takes Kt (ch)
11. Castles Q P	Q Kt to Q 3rd	25. K takes B	P takes Kt
12. Q Kt to Q 2nd	P to Q 3rd	26. Q to Q B 6th (ch)	Q to Q 2nd
13. Q Kt to K 4th	B takes K P	27. Q takes Q (ch)	K takes Q
14. K Kt takes P	Q B to Q 2nd	28. P to K R 3rd	

And wins.

(a) A novelty. Whether as sound as new, we will not at the first examination venture to decide. It is quite clear, however, that if White take the offered Bishop, he loses his own, and a Pawn besides, in return.
(b) Bold, yet apparently safe and good play

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The King of Prussia has so far recovered from his accident as to be enabled to proceed to Pathus, for the benefit of sea air and bathing.

The King of Portugal arrived at Vienna on the 17th, and alighted at the Imperial Palace. He was received at the railway terminus by the Archduke Ferdinand, brother of the Emperor. Apartments in the Palace have been assigned to him.

The interment of the late King of Saxony took place on the evening of the 17th, at Dresden, with great ceremony.

During the past week Queen Marie Amelie, the Duke de Nemours, the Duchess de Nemours, the Comte D'Eu, the Duke d'Alençon, and the Princess Margaret, paid a visit to Teignmouth.

It is said that the French Emperor and the Empress will leave Biarritz on the 27th, to return to St. Cloud, where they intend passing a few days before his Majesty takes his departure for the camp of Boulogne. Another account says, the effect produced by the baths has been so favourable to the health of her Majesty, that she will continue them for about a month longer.

The marriage of Fatima Sultana (Abd-ul-Medjid's eldest daughter) to the son of Redschid Pacha, took place on the 10th inst. The trousseau was transported to the new Palace, on the Bosphorus, on the previous Monday. Some idea of its magnificence may be formed from the fact of its having filled forty caiques.

Orders have been received at Holyrood Palace to have the Royal apartments there in readiness about the beginning of September, for the usual brief stay of her Majesty on her way to her Highland residence.

As the American President was returning from the Capitol, on Saturday fortnight, a young bacchanal from South Carolina, after shaking hands with him, and asking him to have a drink, threw the remains of a boiled egg at his Excellency's hat, and knocked it off. No injury was sustained either by the hat or its owner.

The Princess Zenaide Charlotte Julie Bonaparte died at Naples on the 8th. She was the eldest daughter of Joseph Bonaparte, King of Spain, and was born in Paris on July 8, 1802. The late married her cousin, Prince Canino, the eldest son of Lucien Bonaparte, and leaves by him eight children.

Prince Napoleon left Varna on the 9th for Constantinople, change of air having been ordered him for an intermittent fever, with which he has been attacked. He was exceedingly unwilling to depart, but the medical men insisted on his doing so. Among the persons about the Prince, the opinion prevailed that he would have to return to France.

The King of Saxony has not made a single change in persons holding office under his deceased brother. The troops and all functionaries have taken the customary oaths.

The Russians, it appears, have left 35 million Turkish piasters in Kars (promises to pay) at Bucharest, as a memorial of their invasion. These papers are scarcely worth a para each. The *loans* of 1838 have not yet been paid.

The Government of the Mauritius has engaged the *Proponti's* steamer to convey the mails between that island and Ceylon for one year, at £10,000 per annum.

The Berlin Academy of Sciences recently celebrated the fiftieth anniversary of Baron Alexander von Humboldt's admission among that learned body, which took place on the 6th August, 1804: The day appropriately selected for this commemoration was that of the Liebnitz festival.

In consequence of the spread of the cholera, Cardinal Wiseman has granted permission to his flock to eat flesh meat on Fridays and other days of abstinence and fast.

Bou Maza, who lately obtained permission from the French Government to serve in the Turkish army, arrived on the 6th at Constantinople in the *Ganges* steamer.

General Prim, on hearing of the revolution in Spain, embarked on the 6th at Ramsbuh, to return to Madrid. He arrived in Paris on Saturday, with a retinue of twenty persons, and left next morning early, *en route* for Madrid.

The Duke of Leeds is about to purchase the fine Highland property of Applecross. The price, it is said, will be about £240,000.

Prince Ghika and Prince Stirbey are now at Baden, near Vienna. The latter is unwell.

Lord Anne Hay, a brother of the Duchess of Wellington, is mentioned as a candidate for Lynn, to fill the vacancy made by the death of Viscount Jocelyn.

Prince Albert of Prussia and his family have arrived at the Hôtel de Rivoli, with the intention of passing a few days in Paris.

Queen Christina is still kept in the Palace, with the Duke de Rianzeres. Her children have quitted Madrid. Three of them have already passed to Bayonne, and the others are expected there.

The Mayor of Liverpool has received an intimation that, in consequence of the unsettled state of public affairs, and the intended visit of Prince Albert to the French camp at St. Omer, it will not be consistent with the Royal arrangements for her Majesty to grace the inauguration of St. George's Hall, which is now fixed to take place on September 18.

General de Wedel, Governor of the fortress of Luxembourg, has arrived in Paris on a mission from the King of Prussia, to pay his Majesty's respects to the Emperor Napoleon on his return from Biarritz, and to accompany him to the camp at Boulogne-sur-Mer.

A rich inhabitant of Cologne has presented that city with the sum of 100,000 thalers (about £15,300 English), for the purpose of building a gallery for works of art there.

The Munich Exhibition of Works of Art contains works by 6585 artists: of these, 2331 are Bavarians, 1477 Austrians, 767 Prussians, 442 Wurtembergers, and 446 Saxons.

The *Munster News* announces that Mr. Smith O'Brien has arrived in Belgium, to join his family.

A committee has been formed at Athens for securing the representation of Greek art, manufactures, and agriculture at the Paris Exhibition next year.

The journals of Moscow announce the death of the Tsarevitch Elias Georgievitch, son of the last King of Georgia, George XIII., at Moscow, on the 14th of July.

A great meeting has been held at Hanley, in the Potteries, which was addressed by M. Kossuth, to protest against the German alliance. The speech of Kossuth was of great length, and went over much the same ground as his speeches at Sheffield and Glasgow.

The Turkish Government has come to a decision regarding the telegraph. It is to start from Constantinople for Belgrade, where it will be in communication with all the German lines. A branch is to start from Adrianople to Schumla. This line is to be completed in four months.

A convention was signed on the 12th inst. for guaranteeing literary and artistic property between Great Britain and Belgium, and for regulating the tariffs of books, engravings, music, &c., imported from one country into the other.

The Earl of Kenmare has made a gift of fourteen miles of the land for the Tralee and Killarney Railway. His predecessor gave twenty-three miles to the Killarney junction.

The sentence of death passed upon Sarah Featherstone at the last Cheswick Assizes, for the murder of her child, has been commuted to penal servitude for life.

The *Oregonian* reports that negotiations are going on for the purchase of all the interest of the Hudson's Bay Company in Oregon, for the United States Government.

The disease among the grouse this year has been so great upon Corsock, the property of Mr. Dunlop, M P., that he has resolved to give them a respite for the remainder of the season.

The early construction of telegraphic lines which are to connect Jassy with Czernowitz, and Bucharest with Cronstadt, to be begun immediately after the entry of the Austrian troops into the Principalities, is at present under discussion at Vienna.

In one of the marriage notices read over at the board of guardians in Leicester last week, the intending husband described himself as a quack doctor! The first quack, we should think, who had the honesty to acknowledge himself one.

The Place du Corps-Legislatif, in Paris, is about to be decorated with a statue of France. It is to be placed on the pedestal in the centre, which has been unoccupied for several years. This statue of marble will be executed by M. Feuchères, and bas-reliefs will ornament the pedestal.

The Austrian police reports show a prodigious increase in this city of the number of suicides among the poorer classes, during the last two months. This is partly attributed to the high price of provisions, augmented by an increase at the rate of 25 per cent in the local taxes on provisions.

It is calculated that the deficit bequeathed by the Sartorius Ministry to the Spanish Treasury amounts to seven hundred millions of reals—about £6,600,000 sterling.

Cholera medicines are now kept at all the London police-stations, for the use of persons seized with premonitory symptoms of the disease.

The subscription for the monument to Professor Wilson progresses most favourably. The amount subscribed already exceeds £900 The sum required is about £1400.

THE PEAK OF DERBYSHIRE.

THE PEAK CASTLE.

The Castle of the Peak, which gives its name to the adjacent village of Castleton, is supposed by some authorities to have been in existence at the time of the Saxons; and by others to be of purely Norman structure, and to have been built by William Peveril, a son of the Conqueror, and first Lord of Haddon. The latter opinion is the prevalent, and, probably, the correct one. This, together with other possessions of the Peverils, went out of their hands during the reign of Henry II., who gave them to his son, the Earl of Montaigne, afterwards King John. It was granted during the reign of Edward II. to the Earl of Warren, and, subsequently, during the reign of Edward III. to John of Gaunt, since which time it has been included in the Dukedom of Lancaster; its owners always retaining the Baronial title of "Peveril of the Peak." The Duke of Devonshire is the present Constable of the Peak Castle. The name of "Peveril of the Peak" is no longer in use, and is only familiar to us as the title of Sir Walter Scott's famous novel.

Peveril Castle stands on a high rock, overlooking the village of Castleton. In the distance it has an insignificant appearance, and one is apt to depreciate the good taste of the founders. But as the traveller approaches this romantic ruin, and stands full in face of it, he is soon forced to change his opinion.

A better position for a fortress it is hard to conceive, all its sides being impregnable but one, and that is so steep as to have rendered a winding path necessary to aid the ascent. The castle yard is very extensive, and is enclosed by a wall, in part destroyed, and overgrown with ivy. The interior, which anciently consisted of two rooms, one above the other, is a complete ruin. At the north-west extremity is the keep, of which a great part of the walls are still standing, and reach on one side an elevation of fifty-five feet.

The entrance to the Peak Cavern, situated at the foot of Peveril Castle, is singularly regular for a natural arch, and presents a very fine appearance. Its dimensions are—height, 42 feet; breadth, 120 feet; and receding depth, 90 feet. This magnificent natural lobby has been appropriated by certain twine manufacturers, and the whole of the ground is covered over with their works, much to the dissatisfaction of all persons of taste who visit the Cavern. There is one thing to be said; they afford a good standard of measurement to the eye; and by their littleness, show off the vastness of the Cave. But on the whole the people were better away; they spoil a sublime natural picture by their sordid occupation.

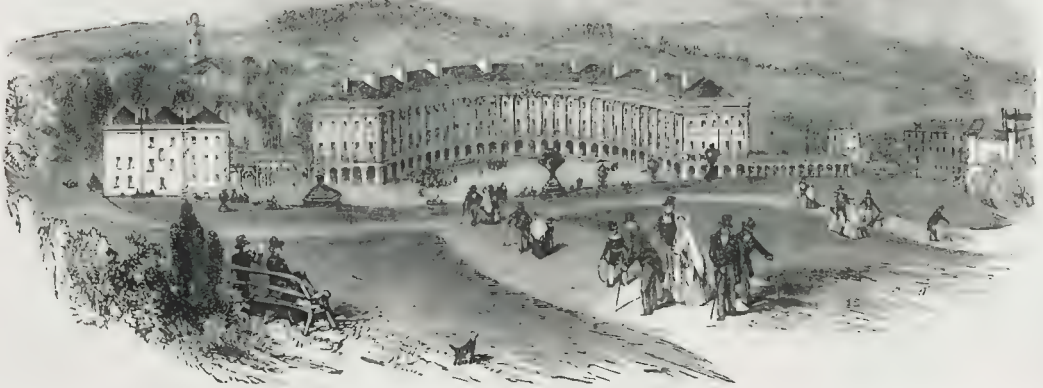
PEVERIL CASTLE, AND ENTRANCE TO THE PEAK CAVERN.

BUXTON.

Buxton, in Derbyshire, one of the most celebrated watering-places in England for the cure of gout and rheumatism, is situated at the distance of about 159 miles from London, thirty-eight from Derby, and twenty-four from Manchester, in the midst of a wild district called the Peak, about fifteen miles in breadth and twenty in length. It occupies a position at the bottom of a small valley, at the height of nearly 1000 feet above the level of the sea, and is sheltered on all sides by lofty hills, of which one, about three miles to the west of the town (Axe Edge), attains an elevation of nearly 2000 feet, and is the highest point in Derbyshire. Buxton, anciently called Badestanes and Bawkestanes, has long been famous for its waters, and is said to have been known even to the Druids. But of this we have no proof. All antiquaries, however, who have investigated the subject, agree in stating it to have been known to the Romans; and one, Dr. Gales, asserts it to have been the site of the Aquis of Ravennas. The discovery of two Roman military roads, which intersect each other within half a mile of the town, appears to justify the belief that it was known to the Romans; and the discovery of Roman walls and cisterns close to St Anne's Well, are proofs that its waters were one of the causes which led to its being made a Roman station.

In the middle of the sixteenth century the waters of Buxton became the study of physicians, and engaged the attention of the Earl of Shrewsbury, who built a house for the reception of visitors on the site now occupied by the Old Hall. It was here that he conducted his Royal prisoner, Mary Queen of Scots, to give her the benefit of the waters. In 1670, when the fame of Buxton began to spread, the small hostelry was pulled down, and rebuilt on a larger scale by William, third Earl of Devonshire. At this time, however, Buxton was a mere hamlet, and the surrounding country was of the most bleak and forbidding description. But, in proportion as the celebrity of the waters increased, the inhabitants became more numerous, and the influx of visitors more considerable. The face of the country began to wear a more domestic appearance, the hamlet grew into a village, and the village into a town, until at last Buxton became what it now is, a finely-built and fashionable watering-place, with spacious hotels and boarding-houses, and a beautiful vicinity.

Buxton contains a resident population of about 1500 inhabitants, with accommodation for as many as 3000. Its visitors come principally from Sheffield and Manchester; but, in the lists at the several hotels and boarding-houses may be seen the names of many that have come from almost all parts of the United Kingdom to drink of this "water of life," and to cast out their "podagra," in the baths of St. Anne's Well. The cures effected by the Buxton waters are very numerous. Many people imagine that there are no healing qualities in the waters themselves, but that the great secret of the matter is the fresh mountain air and the dry soil. "Of 33,709 patients admitted to the use of the baths connected with the Buxton Bath Charity, from the year 1820 to the present time," says Dr. Robertson, the resident physician, in his new treatise on Buxton, "27,008 were dismissed as having been either cured or much relieved." It surely is of very little consequence to the invalid in what way his cure is effected, so he be cured. The Buxton waters have been analysed over and over again by different physicians, and with different results; and no one has yet found out the particular ingredient which is so beneficial to gouty and rheumatic persons. All that is known about the matter is



BUXTON.—THE CRESCENT, NEW BATHS, ETC.

THE PEAK OF DERBYSHIRE.

the broad fact that the Buxton waters really have the effect of repairing the ravages made upon the constitution by those obstinate diseases.

The Duke of Devonshire, who owns great estates in Derbyshire, is the patron as well as the proprietor of Buxton. The first great thing which the Devonshire family did for Buxton, and which has more than anything else contributed to its prosperity, was the erection of the Crescent—a piece of architecture which, for elegance and simplicity of structure, is unsurpassed by any building of a similar description. The Crescent was built by the late Duke, after a design by Mr. Carr, a well-known provincial architect, during the year 1780; and was completed in 1786, at a cost of £120,000—the returns, it is said, of the Ecton copper mine, in Staffordshire, belonging to the Duke of Devonshire and now exhausted. This building is divided into one hotel (St. Anne's) and three boarding-houses (Hicklin's, Smitor's, and Gregory's). These three boarding-houses formed originally one hotel, called the Great Hotel, which, it is understood, Mr. Hicklin is about to re-open, under the same name. It is at Hicklin's, one of the best-conducted establishments in Buxton, that the Duke of Devonshire resides during his annual visit. Next in order, after the Great Hotel and St. Anne's, may be mentioned the Old Hall (chiefly famous for its historical associations), the George, the Grove, and the Shakspeare; together with a variety of others, of all descriptions, and suited to the means of almost all classes.

Among the principal objects of interest in the neighbourhood of Buxton are Poole's Hole—a splendid natural cavern, within half a mile of the town; the ebbing and flowing well, half-way between Buxton and Castleton; Chee Tor, a great rock overhanging the river Wye, six miles along the Bakewell road; and a variety of other natural wonders too numerous to specify. The valley of the Goyte, two or three miles along the Manchester road, though not mentioned in the ordinary Buxton Guide-books, is well worthy of a visit, as it contains some of the most lovely wooded, or rather garden, scenery in the centre of England. But perhaps the most splendid "bit of country" in the whole of the Buxton district is the Bakewell road, and particularly that part of it which is known under the name of Ashwood Dale. The whole route is a panorama of the most various beauties: on the one side, huge crags, richly adorned with verdure; and, on the other, fretted ledges of rock, having the appearance of old castles. With such a sight as this before one's eyes, one is apt to deplore the roving disposition of Englishmen, which carries them away to foreign countries, and will not allow them sufficiently to admire the scenery of their own beautiful little island.

CRYSTALLISED CAVERN, IN THE BLUE JOHN MINE.

THE BLUE JOHN MINE.

From the three principal caverns of Castleton—the Peak Cavern, the Speedwell, and the Blue John, we select the latter for Illustration. It is situate within a short distance of the village; and, unlike the Peak Cavern, whose noble entrance has been already described, opens in a small hollow, closed by a wooden door. It is partly natural and partly artificial—the great caverns being entirely natural, and the connecting corridors principally artificial. These passages were not cut expressly for the purpose of conducting to the caverns, as might be supposed, but were formed by the miners in their search for lead, the discovery of the caverns having been accidental.

The Blue John Mine is entered by a flight of steps, of steep descent. At the bottom of this stair the visitor, on looking back, beholds overhead a twinkling light like a star. This fine effect, together with the shadowy, uncertain appearance of the intermediate passage, is produced by a lighted candle, purposely left behind by the guide. The visitor is afterwards conducted through a corridor, into a spacious natural cavern, said to be upwards of a hundred and fifty feet high, and sixty-five feet wide. This is called Lord Mulgrave's Dining room, having actually been employed for that purpose by the present Marquis of Normanby, to entertain the miners who accompanied him in his subterranean passage of three days in search of another outlet. Next comes the Variegated Cavern—a splendid hall, the height of which has not been ascertained. The guides suppose it to be upwards of two hundred feet high. This is the furthest portion of the mine that is usually shown, the rest of it being difficult of access. It is the opinion of miners that the whole of the distance between the Blue John Mine, the Peak Cavern, and the Speedwell and Bagshaw's Cavern, is one vast corridor of caverns. The Blue John Mine is seen to more advantage on returning, the eye being accustomed to the darkness, and better able to distinguish the objects; for this reason the guide reserves his "blue lights" and his explanations until after the whole of the cavern has been explored.

The splendid part of the Cavern of which we give an Illustration is lit up by means of a chandelier, drawn to the top by a pulley, which cannot have been fastened without great difficulty and risk. The appearance of the dome thus illumined is strikingly shown in the accompanying Engraving. "The lofty walls," says Mr. Adam, in his popular guide, the "Gem of the Peak," "are clustered with stalactites of the purest white. The top of it looks like a rich cornice, from which are suspended numerous stalactites, assuming the appearance of drapery of exquisite texture, falling in the most graceful folds, and streaming down like fine cords to the bottom." Several other striking effects are produced, by means of blue lights, which create a sort of artificial moonlight for the space of a few minutes, and serve to make "darkness visible" in the far distance. But one of the best effects of all is that of the natural day bursting through at the entrance.

The Blue John Mine is chiefly celebrated for the spar of that name with which it abounds. Fluor spar was called by the miners "Blue John," to distinguish it from "Black Jack," the provincial name of a species of zinc ore. It is composed of lime and fluoric acid, the blue colouring matter being oxide of manganese. It has hitherto been found only in the Tre Cliff at Castleton in three different mines: the Blue John Mine, the Cliff-side Mine, and the Old Tor Mine; the Blue John Mine being the only one that is paying the expense of working. The specimens from these several mines, although all so near each other are said to differ very materially as to colour and shape. The fluor spar of the Blue John Mine occurs in strata three inches thick,

HADDON HALL, FROM THE BAKEWELL-ROAD.

except in the case of double stones, which are rarely found, and always fetch a high price. The best specimens are found wrapped up in a layer of clay, attached to loose rocks, called "riders." The principal articles made of this beautiful substance are vases and brooches. Antiquaries have established the fact that fluor spar was known to the ancient Romans, who found it, probably, whilst seeking for lead in the Pre Cliff. It is supposed that the famous *vasa murrhina* were made of Blue John, and certainly Pliny's description of those vases would answer as well to the fluor spar vases of the present day. That writer states the average price of such vases in Rome to have been £7000, one splendid specimen being worth as much as £30,000. Although very much cheaper than this at the present day and in this country, they are still very expensive, and are likely to become much more so, as the spar is getting scarce. The annual product of the mine is some ten or a dozen tons, the price (in the rough) being £40 a ton, wholesale. It is only when cut and polished, that the virtue of the stone becomes apparent, and it is the great labour of cutting and polishing which renders the vases so expensive.

HADDON HALL.

Haddon-hall, the admiration of artists, of antiquaries, and of all true lovers of nature, is situated at the distance of 150 miles from London, in the county of Derby, and fourteen from Buxton. It was built by William the Conqueror, for his natural son, William Peveril, in whose family it remained for two generations, when it was handed over to a retainer, named Avenel. During the reign of Richard I. it fell into the possession of the Vernons, and afterwards became the property of Sir John Manners, a son of the Earl of Rutland, who eloped with and married Lady Dorothy Vernon, the heiress of the last male descendant of that house, and has since descended in direct succession to the present Duke of Rutland.

Haddon-hall is justly considered one of the finest ruins extant, and is, perhaps, one of the most complete as well as the best preserved of any in England. It used to be shown by an old man, who took delight, like another Caleb Balderstone, in sounding the praises of its ancient Lords. A little girl now supplies his place, and repeats the story of Old Haddon in the usual professional sing song. The first thing to which the attention of the visitor is directed is the Chaplain's-room—a dreary place, containing curious relics; and, among others, a huge pair of top boots, a buckskin doublet, an antique matchlock, pewter plates of immense size, and the old cradle in which the scions of this noble House were rocked in bygone ages. Next in order comes the Chapel—a small chamber with two aisles—in which the principal objects of interest are a pulpit, a reading desk, an altar, and pews made of oak, which had originally been richly ornamented. Over the altar is a Gothic window, with a stained-glass representation of the Crucifixion, together with representations of angels and saints. Several of the best specimens of glass are said to have been stolen many years ago, but by whom is not known, although the sum of £100 was offered at the time for the capture of the thief. On the window is the following inscription:—

Orate pro animabus Ricardi Vernon et Benedicte uxoris ejus qui fecerunt Anno Domini Millesimo CCCCXXVII

The figures 1634 are inscribed on the roof—probably the time at which it underwent repair. The visitor is next conducted across the court in front of a porch, over the doorway of which are two coats of arms, and an inscription, now almost illegible, and rendered by Camden thus:—

I EO
MARTI
BACIAR.
OSSIFIS
CECILIAN
FREFAT
IES. U.O.

Through this porch is the great hall, which served for a dining-room. Here is an old oak table standing on a dais, and evidently that at which the lord's family and guests sat; the servants' tables have been removed. At one end of the room, occupying two sides, is a gallery, ornamented with rude carvings, panelings, and stags'-heads, in which the band played during dinner. Whatever fancy-work there was about the ceiling of this room is now entirely erased, though the wainscotings on the walls are still visible. One of the most interesting relics is a sort of instrument called a hasp, made for the purpose of making music by the wrist. This, it appears, was used solely for such as would not consume the orthodox quantity of liquor expected of every respectable man in olden time—the offender's arm being placed in the handcuff, in an upright position, while his boon companions pumped what he would not drink down his sleeve. A doorway near the table leads to the modern Dining-room, said to have been built by Sir George Vernon. The walls of this room are beautifully panelled, and the ceiling has the appearance of having once been gorgeously ornamented. In the recess in the window are portraits of Henry VII. and his Queen, together with boars'-heads, and the Vernon coat of arms. Here may also be seen a quaint, full length portrait of the King's Jester, Will Somers. Above the fireplace is a shield, with the arms, and the names of Sir George and Lady Vernon, together with the Royal arms, and the inscription: "Drede God, and honor the King." The whole bears the date of 1546. Up the grand staircase is the drawing-room, with a fine oriel window (in which stands the State chair), wainscotings, and arras. Next come the Earl's bed-chamber and dressing room. The arras in these chambers are very fine, and consist of Biblical and sporting subjects. Opposite the drawing-room is the ball room, a long gallery, upwards of 100 feet in length and only eighteen in width. This extreme narrowness is in part relieved by the largeness of the recesses in the windows. The walls are covered with oak panelings, and ornamented with arras and carvings of peacocks and boars'-heads (the respective crests of the Vernons and Manners), and other representations. In the ante-chamber are portraits of King Charles I., Prince Rupert, and Eugene, after Vandyck. The state bed room is, perhaps, the most interesting portion of the whole building. It is a handsome room, hung with tapestry, and having a fine oriel window. The state bed is still shown, and is one of the most valuable of all the relics. The ancient state room, to which the visitor is next shown, is said to be the oldest room in Haddon, and is hung with tapestry from the famous manufactory *des Gobelins*, in Paris. Upwards of 200 couples danced in the long gallery at the time of the conclusion of peace with America; and, in 1836, Haddon-hall was thrown open to the tenantry of the neighborhood, in commemoration of the coming of age of the Duke of Rutland's eldest son, the Marquis of Granby. After the visitor has seen all the rooms, he is conducted up a winding stair to the Eagle Tower, from which there is a fine view of the surrounding country.

But the glory of Haddon is the terrace. Topographers let loose all their sounding phrases in treating of this subject. It seems strange that no genuine poet should have done for it in words, what so many artists have done for it in colours. The terrace is quite deserted. There is no gardener here now to strip the luxuriancy of the encroaching grass and ivy. Even in the heyday of the glory of the Vernons—when

> "Lords and ladyes gay
> Were out with hawk and hound"—

it could not have been so beautiful as at present; the magnificent colouring which age has given it, and which is its principal charm, would have been wanting in the olden time. Who, having once seen, can ever forget this solitary garden-walk, with its suggestive associations, and its touching air of sadness? Artists love Haddon; Haddon has made artists. There are painters who take a pride in saying, that, but for such and such a chance visit to Haddon, they would never have mixed colour. The enthusiasm with which such men talk of the "Old Terrace," would lead one to suppose that they exaggerated its merits; and yet when we come to see Haddon ourselves, instead of being disappointed, we feel that these enthusiasts have scarcely praised it enough.

The inhabitant of this deserted walk is a peacock, rendered doubly interesting from its beauty, and its appropriateness as the crest of the present Lords of Haddon.

Materials for Paper.—Some movement appears to be making towards the cultivation, purchase, and shipment of fibrous plants in our East Indian and other colonial possessions; and we understand that an application is about to be made for a charter for a company now forming under the title of the "Colonial Fibre Company," with a view of converting these hitherto almost useless products into a valuable marketable commodity, as materials for paper-making and textile purposes.

Dr. Kitto.—We are happy to be able to state that Dr. Kitto, the eminent Biblical scholar, who left England with his family on the 9th instant, has arrived safely at his final destination in Stuttgard, whither he had proceeded by the advice of physicians, with a view to his ultimate recovery, and return to that sphere of usefulness, from which he has been for a time withdrawn.

COMMENCEMENT OF THE VICTOR EMMANUEL RAILWAY.

(From a Correspondent.)

Those of our readers who have travelled from Geneva to Turin, and toiled up the steep ascent of Mont Cenis in the coupé of the diligence, will be pleased to hear that on Monday last the ceremony of turning the first turf of the Victor Emmanuel Railway took place near Aix-les-Bains, in Savoy. The directors, being determined to give the undertaking all the éclat possible, had invited the notabilities of the neighbourhood, with many ladies and gentlemen from Paris, to witness the blasting of the first rock, from the deck of a steamer, which took the company round the beautiful lake of Bourget, to give them an opportunity of admiring the magnificent mountain scenery on its shores. The steamer was tastefully decorated with evergreens, surmounted by the flags of Savoy, France, and Switzerland. The Archbishop of Savoy, who came down to the point of embarkation dressed in the robes of his sacred office, was received by M. Lafitte, the celebrated banker, who read an address, asking him to invoke the blessing of Heaven on the undertaking, which, he said, would be the means of connecting in paternal bonds the kingdoms of Savoy and France. On his Grace having made a suitable reply, he was led to a seat prepared for him on board the steamer. At a signal made from the shore by Mr. Bartlett (the agent for the contractors), M. Lafitte, accompanied by the Viscountess Villiers, entered a boat, and proceeded to the rock, where the Viscountess lighted the fuse connected with the mine. A series of tremendous explosions took place, bringing down an enormous mass of rock into the lake. After an address from the Archbishop, the company were conveyed in carriages to Aix-les-Bains, where they sat down to an elegant dinner at the Casino; after which M. Lafitte proposed the health of the King in connection with the Line, which is named after him, Victor Emmanuel.

The railway so favourably inaugurated is to run from Aix-les-Bains through Chambéry (the capital of Savoy) to St. Jean de Maurienne; and it is proposed ultimately—by means of a tunnel, seven miles long—to carry it through Mont Cenis, where it will join the Turin-Susa Line, and thus complete the communication between Switzerland, Genoa, and Central Italy.

The debts contracted by the Russians in Wallachia for supplies, &c., are estimated to amount to forty millions of piasters. This sum does not include the private debts of the soldiers and officers.

Guns for the Bashi-Bozouks.—The contemplated plan of forming an irregular army of Bashi-bozouks, as intimated by Lord John Russell in his speech in Parliament, when he acted for the war grant of three millions, seems on the eve of consummation. Some of the most eminent gun-manufacturers of Birmingham have just received the commands of the Board of Ordnance to make several thousands of carbines for this service.

The Greek Patriarch v. the Czar.—Monsignor Antimos, the Greek Patriarch of Constantinople, who styles himself Archbishop of New Rome and Ecumene Patriarch, issued a circular to the Greek clergy on the 30th of July, in which he energetically condemns the acts of the Czar, and the endeavours of the Russian Greek Church to encroach upon the Greek subjects of the Porte, and to thrust a protection upon them to which they have no right. In this extraordinary document the prayers of the faithful are invoked for the cause of the Allied armies, and against Russian aggression, and the rayah population are reminded of the great privileges they enjoy at the hands of their Sultan, &c. The circular is a standing proof of the very small amount of Russian influence actually existing at Constantinople.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

Rustchuk, 30 July, 1854.

The Russians having made their retreat on the night of the 27th, from the camp which they occupied on the heights of Fratcschti and Daja, a reconnoissance was made on the 28th, to discover the direction in which they had retired. Some battalions of infantry having been marched into a wood which covers the road in front of Giurgevo, we started with a squadron of cavalry, and entered Fratcschti with every precaution. At our approach, about a dozen Cossacks were observed to decamp in haste and disappear over the crest of the hills above the village. Fratcschti is a village of semiliks, or earthen huts, protected by a country house belonging to some noble Wallachian who owns the place. In this château—which reminded me of the rural retreats which one finds in the villages around Paris—General Soimanoff had his residence. On the crest of the hills above was the camp of the Russians, consisting of long low huts above which the cavalry, marked in front by long lines of tents, apparently placed so as to deceive the Turks as to the numbers who occupied the position. The huts, both for infantry and cavalry, were standing, and a lone hayrick remained untouched. The Russians would probably have burnt these, but that the flame and smoke would have betrayed their departure. A few stray Russians allowed themselves to be caught, having evidently remained behind for the purpose of deserting. Yesterday a larger reconnaissance was made, and four regiments of cavalry were sent forward to scour the country beyond Fratcschti. Behind the hills, on which the Russians were encamped, was a vale, at the bottom of which was a pond, which seems to have formed the sole supply of water for the soldiers. The liquid was not good to the taste, and can scarcely have been wholesome. Across this vale the Turks advanced, passing slightly undulating ground, till they reached Kamana, on the banks of a small stream, which runs into the Argisch. These were no signs of the Russians who had retired behind the Argisch, and burnt the bridges of Koman and Gradeschti. Eleven deserters were taken in the woods between Fratcschti and Gradeschti, and from them it was ascertained that great discouragement existed amongst the Russian soldiers, and that a proclamation had been recently issued calling on them to take heart; that the Czar was threatened on all sides by the two Great Powers, the English and the French; that the Turks were acting, as it were, in the centre; and that it had become necessary to concentrate behind the Pruth. Whether this be true or not, I cannot say, the story being only founded on the tales of deserters. Be that as it may, the Russians appear to be retiring on Yassy, and to have abandoned the position of Kalougaren, which lies on this side of the Argisch: their retreat took place under the superintendence of Prince Gortschakoff.

Giurgevo is becoming gradually filled with inhabitants, and resumes daily its wonted activity.

Bucharest, August 10, 1854.

It was supposed to be a dead secret on the 5th at Giurgevo that a reconnaissance would be made as far as the gates of Bucharest, to ascertain whether the enemy had completely evacuated the town, or whether the centre of the Russian army still held its old positions. But, as six or seven regiments of cavalry were observed to march towards Fratcschti on the evening of the 5th, accompanied by two batteries of field-pieces, I determined to follow up their steps; and, accordingly, started on the 6th along the main road which leads to the capital. At Kalougaren the bridges had been repaired by Captain Symmons; several regiments of cavalry were encamped, with the artillery, on the heights of Croce di Petra; and Suleiman Bey and Skender Bey had advanced to Dereschti, and thrown their advanced guards over to the left bank of the Argisch. The camp of the cavalry on the crest of the wooded hills above the Salesa was one of the most picturesque sights that could be witnessed. On the road, which the forest hemmed into a narrow pass, were picquetted two regiments of cavalry—Lancers and Carabineers. In the woods on the right were Sadyk Pacha's Cossacks. The tent of the General himself was pitched amongst the trees, from which glared the bivouac fires of his attendants. A dim twilight enabled one to see the men at their varied avocations, yet left a sufficient darkness upon the ground to give the fires their full effect in the glades where they were kindled. The hoarse murmur of innumerable voices, the neighing of horses, and loud trumpet-calls, completed the characteristic features of the scene. There was an order amidst apparent disorder which gave it a highly military appearance. Here and there were to be seen groups of Wallachs, whose white dresses contrasted picturesquely with the uniforms of the soldiers. Cart-loads of hay and maize came up at intervals, and were appropriated by the squadrons for which they were destined; and cooking, smoking, swearing, and snoring, were going on in every part of the camp.

The *reveille* was sounded at half-past two o'clock in the morning, and at daybreak a squadron of Sadyk Pacha's Cossacks were told off to accompany Halim Pacha to Dereschti. After passing the bridges newly made by the Turks, the Pachas crossed the village Kalougaren—which is a collection of small huts commanded by a few more important houses, such as a Khan, and the residence of the lord of the manor. Large pools of green and dirty water surrounded the huts. Pigs were wallowing in them, and notwithstanding the coolness of the morning, innumerable flies rose around the horses as they marched, and teased them into madness. Of all the marshy, low, unhealthy places that I have seen, none has struck me as more hideous than Kalougaren. Like many Eastern villages, it is, however, extremely picturesque, when seen from afar, and the tin-roofed houses which overtop the rest, seem to nestle in their beds of trees, and look the picture of cool retreat. The road from Kalougaren to Dereschti has nothing to distinguish it from others that run through corn and maize-fields, in a flat country. Dereschti is a place of no pretensions, but the vicinity of the Argisch, which is crossed there by a bridge of boats, as well as the small distance which separates it from Bucharest, render it pretty and more imposing in appearance than others. There were two regiments encamped, partly above the village, and partly on the other side of the Argisch, when Sadyk Pacha and Halim Pacha came up. Captain Symmons was reposing in a room on one side of a quadrangle which, before the arrival of the Russians, had been a slaughter and tan-yard, and since had been turned into stables. Skender Bey was seated under a verandah outside, whilst Colonel Ogilvie and Lieutenant Ballard, who had arrived overnight, were breakfasting upon an egg a piece in a snug little quarter of their own. Every one was in high spirits. Captain Simmons had crossed the Argisch on the previous evening, occupied the whole of the village of Upper Dereschti, crossed a branch of the Argisch there, and placed the Turkish vedettes near Mogureli, from whence a distinct view could be obtained of the steeples of the Wallachian capital. No enemy had appeared in sight. A few deserters had been taken in the maize-fields, and it was evident that the enemy were at a considerable distance on the road to Ureitschoni. It was, therefore, with considerable astonishment and disgust that the order was received to remain that day at Dereschti. The Pachas assigned no reason for not advancing; but their resolution was not to be moved by the arguments of Captain Symmons, or the prayers of Skender Bey. The former, in disgust, took the road to Giurgevo, accompanied by Colonel Ogilvie; whilst Lieutenant Ballard and myself remained to wait for a change in the uncertain mind of the Pacha. It was a happy thought. No sooner had the English officers departed than Halim Pacha changed his orders, and the first notice of his intention was the rapid movement of Sadyk Pacha's Cossacks and the regiment of Lancers of Suleiman Bey across the bridge of Dereschti. We forded the upper branch of the Argisch near Mogureli; we dashed up the hills from the vale in which the river runs, and saw the tin steeples of Bucharest glistening in the hottest mid-day sun that ever burned the flat or sandy plains around the city. A small advanced party had searched the maize-fields on every side, and no sign of an enemy was visible. We thus arrived to the gates of Bucharest. The peasants till then had looked upon us in stupid wonder. They did not expect us, and they had been so long accustomed to the Russians that they perhaps had lost all hope of seeing Turks.

The main body of our force halted shortly from Bucharest; and, a troop of Carabineers and Lancers having been detached, the forward march commenced. At the first barrier, where a toll-gate is erected, a crowd had already gathered, and noisy acclamations testified the joy of the people. The steady and respectable bowed and took off their hats; the peasants stood with uncovered heads, waiting till notice was taken of them; and a parcel of Jews prostrated themselves on the ground with the abject habit which their race exhibits in the East. The first sight of the broad road which led into the town showed us long lines of low houses detached from each other, well, white-washed, at the doors of which stood the inhabitants, wondering at such a small troop entering a large town hitherto occupied by masses of Russians. The crowd increased as the cavalcade proceeded. Genile forms with dark eyes were at the lattices; handkerchiefs were waved, and heartfelt welcomes greeted us as we passed. The people hurrased, seized our hands as we passed, and showed every symptom of joy. It was no preconcerted triumph. It was the spontaneous outburst of long pent-up feelings that made the scene so genuine and so grateful. No doubt there were, amongst the 150,000 inhabitants of the capital, many whose sympathies were with the Russians—ties of caste and of interest held them firm; but the mass were there in the streets and at the windows; and amongst them the wealthy and the noble; and there could be no treachery in their eager looks, their joy, and their acclamations. Such scenes as these are worth ten years of propaganda. Well may Budberg have issued a proclamation, in the name of Nesselrode, accusing the Wallachians of ingratitude and disaffection to the Russian cause. It was evident that the hearts of the people were not with the Czar, and that the protection which he claimed they looked upon as nothing less than despotic interference.

Having paraded the whole town amidst the enthusiasm of the inhabitants, it became necessary to halt and obtain some refreshment. There was no lack of kind offers. Invitations poured in from all sides; but a place of public resort was preferred, and we halted before a hotel, situated near the theatre. The people in the square disputed with each other for the honour of holding the horses; and as for the servants and soldiers, it was ludicrous to see the attempts of contending parties to seize them and carry them in triumph to the neighbouring taverns. The square below was full of people, grouped around our followers, asking questions which were not understood, and receiving replies which they could not understand; but signs soon took the place of words, and each man of the Turkish troop that had not been dragged away was the centre of an anxious and admiring crowd. Inside the hotel the enthusiasm was the same. Champagne flowed round, and was drunk to the confusion of the Russians. All the tongues, which for a year had been tied up by the dread proclamations of Budberg and Halchinski, seemed to talk at once, and with difficulty we tore ourselves from the crowds who surrounded us, mounted our horses, and rode out of the town.

Whilst we were receiving this ovation, Skender Bey had come into the town, and visited the Minister of the Interior, Cantacuzene, and the Austrian Consul, who witnessed from the windows the enthusiasm with which he was received, and the flowers which were thrown at him. Sadyk Pacha had returned in the meanwhile to Dereschti, where we joined him, and from whence, next day, a further movement of retreat was made, by order of Halim Pacha, to Kalougaren. Whether from jealousy, or anxiety for our safety, the Commandant refused all permission to stop at Dereschti, and we were forced to follow the retreat. At Kalougaren, however, fresh orders to advance had already been received; and, the same day on which we left Dereschti, we returned there, accompanied by artillery and several regiments of cavalry. On the morning of the 8th it became known that we should enter Bucharest in force. The troops, headed by Sadyk Pacha and Halim Pacha,

RUSTCHUK.—BRIDGE OF BOATS IN COURSE OF CONSTRUCTION.

(*Continued from page* 194.)

entered, and paraded the town in state. They were met by M. Cantacuzene and the authorities. The Wallachian troops—consisting of Lancers, Cossacks, and Infantry—dressed in Russian uniforms, were drawn up on the line of march, and there was a great deal of dust and heat on the occasion. Everything passed off extremely well. Sadyk Pacha took up his quarters in the palace which Prince Gortschakoff had but just left; and Halim Pacha retired to Mogurell, leaving behind, to perform the duties of a garrison, the Cossacks and a regiment of Lancers. The mere reading of this letter will show you what a hesitating and timid General is Halim Pacha. It will be difficult for him to explain why he refused to visit Bucharest with Captain Symmons, and why he sent a reconnaissance thither an hour after his departure.

We are told some amusing stories which illustrate the period of the Russian retreat. In the square next to the hotel in which we are now quartered was a Russian guard-house. Whenever a general officer appeared in sight, it was customary for the sentry to ring a bell above his box, upon which the guard turned out and paid the military honours. As the Russians left the guard-house, the place was invaded by a host of little boys, one of whom shamming to be a General, the bell was rung, and the brats rushed out, with sticks instead of guns, and paid imaginary honours to the officer. The police, seeing the joke repeated, removed the bell. The Russian colours still adorn the barrier and posts where the guard was placed. There are many other signs of their presence; and Bucharest may be counted at this moment amongst the most expensive capitals in the world, the officers having cast their imperials about in a truly princely manner.

Prince Gortschakoff and his officers did not say adieu when they left, but promised a speedy return. They are now at a considerable distance, beyond Buzeo, and I do not think their next visit to Bucharest a near one. Liders moved his corps from Kalarasch and Liprandi from the opposite frontier, before Gortschakoff with the centre left this place. They are, doubtless, on the march towards Ismail, which they may suppose threatened by the French, who are between Babadagh and Toutcha. We learn already of successes in that direction, and the French are said to have beaten a small force of cavalry, from which they took three guns.

A somewhat unmeaning proclamation has been published here, of which the following is a copy:—

The armies of your Sovereign have entered this town with the object of maintaining peace and order, and of respecting the existing Government. Until it shall please him to make changes in your situation, no one shall be allowed to take the initiative or ask for change with noise or turbulence; for all such persons will be punished with severity. The Russian armies, when they left this town, entrusted to our care several of their sick whom they were unable to remove. We shall show that we deserve this confidence; and, until hospitals are formed in this city, they will be treated where they are with all the care which humanity requires for, two empires which to-day are at war to-morrow may be friends, and should mutually respect each other during time of war. Such are our wishes and the Wallachs will conform to them to prove their gratitude and submission towards their all-powerful Sovereign.

(Signed) HALIM, General.

Bucharest, July 27 (August 9), 1854.

DISCUSSING THE WAR AT COPENHAGEN.

We have been favoured by a Correspondent (Mr. E. T. Dolby) in the Baltic fleet with the accompanying characteristic Sketch of a scene in a Coffee-house at Copenhagen, where a knot of quidnuncs are discussing the material and political chances of the war. In the centre of the group is seated an old Danish *savant*, who unfortunately speaks a little English, and invariably bores each new comer with the same question, and jeers at the inability of the English or French to touch the impregnable Cronstadt. No sooner did an English officer, *en route* for the fleet, present himself at one of the places of general resort at Copenhagen, than the Danish *savant* mustered his best English, and demanded to know what our Napier will attack first? when the crushing reply, from whatever Englishmen might be present, was, that whatever he makes up his mind to attack he will not retire until he has achieved his purpose; after which the Dane withdrew into a cloud of tobacco-smoke, only again to emerge to put the everlasting question, and, map in hand, to spare no endeavour to convince his hearers. We opine that, as time progresses, he will find the difficulties of his demonstration greatly increased.

DISCUSSING THE WAR, IN A COFFEE-HOUSE, AT COPENHAGEN.—SKETCHED BY E. T. DOLBY.

No. 700.—VOL. XXV.] SATURDAY, SEPTEMBER 2, 1854. [WITH A SUPPLEMENT, SIXPENCE.

FREE-TRADE IN FRANCE.

DURING his short but brilliant reign, Napoleon III. has conferred inestimable benefits upon Europe. He has accomplished what previous Sovereigns of France never had the courage to attempt, even if they had the sagacity to conceive. A firm and intimate alliance between Great Britain and France is no longer the dream of a few of the most enlightened statesmen and philosophers of both nations. Thanks to the clear intellect and firm will of Louis Napoleon, it is the realised blessing, present in the homes, and influencing, in a thousand beneficial modes, the fortunes of the mass of mankind in the great Commonwealth of Christendom. The *entente cordiale*, of which so much was said and written during a portion of the reign of Louis Philippe, was a sham and a delusion—a mere shadow—palmed off upon the world as a substantial fact by a hypocritical Minister and a fraudulent King. The existing alliance is a reality, full of vigour and fruitfulness, entered into with perfect sincerity by both parties, founded upon the most righteous of objects, and cemented, not alone by identical interests and a mutual sense of right, but by a community of peril and of glory. We would not seek to deprive the British Government of the full credit that is its due for holding out the right hand of fellowship to France; but it may with truth be said, that to Napoleon III. belongs the greater merit of accepting it, and of understanding to the fullest extent the happy results that were to flow from so auspicious a friendship. For the last quarter of a century, if not for a much longer period, the Government and people of Great Britain have ceased to look upon the French with even the smallest remnant of ancient jealousy and ill-feeling. If the intimate alliance that we now enjoy was not sooner formed, the fault was in the misjudging selfishness of the Orleans family, and of the obsequious and dishonest statesmen whom they employed, and not in the French people, or in the English, of any class or rank whatsoever. To Napoleon III. is to be adjudged by the discriminating verdict of the present and of future times, the high praise of doing, what before his time, no man could do, though many could imagine. Europe, far more than either England or France, has reason to be grateful for his work. The tide of encroaching barbarism has been driven back, and will be confined within its proper limits; and, though the war of 1854, which is the necessary price that has to be paid for the peace that the world hopes to enjoy for the next half-century, has yet scarcely begun, we know sufficient of its course its chances, and its achievements, to be quite certain that it will be ten or twenty times shorter than it would have been had the Emperor of the French been as stupid or as wayward as the King of Prussia, or as mean-spirited as the late unfortunate concoctor of the "Spanish marriages."

But Louis Napoleon has not only been the means, under Providence, of playing this great and beneficial part in countries not his own, but promises to confer upon the French people a number of advantages which they are not yet in a condition of mind to demand for themselves, or even to understand, or to appreciate. Though the *coup d'etat* by which he vaulted into the Imperial Throne was severely condemned in this country, events have proved that the Emperor knew the French character far better than his critics; and that he saw more clearly than any statesman or general about him a way for the salvation of his country.

The process which he adopted was certainly a rude one. But if the remedy for the disease was cruel, it cannot be denied that it had the essential merit of being successful. If a despot be a wise man, and far in advance of the intelligence of his people, his despotism may be a happy accident. Such despotism is like that of a kind father; and, if the world could be sure that all despots would act wisely and paternally, there are many places within its broad circumference, where their presence would be of temporary, if not of permanent benefit. Louis Napoleon has shown on many occasions, since his throne has been established, a wisdom superior to that of his people—but in no instance so advantageously, as in his adoption of the principles of Free-trade. He studied political and social economy in England; and has become too thoroughly convinced of the true sources of the wealth of nations, to allow us to hesitate in believing that he will sooner or later introduce a sound commercial policy into the Government of France. In this respect his trenchant despotism will be of more avail to serve his country than a slow and hesitating Parliamentary *régime* would have been. Every one remembers at what a bitter cost the battle of Free-trade was fought and won in the British Legislature: the severance of class from class which it occasioned; the antagonism of interests that it brought into play; the heats, the contests, and the animosities that grew out of it; the sacrifice of life-long reputations that it demanded; and the length of time that was consumed in fierce and useless recriminations, before the Protectionists were unwillingly convinced that Protection was a mistake, and before the people were allowed to purchase their food wherever it was cheapest, and to make their choice of the great markets of the world. If truth became finally triumphant, its victories were dearly purchased. The Emperor of the French will spare France a similar ordeal. Already, the Corn-laws have been virtually abolished, by a stroke of the Imperial pen; and French Protectionism, quite unaware that it has received its death-blow, bears the Imperial Free-trader no ill-will. In England, the reform of the tariff of Customs-duties preceded the abolition of the Bread-tax. In France, the process has been reversed, but the result will be the same. Having given the people cheap bread—not by the foolish interference of compelling the bakers of large cities to sell at a maximum, and taking the inevitable loss upon the shoulders

FRENCH LINE-OF-BATTLE SHIP "BAYARD." H.M. FRIGATE "LEANDER."

CONFLAGRATION AT VARNA.—(SEE NEXT PAGE.)

of the State, as he once attempted, but by the natural and reasonable process of opening the ports—he has turned his attention to the Tariff. Here he has found a mass of absurdities as vexatious and useless as those which the sagacious Sir Robert Peel swept so ruthlessly away from the Tariff of Great Britain. Nearly twelve hundred articles figure upon the list, a great proportion of which are liable to Export as well as Import duties. In addition to imports upon manufactured goods of almost every kind, especially upon the cutlery, the iron, the woollens, and the cottons of England, every article of luxury or of necessity, pays a tax, more or less injurious to the commerce of France. But the heavy hand of the Emperor is upon it, and the Tariff will undergo a searching and a speedy reform Frenchmen, no longer in political antagonism, will cease to act with commercial hostility towards this country. The first steps towards a better system have been made during the past and the present week. A report in the *Moniteur*, addressed to the Emperor by M. Magne, the Minister of Agriculture, Commerce, and Public Works, recommended a reduction or an abolition of Customs-duties on various articles; and an Imperial decree followed in the same paper, by which a practicable breach was made in the great Sebastopol of French Protectionism. The articles that have been relieved are of small importance, but the reform is more valuable as a concession to the great principle from which other concessions are certain to flow, than for any immediate and tangible benefits which may be expected by the commerce of France or of this country. The principle, though not new to the Emperor, is new to his subjects; and, with the caution, as well as the boldness, which has marked his policy in other matters, he will not startle the French manufacturers by doing too much at a time, but will quietly continue what he has begun as occasion shall serve, and bring his work to a successful issue. It is not, as it was in England, the agriculturists who cling to the fallacies of Protection. The manufacturers of silk, linen, cotton, and woollen goods, and of iron and other metals, are the persons whose obstruction would have to be guarded against by any ruler less decisive in his actions and less firmly seated in power than Louis Napoleon; but these gentlemen will some fine day discover France to be a Free-trading country, without their having been consulted. That they will be large gainers by the result, the experience of this country is a sufficient guarantee. The establishment of Free-trade in France will complete the good work which the alliance of France and England in defence of Turkey has begun. It will render steady and permanent a friendship which might otherwise have been exposed to political dangers of many kinds, and will weave around the two greatest nations of Europe the bonds of mutual interest and prosperity—bonds that are far harder to break than any which Governments can frame, or which Legislatures can sanction.

CONFLAGRATION AT VARNA.

(From a Correspondent.)

WE have been favoured by a Correspondent with the accompanying view of a destructive fire at Varna, sketched from the bay. The following are the details of the frightful scene:—

"On the evening of Aug. 10th, about sunset, all eyes were directed to the *Agamemnon* crossing the bay, and speculating upon the probability of her entering the port. At the time, a small column of smoke, apparently from a steamer near the town was scarcely noticed; or, if noticed, merely exciting the remark, "another steamer under way." In a few minutes this small cloud magnified itself into one of gigantic proportions, from whence dark red flames were seen to issue. It was evident the flames were increasing with appalling rapidity; for, shortly after, the whole bay was illuminated with their brilliancy, and the dark mass of smoke had assumed a most beautiful rosy tint. In the bay were the *Bellerophon*, *Sanspareil*, and *Leander*, English; French ship *Bayard*; with numerous steamers-of-war of both nations—the Turkish fleet mustering eight line-of-battle ships, and various other craft, consisting of brigs and steamers, swelling the numbers.

"All these vessels sent parties on shore with their fire-engines; but, notwithstanding the most energetic exertions, the flames gained ground. Messengers were sent to the English and French ships of war for more assistance. The fire was rapidly approaching towards the gunpowder magazine of both armies, and it was necessary that the ammunition should be removed. However, it was found that this would be too slow a process; and efforts were made, by pulling down the houses in the vicinity, to cut off the fire from this dangerous neighbourhood. But, shaky as these houses appeared, this was a more difficult undertaking than was supposed. They seemed to defy all the strength that was brought to bear upon them. Playing water upon the burning mass seemed like adding fuel to the flames. The whole strength of the fire-engines was, therefore, poured upon the magazines. Bales of blankets were taken from the Commissariat stores and laid upon the roof and nailed against the walls These being kept wet by the engines playing upon them, preserved the magazines from the fury of the flames. It is impossible to say what might have been the consequence of the destruction of the magazines An attack upon Sebastopol, or any other place of importance, would have been rendered impossible; and the loss of life that would have occurred is frightful to think of. Amidst the confusion attending such a scene, and the almost utter impossibility of forming any plans, it is wonderful how much was done when, to other difficulties, you must add that of managing bodies of men of various nations and habits—French, Turks, Greeks, English—soldiers and sailors all mingled together, all wanting to do something, and yet with difficulty made to direct their energies to the same point. To these must be added the supplies attached to the Greeks, many of whom did not disguise the delight they felt at the conflagration. The utmost advantage was taken by the various people employed to raise a spirit of emulation amongst the men:—"Voila les Anglais," the French would say. "You are not going to let these Frenchmen beat you," would be the cry of an English officer. Again, "The soldiers are laughing at you blue-jackets;" or, "Those sailors carry everything before them," as the case may be. But scarcely any thing could rouse the apathy of the Turk—I allude to the resident Turk. Many a rough handling they got. Several were observed to be well shaken by the collar, to try to force a little energy into them; and, *nolens volens*, were dragged to the pumps and made to work there. A Greek, who showed his delight in too open a manner, had his way freshened by a considerable portion of physical force applied to his stern-frame, and, to add to his chagrin, was kept to work. It is fortunate that no panic seized the men. The slightest misgiving on the part of any of the officers would have caused the destruction of all. Two or three hundred French soldiers were laid on a rope for the purpose of pulling down a house. There happened to be a small portion of powder lodged there, which exploded. Immediately the cry was raised, "Le magasin!" "La poudre!" when the whole body dropped the rope and ran off as fast as possible, leaving officers, French and English, alone. As usual, the sailors were everywhere conspicuous—mounting the roofs of the houses, climbing like monkeys, and venturing where no other person would think of approaching. The calmness with which they kept the roof of the magazines, and directed the engines pipes upon the blankets was beyond praise. The fire was not got under until near three a.m. of the following day; it had advanced to within a dozen yards of the magazine, which nothing, as I have before said, but the coolness of the people at keeping at their post, prevented from being attacked by the flames. The greatest difficulty was to keep the people sober; and this may be said of all parties. Casks of wine were staved on every side, and in many places you were literally up to your knees in wine and olives. There is comparatively little loss in a public way. To the left of the drawing, near the low buildings, is where the fire raged with the greatest fury. Here were the brandies of the French army. They burned for some hours with intense fury and splendour, sending forth an almost pure white light. The loss to individuals is, doubtless, very great; and amongst the sufferers are various storekeepers, who came to this place to supply the wants of the fleet and others. A very large portion of the town is destroyed, including three mosques. We have nothing beyond conjecture to account for the origin of the fire. Some think it the work of an incendiary. But the prevailing idea is, that it originated in a wine-shop. The fire lasted throughout the next day, and at night of the 11th there was every appearance of a fresh outbreak."

FOREIGN AND COLONIAL NEWS

THE SURRENDER OF BOMARSUND.

In the account we gave last week of the capture of Bomarsund we were unable to supply any particulars relating to what took place on the 16th ult., the day on which the long fort surrendered. By the last mail from the Baltic ample accounts have been received of the surrender which took place about one p.m. On the morning of that day the *Ajax*, *Edinburgh*, *Blenheim*, *Amphion*, *Phlegethon*, *Dupperé*, and two other French vessels, commenced, at long range, a decided attack upon the fort. The French troops had also erected a field-battery which would soon have made a deep impression on the walls. Under these circumstances the Governor, seeing that he was fairly surrounded—that there was no hope of obtaining relief—ordered a white flag to be thrust out from one of the embrasures. The *Edinburgh*, *Bulldog*, and *Driver* immediately hoisted a similar flag to the fleet to suspend firing, while Sir Charles Napier and Admiral Chads proceeded in a small unarmed boat to the shore. It was a period of breathless anxiety, for the advanced Chasseurs and some few English sailors were seen mounting the rocks, and eagerly pressing on to the very gates of the fortress. General Baraguay d'Hilliers and his staff at the same time wound round the roadway and galloped up to the fort. The General motioned the soldiers to remain off a few yards, for fear of treachery; and at length the Governor, General Bodisco, came forth to parley, but, finding that an unconditional surrender was demanded, he delivered up his sword to the English Admiral and French General. A French aide-de-camp was then dispatched to order a general advance of the army, and at the same moment the Royal Marines and Artillery, and the remainder of the Chasseurs, came scrambling down the ridges. They at once entered the fortress, surrounded and took charge of the magazine, and the troops pouring down either entered or drew up in line outside.

It was a scene of singular interest to behold the conquerors animated with victory, and contrast the dejected air of the Russian soldiers as they bent forth from the embrasures looking sullenly upon them. Under the walls of the huge fortification the ground was completely bestrewed with 84 lb. shot, broken shells, grape, and canister, intermixed with enormous sheets of iron that had been dislodged from the roof, and fragments of the granite walls which have been broken away in thousands of places. In the interior, which was a large square and parade-ground, the fatal missiles, and heaps of broken granite and brickwork, bespoke the terrible vigour of the siege. The commanders then demanded the arms, which the prisoners brought and piled up in the square, near to the furnace where their red-hot shot had been heated The prisoners having collected their personal baggage, were ordered to be immediately removed on board the men-of-war. The Commanders-in-Chief, Sir Charles Napier and General Baraguay d'Hilliers, with Admiral Chads, Captain Ramsay, Captain Pelham, Captain Yelverton, General Jones, the Colonels of the French Regiment, the Hon. Captain Cochrane (aide-de-camp to the French Commander), Lieutenant Agnew and Lieutenant Chads (Flag Lieutenants), with a brilliant staff of French officers on horseback, were drawn up in a space of ground on the outside. The whole army lined the way for 800 yards, extending from the gateway to the mole, or landing-place, and they stood with loaded guns and fixed bayonets, the Royal Marines and Marine Artillery being ranged on one side of the entrance, and the Chasseurs on the opposite. Between this file of men the prisoners came forth two by two, the Russians first, and the Marines striking up national tunes, which were taken up by each regiment in the rear. The Russians looked dispirited and cast-down, the only repose they could obtain for five days having been by the side of their guns. At intervals, a few drunken boats escaped from the fort. A partial revolt had arisen previous to their surrender; and, on seeing the army enter, many had rushed to the spirit-casks. These men were the last that could be got out; and, on hearing the music, they commenced their national pastime, and indifferently danced a polka through the whole line. One man was brought out between two French soldiers: he had been discovered attempting to fire the powder-magazine when in a drunken fit, and was shot on the following day. The large pinnaces and cutters from the squadron rapidly embarked the men; and, in three hours after the surrender, they were placed on board the men-of-war.

The character of these operations may not be termed of very vast importance, but they will deserve to be ranked as a most scientific organisation of attacking forces—2300 of the enemy secured, in what they deemed to be unapproachable fortresses, have been made to surrender with the loss of only four English and about eighteen French. The tremendous power of our 10-inch guns have been the chief cause of this small loss; for at the time the *Edinburgh* and *Ajax* were at 3300 yards, throwing 84 lb. shot, the enemy's shot were falling inert between them and the fort. Moreover, the force actually employed was not great, as will be seen from the following analysis:—100 Chasseurs (artillery) and 600 Riflemen, with three mortars and three field-pieces; Captain Ramsay's battery of 100 blue-jackets, with three 32-pounders; 60 Marine Artillerymen, with four 12 lb. howitzers; 200 Marines employed in skirmishing; and Captain Pelham's 10-inch gun on the mud battery, with 20 men. These were the land forces at work The rest of the army were kept in reserve. It must also be remembered that the steam ships, with the exception of the *Edinburgh* and *Ajax*, fired only their two large guns, and the two latter, although mounting 60 and 58 guns, never brought more than 4 upper-deck guns to bear. By this admirable and well devised scheme of Sir Charles Napier, an immense amount of life has been saved by prolonging the siege a few days, and thus harassing the enemy. The French men-of-war have no metal equal in power to the English; they did no execution, and drew off very early. On the contrary, the Chasseurs fought throughout with coolness and business-like precision, and the close cover of the rocks they would throw into an embrasure such a shower of bullets that the enemy could not stand to load their guns, ten and fifteen minutes frequently elapsing after a discharge before they could fire again. The Russians are scientific gunners, and the accuracy with which the Allied batteries being so steadily formed comparatively little loss took place. The amount of property lost by the destruction of 300 or 400 houses has been estimated at £100,000. Why the Russians wantonly caused this conflagration is a mystery, and it was for the purpose of preventing an ambuscade it was essentially fruitless, for the rocks around answered all the purpose of protection for the besiegers.

According to the *Moniteur*, the Government of the Emperor and that of her Britannic Majesty, have resolved that the fortifications of the archipelago of Aland shall be destroyed, and Bomarsund evacuated.

The following official Despatches from Sir Charles Napier appeared in Tuesday's *Gazette*:—

ADMIRALTY, AUGUST 28.

Despatches, of which the following are copies or extracts, have been received from Vice-Admiral Sir Charles Napier, K.C.B., Commander-in-Chief of her Majesty's Ships and Vessels in the Baltic:—

(No: 380.)

Bulldog, off Bomarsund, August 19, 1854.

Sir,—I beg to inclose a letter from Rear-Admiral Plumridge, who was stationed, with the *Hecla* and the French steamer *Cocyte* (commanded by Lieutenant de Vaisseau A. Georgette du Buisson, on the north side of Bomarsund.

2. I had intended to have brought his squadron through the Presto Channel, to have shelled the north side of Bomarsund; but, as the breaching batteries were placed, he could not take that station without endangering the men in the French batteries; he therefore very wisely took up a position so that he had the Presto Tower and Bomarsund in a line, and did good service against the Presto Tower, which I afterwards examined. He was rather too close, being within range of the enemy's fire, and received some damage, but no one was hurt.

3. The ships I stationed to the southward were out of range of the enemy's guns, and received no damage; but the shot and shells from the 10-inch guns, together with the fire from the four French mortars, which never missed, and the excellent fire from Captain Pelham's battery, together with the preparations the enemy saw in progress, I presume, expedited the surrender.

4. Had the enemy held out till the following morning, when the breaching battery, judiciously placed by the French engineer (General Niel) within 400 yards of the rear of the fort, and the ships the French and English Admirals intended to place in their flank, the fortress would have been reduced to ashes.

5. I have the honour of enclosing lists of the whole British force landed, and of casualties; together with a list of prisoners and guns captured, being no less than 112 mounted, 2 mortars, 7 field-pieces, and 79 not mounted.

6. The commissioners are now taking an account of the stores, and they are preparing plans not only of the batteries in existence, but of those in progress, which I shall send home as soon as possible.

7. This has been a most arduous and laborious service, and I have great reason to be satisfied with the great exertions of all the officers, seamen, and marines, and their orderly conduct.

8. General Jones speaks in the highest terms of the conduct of Colonel Graham and his marines. The firing of the seamen and marines and marine artillery, under Captain Ramsay, was most precise; he himself was slightly wounded.

9. The shells thrown by the ships were most destructive, and had the fortress resisted till the following day, when all was ready on shore, they would have been irresistible.

I have, &c.,
CHARLES NAPIER,
Vice-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

Leopard, at Bomarsund, August 17, 1854.

Sir,—Observing on the 16th inst. the Presto Tower's fire was harassing the construction of General Jones's battery, I moved (in obedience to your orders) the *Leopard*, *Hecla*, and French steamer *Cocyte* into a delightful sequestered position, screened from observation by the trees on the neck of land to the eastward of the tower, having the great Bomarsund Fort and it in one, so that our over shot and shell should fall to the lot of Bomarsund

The simultaneous opening fire from the three broadsides was the first intimation the tower inmates had of our movements, and I had the satisfaction of seeing (at times from aloft) the steadiness and precision with which the shot and shell were delivered from each vessel. I only regret that the trees alluded to obscured us all from your view, as I feel almost assured this bit of service would have been deemed worthy of better notice than it becomes me to make, except so short a distance from your flag. It is, however, sir, my most gratifying duty to state, on behalf of the whole of the officers and ships' companies, that I entertain the most lively sensation of their exertions, as well as of the exemplary animation exhibited by Captains Hall and Giffard, and Lieutenant de Vaisseau A. Georgette du Buisson, of his Imperial Majesty's steam-vessel *Cocyte*.

I have, &c.,
HANWAY PLUMRIDGE,
Rear-Admiral of the White.

Vice-Admiral Sir Charles Napier, K.C.B.,
Commander-in-Chief, &c., &c., &c.

A return of the killed and wounded in the force under the command of Brigadier-General Jones, between the 7th and 18th of August, 1854, at Bomarsund, Aland Islands:

Killed—The Hon. C. Wrottesley; Henry Collins, private, R.M., *Duke of Wellington*.

Wounded dangerously—Thomas Baughan, private, R.M., her Majesty's ship *Blenheim*, ankle-joint by a fragment of a shell; since amputated.

Wounded severely—William Mitchell, A.B., her Majesty's ship *Blenheim*, by splinters of iron.

Slightly wounded—William Bridle, gunner's mate, her Majesty's ship *Hogue*, by splinters of iron.

Slight contusion—Captain William Ramsay, her Majesty's ship *Hogue*; Lieutenant G. F. Burgess, R.N., her Majesty's ship *Edinburgh*.

Burnt—John M'Gegan, A.B., her Majesty's ship *Hogue*, in the foot; John M'Griffin, A.B., her Majesty's ship *Hogue*, foot.

A. R. BRADFORD,
Surgeon of her Majesty's ship *Hogue*, and medical officer in charge of the above force.

Approved—W. RAMSAY, Captain.

No. 381.

Bulldog, off Bomarsund, Aug. 18, 1854

Sir,—I have received their Lordships' letter of the 7th inst., approving of all my proceedings, and their satisfaction at Admiral Plumridge's activity and judiciousness.

2. I owe much to Admiral Plumridge for the manner he placed his squadron to prevent reinforcements being thrown in; and I am informed two Russian Admirals were sent among the islands to see if it were possible to pass the blockading squadron, and returned in despair.

Rear-Admiral Plumridge, as second in command, I have removed into the *Neptune*, Rear-Admiral Martin will hoist his flag on board the *Leopard*, and take charge of the Gulf of Bothnia during the rest of the season, which will not be long.

I have, &c.,
CHAS. NAPIER,
Vice-Admiral and Commander-in-Chief

The Secretary of the Admiralty.

(No. 397.)

Bulldog, Lee Sund, August 22, 1854.

Sir,—I am happy to inform their Lordships that Rear-Admiral Chads has conducted three of the line-of-battle ships in perfect safety through all the intricate navigation of the channel from Bomarsund to this anchorage.

I have, &c.,
CHARLES NAPIER,
Vice-Admiral and Commander in-Chief.

The Secretary of the Admiralty.

Return of Russian prisoners embarked in the undermentioned Ships.

Hannibal—Officers, 8; privates, 304; wife of officer, 1; wives of men, 7 children, 2. Total, 343.

Alcide—Officers, 8; privates, 409, wives of officers, 2; wife of man, 1. Total, 420.

Royal William—Officers, 16; privates, 731; wife of officer, 1; wives of men, 3; children, 5. Total, 764.

Germanicus—Officers, 8; privates, 399; wives of officers, 2; child, 1; servant, 1. Total, 271.

St. Vincent—Officers, 15; privates, 499; wives of men, 5; children, 2. Total, 521.

Grand total, 2235.

(Signed) F. W. GREY, Commodore.

THE EXPEDITIONARY FORCE AT VARNA.

The telegraphic despatch we gave last week, announcing the departure of the expedition to the Crimea, proves to have been false. Letters from Constantinople, of the 20th ult., have been received, and they state that no part of the fleet had sailed up to that time. We are glad to learn, however, that the sanitary condition of the Allied army was rapidly improving; the disease was everywhere on the decline, and the moment was fast approaching when the Generals could attempt important operations without compromising the health of the troops. The preparations for the expedition were proceeding with extraordinary activity, both at Constantinople and at Varna. The Bosphorus was crowded with steamers destined to carry troops, munitions, and *materiel* of siege. The last corps of the Light army, which remained at Buyukdere, had left for Varna. The real object of the expedition was still a profound mystery to all. It was generally believed that an attack against Sebastopl and a landing in the Crimea were contemplated.

There was a large fleet of transports, all English, at Baltsch ok, and Varna harbour was full of vessels. In addition to French transports there was the Turkish fleet (five line-of-battle ships), the French fleet of three line-of-battle ships), eight steam frigates, two despatch-boats, seven transports, and the English men-of-war, *Agamemnon*, *Bellerophon*, *Sanspareil*, *Leander*, *Cyclops*, *Firebrand*, *Simoom*, *Vulcan*, *Highflyer*, and *Megæra*. Both the French and English troops had been busily employed for several days in embarking and landing artillery, by way of practice. It was found that the paddle-box boats of the *Firebrand* would hold eighty-four men, with all their pack, &c., in heavy marching order. The pontoon-boats held two guns, the gunners belonging to them, the carriage, everything, in fact, but the spare ammunition waggon. Lord Raglan, Sir George Brown, and Admiral Lyons were over from Varna in a small steamer, to witness the operations, which took place very early in the morning at the opposite side of the bay. All the officers of the fleet were invited to attend. The men were landed soon after they were embarked, and men, horses, and guns returned to their quarters; in fact, it was merely an experiment to see how many boats would carry, and in what time a given number of men could be embarked on board. These experiments have, no doubt, given rise to the report which appeared in a Trieste paper, that the embarkation of the first part of the expedition began on the 18th.

Since the great fire on the night of the 10th, the cholera has diminished in Varna, and the reports from the various camps are much more favourable than heretofore. The chaplain of the Light Division, on one day during the previous week, had not to perform any funeral service. Since then there had been several days on which the deaths in the division had not exceeded one or two. The plan of wide-open encampments had answered well in checking disease. The British army is now scattered broadcast all over the country, from Monastir to Varna, a distance of twenty-six or twenty-seven miles. The Allied fleets had suffered severely from cholera, but the disease had greatly abated when the mail left Constantinople.

On the 13th, 5000 of the Ottoman troops were embarked at Constantinople, on board six French frigates—the *Ulloa*, the *Lavoisier*, the *Pomone*, the *Eurmenide*, the *Mouette*, and the *Dauphin*. This was the first convoy of Turkish troops who are to form part of the expedition. On the 14th, 3000 more Turks were carried on board the *Napoleon*, the *Charlemagne*, the *Magador*, the *Téléphone*, and the *Mégere*. These troops are enchanted at forming part of the expedition, and are to be under the orders of Suleiman Pacha, an excellent officer, who speaks French well. The Minister of War, Rechid Pacha, was present each day at the embarkation of these troops, and paid a high compliment to the officers of the French navy for the promptitude and regularity with which they conducted everything. His men are described as strong able fellows, well inured to fatigue, and most anxious to distinguish themselves.

GREAT ALARM AT ODESSA.

The inhabitants of Odessa, who have no doubt heard of the preparations making at Varna, are said to be in a state of great alarm. The sight of an enemy's ship in the distance is sufficient to fill them with the utmost anxiety for the safety of their homes, and many have fled to the steppes, to be out of the range of the enemy's guns, which, as they have already discovered, throw their balls to an immense distance. Some of them have been picked up above two miles beyond the town. The Commandant of Odessa has issued a notice that he will give fifteen kopeks for every ball picked up and brought to the arsenal. The working people, having nothing to do, in consequence of the complete stagnation of trade, go prowling about after these missiles; and if a man can bring in two or three a day his living is secure. The damage done to the town by the last bombardment is now completely repaired. All the hands at the disposal of the Government have been employed in the fortification of the war and the commercial harbours, which they hope to have once in such a condition as will enable them to withstand any attack. The reinforcements from the interior of Russia have been continually arriving in Odessa for the last month. They do not, however, remain, but continue their march for the Crimea. On the 14th August the garrison was consigned in all haste to barracks, and the following proclamation was read —

In his exalted wisdom his Majesty the Emperor has ordered the withdrawal of the troops which had entered Moldavia and Wallachia, and commanded their presence here where the danger is greater. In order to the protection of the Danubian Principalities against an invasion by the Turks, the ancient ally of his Majesty the Emperor undertakes the duty of temporarily occupying those provinces. In this place we have to do with a new enemy, who entertains the wicked and presumptuous intention of attacking us in our own country. This enemy has been repeatedly fought and vanquished by our brave fathers. From you his Majesty the Emperor expects the like. By your bravery and discipline you will conquer and utterly defeat the foe. This new enemy is more expert and courageous and better led than are the Turks; nevertheless, your valour and might will suffice to overcome him, as your fathers have done before you. In the battle with these French, think of the glorious year of 1812, when the Heavenly Father prepared also his armies against these godless and presumptuous men, and caused them all to perish amid ice and snow.

TURKISH REVERSES IN ASIA.

The news from the Turkish army in Asia is not so favourable as that from the Principalities. Letters from Trebizond give a sad description of the Turkish troops, and their complete want of organization. They also give the following details of the defeat of the Turkish army of Asia by the Russians at Kars and Bajazid. The Turkish camp at Kerabouiak was attacked by 10,000 Russians on the morning of the 20th of July. Kerabouiak is six leagues from Bajazid, and the camp was guarded by 2500 Redifs and 6000 Bashi-bozouks. The Turks made a determined resistance, and the Russians were compelled to advance their reserve of 5000 men. At that moment Selim Pacha, who is said to have been bribed, in place of supporting his army, fled with his reserve of four battalions of regulars in the direction of Van. The remaining Turks, finding themselves deserted by their General, fled in their turn, and left on the ground 2600 men, together with their tents, provisions, and ammunition. The Russians immediately took possession of Bajazid, and advanced the next day in the direction of Erzeroum. The inhabitants of Erzeroum were flying with their property, that town being open to the Russians. The affair at Kars was still more sanguinary, the Turks having fought with more determination. The Turks, on the 7th of August, committed the fault of quitting their fortified positions and of attacking the Russian camp at Kurak-Dereh. The Turks had succeeded in defeating the right wing of the Russians, when the Russian General advanced his reserve and attacked the Turks with his entire cavalry. The Turkish cavalry gave way, and the infantry was compelled to retreat by a league. This movement was effected in good order, the Turks having with the bayonet successfully resisted all the attacks of the Russians. 4500 men were killed on either side, and, as the Turkish artillery was admirably served, it is believed that the Russians suffered most. One of their Generals was killed and two wounded. The Turks lost Hassan Pacha, and Mustapha Pacha was wounded in the left arm. The Russian dragoons captured 2500 Turks. The Turkish army remained in front of Kars. To all appearance they did not consider themselves beaten, as they were about to recommence the action when the courier was leaving.

Colonel Skender Bey (Lieutenant-Colonel Fricht), the bearer of these despatches, arrived on the 20th at Constantinople. He was commissioned by the Commander-in-Chief to ask for a reinforcement from the Allied army. Selim Pacha had been superseded in his command as General-in Chief of the Imperial Guard by Dhurbor Redschid Pacha, General-in-Chief of the Army of Constantinople, and in his post as Commander of the Corps of Batoum by Mustapha Pacha, who distinguished himself by his brilliant services in the Dobrudscha, and especially in the affair at Oltenitza.

THE AUSTRIAN OCCUPATION OF WALLACHIA.

The movement of Austrian troops into the Principalities commenced on the 20th of August, Count Coronini conducting all the operations. He is expected to arrive at Bucharest by the 5th inst., and will reside alternately at Bucharest and Jassy. Up to the 20th the Russians had made no serious preparations for quitting Moldavia. Troops had crossed the Pruth by way of Leova into Bessarabia, but these were battalions which had entered Moldavia from Kamieniz in Podolia, and were on their way to Odessa. By marching these troops through a part of Moldavia, instead of through the whole of Bessarabia, the Emperor Nicholas fed them at the expense of the Moldavians, instead of his own.

Omer Pacha having received news from Hermanstadt that the Austrian occupation would begin on the 19th, he at once sent off one of his adjutants to Marshal St. Arnaud, at Varna, with the following intelligence. On the 22nd he entered Bucharest with 25,000 men and thirty guns. He was followed by the young Prince Stourdza and a few French officers. The crowd was tremendous, and the enthusiasm great. There was a regular shower of flowers. He will remain at Bucharest until the arrival of General Count Coronini. Meanwhile he has sent the foreign legion, and all such persons as could be disagreeable to the Austrians, back to Rustchuk. The Turkish army now standing in the triangle formed by Bucharest, Giurgevo, and Oltenitza, is estimated at 80,000 men; and it is said that Omer Pacha is likely, during the present campaign, to undertake offensive operations against the Russians at Rustschouk and Ismail. Indeed, it is said that as soon as the Russians are in Bucharest, the Turkish head-quarters will be removed from Rustchuk to Babadagh in the Dobrudscha.

The Turks are fortifying Tirnova, which lies south of Sistova, and is one of the fortified places that was razed in accordance with the stipulations of the Treaty of Adrianople. According to that treaty the Danubian islands were to be considered neutral ground, but the Turks have taken possession of those which are of importance in a strategic point of view.

The Russians are fortifying the line of the Pruth in every possible way, and a Cossack *cordon* has been established all the way from Galatz-Reni up to Czernovitz. On the left bank of the Pruth great numbers of clay huts are being constructed, which are to serve as winter quarters for the troops. The Danubian flotilla is being removed from Ismail to the Lake of Yalpuck, and this is considered a proof that the Russians expect a combined attack on that place.

FRANCE, TURKEY, AND RUSSIA.

The commercial treaty existing between France and Turkey, which will expire in April next, was concluded in the year 1535, when Russian influence was predominant at Constantinople. The consequence of successful Russian intrigue was, that the terms of the treaty were most unfavourable to the French, and at the same time highly advantageous to Russian, commercial interests; so much so that a Marseilles merchant has been frequently compelled to borrow the name of a Russian in order to operate with any success in the Levant. The Emperor of the French is determined that this state of things shall no longer continue, and that France shall at least be placed on an equality at Constantinople with the most favoured nation. For this purpose the Minister of Commerce has, in anticipation of the execution of a new treaty of commerce between France and the Porte, addressed a number of questions to the Chamber of Commerce of Marseilles, for the purpose of ascertaining what modifications are necessary to give Marseilles the full advantage of its admirable geographical position, and the manufacturers of the entire of France facilities to open new and extensive markets in the Levant for the export of their produce. The opening of the Black Sea to European commerce is calculated, as was well observed by Prince Napoleon, in his speech at the Hôtel de Ville of Marseilles, previous to his embarkation for the Dardanelles, to confer immense advantages on France, but particularly on Marseilles.

AUSTRIAN ANSWER TO THE RUSSIAN NOTE.

The following translation of the reply of Count Buol to the Nesselrode note of June 29, which has recently been published, shows that Austria has been doing its best to keep back the Crimea expedition :—

TO COUNT VALENTINE ESTERHAZY, AT ST. PETERSBURG.

VIENNA, July 9.

Prince Gortschakoff has communicated to me a despatch of M. the Chancellor of the Empire, which contains the answer of the Russian Government respecting the invitation which we felt called to address to it with the object of procuring the withdrawal of the Russian troops from Wallachia and Moldavia. In this answer Russia exhibits an inclination to enter into negotiations respecting the precise execution of this evacuation, on the understanding that we guarantee that the Russian troops shall not be molested on their homeward march, and that the Powers shall not employ the disposable forces in an attack upon the Asiatic or European coast of Russia. The Russian Cabinet urges on us the consideration that it cannot voluntarily give up the only military position in which, supposing it to act on the offensive, there would be a prospect of restoring the balance in its favour. In one word, Russia desires that the evacuation of the Principalities shall have a general cessation of hostilities as its result. We cannot, of course, but regret that the Russian Court should have thought fit, in opposition to the remarks which we were compelled to introduce in our communication to it, to make the reception of our proposition dependent on circumstances obviously not under our control. Since, however, in our opinion, the request of Russia has its reasonable aspect, and his Majesty, our exalted master, holds it desirable to exhaust even the last means which appears calculated to bring about an understanding, the Imperial Cabinet will take pains, to utilise this communication with the Maritime Powers, and the more so as in its connection it appears to convey an earnest desire to attain to an adjustment. But while you bring this to the knowledge of Count Nesselrode, he good enough to take him understand very clearly that notwithstanding the conciliatory spirit which compels us to make this effort at London and Paris, we are compelled to insist upon the request in its fullest extent which we have directed to Russia, although we may not succeed in obtaining for our proposal that acceptance which we shall seek at the Maritime Courts. Please further to urge that since the position which we have taken up in this affair does not empower us to exert any direct influence upon the military operations of the Two Powers, our action is limited to recommending to their deliberate consideration the consequences which their decision may entail, and to represent to them that in our opinion all Governments appear to us to be equally called to join together in their endeavours after peace, by making all sacrifices not positively irreconcilable with their honour and their interest. (Signed) BUOL.

POLITICAL DEMONSTRATION AT COPENHAGEN.

A crowded meeting of the members of the Constitutional Society was held in Copenhagen, on Tuesday evening. Three thousand persons, including men of all ranks, were present. Enthusiastic resolutions were passed, supporting the ground law, denouncing the despotism of the *coterie*, and defying the Ministry. All the persons present solemnly agreed to sustain the Parliament in impeaching the Cabinet, and to refuse the payment of taxes until this step had been taken. A sum, amounting to several thousand dollars, was subscribed in the room towards forming a fund for guaranteeing the support of discharged civilians, members of Parliament, and for assisting the Constitutional press. The name of the King was not mentioned during the proceedings. At the close, loud cheers were given for the Constitution. The Ministry continue to threaten obnoxious public men, as well as members of the Parliament holding office. The consequence is, that fresh resignations are taking place.

THE REVOLUTION IN SPAIN.

The state of affairs in Madrid is still very unsettled. On the 28th there were some disturbances, said to be in consequence of the departure of Queen Christina, but the behaviour of the National Guard was excellent, and tranquility was speedily restored. The troops, in conjunction with the National Guard, stormed several barricades which had been erected, and crushed the insurrection, which had been partly caused by the suppression of the Union Club, on the 28th. A detachment of National Guards intimated to the members that they must disperse, and the order was immediately obeyed. Other clubs of less importance were closed at the same time.

In order to satisfy the public feeling which exists against Queen Christina, and at the same time to cover her departure, a decree was about to be issued sequestrating her property and suppressing her pension until the pleasure of the Cortes has been taken on the matter.

AMERICA.

The steam-ship *Atlantic*, which left New York on the 16th ult., arrived at Liverpool on Wednesday morning. M. D. Sickles, Secretary of the American Legation, at London, has arrived in this ship, and is said to be the bearer of despatches containing instructions of the affairs of Cuba, and supposed to favour the Republican party in Spain. A great drought prevailed in the States, and the crops were suffering severely; many of the rivers which furnished motive-power to the mills and factories had dried up. The Ohio river was lower than it has been for many years.

Unfavourable advices to the 6th ultimo had been received. A strong movement existed in Texas in favour of the proposed "no license law." A meeting of the Anti-Nebraska State Convention had been held at Saratoga. Although some angry feeling had been exhibited at several meetings, the several resolutions were adopted, and it was thought that the business of the convention had been done well.

Mexican dates to the 3rd ult. had been received. The report of the battle, in which the insurgents had been defeated, had been confirmed.

Count de Boulbon, at the head of some recent French arrivals, had been defeated. His party, numbering 200 men, was surrounded, and 46 either killed or wounded. All persons at Vera Cruz had been ordered to surrender their private arms to Government.

INDIA AND CHINA.

The letters and papers by the last Overland Mail have been received. From Burmah the news continues to be of little interest. One man, Moung Sing, had been collecting revenue in the British district of Sarawak, and forwarding it to the Court of Ava; but Captain Grant, the Deputy Commissioner, was engaged easily to apprehend him. Dacoity (which now signifies all kinds of violent robberies) will not be thoroughly suppressed, it is thought, until roads are made, and a mounted police force is established.

The rumours from Cabul in regard to the intrigues of Russia in Central Asia are of a quieter kind than they have been for some months back. It was believed everywhere in that part of the world, that the Czar was daily gaining a footing in the dominions of Turkey, and that Persia was inclined to support him in every way except by overt acts.

At Lucknow the Minister, in an interview held lately with the British resident, said that he had been deputed by the King to express his Majesty's sympathy with England in the Russian war, and that, had not his treasury been exhausted, he would gladly have offered a large loan of money. But not being able to do this, he offered to place twelve battalions of infantry, each a thousand strong, a thousand horsemen, and a thousand guns, at the disposal of his ally, and march these troops to wherever they may be wanted.

From Calcutta the piece of news of most importance is the running of a locomotive and carriage on a portion of the Bengal Railway, which actually ran through, created immense excitement to the Legislative Council of India.

The order for sending the 10th Hussars to Turkey has not been literally carried out: in fact, owing to the present state of the vessels of the Indian Navy, and the difficulty of crossing the ocean in the monsoon, it could not be. They will not leave till the end of September, or later.

From China we have dates to the 6th of July. Nothing had been heard of the Russian fleet, which was supposed to have gone as far north as possible.

The American treaty with Japan had been duly signed.

The *Pekin Gazette* acknowledges the formidable nature of the insurrection. From Nankin, 40,000 rebels had gone northwards.

LATEST INTELLIGENCE.

OPERATIONS IN THE BALTIC.

A telegraphic despatch from Dantzic, of Friday (yesterday) states that—

On Sunday, the 16th ult., General Baraguay d'Hilliers and Vice-Admiral Nepier went up to Hango. In their sight the Russians blew up the fortifications, and retreated to Abo, where there are 15,000 troops. Abo will be attacked by the Allies. The *Merlin*, Scott; *Gorgon*, Cracroft; *Driver*, Hobart; and *Lightning*, Sullivan, engaged eighteen Russian gunboats, carrying about fifty men each, and four steamers, at Abo, on the 18th of August, without loss. Admiral Martin, with a small squadron, is gone up the Gulf of Bothnia.

The *Moniteur* of Thursday publishes the despatches of General Baraguay d'Hilliers, General Niol, and Admiral Parseval Deschenes, relative to the affairs of Bomarsund. General Baraguay d'Hilliers pays a handsome compliment to the courage and disciplne of the English soldiers. Both General Baraguay d'Hilliers and Admiral Parseval declare, after the experience of Bomarsund, that the vaunted impregnability of the Russian granite fortresses is an absurdity; and the Admiral speaks of Cronstadt and Sveaborg as easy of destruction.

THE CRIMEA EXPEDITION.

The Vienna *Presse* contains the following announcements from Constantinople of the 24th ult.:—"Thirty gun-boats have arrived from Malta, and fifteen others are expected. Great excitement exists at Varna against the Greco-Slavonic agents of Russia. Dysentery is increasing in the French army at their long inactivity. The cholera is decreasing. A kind of state of siege prevails. Five vessels, filled with troops, left on the 23rd, and six on the 24th.

A letter from Constantinople says: "Letters from Marshal St. Arnaud announce that on the 26th to the 30th of August, the Anglo-French force will have landed in the Crimea; but I am unable to state whether there is any intention in the first instance of an attack on Anapa or Caffa, of which there is also a rumour in Circassia. More than 180 ships of all sorts are at this moment assembled at Varna, and within a week's time any still remaining in the Bosphorus will have repaired also to that point."

THE CAMP AT BOULOGNE.—The French Emperor left Paris on Thursday, at half-past two, for Boulogne, by the Northern Railway. It is currently reported at Boulogne, that Prince Albert will honour Boulogne with a visit on the 4th or 5th September. The local papers even announce that his horses will arrive by the Folkestone boats, and that apartments have been taken at the Imperial Hôtel de Pavillon for his Royal Highness's suite. Lord Hardinge, General Wetherell, Soliman Pacha, and Iskander Bey are also expected. The visit of the King of the Belgians, and the King of Portugal, is announced. The King of the Belgians will take steam from Ostend to Calais, and from that town proceed by post-horses to the Camp. The Prince de Chimay accompanies him. It is probable that these Royal personages will be the guests of the Emperor, at the Hôtel Brighton.

RUSSIAN TROPHIES OF VICTORY.—An immense number of snuff-boxes, warranted to be made of the wood of the English man-of-war, *Tiger*, taken by the Russians, are exposed for sale in the shops at Odessa.

NO BLOCKADE AT ODESSA.—Letters received in the City on Wednesday, from Odessa, mention that no blockade was in force, and report sundry transactions in linseed and other articles. Letters from St. Petersburg report a further advance in the exchange on London, caused by the extent of transactions with the West.

CAPTAIN HALL AT HELSINGFORS.—Private letters state that W. King Hall, in the *Bulldog*, during a late reconnoitre of the fortresses of Sveaborg, went within a mile and a half of the Russian fleet; and that had that officer's information been acted upon immediately, it is probable the successful attack might have been made upon the Russians without interruption from their batteries. The oversight on the part of the Russians has no doubt been rectified ere this.

LOSS OF THE STEAMER "MINERVA."—The *Minerva* steamer sailed from Liverpool on Tuesday afternoon for Cork, and at a quarter-past six o'clock, when off the Skerries, the wind was blowing a smart breeze, and thick weather was coming on. The Captain then observed that the vessel was a little too near the Skerries Shoal, and altered her course, and in less than ten minutes afterwards she struck on the Victoria Rock, near the Skerries, and went over on her side. She shortly afterwards capsized, but the water was in so much that she could only extinguish the fires, and she began to fill rapidly. The boats were immediately lowered, and the Captain and cabin passengers, about thirty altogether, got off safely. They were ladies, got into the boats immediately put off, and was seen no more. She carried blue lights, but the remaining boats had only the binnacle lamp in one of them. When they left the ship she was still standing, and had been for some time, until the boats had pulled away up by the screw steamer *Mail*, which happened to pass at the time. The attention of the Captain, who was on the look-out, had been attracted by the light in one of the boats, and he reversed the engines, and took all he could find on board. Hopes are entertained that the boat in which the captain and the rest of the passengers are may have reached the Welsh coast.

REPORTED LOSS OF NEARLY EIGHT HUNDRED LIVES.—The recent Overland Mail has brought intelligence which has led to a general belief that two very appalling shipwrecks have taken place in the Indian Seas, both of which, it is feared, were attended by a dreadful sacrifice of life. One of the unfortunate vessels is known to have been a large-sized brig, called the *Hygeia*, of about 450 tons, which had been bought up by the Government for the purpose of using her as a Chinese passenger or emigrant ship to California. She was wrecked on a range of rocks midway between Formosa and Hong-Kong. The *Victoria*, a small schooner, was sent from Hong-Kong to her relief, and brought away 147 persons—as many as she could carry; but, when the *Victoria* left the *Hygeia*, 230 of the emigrants were to be seen on the broadside of the hull of the wreck, under a burning sun, without a particle of food or a drop of water to sustain life. The second melancholy loss was that of the British ship *Lady Nugent*, which sailed from Madras on the 10th of May, for Rangoon, with upwards of 300 of the 80th Regiment of Madras Native Infantry. Nothing has been heard of her since she left Madras; but as it is known that she must have encountered a terrific monsoon three weeks after her departure, it is feared that the *Lady Nugent* has foundered with all on board.

THE LIZARD SERPENTINE COMPANY'S SIGNAL STAFF QUARRY, NEAR CADGWITH.

THIS Quarry, with four others, known as Poltesco, Treal, Long Alley and Rosevear, in the Lizard district, is now worked by a modern and patented and powerful Derrick-cranes—a species of machinery peculiarly adapted for the raising of large blocks of stone from quarries of very considerable depth.

The existence of Serpentine in the most southern part of Cornwall has been long known; and blocks from time to time obtained from the rugged shore, as well as from the surface of the ground, have been applied to the manufacture of slabs, mantelpieces, and other articles of luxury; but the imperfect consolidation of the stone of the ground, and the intermixture of steatite and other substances of varying degrees of hardness and durability, have tended to depreciate the estimation of Serpentine in its application to useful and ornamental purposes.

In the Great Exhibition of 1851, certain specimens were particularly noticed by her Majesty and his Royal Highness Prince Albert, and the patronage they extended to this beautiful material, encouraged the proprietors to avail themselves of a suggestion made by Sir Henry de la Beche, in his report of the Geology of Cornwall, that advantage had not been taken of the favourable appearances of the Signal-staff Hill, near Cadgwith, a point occupied for a coast-guard station, and conspicuous to the Lizard Light-houses, the most prominent landmark in the neighbourhood.

It is now about twelve months since the Lizard Company, with its manager (Mr. Cox), located at Cadgwith Cove, commenced operations, which have been continued without intermission, with a view to develop the contents of the Signal-staff Hill; and it is gratifying to find that their efforts have been attended with the greatest success. Not only are the blocks obtainable in increased size, as the works are deepened, but the specimens of the stone are now procured by which it is found to be more easily worked than marble; and, when polished, to be distinguished by beauty, variety, and vividness of colours, not to be surpassed, or even equalled, by any of the specimens of foreign marbles in the British Museum.

Thus, England, so rich in its carboniferous and metallic products, bids fair to offer a challenge to other countries for supplying the most beautiful of stones for all decorative purposes. In addition to the works of the Lizard Company, are those of "The Penzance Serpentine Company," who also enter the market as manufacturers of the stone, and who have erected very large premises, with steam-power, and extensive machinery, at Penzance. Objections have been hitherto raised to Serpentine, as unlikely to prove durable; and, seeing that the general introduction of this beautiful product may

greatly interfere with the important interests of the marble trade, it is not to be wondered at that the forebodings of failure should be vehement and frequent.

The friends of Serpentine meet the two principal objections of its opponents—that it is not durable in itself, and will retain neither its polish nor its colour—by referring to the following facts. In the Lizard district, there are the three old churches of Grade, Llandewednack, and Ruan Minor. Many portions of these are built of blocks of granite and Serpentine, alternately superposed. They have been exposed for centuries to the blasts and storms from the Channel and the Bay of Biscay. The blocks of Serpentine remain sound as when first used, with their angles sharp; whilst those of granite have, in many instances, lost both smoothness of surface and sharpness of edge.

As regards retentiveness of colour and polish, there have been produced specimens of Aberdeen granite and Serpentine polished at the same time, and during eight months subjected to precisely the same influences of light, smoke, atmosphere, damp, and dryness. The colour and the polish of the Serpentine are alike unaffected; but both colour and polish of the granite are gone, except on the base, which, not having been exposed to light or the atmosphere, remains as it was when first subjected to the experiment.

Serpentine, although possessing qualities dissimilar to ordinary granite, is, like the latter, an igneous product, but is supposed to have been produced anterior to the granite of the district, as it is occasionally traversed by veins of that rock and also of porphyry.

The varieties of Lizard Serpentine are very numerous; the whole occupies a comparatively large area, but the choice stone hitherto discovered is confined to certain small spots. The greatest portion of the formation is believed to lie upon hornblende, slates, and rock; and in its neighbourhood is found asbestos, porphyritic veins, and other substances possessing great geological interest. Popularly the article has been described as a coloured marble; but this has been erroneously done, the chief constituent of marbles being lime, which is immediately acted on by acids; whilst in Serpentine, there is but little, if any lime; and it is not acted upon by any acids with the exception, perhaps, of one or two of those unusually powerful in their properties.

From more than a dozen analyses silica and magnesia have been found to compose more than eight tenths of Serpentine, and the residue of its components vary in different qualities of the stone.

THE LIZARD SERPENTINE SIGNAL-STAFF QUARRY, NEAR CADGWITH, CORNWALL.

The district of the Lizard being ten miles beyond Helstone, the most southern town of Cornwall, and approached by the Goonhilly Downs, has not been so much visited as many places possessing infinitely less interest. It is only very recently that scientific attention has been at all directed to the immense funds of information to the geologist, the naturalist, and the botanist, which the district affords, and that it has been visited by the tourist, in search of bold and beautiful scenery. The ever-varying rocks abound with zoophytes; and on the Serpentine formation is to be met with, the most splendid heaths. At the Lizard town — which, like its suburb, may be regarded as a primitive formation—there was but indifferent accommodation for travellers. But near the ancient mud hovels, an inn, making up several beds, has been recently erected; and the tourist may obtain tolerable accommodation at the inn at Cadgwith Cove, and a few farm-houses in the neighbourhood.

DISCOVERY OF THE REMAINS OF THE ALEXANDRIAN LIBRARY

An antiquarian matter of considerable interest has, for some time past, attracted great attention at Alexandria—namely, the discovery of ruins of what is stated to be the celebrated Alexandrian Library, amongst excavations made near the south-west angle of the great square of the city.

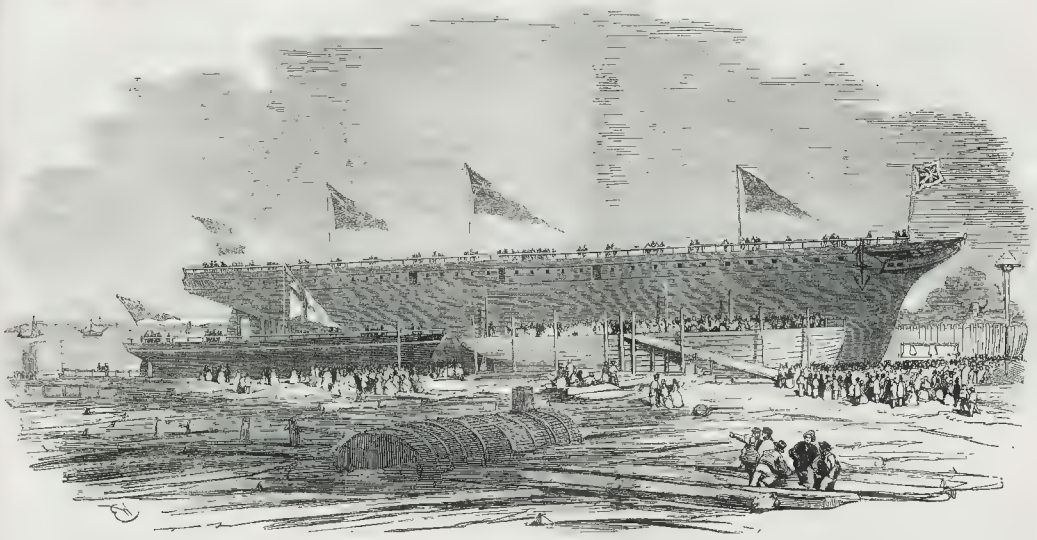
The increasing value of house property here has induced several persons to build new dwellings; and, a few months since, the men employed digging foundations came upon some very extensive ruins, consisting of brick, stone, and excellent building material, composed of brick and cement, so firmly united as to be inseparable from each other, but very useful when broken into blocks suitable for building with. The excavations have been made to a considerable depth, and have in this way repaid the trouble of the work. Massive brick walls, numerous arches, portions of plastered ceilings, fragments of vitrified and charred matter—in some places bearing marks apparently made by close contact with the edges of ancient books, while in a state of semi-fusion; very fine monolithic columns of red granite; and large masses of stone—very like that now used in the construction of the Cairo and Alexandria Railway, and obtained at the quarries at Kaffre Douar, sixteen miles from Alexandria—are found in abundance in the ruins.

Some very fine capitals of pillars and portions of columns of white marble are also amongst the discoveries. The locality where these interesting excavations are being made is less than half a mile from the place, laid down by antiquaries as the grand centre of the four great streets of Alexandria of Ptolemy Soter; and also near the spot which Arabic tradition points out as the last resting-place of Alexander the Great.

Our Correspondent adds, some very fine Grecian statues have, within the last two or three years, been found in this city, and have been placed by a wealthy citizen near his house, where the public have full liberty to inspect them.

It is much to be desired that a careful and still more extensive examination of the above ruins should be carried out. Our Correspondent, in conclusion, acknowledges the courtesy shown to him by H.B.M. Consul, Mr. Green, Mr. H. Thirburn, Mr. Halton, and other gentlemen resident in Alexandria, in directing his attention to the subject.

RECENTLY-DISCOVERED REMAINS OF THE ALEXANDRIAN LIBRARY



LAUNCH OF H.M. GUN-BOAT "PELTER," AND THE PORTUGUESE STEAM-SHIP "DOM PEDRO SECONDO," AT NORTHFLEET.—(SEE NEXT PAGE.)

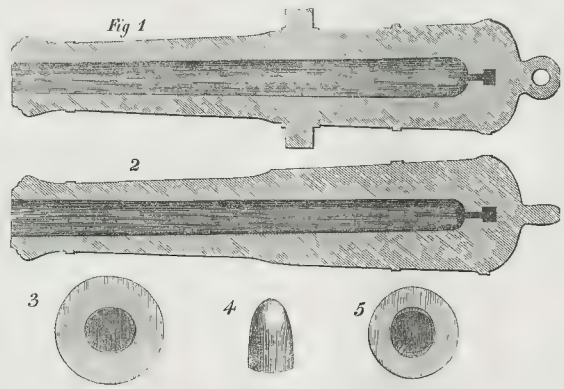
LANCASTER'S OVAL CANNON.

In deference to the reports of our contemporaries, from which the reader's notions respecting this celebrated kind of artillery will probably have been derived, we employ the term *oval cannon*. Cannon with oval bore would, however, be the more appropriate designation. Then, again, as though it were desirable to confuse the matter needlessly, the public is gravely informed that the oval cannon in question are intended to project *spherical* case shot.

It is now some years since Mr. Lancaster, the gun-manufacturer, of Bond-street, first constructed rifle small-arms, totally devoid of those ridges or furrows which hitherto had been considered an essential part of rifle guns. A casual observer, looking at the muzzle of one of Mr. Lancaster's rifle small-arms will fail to see in what respect it differs from an ordinary musket or fowling-piece. The bore is absolutely smooth, and its oval contour is so slight as not to be discoverable, except when very narrowly scrutinised. Owing to this slight deviation from a true circular form, Lancaster's oval rifles may be employed for bird shooting, with small shot.

The mere adoption of an oval bore would have been attended with no useful results, had the oval not been made to assume the spiral twist of an ordinary rifled gun. Lancaster's oval-bored fire-arms then are rifled fire arms devoid of the ordinary channels, the necessary rotation of the projectile being accomplished through the agency of a revolving oval. The term *projectile* instead of ball, is used designedly, for it should be remarked that the employment of balls in connection with rifled small-arms is almost obsolete; heavy conoidal masses of metal—lead in the case of small fire-arms being used instead

The great advantage of rifled small-arms over those having smooth bores, is so well acknowledged that all argument on that point is unnecessary. It was natural, therefore, that attempts should have been made to apply the same principle to cannons. Before the discovery, however, of Lancaster's principle of oval-boring, these attempts were unattended with success. We have neither time nor space to explain these reasons. Most of them have reference to the circumstance that cannon-balls are made of iron, and small-arm balls of lead. Now, lead being a soft material, easily receives impressions from the ridges and indentations of ordinary rifle barrels, whereas iron is not so accommodating. Mr. Lancaster's principle of oval boring obviates much of this difficulty, and enables conoidal masses of iron to be shot from rifled ordnance, as conoidal masses of lead are shot from rifled small-arms. Lancaster's cannon occupies the same relation to ordinary cannons that Minié rifles do to ordinary muskets. The preceding outlines indicate sufficiently the nature and properties of the new gun. Its projectile may be considered a sort of modification of the Minié rifle ballet, but what sort of modification no good patriot will make known just yet. Like the secret of Congreve's rockets and Shrapnell's shells, the secret of Lancaster's oval projectiles will ultimately transpire; not however, we hope, and believe, until they shall have done good duty against the strongholds of the Russian aggressor. Having alluded to Shrapnell's shells, it may be just as well to remark that they are synonymous with spherical case-shot.



1. Horizontal Longitudinal Section of Gun
2. Vertical Longitudinal Section of Gun.
3. Transverse Section of Breach of Gun.
4. Conical Ball.
5. Transverse Section of Mouth of Gun.

LANCASTER'S OVAL CANNON.

H.M.S. "ANTELOPE" IN THE BONNY RIVER.

THE above-named vessel, during her late visit to the different rivers in the Bight of Biafra, took a somewhat unexpected share in the administrative affairs of this part of South Africa. The rivers visited were the Bonny, Old and

H.M.S. "ANTELOPE," AT FERNANDO PO.—ELECTION OF A NEW SOVEREIGN.

New Calabar, and Cameroons. At the Bonny the *Antelope* found fourteen merchant vessels, trading in palm-oil, which was stopped, in consequence of a series of aggressions committed by King Pepple upon his subjects during the previous three or four months, and owing to his determination to go to war with the new Calabar people. On the 12th December last the whole of them rovolted, leaving the trade of the river very unsettled. On the 13th January the vessel, with Mr. Beecroft, her Majesty's Consul, on board, arrived, and not being able to bring them to an amicable unders anding, Pepple was considered deposed; and Prince Dappo, the son of an elder brother than Pepple, was formally elected in his place; and our Correspondent made the accompanying Sketch of the scene.

LAUNCH OF A GUN-BOAT.

THE interesting ceremony of naming and launch ng the gun boat *Pelter*—be ng the first of four gun-boats which Mr Fitcher, of *N xt* fleet, has been ordered to build for her Maj-sty's navy—took place on Saturday last, at Northfleet Dockyard, in the pres-nce of a very numerous and gay assemblage—the ladies, as usual, predominating in number. There were several naval and military officers, and persons connected with her Majesty's civil servi e, present on the occasion. The dimensions of the boat are—length between the perpendiculars, 100 feet; extreme breadth, 22 feet; depth in hold, 7 feet 10 inches The burden is 212 tons. The engines intended for her have been manufactured by Messrs. Penn and Co, on the high-pres ure p inciple, and are of 60 horse power. Her armament will consist of two guns of 95 cwt, which will be capable of throwing solid shot of 8 in. diameter The draught of water which she took when launched was 4 feet 6 inches aft, and 3 feet 2 inches forward. The load draught will be 6 feet 6 inches, with guns, powder, shot, shells, and all stores complete. She will be rigged as a lugger, having three rails and no bowsprit; the forecastle being arranged in such a manner that one of her guns (which will, under o dinary circumstances, be carried amidships) can be transported forward, so as to be used as a bow chase, while the stern is also so arranged as to receive the other gun as a stern chase. It is evident, from the above description, that this gun-boat is a vessel admirably adapted for the service for which these boats are intended by the Government. The flatness of the floor, and the shallowness of the vessel, will enable her to penetrate into creeks and shallows which we believe no other description of ve sel in the service can possibly do; while, from the immense range of her guns, and the lowness of her hull, she will be scarcely vulnerable

The boat, immediately after being launched, was taken in tow by a steam-tug to Woolwich, to have the machinery put in. The other three boats—respectively named *Pincher*, *Ranger*, and *Snapper*—are in a state of great forwardness. Only nine weeks have elapsed since the order was given by the Government to Mr. Fitcher for the construction of these boats; the despatch, therefore, that has been displayed in this instance is a proof of what can be achieved by our private ship building establishments.

The interest of the day's proceedings was considerably enhanced by the circumstance of a launch taking place, immediately after that of the *Pelter*, of a fine commercial screw-vessel, called the *Dom Pedro*, which has been constructed by Mr. Fitcher for the Lazo Brazileiro Steam Company. The dimensions of this vessel are:—Length between the perpendiculars, 250 feet; the extreme breadth, 35 feet 8 inches, depth in the hold to main deck, 20 feet 6 inches. The burden is 1510 tons She is constructed for a passenger vessel to run between Lisbon and Rio Janeiro. The two launches having taken place without one disturbing incident, and under the most genial sky, Mr. Fitcher, the nephew of the contractor, under whose immediate direction the whole proceedings were conducted, withdrew with his numerous friends to the Rosherville Hotel, where they partook of a cold collation, and drank toasts of loyalty and good wishes for the destiny of the boat and ship, which, as Mr Tufnell (the nephew of the late right hon. gentleman of that name) well expressed, represented the two mighty interests of "war" and "peace."

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 3 12th Sunday after Trinity. Oliver Cromwell died, 1658.
MONDAY, 4.—Riots at Manchester, 1830.
TUESDAY, 5.—Malta captured, 1800.
WEDNESDAY, 6.—Blucher died, 1819. Hannah Moore died, 1833.
THURSDAY, 7.—St Eanuerous. Buffon b., 1707. Dr. Johnson b., 1709
FRIDAY, 8.—Nativity of the B. V. Mary.
SATURDAY, 9.—William the Conqueror died, 1087.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (24 Vols.), in cloth, £22 17s.; £16 17s. in paper.

Any of the Volumes, in paper or cloth, can be had separate.

Price of each Volume in cloth:—Vol. I., 21s.; II. to XVII., 18s. each, XVIII., 21s.; XIX., 22s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in paper, 4s. per volume less.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPT. 2, 1854.

ALTHOUGH the main interest of the war has, for the present, shifted from the Baltic to the Black Sea, the public is disappointed to learn that the fortifications of Aland are to be destroyed, and the Archipelago to be evacuated. This looks as if Sweden were not yet ready to ally herself with Great Britain and France. Sir Charles Napier will not, however, content himself with the capture of Bomarsund; and it is almost certain that Sveaborg will be the next point that he will attack—with a success, let us hope, as brilliant as that which rewarded his first experiment against Russian granite. However this may be, the public looks with more immediate interest to the operations against Sebastopol. The dreadful ravages of the cholera appear to have been stayed. Even the conflagration at Varna—a calamity attended with serious loss of stores belonging to the Allied armies—has had the effect of clearing the pestilent atmosphere of that town, and putting an end to the devastations of the plague. Whether the fire were the work of Greek incendiaries, instigated by Russian bribes, as at first suspected, or whether it were purely the result of accident, as now more commonly supposed, it has not been totally unproductive of benefit. Both the French and the English armies are recovering from the temporary depression caused by the ravages of that unseen enemy which was generated in the swamps of the Dobrudscha, and are in high spirits at the prospect of an early attack against the Crimea. No information has yet reached London of the actual departure of the expedition; and so many conflicting statements have been made as to the day fixed upon, that it is useless to reproduce them. The 15th of August was the day originally named; the 30th is the one last mentioned. Possibly no one but the Allied Commanders are in the secret; but it is evident, from the rapidity, extent, and completeness of the preparations, that not many days will elapse before the Black Sea fleets will take their position in front of Sebastopol, and the British and French troops beleaguer it from behind. The high spirits, perfect discipline, and steady courage of the fleets and armies of both nations, together with the good feeling and generous emulation which exist between both branches of the service;—all testify that the operation will be brilliant and successful. Both French and English can now inscribe the name of Bomarsund upon their flags. They will shortly be able to add the still more brilliant name of Sebastopol, and to strengthen their happy alliance by a new talisman and watchword of victory.

The triumphal entry of Omer Pacha into Bucharest is, in the meantime, one of the most striking events of the war. The unfortunate Wallachians suffered too much from the presence of the miserable but rapacious hordes of Prince Gortschakoff, not to hail the appearance of the Turkish General with joy and gratitude. They naturally felt some anxiety to learn whether their compulsory submission to Russian authority was to be visited upon them as an offence by their lawful Sovereign the Sultan, and Omer Pacha wisely heralded his approach by a proclamation of complete amnesty to all persons, of whatsoever rank or condition, who had acknowledged, *per nefas* and by coercion, the supremacy of the Czar and his Generals. It will take many years before Wallachia and Moldavia can completely recover the damage they have sustained by the Russian invasion. Though it may be doubted whether the presence of Austrian and Turkish armies upon their soil will not prove an infliction almost as grievous as that of the Russians, yet, whatever evils may result from their occupation will be borne with comparative cheerfulness. The Wallachians and Moldavians will remember that they come as friends and protectors, and not as tyrants and destroyers.

The Emperor Nicholas continues true to his old policy of "enormous lying," and, in a proclamation referring to the evacuation of the Danubian Provinces, informs his troops and people that "he is about to direct the forces of his empire against points that appear to be menaced by England and France;" and "that, in order to protect the Principalities against an invasion of the Turks, the ancient ally of the Czar will occupy them in the meanwhile." The impudence of the latter part of the assertion will doubtless cause the Emperor Francis Joseph to smile with contempt at the "ancient ally," but actual opponent, who could be guilty of so gross a perversion of the truth. The proclamation will excite a very different feeling among the French. If anything were wanting to inspire the gallant soldiers of the army under the command of Marshal St. Arnaud with additional vigour of arm, and determination of purpose, it would be the insulting manner in which the Czar has thought proper to taunt the French nation with the remembrances of 1812. "This new enemy (the French), more able, more courageous, and better commanded than the Turks, was, on several occasions," says the Czar, 'beaten and conquered by our valorous forefathers; and, in 1812," he adds, "the Heavenly Father sent his hosts against these impious and criminal men, and buried them all under the ice." The Czar must know that, in every encounter which the troops of Napoleon had with the Russians, the French were victorious; and that, had it not been for the climate [no thanks to the soldiers of Alexander] the French flag would have waved in triumph, not only over Moscow, but over St. Petersburg. But the Czar's words will be deeply studied at Varna, in the Black Sea, and on the heights above Sebastopol. The British and French have a good cause, but the French, we may be certain, will fight all the better in it, after a taunt so galling, and a falsehood so insulting. The Russian calamities of Napoleon are a sore subject. After the capture of Sebastopol, the remembrance of the past will be atoned for, if not effaced. The French armies will thus achieve a double victory.

THE state of Spain continues to excite uneasiness. The genius of Revolution has been evoked, and will not be quiescent at the command of those who aroused it. O'Donnell, a Moderate politician, finds that it is easier to stir up than to quell a dissatisfied people. He would restrain the insurgents, now that they have accomplished his immediate purpose, but does not know how to set about the work. Espartero, who had no hand in fomenting the revolt, does not appear able to control the fierce agencies that have been called into operation. Though he approved of the barricades of Madrid, and the virtual overthrow of the Government that resulted from them, he by no means approves of the Clubs and Juntas who bore him triumphantly to the nominal leadership of affairs. They seek to govern the Government, and to drive the Revolution to extremes that are inconsistent either with the public tranquillity or safety, or with the existence of the Monarchy. Telegraphic despatches inform us that some of the most noisy and dangerous of them have been forcibly suppressed by the military. But the Republicans are stronger in Spain than was at first suspected; and the project of an Iberian Republic, comprising both Spain and Portugal, has more adherents than either Espartero or O'Donnell will find palatable or convenient. It was the Republican party which urged the impeachment and trial of Queen Christina; to which Espartero consented in a moment of weakness or of thoughtlessness, and which will yet produce many calamities to Spain. Queen Christina has been fortunately enabled to escape from Madrid, and proceed unmolested into Portugal. She has thereby saved Queen Isabella and her Government, the pain and the scandal of seeing her arraigned in person before the Supreme Cortes. Yet the Juntas and other provincial clubs, supported by the public sentiment, will doubtless insist that her trial shall take place in her absence. In this case the same scandals will ensue, and the throne of Isabella will be undermined. Though honest men and virtuous women in every part of Christendom disapprove of the personal conduct of Queen Christina, and of the bad example she set her unhappy daughter, it must not be forgotten that her offences as a woman are not the fit subjects for the consideration of the Cortes or any other political tribunal. If it be desirable not only to retain a monarchical form of Government in Spain, but to strengthen and consolidate it, it is not desirable to proceed to extremities against Queen Christina, which can have no other result, as they can have no other object, than to render Monarchy itself unpopular and odious. The Spaniards, however, have got rid of Queen Christina, and should be thankful for the blessing. Their solicitude should be to guard effectually against her return. This might be accomplished without the monstrous scandals that would result from her trial, either in her presence or her absence. Possibly the genius of Espartero and O'Donnell will find the means to effect this end. They have quite sufficient difficulties to contend with, without adding this to the number. They have the spirit of anarchy to reduce to submission, they have to restore the dilapidated finances of the country, they have to replace corrupt by honest functionaries, and they have to rescue the fiscal and commercial policy of the nation from the stigma of barbarism, and the very name of Spain from the reproach of being the best country in the world for the smuggler, and the very worst for the fair trader. They have, also, another danger to guard against—the danger of a bloody reaction against revolutionary violence. Already the ominous name of NARVAEZ begins to be whispered as that of the only man who has strength of will and of hand sufficient to rescue the country from anarchy. Let the Liberal Espartero, and the Moderate O'Donnell consider well what they are doing, or the Man of the Sword will supersede them both, and put an end to the growing liberties of the nation.

THE COURT.

The Court remain at Osborne, in the full enjoyment of the beautiful weather of the past few days. On Friday, the 25th ult., the Prince Consort went to Portsmouth, and reviewed the garrison on parade there under Major-General Simpson. The Queen, accompanied by Prince Arthur and the Duchess of Kent, embarked in the *Fairy*, and proceeded to Southsea Beach to rembark the Prince. The Royal party returned to Osborne at seven p.m.

On Saturday, being Prince Albert's birthday, the band of the Royal Marines played on the terrace at a quarter to seven o'clock. The dinner party included the Duchess of Kent, Lady Anna Maria Dawson, Baroness Lehzen, Baron Stockmar, Miss Barrington, Colonel the Hon. C. B. Phipps, Sir George Couper, and Sir James Clark. Mr. Albert Smith had the honour of giving a performance in the evening, consisting of selections from his ascent of Mont Blanc, before her Majesty, the Royal Family, and the party assembled. The Marquis of Ely, Lady and the Misses Graham, Lady Frances Bruce, Lady Couper, the Hon. Captain and Mrs. Denman, and Mr. Gibbs, received invitations.

Her Royal Highness the Duchess of Gloucester, attended by Lady Georgiana Rodney, Lord and Lady Bangor and Colonel and the Hon. Mrs. Liddell, visited the Crystal Palace on Tuesday last.

The Duke of Devonshire has so far improved as to permit his Grace to leave his villa at Chiswick, and proceed to Chatsworth. It is understood that his Grace, after residing at Chatsworth a short time, will, if his health permit, sojourn a short period at Buxton

The Duke and Duchess of Hamilton have left Manheim, on the Rhine, for the Baths in Bohemia, and are not expected to return to this country until the close of the ensuing month.

Viscount Villiers has left town to join Lady Villiers at Dieppe.

The Hon. Mrs. George Anson and Miss Anson, accompanied by the Hon. E. Forester, leave this country about the middle of October, for the East Indies, to join General the Hon. George Anson, at Madras.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Deaneries:* The Rev. J. Lyster to Leighlin; Rev. J. H. Stephenson to Lymphaun. *Prebendary:* The Rev. A. Fane to Yetesbury, in the cathedral church of Sarum. *Rectories:* The Rev. H. Beaumont to Fressford, near Bath; Rev. N. Davies, to West Lexden, Norfolk; Rev. G. W. Murray, M.A., to Weltonle-Wold, near Louth, Lincolnshire; Rev. L. F. Clarkson, M.A., to Molesworth, near Kimbolton, Huntingdonshire. *Vicarages:* The Rev. W. Hughes to Llanwddyn, near Oswestry; Rev. W. H. Lyon, to Chorley, near Sherborne, Dorset; Rev. C. A. Moore to Romsey, Hants; Rev. J. M. Rice to Wye, near Ashford, Kent; Rev. Dr. Rushton to Blackburn.

NEW BISHOPRIC IN AUSTRALIA.—The consent of Sir George Grey, her Majesty's Principal Secretary of State for the Colonies, has been obtained for the immediate erection of a Bishopric for Western Australia, the seat of which shall be at Perth.

TESTIMONIAL.—The Rev. R. J. Thomas, on retiring from the curacy of St. Peter's, Hammersmith, has recently received from the parishioners, as a testimonial of affection and esteem, a silver inkstand, and a purse containing 100 sovereigns. He has subsequently been appointed chaplain to the Right Hon. Lord Leigh.

NAVAL AND MILITARY INTELLIGENCE.

BLOCKADE OF THE WHITE SEA.—Official notice has been received from Archangel that the ports of the White Sea have been declared in a state of blockade from the 12th ult. A period of fifteen days would be allowed for vessels to leave the ports in that sea.

THE War-office has made nine sergeant-majors, five sergeants, three quartermaster sergeants, four colour, and one company sergeantensigns without purchase.

DIVISION OF PRIZE-MONEY.—Proclamation was made on Monday, in the customary form, at the Royal Exchange and Horse Guards, agreeably to the recent Order in Council with respect to army prize-money derived from conjoint expeditions with the navy, that the net proceeds of the share assigned to the army will be divided in the following manner:—The Commander-in-Chief, one-fourth of one-tenth part of the net proceeds. First-class general officers commanding divisions, and other officers holding equivalent staff appointments; second class other general officers, and all other officers, &c., holding equivalent staff appointments, the remaining three-fourths of one-tenth part of the net proceeds; the same to be so divided that a general officer of the first class shall receive one-half more than a general officer in the second class. Field-officers, first-class colonels, and brevet lieutenant-colonels and other officers holding staff appointments equivalent thereto, second class brevet lieutenant-colonels, not holding an appointment qualifying them to share in the preceding class of field-officers, and all majors, regimental or brevet, and all other officers holding appointments equivalent thereto, one-eighth of the remainder of the net proceeds; the same to be so divided that a field-officer of the first class shall receive one-half more than the second class. The remainder of the net proceeds will be distributed in the following order:—First class, captains and officers entitled to share that rank, 35 shares; second class, subalterns, 20 shares; third class, sergeant-majors, quartermaster-sergeants, staff sergeants, and others holding equivalent rank, 10 shares; fourth class, sergeants, eight shares; fifth class, corporals, four shares; sixth class, private soldiers, drummers, and trumpeters, three shares.

TROOPS FOR FOREIGN SERVICE.—Between the 28th of Feb. and the 24th of August, in the present year, 363 officers and 10,850 non-commissioned officers and men were embarked at Cork for different stations. Not the slightest accident occurred; and from among that large number only three soldiers were intoxicated.

DRAFTS AWAITING EMBARKATION.—Eight officers and 220 non-commissioned officers and privates are waiting at Cork for transport to convey them to the Crimea or Turkey. Three officers and 203 men of the 13th Light Infantry, with 3 officers and 72 non-commissioned officers and privates of the 92nd Highlanders, will sail in the *Poictiers* for Gibraltar forthwith.

MANUFACTURE OF ROCKETS BY MACHINERY.—In the month of March last the demand for the munitions of war for her Majesty's sea and land forces became so great that, although the workmen in the Woolwich laboratory department were employed from five o'clock in the morning until eleven at night, and many of them for the whole night during two nights in the week and often on Sunday, it was found that they could not accomplish the orders given to them to execute within the required time. On the appointment of Capt. Boxer—an artillery officer of great scientific acquirements, who had devoted much of his time to practical experiments connected with the artillery, and invented the Boxer tubes now in general use in the rocket service—to be Firemaster in the laboratory department, he turned his attention to the introduction of machinery as a means of performing much of the work that was at that time executed by the skilful mechanic. Capt. Boxer having matured his plans to a certain extent, with the concurrence of the Master-General and the Board of Ordnance, proceeded to Manchester, placed himself in communication with some of the most eminent machine-makers in that large manufacturing town, and ordered machinery to be constructed according to his views of what was most requisite and most eligible for executing the work of the fire department. He has now had the satisfaction, during the last two months, of witnessing the machinery put up, and executing every order with promptitude and dispatch by the simple aid of unskilled labourers, or boys with no mechanical knowledge, who can now produce in many cases five times the quantity of work in a day that had hitherto been accomplished by the most skilful artisans by manual labour only. Besides the great saving, all the work is executed with a correctness which it was never possible to obtain from the most capable workman.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 31.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading	Thermometer: Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + denotes above the average.

The reading of the barometer has been high during the week, and ranged between 30·1 to 30·4 at the hight of eighty feet above the level of the sea. The mean reading of the barometer for the week was 30·2 inches.

The temperature, on the first two days, was at about its average for the season. It increased on Sunday, and was 6 degrees in excess; and still further increased on Monday, whose temperature was 12 degrees in excess (the night of this day was warm, as well as the day); and the remaining days of the week were from 5 to 8 degrees in excess.

The mean temperature of the week was 64½°; being 5½° above the average.

The highest temperature occurred on Monday, Tuesday, and Wednesday nearly 80° on each day. The lowest occurred on Saturday, and was 45°. Thus the range of temperature during the week was 40°.

The mean daily range of temperature was 26°. It was as large as 33½° on the 30th, and of 31½° on the 29th and 30th.

The weather during the week has been fine, the reading of the barometer has been unusually high. The air has been in very little motion, particularly in low situations, and at times the atmosphere has been very misty, obscuring objects at short distances, particularly near the river Thames.

Lewisham, September 1, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending August 26, the births of 1638 children were registered within the metropolitan districts; of these, 836 were boys, and 782 were girls. The number of deaths registered within the same period was no less than 2089, exceeding the number of births by 451. The average number of deaths in the same week, for the preceding ten years, was 1554. The excess, beyond the increase of population, was 1225. The prevailing epidemic has produced an excess, amounting to 814, above the corrected average. From cholera the deaths in last week were 867—of which 276 were children, 488 in the prime of life, and 111 aged; and from diarrhœa were 214—of which number 166 were children. In the corresponding week of 1849 cholera carried off 1279 persons. In the present summer its weekly progress is traced in the following numbers—5, 26, 133, 369, 644, 720, and 867. In the first seven weeks of the epidemic of 1849 the deaths were 9, 22, 42, 49, 124, 159, and 389. In that year it encountered about the end of May, but in the fourth week of August it had reached to 2486, a higher rate of mortality than the disease which now prevails has yet attained. The number of persons who have already died of cholera in the present epidemic in the metropolitan districts, is 2783; but 1706 of the number have fallen on the low grounds of London, out of 894,119 people, whose dwellings are not ten feet above the Thames; 705 have died out of 648,615 on ground extending from 10 to 40 feet above the same level; and only 372 out of 1,070,371, who live on ground exceeding 40 feet above the same level. The mortality from cholera at the three elevations is, therefore, at less than 10 feet, 1 in 950; between 10 and 40 feet, 1 in 920; and at elevations exceeding 40 feet, only 1 in 2100. Last week 1022 males, and 1017 females died, distributed at three different periods of life, as follows:—Less than 15 years, 965; exceeding 60 years, 268; and between those ages, 776.

ROYAL POLYTECHNIC INSTITUTION.—An interesting lecture, combining abstruse science with a delightful mode of explanation, was delivered here on Monday last, by the Rev. Professor Haden Powell, Vice President of the Royal Society, the subject being "On the Physical Cause of the Procession of the Equinoxes." The title refers to a fact first discovered by Hipparchus, viz., the attraction of the sun and moon on the protuberant portion of the earth, which, as is well known, is an oblate spheroid, or a globe, somewhat flattened at the poles. The chief interest of the lecture, however, was centered in a beautiful piece of apparatus, constructed at the expense of the resident director, Mr. J. H. Pepper, with a view to afford a practical illustration of the principle known as the precession of the equinoxes; the lecturer explaining in detail what exactly what occurred and was visible in the model before them took place in the mighty bulk of the earth which we inhabit.

JUNIOR UNITED SERVICE CLUB.—The managing committee of the Junior United Service Club, in Waterloo-place, Regent-street, have resolved to entirely rebuild the Club-house, so that it may be more in keeping with similar structures in the locality.

MEDICAL GRADUATES OF THE UNIVERSITY OF LONDON.—The new act to extend the rights enjoyed by the graduates of the Universities of Oxford and Cambridge, in respect to the practice of physic, to the graduates of the University of London, has been printed. By virtue of this Act graduates in the University of London are allied to practise physic in the same manner as graduates of the other Universities.

BOROUGH HOP-MARKET.—On Tuesday a gold-laced hat was awarded to Mr. Jeremiah Smith, of Springfield-hall, Rye, Sussex, in consideration of having sent to market the first parcel of new hops, which was sold by George Russell and son, at £28 per cwt.

GAS EXPLOSION.—Shortly before twelve o'clock on Wednesday morning an explosion of gas, which created great alarm in the City, occurred on the premises of Mr. Amadio, optician, No. 7, Throgmorton-street. Several persons were passing at the time the accident occurred, and one or two sustained some injuries. A gentleman named Hamilton was blown with violence against the wall on the opposite side of the way; while another gentleman who was struck down by the shock was taken into the Dartford gunpowder-offices opposite for safety. Mr. Amadio's shop-front was blown out, and his valuable stock-in-trade was scattered in all directions. Immediately after the explosion the back of the house took fire, but it was speedily subdued.

DESTRUCTIVE FIRE IN LOWER THAMES-STREET.—On Wednesday morning, between four and five o'clock, a fire broke out on the extensive premises of Messrs. Bates, Brothers, and Co., No. 125 and 126, Lower Thames-street, wholesale druggists. Property to a very large amount was destroyed; and the most remarkable circumstance connected with the outbreak is that it commenced near the same spot, on the same premises, six years ago. The discovery was made by some men passing the warehouse in Thames-street to go to Billingsgate-market. They had scarcely time to acquaint the police when the flames burst out with terrific fury. The reflection of the fire was the means of alarming nearly the whole metropolis, and several thousand persons were attracted to the spot. The engines of the London Fire Brigade, from Watling-street, Farringdon-street, and St. Mary Axe, quickly arrived with a powerful body of men, followed by twelve parish engines and the West of England, who, with numerous auxiliaries, speedily got to work, and rendered great assistance, with a plentiful supply of water from the main of the New River. The flames, however, spread with such rapidity that it became necessary to send for the two floating engines, which were brought from Southwark-bridge station. They did good service, though worked under disadvantage, on account of the great length of hose that had to be laid along the shore, and the fire was not extinguished till the premises were burnt down. So great was the crowd, that the street had to be barricaded during the day, and a large body of police were kept on duty to prevent vehicles from passing over the hose of the engines. The total loss is estimated at more than £25,000.

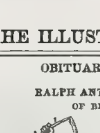
DESTRUCTION OF A CHAPEL BY FIRE.—The large Independent Chapel, formerly belonging to the late Rev. Dr. Cox, and situate at the Triangle, Mare-street, Hackney, was totally destroyed by fire on Saturday evening. The fire was discovered by the organist while engaged in tuning the organ, from which, or from a part of the gallery immediately contiguous, flames were seen to issue. In less than a quarter of an hour the whole edifice was on fire, the roof having fallen before the arrival of the first engine. The entire loss is estimated at about £10,000, partly covered by insurance.

THE "CITY OF GLASGOW."—Some fragments of the lost steamship were seen by a master of a British vessel, on the 25th inst., in lat. 41°56, lon. 56.05. They consisted of a chest marked "City of Glasgow," in a wreath of laurel. A plank about twelve feet long belonging to the ship, and having some letters on it, which at the time could not be read, was near the chest.

THE CHOLERA PANIC IN FRANCE.—In some parts of the south of France, not a day passes without the news of some Government functionary, often a very important one, having deserted his post. The manager of the *Provence*, a newspaper printed at Aix, has written a circular to his subscribers, informing them that, all the editors and printers being absent in consequence of the epidemic, the publication of the journal is suspended. Marshal Magnan has issued an order of the day, exhorting the troops under his command not to endanger their health by eating unripe, or otherwise unwholesome fruit.

OBITUARY OF EMINENT PERSONS.

RALPH ANTHONY THICKNESSE, ESQ., M.P., OF BEECH HILL, CO. LANCASTER.



THE death of this gentleman, M.P. for Wigan and a Magistrate and Deputy-Lieutenant for Lancashire, occurred on the 22nd ult., at Harrogate, in the fifty-fifth year of his age. Mr. Thicknesse, the representative of a very ancient family, was only son of the late Ralph Thicknesse, Esq., of Beech Hill, by Sarah, his wife, daughter of John Woodcock, Esq., of Newburgh, county Lancaster. He was born in 1800; and married, in 1828, Mary-Anne, daughter of Thomas Woodcock, Esq., of Bank House, near Wigan, by whom he leaves issue.

He sat in Parliament for Wigan since 1847, always supporting the Liberal party.

RANDALL McDONNELL, ESQ.

THIS gentleman, who died on the 14th ult., at his residence, in Glenarif, county Antrim, in the eighty-second year of his age, was the fifth son of John McDonnell, of Glenarif, whose grandfather Coll retired there after the death of his father, the celebrated Lieutenant-General Sir Alexander McDonnell, better known as Coll Kitto, who commanded Lord Antrim's Irish, under the Duke of Montrose, in Scotland, in the Great Civil War, and was afterwards slain in the Battle of Knockna-Noss, county Cork. Of this General, the present representative is the Right Hon. Alexander McDonnell, of Tyrone-house, Dublin, the cousin of the gentleman whose death is here recorded. The McDonnells of Glenarif descended from the Lords of the Isles, who were allied by ties of blood and marriage to the Stuarts, Kings of Scotland.

Randall McDonnell, Esq., the subject of this notice, married a niece of Alexander McDonnell, Esq., of Glassmullin. By this lady, who survives him, he leaves three daughters and two sons: the latter are Alexander, of Great Denmark-street, Dublin; and John, a Captain in the Cape Mounted Riflemen, and a distinguished officer in the late Kaffir War.

RALPH BERNAL, ESQ.

THIS gentleman—so well known as Chairman of Committees of the House of Commons—was a barrister; and was first returned to Parliament as member for Lincoln; and afterwards, in 1820, for Rochester, which city he represented for very many years, until 1852. Mr. Bernal was a Whig, and declared himself, in 1837, a reluctant convert to the Ballot. He was also a writer of literary taste, and a contributor to the Annuals and such like publications. He married a daughter of Dr. White, of Chatham Dockyard. He died intestate: his son is Ralph Bernal Osborne, Esq., M.P. for Middlesex, who assumed the additional surname of Osborne by Royal license in 1844, on his marriage with the only daughter and heiress of Sir Thomas Osborne, Bart.

Mr. Ralph Bernal, the subject of this notice, died a few days since, after a brief illness, much and generally lamented. Mr. Bernal, as Chairman of Committees of the whole House of Commons, discharged the onerous and delicate duties of that office so as to earn for himself the respect of all classes of politicians.

THE HON. LIEUT.-COLONEL LAUDERDALE MAULE, M.P.

LETTERS from Constantinople announce the death, by cholera, on the 1st ult., of the Hon. Lieut.-Colonel Maule, M.P. for Forfarshire, and Surveyor-General of the Ordnance. The gallant officer, who retired, on half-pay, from the command of the 79th Regiment about two years since, was appointed one of the Assistant-Adjutants-General on the formation of the Staff of the Army which, it is well known, is at Gallipoli. He was born 25th March, 1807—the second son of the late Lord Panmure, and, was, consequently, brother and heir-presumptive of the present Peer. By his decease, a seat for Forfarshire, the Surveyor Generalship of the Ordnance, and an appointment on the Adjutant-General's staff, fall vacant. Colonel Maule was not married.

BREVET-MAJOR LEVINGE, R.A.

THIS accomplished and popular officer died, on service in the East, of an overdose of opium, administered by himself, when suffering from diarrhœa. George Charles Rawdon Levinge, Brevet-Major Royal Artillery, was next brother of the present Sir Richard Levinge, Bart., of Knockdrin Castle, county Westmeath, being second son of the late Sir Richard, by Elizabeth Anne, his wife, eldest daughter of Thomas Stoobhy, first Lord Ranclife. At the time of his lamented death he had not quite completed his forty-second year.

MAJOR-GENERAL BUSH.

MAJOR-GENERAL William Bush, K.H., who died on the 27th ult., at his residence in Sloane-street, was a son of the Bushes of Tracey-park, Gloucestershire. The gallant officer rose, after long service, to the rank of Major-General, to which he was promoted in the last Brevet; he was made a K.H. in 1835. He was at the time of his death at the head of the London Recruiting District.

FRANCIS MORLEY, ESQ., OF MARRICK-PARK, YORKSHIRE.

THE death of this gentleman occurred at his residence, Marrick-park, near Richmond, Yorkshire, on the 3rd ult., in his 45th year. Mr. Morley married, March 10, 1836, Charlotte, eldest daughter of the late John Clervaux Chaytor, of Spennithorne-hall, near Bedale, county of York, Esq., and leaves two sons and three daughters. Mr. Morley was a magistrate for the North Riding of Yorkshire, and late Captain of the North York Regiment of Militia.

The family of Morley, represented by this gentleman, was originally of Morley and Wrenington, and subsequently of Clapham and Beamsley, and is a family of great antiquity in the county of York.

CHEVALIER MELLONI.

We regret to record, from the foreign correspondence of the *Morning Chronicle*, the death of Chevalier Macedonio Melloni, the celebrated natural philosopher, which occurred at Portici, near Naples, on the 11th ult., in consequence of a severe attack of cholera. M. Melloni was only fifty-three years of age. He was born at Parma, and he had been appointed in 1829 director of the Meteorological Observatory on the summit of Mount Vesuvius by the King of the Two Sicilies, to whom he had been recommended by Arago and Baron von Humboldt. Although he never interfered in Neapolitan politics, in 1850 he was suddenly dismissed, and ordered to leave the country. The latter part of this sentence was remitted, on the application of Count Brokausen (the Prussian Minister at the Neapolitan Court at that time); and when M. Melloni was annoyed from the Chief of Public Instruction, Canonico d'Apuzzo—the author of the famous "Catechismo," with which Mr. Gladstone made the English public so well acquainted—on what grounds he was dismissed, the Canonico answered that there was no accusation against him, but that he must recollect he was "an Italian celebrity!" M. Melloni is deeply regretted throughout the whole of the Italian peninsula, both on account of his great scientific genius, and of his noble heart. He was well known by all scientific men in England, and was on intimate terms with Professor Faraday and Dr. Brewster. The Royal Society have conferred upon him more than once the gold Rumford medal.

WILLS AND BEQUESTS.—The will of the Hon. and Right Rev Richard Bagot, D.D., Lord Bishop of Bath and Wells, has been proved under £14,000 personalty, which he has left to his widow.—The late Alderman Hooper, for the ward of Queenhithe, has left personalty amounting to £40,000.—The late Hugh Barton, Esq., of Straffan, Kildare, has died possessed of personalty in this country estimated at £100,000.

INTERESTING DISCOVERY.—The learned archæologists, the Prince de Saint Elia and M. Cavallero, have just made a curious discovery in Italy. It was said that formerly a submarine communication existed between the main land of the city of Syracuse, and the little island of Ortigia. The communication has just been found by the gentlemen mentioned above. It is an aqueduct, the foundations of which are 110 palms (about 28 feet) deep in the ground, and 15 feet below the bottom of the sea. By this aqueduct the waters of the celebrated fountain of Arethusa were conveyed to Ortigia.

ATTEMPTED REVOLUTION IN NEW GRANADA.

(From our Private Correspondent).

HAVING for years past derived much pleasure and entertainment from your interesting Journal, the value of which is so much enhanced by its happy and well-executed illustrations of scenes and passing events in all quarters of the globe, it occurs to me that you may possibly like to receive, from an authentic source, a brief description of what has lately transpired in this part of South America (New Granada), and which may, perhaps, prove interesting to some of your readers, although the attention of the majority will naturally be directed at the present time to the far more important and exciting scenes in the East. However, should you deem this short account of any interest, or worthy a place in your columns, I will endeavour to give it as briefly as possible.

Bogotá, as your readers will be aware, is the capital of the republic of New Granada, and the seat of Government. During the last few years the country has enjoyed comparative tranquillity, under the successive administrations of three Presidents—viz., the Generals Herran, Mosquera, and Lopez; and all trusted that the successor, General Obando, would have gone through his term of office with equal éclat. Unfortunately, however, this expectation was not to be realised, as on the morning of the 17th April last, the inhabitants of the capital were astounded by the intelligence, that during the night General Melo (Commander-in-Chief of the troops), had taken effectual measures to change the order of things; by the establishment of a species of Dictatorship, naming the President Obando, as "Jefe Supremo" of the nation. This step would appear to have been taken with the view of changing the new Constitution, which had almost entirely annulled the powers and privileges of the President. At daybreak, therefore, of the 17th April, the "Plaza Mayor" was filled with troops, united to the "artesanos," all under arms; whilst discharges of artillery announced to the people the unexpected change in their Government. Subsequently a deputation was formed from amongst the leaders in the revolution to wait upon the President, acquainting him with what had taken place, and to obtain his acquiescence to the act. He, however, it would appear, did not sanction the movement, although it is supposed by some that he was the prime mover in the whole affair; and got General Melo and his officers to take the prominent part; but the result was that the President was placed under a nominal arrest; and his colleagues in office, who had also refused to recognise what had been done, being likewise arrested, and placed in strict confinement—the President remaining in the Palace, and the Ministers Plato, Barriga, and Pinson were sent to the barracks. General Melo meanwhile declared himself at the head of a Provisional Government until a Convention could be called and further measures taken. As the Session of Congress had not yet closed, and some of the members had rendered themselves unpopular, with the party now in power, some few were apprehended, and others took refuge under the flags of the different foreign legations, together with several of the influential inhabitants, and wealthy merchants of the place; and amongst others who sought protection in the United States Legation, was Señor Obaldia, the Vice-President of the Republic. Amidst the alarm which at first prevailed, and the excitement attending it, it must be admitted that proper precautions were taken to preserve tranquillity in the city, although subsequently, with the object of exacting forced loans or contributions, much severity, and even tyranny, has been exercised towards several respectable persons, who were thrown into dungeons, and treated with the greatest rigour, because they refused to pay up what was demanded of them. One of these parties (Don Raimundo Santamaria) was released, partly by the influence of friends, but more from a fear of his paying to the extent of some £1200 sterling, and others in a similar manner.

A day or two after the revolution broke out, two Generals, named Herrera and Franco (the former was elected, last Congress, a "Designado," or President elect, an office periodically given in the event of the President's death, or other casualty) made their escape from the city, and in a short time succeeded in raising a considerable force in favour of the Constitutional Government; and, had their plans been prudently concerted and carried on, no doubt by this time Melo's party would have been overthrown, and peace re-established; but, owing to the want of daring of General Franco, who, it seems, prevailed upon Herrera, against his will, to march upon the town of Cipaquirá (ten leagues from this, and a place of great importance, being the locality of the salt mines, which produce to the Government some 40,000 dollars monthly), they were defeated in this, their first attempt; as, on their advanced guard entering the town, they were fired upon from the windows of the houses, and much slaughter ensued, one of the first victims being General Franco, who fell mortally wounded. Herrera himself escaped, but his troops, being chiefly recruits or volunteers, dispersed, discouraged, it may be supposed, at this repulse. However, since then, it would appear, the Constitutional Government are gaining new vigour and strength, and are now daily augmenting their forces. The town of Honda (the port of embarkation on the Magdalena river, and high road to the coast) is in possession of the Constitutional party; and General Mosquera (who lately arrived from the United States) is coming up with a considerable force against the capital; to be joined by other troops from the province of Antioquia, and forces from the south under General Lopez. Meantime, the Vice-President, as also the Ministers, who, as before stated, were under arrest, contrived to make their escape.

General Melo (in charge of the Provisional Government) is encamped with his troops on the plains of Bogota, a few leagues from the city, so that something decisive between the two parties may shortly be expected; and it is supposed the result will be the re-establishment of the Constitutional authorities; although there are doubtless many difficulties to overcome, as Melo has under his command many of the veteran troops, and he has so far shown himself to be a man of intelligence and capacity, and will of course do his best to maintain his position.

I have only to add, in conclusion, that the country in general must suffer severely from this revolution, whichever party may gain the day: and, at present, things are in a deplorable state—all operations, whether commercial or agricultural, being, for the time, completely paralysed, and the Treasury quite exhausted. Deeply is it to be lamented that a country whose natural resources are so great, and, if properly developed, almost inexhaustible, should thus suffer by these too frequent revolutions, which, productive of no good to the people, tend only to destroy confidence here, and their credit as a nation abroad.

CAREER OF A YANKEE.—The career of Mr. Thayer, the originator of the Massachusetts Emigrant Aid Company, is a remarkable instance of perseverance. Until nineteen years of age he was a labourer upon a little farm in the interior of Massachusetts. He then conceived the idea of educating himself, and, tying his few clothes in a cotton handkerchief, he placed the bundle on a canal-boat, and walked to the terminus of the canal, where he reclaimed the bundle, and continued his walk some miles further, to a neighbouring village, where was situated a school of preparation for the University. Supporting himself there by manual labour, and sleeping at first in a garret, he so fitted himself as to be able to pass examination in all but mathematics, and was admitted to Brown University, on condition of bringing himself up in that branch before the end of the first term. There being two spare days before the beginning of term, he stripped off his coat and hired himself to dig post-holes, by which he earned enough to buy a bed and a table, and a chair for his room, and the few books he would immediately want. In this way also he went through the University, and, though entirely unaided, graduated at the close with high honours, and with £20 in his pocket. With this he began life as a school teacher eight or ten years since, and is now the possessor of a handsome competency.

By the Swedish Diet the House of Peasants proposes a petition to the King to take measures in conjunction with the Diet, to prevent the Aland Islands from returning to Russian dominion.

PANORAMIC VIEW OF SULIN

DRAWN BY LIEUTENANT MONTAGU

THE COAST OF SULINA.

LETTERS from the head-quarters of the Allied army of the 12th ult. mention various unmistakeable signs which show that the army was about to move. This was not inferred so much from the secret conferences of Generals—the hasty despatches flying between Rustchuk and Varna, and between Varna and Constantinople—the uneasy movements of Lord Stratford de Redcliffe from Therapia to Stamboul and back again—the activity of Aides-de-Camp, and the fussiness of the Staffs, as from the more obvious fact that, day after day, French and English war-steamers and transports were arriving there, with large horse-boats in tow, fit for landing men and horses and guns. A n of a peculiar but useful kind of vessel had been constructed at Constant and elsewhere for our use, and sent up to Varna. Each vessel consists of the large Turkish boats of the Bosphorus (which are about fifty fe and about eight feet broad) fastened together and planked over at

will have a division of transports for its special service and carriage, and each division of transports will be convoyed by a squadron of ships of war. This grand fleet consists of steamers of a magnitude, burden, and speed hitherto unknown in any operation of war—of such vessels as the *Himalaya*, the *Simla*, the *Emu*, the *Hydaspes*, the *Melbourne*, the *Victoria*, the *Orinoco*, the *Avon*, the *City of London*, the *Emperor*, the *Colombo*, the *Tonning*; and of sailing-vessels which would constitute a formidable navy of themselves alone. Our men-of-war steamers could probably land 20,000 men in their boats in two hours! The artillery at Varna, on the 13th, under General Cator, consisted of the siege-train (30 guns out), commanded by Captain Cambier (*vice* Finde, gone home sick); the Royal Horse Artillery, C Strangways; the Artillery of the Light Division, Colonel Dacres; of the Division, Colonel Lake; of the Second Division, Colonel Dupuis; and Third Division, Colonel Pitzmayer. Each division has 12 field guns att to it, so that there were 48 field-guns in all. There were besides, 12 gu

e is a light kind of raft formed, not drawing more than a foot of d capable of landing two heavy guns and their men, or of carrying 0 men with the greatest ease. The quantity of stores was enormous, the large steam transports were ordered to supply themselves with six rovisions for the number of men which each is calculated to carry.

The manufacture of fascines and gabions continued with the utmost activity among all the divisions, and fatigue parties were working at them with increased energy. The men of several divisions were being trained in throwing up field-works, and in the use of the fascine and gabion when made. At the office of Admiral Boxer, at Constantinople, the programme of operations for a large fleet of transports had been prepared. They are divided into ships for the Light Division, No. 1; for the 1st Division, division No. 2; for the 2nd Division, division No. 3; and for the 3rd Division, divison No. 4; each with its distinctive flag, so as to prevent confusion, and each under the command of a naval officer. Thus, each division of the army

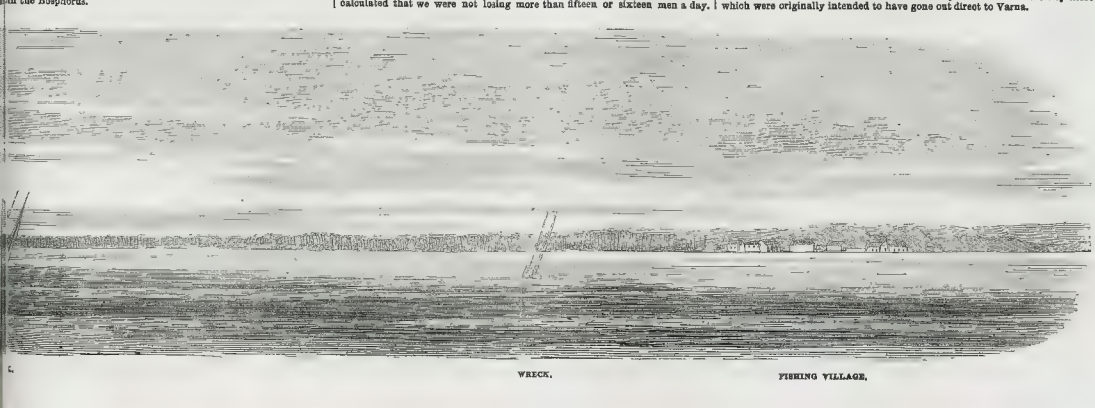
Horse Artillery—the latter were 6 and 9-pounder guns. It was that our boats would suffice to land these 56 guns at one trip; but es for landing the heavy siege-guns was not so evident. The French had not all arrived at Constantinople, but it was stated some of it tin the Bosphorus.

We are glad to learn that the cholera is on the decrease. The numbers of the dead were diminishing every day; the admissions into the general hospital (English) had fallen to about five a day, and the deaths to four a day; and, taking the average proportion of deaths through the whole division, it was calculated that we were not losing more than fifteen or sixteen men a day.

As it has been found that those regiments which have been lately abroad have been less sickly than the regiments which have come out direct from England, it has been resolved that regiments from Malta, the Cape, and Gibraltar shall be sent on to Varna, and that their places shall be taken by those which were originally intended to have gone out direct to Varna.



WRECK. FISHING VILLAGE.

PANORAMIC VIEW OF SULINA, AND THE ADJACENT COAST.

The View engraved upon the preceding page is from a sketch made by Lieutenant Montagu O'Reilly, H.M.S. *Retribution*, a short time previous to the destruction of Sulina, by the *Spitfire*. The many wrecks show the dangers of the navigation at this point—the Sulina mouth of the Danube—especially where there is little water on the bar; but the recent visit of the *Spitfire* proves these dangers to have been greatly exaggerated.

Sulina is at present desolation personified. Since Captain Parker's death, the whole of the town has been burnt, in order that it might not afford cover to the Cossacks. The lighthouse and the church, a wooden building, alone remain. There are blackened beams marking the site of the town on the south side of the mouth, and a dismantled work on the north side. Between the two oscillate and drift perpetually an enormous number of pieces of wreck and wrecked vessels, their masts forming various angles with the stream. Dogs and cats, of every grade of leanness, are the permanent occupants of the place, and frequently a party of Cossacks (when the coast is clear) takes a survey from the summit of the lighthouse. Lower down, a meagre supply of trees rises occasionally from the low swampy shore.

A Correspondent states:—"The whole of the inhabitants of Sulina have retreated on Tultcha. There is no doubt but that they are a set of marauding ruffians, and practise all kinds of extortion on the many ships that pass out the Sulina mouth, through the year. Before taking their final departure, they went on board a Dutch galliot, lying quietly in the river, and plundered her of everything. These fellows are Greeks, of the Ionian and Albanian class."

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

English artists are mourning the loss of an old friend. On the 29th of August, in the house in which he had lived for a quarter of a century —No. 29, Devonshire-street, Queen-square, Bloomsbury—died William Brockedon, artist, author, and inventor. He had been long ailing; the death, some five years ago, of an only son—a young man of high promise—told greatly upon him; but the immediate cause of his death was from gall-stone. He was in his sixty-sixth year.

Mr. Brockedon was a native of Totness, in Devonshire, where his father was a watchmaker. When very young he evinced a liking for all mechanical pursuits; and, long before quitting Totness, he is said to have made several useful inventions that attracted attention beyond the waters of his native Dart. But another study occupied much of his spare time when a boy. He was irrecoverably an artist in his tenth year—dreaming of great pictures he was never destined to paint, and foreseeing a reputation as an artist which he was never to attain. Devonshire had lately produced Sir Joshua Reynolds and James Northcote, and was now about to add to its worthies in the same school Benjamin Haydon, Charles Eastlake, and William Brockedon—all three to be heard of hereafter.

In his twenty-fourth year Mr. Brockedon found his way to London, took lodgings at No. 12, Frith-street, Soho, and sent to the Royal Academy Exhibition of that year two small portraits—"Mr. Prout, of Plymouth," and "Mr. Holdsworth, M.P." They attracted little attention; but still he was not disheartened, and the next year sent another and more ambitious work—"Portrait of Miss S. Booth, as *Juliet*"—of which we have heard artists of name speak with greater approbation than they would now probably award to it, were the picture once more before them.

His ambition advanced as he grew older—some of his subjects revealing great daringness of pencil. Thus, we find him painting and exhibiting "Ossian Relating the Fall of Oscar to Malvina;" "Adam and Eve Lamenting over the Dead Body of Abel;" "Christ Instituting the Sacrament;" Psyche Borne by Zephyrs;" "L'Allegro;" "The Deluge;" "Raphael introduced by his Father to the Duchess of Urbino;" and "Milton Asleep in a Garden in Italy, observed by a Lady, who writes some lines on his appearance, which she leaves in his hand." These were varied by subjects less daring and comprehensive; by a few portraits, including one of the late Sir Alexander Burns; and by foreign landscapes—such as the "Plains of Italy seen from the Col de Viso;" and, better still, a "View in the Southern Alps, with the Source of the River Po."

Mr. Brockedon was a great traveller—commencing, not as others in early life, but in his mid career. His favourite homes were among the Alps, whose passes he has made known to us by a very accurate and agreeable work, in which pen to hand and pencil to the graces of the pencil. It was in Brockedon's company that Murray acquired a taste for travel, that led to so many useful Handbooks; and it was in Brockedon's company that Layard first gratified that ardour of inquiry to which we owe the discoveries at Nineveh.

But it is not as an artist that Mr. Brockedon will be hereafter remembered, though his "Passes of the Alps" is no common book: some of his mechanical inventions will perpetuate his name. He turned india-rubber to other useful purposes than artistic ones; and all but abolished corks from our wine and beer cellars. He coined power of pluming by a screw press, and made the best black-lead now to be procured, as the mine is exhausted. But his most ingenious invention was that of jewel boring for wire-drawers—a most useful process, by which he should have made a rapid fortune. But it was the fate of Mr. Brockedon always to be within an ace of discovering some invention by which he was to become rich, and his name to be identified with a discovery of permanent importance. He was not, however, unrewarded by his discoveries, and is understood to have died richer than his father, the old watchmaker, foresaw would be his lot.

On the day on which our paper appears, Mr. Brockedon will be laid by the side of his first wife, in the burial-ground of St. George the Martyr, in Bloomsbury. He has left a widow and an only daughter. Let us add, that the Graphic Society—a still existing and useful institution—originated with William Brockedon; and that pictures from his pencil are to be seen in Dartmouth Church, in the Guildhall at Exeter, and in the Great Hall at Christ's Hospital.

The names of two well-known collectors of rare things are to be seen in the obituaries of the present week—Mr. John Wilks, of Finsbury-square, and Mr. Ralph Bernal, of Eaton-square—both ex-members of Parliament. Mr. Wilks collected books and MSS.—his books he sold some few years ago; but his autographs, with some few exceptions, he is understood to have kept pretty well intact. Mr. Bernal delighted in Raphael ware, and Venetian and Swiss glass. His collections in this way are most remarkable. Indeed his house in Eaton-square is literally crammed with the choicest examples of mediæval art, mixed with rare French miniatures of historical personages: the result of an eager and active inquiry for such things spreading over a period of forty years. Both collections, it is understood, will come to the hammer some time next spring. Collectors have empty purses just at present.

The result of the sale of the late Mr. Pickering's effects and stock will be, that his estate will pay considerably more than twenty shillings in the pound. Why, then, was he made a bankrupt? But it is now too late to regret an erroneous step. Poor William Pickering, to whom we owe so many excellent books, lies cold in the Cemetery at Kensal-green.

This is rather a mournful column of talk this week. Let us, therefore, wind up by recording that her Majesty was pleased to request that Mr. Albert Smith would entertain Prince Albert at Osborne, on his birthday, on Saturday last. Mr. Smith did so; and varied his excellent entertainment so much, that the Court laughed as it has not laughed, we suspect, since the last Court Revels, in the reign of King Charles II. What would not our first three Georges have given to have had Mr. Albert Smith at Kensington or St. James's, instead of those dull Poets-Laureate—Mr. Nahum Tate, Mr. Lawrence Eusden, and Mr. Colley Cibber?

LITERATURE.

History of Russia, from the Foundation of the Empire by Rourick to the Close of the Late Hungarian War. By Alphonse Rabbe and J. Duncan, B.A. Vol. II. Herbert Ingram and Co., and Orr and Co. Of the first volume of this History we have already given an ample account. The able manner in which the progress of Russia is traced as far as the beginning of the present century, is M. Rabbe's share in a bipartite production of the most useful, important, and commendable character. True, even in that earlier portion, Mr. Duncan found means to increase the value of the French chronicle which he translated. He contributed to that admirably succinct compendium of the story of Russia those preliminary records which M. Rabbe had neglected, whether through oversight or through contempt. And as our countryman had thus supplied what the work wanted intrinsically—we mean a proper beginning, he now adds to it what the lapse of time has rendered equally requisite—a conclusion. Very great events, in which this country took so conspicuous a part, make this last and comparatively short era far more interesting than all the preceding Russian annals together, though wading over many long centuries. We now refer to the opening of the nineteenth century, of which the narrative places before us exactly the half.

Thus, through a number of ages, these two luminous volumes trace the whole subject, first down, and at last as the nature of things can admit; and, on closing the work, a commendation of its completeness escapes from the readers who might say—"These are the events and the concerns of five years back, and, in truth, by their results, they are the business of the present moment, the actual and universal theme of solicitude—they are all we can know on this side of the dark veil of futurity; and to this broad light, and these now urgent interests, by the regular series of facts, a chronicle so condensed, has carried us, from the distant and barbarous obscurity of the times of Rourick the Founder."

A great merit is implied in this description of work; and this description is but just and true. Many circumstances combine to make the interest of the last fifty years of Russian history, what we have said that interest was, greater we mean than the interests of all the former long records of the same empire, since it first took distinct shape among the nations. First of all, we are ourselves directly and momentously implicated in this later part of the story; whereas with the earlier Muscovite destinies—seen in the prescient eye of some profound and philosophic statesman—we were practically no more concerned than in those of China, and apparently as little as in those of the inhabitants of another planet. The liberal and noble curiosity of a scholar, would doubtless engage in researches respecting any human community; but the great rough attention of the miscellaneous public is won only by more obvious and immediate bearings in the study of history. These exist—striking, prominent, and vivid—in Russian annals of the last half-century. England was enormously taxed, and she spilled some of her best blood, undertook some of her greatest enterprises, and felt some of the keenest alternations of anxiety and of pride, that she ever experienced—all in close propinquity, and frequently in actual contact, with the proceedings which constitute, as it were, the life and fortunes of Russia, during that ever-memorable period.

But this direct association, in which the names of our statesmen, our negotiators, our military and naval heroes—some of them still living—are blended continually in the narrative, even of the opening days of the present century, with the names of the Russian characters who are more professedly the theme of our author. This direct association, this close and personal interest, which of itself would make the present volume far more attractive and profitable to us than its predecessor; this, we say, is not the only circumstance which enhances the entertainment of the perusal, and lends to it additional importance. For, in the second place, the writer has here enjoyed immensely greater facilities for the perfect discharge of his own duty. We need not insist on this point. Everybody is aware that the materials at his disposal are so ample that, here at least, there could be no danger of historical mistakes. They were not difficult to avoid; they would have been difficult to commit. In the third place, Russia itself, at this epoch, and thenceforward, stands before the reader's eye, like some object which has undergone a magical transformation. It had been esteemed a state of the fourth or fifth rank; at this epoch, it suddenly strode into the attention of Europe as a power of the first class, and, in some respects, one of the very strongest empires in the world.

Next, above all, the very particular transactions themselves which this volume relates deserve, and extort, our attention. That is the great point; that is the main difference between the earlier and the later parts of the production for which we are indebted to M. Rabbe and Mr. Duncan. Doubtless, no one carefully perusing the present condition or character of a country who had not made himself master of its former condition and character; and the first of these volumes, therefore, was absolutely necessary (not only for the sake of its own contents, but), in order to prepare for that which the present contains. And, were M. Rabbe's chronicle as dull as on the contrary it is spirited and entertaining, still, that with which Mr. Duncan continues it would reward the reader for the perusal of both.

When, in 1811, he who terrified Europe into frantic admiration for Napoleon, was strangled in the gloomy palace, now closed, which towers on the banks of the Fontanka Canal, at St. Petersburg, the Continental system of that marvellous conqueror was rent asunder in a thousand parts, as if an electric shock had shivered some vast but brittle fabric of material construction.

Then began that Titanic struggle of Napoleon, which (frequently suspended for treacherous intervals) was renewed, and must have been renewed, until, in spite of his unparalleled genius, he was entirely overthrown. No other termination of that struggle was possible, for it was a struggle not only of one power against what was virtually all mankind, but it was the struggle of a despot against the very laws of nature itself, both morally and materially. Xerxes and Napoleon are hopeful an enterprise as the Continental system, when he ordered the Hellespont to be put in chains; and Napoleon afterwards committed not a greater extravagance himself, when he thought that half a million of foreign soldiers, he were more than a match for the seasons of heaven, amid the boundless wastes of a country occupied by a race whom the succession of immemorial generations had protected efficiently against the influences under which their invaders perished. He might as well have led that mighty host to make war on the monsters at the bottom of the sea, or have sent them into living flames to fight the fabled salamander in his native element.

Naturally, much of this volume—all its earlier part—is engrossed by the career of Alexander: his alliances with England; the transient conventions with Napoleon which were extorted from him by the sword; his wrestle, in 1812, for very existence on his own soil, amid his own ice-bound fastness on the final explosion of that gigantic tempest; the victor's share in the grand concentric advance of all Europe towards Paris; and the brilliant tranquillity which, after so many storms, illumined the evening of his long and remarkable reign.

Then comes Nicholas—whose fate is still to "rede," and whose insidious moderation, for more than twenty years, has been at last flung aside, like a worn-out mask—in an evil hour for his empire. Surely, such a work as Mr. Duncan's, on such a theme, and at such a moment, must excite everybody's interest, and obtain that popularity which, for so many reasons, it deserves.

A Handbook to the Peak of Derbyshire and to the Use of the Buxton Mineral Waters; or, Buxton in 1854. By W. H. Robertson, M.D. Bradbury and Evans.

The need of a good guide-book to Buxton—one of the most celebrated watering-places in England for the cure of gout and rheumatism—has been felt by all visitors. The work before us possesses the twofold merit of being a medical, as well as a topographical, guide. The reputation which Dr. Robertson has acquired in the treatment of the diseases for which the waters of Buxton are considered to be almost a specific, renders him an authority on the medical branch of the subject, while his descriptions of local scenery, being derived from personal inspection, have the merit, not only of accuracy, but of a style of elegant simplicity seldom found in mere guide-books.

Dr. Robertson commences with an historical description of Buxton from the earliest period of its existence as a place of note down to the present year. This chapter is full of the most interesting particulars with respect to its gradual progress from a hamlet to an extensive and finely-built town. The second chapter contains an account of the drives and walks in the neighbourhood, and in all the more celebrated portions of the romantic and beautiful country known under the general appellation of "the Peak." The remainder of the book deals exclusively with the baths themselves, their origin and properties, and gives a copious analysis of their waters. The Appendix, by Miss Hawkins, a lady resident in the immediate vicinity of the town, contains a botanical commentary, and a classified list of the Flora of the Peak. To this is added a directory of distances, routes, and a list of the principal hotels and boarding-houses. The book is, besides, embellished with a map of the Peak of Derbyshire, plan of Buxton-park and Grounds, and other illustrations, which add much value to it as a work of reference.

A Shilling Cookery for the People. By Alexis Soyer. Routledge and Co.

Little need be said by way of introducing this useful book to the notice of our readers. M. Soyer having already provided for first-class epicures in his guinea volume, the "Gastronomic Regenerator;" and next, for "the wants of the easy middle-classes," in his volume entitled the "Modern Housewife," has, in the book before us, supplied a more pressing want, namely, a system of cookery for the humbler classes, among whom there is, generally speaking, a lamentable lack of economy. In the present book, notwithstanding its Franco-English style, there is a large amount of straightforward, commonsense instruction in making the most of everything—a point much needed in cookery-books. The requirements of *the class* for whom this volume is written are here specially anticipated in some 500 receipts; and a little study of its pages will enable the industrious housewife to increase the comforts of her home without adding to the expenditure, and at the same time to arrive at the best means of ensuring health and comfort. With such high recommendation the "Shilling Cookery" must rapidly attain extensive circulation; and its practical utility fully entitles it to this pre-eminence.

NATIONAL SPORTS.

From twice one hundred thousand throats, rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course, or more.
NIMROD.

The York Meeting was far before any of its predecessors, and no less than 143 horses went to the post for the 32 events. The blood-stock market was also brisk, but the sale of Yellow Jack for 1000 guineas, &c., has so unsettled breeders' ideas, that Mr. Jacques considered his yearlings were quite "given away" when the nine only averaged 72 guineas, and the six foals 42 guineas. Seven of the Rawcliffe Paddock yearlings averaged 295 guineas, and the remaining twenty-two only 44 guineas. The Earl of Chesterfield gave the highest price (600 guineas) for a filly by his ancient St. Leger champion, Don John, who is, we hear, sold to go to America, whither the Earl's equally celebrated winner, Priam, migrated some twenty years ago. Don John's sale will make room for West Australian as Lord Londesborough's stud farm, which will most probably receive him at the end of this season, as his Lordship is most anxious that he should retire with unabridged honours. If, however, he stands his preparations, and the ground suits him, he is to meet Virago in the Doncaster Cup. The mare's defeat at York, over a distance very unfavourable to her, will, no doubt, make "Mr. Howard" all the more anxious that she should not shrink from a bout which will be quite as exciting as the great Voltigeur v. Flying Dutchman, and Teddington v. Kingston issues of bygone Doncaster Cup days. Bourton is an acceptor at 7 st. 10 lb. in the Great Yorkshire Handicap, as his owner was greatly dissatisfied with his Wolverhampton defeat; but no muscles can stand steeple-chasing all the spring, and fast-racing all the summer, with impunity. The racing career of his stable companion, Prime Minister, is also, we hear, come to a close. Five thousand guineas were refused for him after his flying two-year-old performances; but infirm legs and needless handicapping have left his bang and since then he has only won £880. Many think that Rifleman's running at York did not justify the estimate of his Derby chance, which Mr. and Mrs. Osbaldeston entertain. He is very much grown and improved since last year, and although he had not quite the distance to suit him, Nat only "threatened," and did not punish him at the finish. For our own parts, we thought Nettle quite the flower of the York two-year-olds. Ephesus is advertised as a sire for next season; and Hermit, "perfectly sound," is in the market for 1000 guineas. Newmarket Handicaps have just been published, and Virago and Kingston have to carry the same weight in each 8 pound.

The St. Leger is not, as yet, a brisk betting race, and the scratching of King Tom, and the downfal of the much-vaunted our Dervish, have rather plucked the heart out of it. Trapper has many friends, who think that sixteen two must be "served" over the Doncaster flat, but his foes are so inveterate that nothing can make him a favourite. He has, however, been matched against Filbert, at equal weights, in the Second October. Peck and his friends are very fond of Midsummer, who will probably be ridden by Charlton. It was said, at York, that Mr. Ivar had "declared" his mare in which case Wells would have the mount, and Scythian go to make the running for her. According to report, Scythian was fourth in the Malton Trial, while Meteora beat Acrobat for second place in it; and hence, the moment her York running was over, Mr. Ivar's trainer declared that Bolardo was certain to win the St. Leger. The respective running of the mare and Acrobat with Ivan is certainly not true to the trial, as the former received 2 lb. and hardly gave him a 3 lb. beating; whereas Acrobat, carrying his own proper weight all the way, gave him at least a 5 lb. beating, at equal weights, without being "extended." This son of Ithuriel is one of the finest-actioned and most compactly-built horses that Whitewall has turned out for many a long year, and interested more than one, who cannot forget how miserably Bolardo performed in the First Spring Meeting. It will be strange, indeed, if it proves that Lord Derby started only his fourth best animal for the great Epsom event; and if so, it will confirm the general belief, that such was Scotty's opinion in favour of Dervish, that the horses were never really tried till the middle of August. His Lordship quite made the *amende honorable* to Templeman, at York, which was nothing more than so eminent and honourable a jockey deserved; and he will ride the best of the twain at Doncaster, in case Frank Butler cannot face the requisite 8 st. 7 lbs. preparation. Autocrat is reported to be in good work, but he is out of the betting; and Calamus and Ivan seem also friendless. Some adventurous Irishman has, however, ventured a "pony" on Hanoverian, whose performances do very scanty justice to his name. The meeting, as a whole, will be attractive enough to summon scores from the moors, where sport has been very indifferent; while in many parts of the country partridge shooting (which is likely to be first-rate) has, by common consent, been delayed a week.

DERBY RACES.—Tuesday.

Grand Stand Stakes.—Falcon, 1. Little Tom, 2.
Produce Stakes.—St. Clare, 1. Ostrogoth, 2.
Tradesmen's Plate. Little Davie, 1. Pumicestone, 2.
Derwent Stakes.—Tunotheus 1. The Governess, 2.
Maiden Plate.—Vivid, 1. Katinka, 2.

WEDNESDAY.

Selling Stakes. Mirabeau, 1. Uncle, 2.
Chatsworth Stakes.—The Jealous One, 1. Le Juif, 2
Chesterfield Stakes.—Fayaway, 1. Mrs. Rigby, 2.
Sudbury Stakes.—Florist, 1. Le Juif, 2.

CHELMSFORD RACES.—Tuesday.

Marks Hall Stakes.—St. Faith, 1. Bordeaux, 2.
Brentwood Stakes.—Guitar, 1. The Despised, 2.
Chelmsford Handicap.—Miss Bolton, 1. Little Naughty, 2.
Galleywood Stakes.—Vestige, 1. Verulam, 2.
Members' Plate.—John o' Bruges, 1. Adeline, 2.

WEDNESDAY.

Cup St. kes.—Haokapelt, 1. Virgt'un, 2.
Stand Stakes.—Vestige, 1. St. Faith, 2.
Her Majesty's Plate.—Sharavogue walked over.
Town Plate.—John O'Bruges, 1. Hackapelt, 2.
Champagne Selling Stakes.—Caliela f., 1. Guitar, 2.

LINCOLN RACES.—Thursday.

Brownlow Stakes.—Snowdon Dunhill, 1. Cherry Brandy, 2.
Lincolnshire Handicap.—Jetty Treffz, 1. Lady Vernon, 2.
Granby Stakes.—Jack Sheppard, 1. Van Winkle, 2.

FRIDAY.

Scurry Stakes.—Falcon, 1. Miss Allen, 2.
Queen's Guineas.—Kingston, 1. Sharavogue, 2.
Brocklesby Handicap.—Snowdon Dunhill, 1. Horatio, 2.

TATTERSALL'S.—THURSDAY EVENING

Leamington Stakes.—100 to 8 agst Haalbec (c), 8 to 1 agst Haco (c).
Derby.—25 to 1 agst Bonnie Mary (f).
St. Leger.—7 to 4 agst Bolardo (3 to 1 laid to £100), 5 to 1 agst Trapper (3), 7 to 1 agst Acrobat (c), 10 to 1 agst Scythian (c), 10 to 1 agst Midsummer (3), 25 to 1 agst Hamilton (c).
Cesarewitch.—7½ to 1 agst Muscovite (3st 5lb), 8½ to 1 agst Burlington, 33 to 1 agst Balrownie, 40 to 1 agst Star of Surrey (3).

A Concert in the Alps.—Mr. and Mrs. Howard Paul, who are at present travelling in Switzerland, recently gave an English concert in the large *salle* of a *pensionnat*, near Geneva, which was attended by several hundred peasants, attired in their native mountain costume. The English and American songs were rapturously received by the picturesque audience, many of whom stated it was the first time they had ever heard an English song.

THE NEW UNIFORMS.

(From our Military Correspondent.)

VERY recently public attention has been strongly directed to the clothing and appointments of the British troops. By unremitting perseverance on the part of the press only can it be hoped that effectual relief will be attained. None dispute the paramount necessity for immediate improvement; but months have lengthened into years since the subject was officially bruited, yet nothing has been virtually effected It is true that samples, of every conceivable shape and description, have, from time to time, been presented for approval. Ingenuity found fertile scope for invention, and manifold were the specimens submitted by those zealous in the cause. But to what beneficial results have those exertions tended? Absolutely to nothing! Dilatoriness and hesitation take the place of promptitude and decision, and our soldiers are at this moment exposed to the fatigues and dangers of a campaign cramped with unsuitable uniforms, and oppressed with cumbrous accoutrements. These, although long since condemned by general opprobrium, as objectionable, are nevertheless still issued. We are cognizant of the fact that a differently-cut coat has been decided on as applicable to the infantry of the line. But when will it be brought into wear? Of what moment is it to the soldier in the field, to know that persons daily flock to Whitehall-place to gaze on the sealed pattern of what he is informed will hereafter become his costume? To him, it matters little whether it be a suit of armour or a Guernsey frock, unless permitted to heat the breath, or otherwise, expected by the change. Small probability exists of additional comfort accruing to him by the recent regulation. Five regiments only are to be dress in the new clothing during the ensuing year: these are at present at home—viz., the 18th, 30th, 32nd, 50th, and 94th. The remainder of the Army, including those corps now in the East, more especially requiring a better supply, will not receive theirs until 1856. Comment is not needed to demonstrate the absurdity and injurious consequences to be expected by adherence to such mischievous delay. Excuse for procrastination is based on the impossibility of interference with contracts already signed, entailing loss on individuals by swerving from agreements. But if this forms the only argument in support of culpable trifling, the apology is worthless. Loss of life must happen when men, enduring inertness from lassitude or exposed to cold, and often suffering from scarcity of provisions, are clad in garments incapable of resisting rain, and of insufficient warmth to encourage the animal heat of their bodies. The material of which the clothing is made is too scant in quantity to permit the wearer the free exercise of his limbs. Additional exhaustion and unnecessary detraction from the physical powers are necessarily concomitant attendants on so reprehensible a system. Taking the result in a pecuniary view alone, disinclination to adopt improvements will entail greater expense on the country than would be the case if Government undertook to satisfy the contracts engaged in by colonels of regiments prior to the promulgation of her Majesty's warrant of the 6th of last June. A marked difference in the style of dress worn by Light Dragoons, exclusion of Lancers and Hussars, has been sanctioned; but, as the cavalry receive their clothing but every second year, instead annually, as with the infantry, it will not be made available before 1856-7. Until a fair trial has been given to the expected amelioration of annoyances, it would be unjust to hazard comparisons between what is now enforced and the promised future amendment. The Grenada memorandum just published, acknowledges the desirability of abolishing a defective costume; but to what practical purpose are such decisions pointed, if the men are debarred from enjoying the fruits of the tardily-arrived-at dictum of the authorities? The future location of the Expeditionary Force must depend upon circumstances hitherto unforeseen; but, as no probability is entertained of the army returning home prior to exposure to severe weather in the climate where they are located, nothing can justify the inactivity manifested in not supplying them with better clothing than the apology for apparel now in use. Although valuable time has been squandered, and opportunities for studying soldiers' comforts allowed to glide by unheeded, a substitute for the intended dress might readily be furnished. Warm double-breasted frock-coats and loose trousers, both composed of durable material, properly lined, and with the seams strongly sewed, could be made by contractors in very brief space of time. Colour, or uniformity, matters nothing; the paramount object being to secure good cloth, and to ensure the various portions of the garments being durably stitched together. Above all, the excellence of the great coat should preclude the possibility of its being unfitted at. Soldiers have too long been acquainted with the miserably bad covering issued by the Ordnance under that misnomer, a perfect burlesque on the article intended to be represented. An immensity has been both said and written on this prolific subject. But, although many alterations have, apparently, been made, and again, been whispered, bearing the stamp of authoritative decrees, time has exposed the fallacy of such flattering rumours. The Royal Warrant of the 6th of June has bereaved general officers on whom regiments had been bestowed from a disgraceful and onerous position, deprived of deriving a professional income from the off-reckonings, a fixed salary is determined, which will be drawn irrespective of the sum charged against the public for clothing the troops. To attain this end the press has laboured for years; but had not the aspect of the present war drawn general attention to the condition and equipment of the soldiers, the old system would have held supremacy over innovation, as of yore. As far as the warrant embraces the subject it is good, and will be received by those affected by its provisions with satisfaction. But to what extent it will benefit the soldier may be now ascertained by inspecting the sealed patterns of the intended uniforms. Judging by the specimen quoted, each man will receive his clothing fashioned in a different shape, but made from material equally objectionable as that in wear. A change will be made but without difference, excepting outward appearance. £600 per annum having been decreed to the Colonels, instead of the full sum voted by Parliament for their corps, a supposition was engendered that the grant would hereafter be appropriated towards en-uring more fitting habiliments and appointments—a groundless hallucination, too readily credited. Those conversant with the parliamentary littleness too frequently practised on the Army, appreciated the hollowness of the project at its just value. A boon was conceded drawing down popularity on the donors, but in reality leaving the parties principally concerned in no better position than heretofore. This can be readily explained. Formerly, stated sums were sanctioned for clothing the troops, varying in amount according to the different grades, but a portion only was appropriated to that specific purpose. Detailed particulars of the deductions have already been published in this journal. The balance was tacitly understood as belonging to the Colonel. In fact it was the only emolument that officer derived from his appointment. Not a shadow of reproach existed on those broad lines. Regulations were given as instructions of the Sovereign's favour in requital for long and gallant service. The sanctioned practice deserved censure, but not the officers, who were compulsorily instrumental in upholding a faulty custom. The compensation now given to Colonels amounts to *£74,000*. Should this money be allowed without infringing on the original grant, the Army may be excellently clad and appointed. If, on the contrary, a subtraction is made in order to furnish the former, it will be difficult to discover by what means either party can benefit by the warrant. It is evident by the sealed patterns that the more economical plan will be adopted. These remarks are not intended as animadversions on the *details* of the new uniforms, but solely as regards the *material*. Yet, as the dress is not to be generally issued before 1856-7, circumstances may arise suspending the change for the Army, consonant with the proverbial indecision of its rulers.

THE DISHONOURABLE DECORATIONS OF RUSSIA.—The Wallachian Council of Administration of Bucharest has ordered the confiscation of all the Russian crosses and decorations conferred on Wallachians during the Russian occupation. These crosses will be sold by auction, for the value of the gold and silver they contain, and are to be melted down. The reason of this measure is, that these decorations confer no honour on any one, as all the Montenegrin brigands wear them.

THE EMPEROR NAPOLEON AND ESPARTERO.—A well-known Spanish statesman, who recently saw the Emperor Napoleon at Biarritz, received from his Imperial Majesty the warmest assurances of his good-will towards the present Government of Spain, and especially towards Espartero, whom he knew and frequently visited when both were refugees in England. The Emperor expressed his satisfaction that the General is now at the head of affairs, said that he wished he could in any way help him, and that he would certainly not interfere in Spanish affairs, but recognise any Government the Spanish nation might select, with the exception of that of Montpensier.

THE THEATRES.

THE "QUARTERLY REVIEW" AND THE DRAMA.

Nothing can, perhaps, more strongly demonstrate the reality of the revival of the drama in this country, than the fact of a serious article on the long-neglected theme having appeared in the last number of Murray's aristocratic review. We denominate the article a sparkling one, but we cannot congratulate the writer on the exactness either of his logic or his facts. Notwithstanding that the interest of his subject has culminated to a point to compel his attention to it, he seems disposed to doubt the evidence of his senses, and to discredit the possibility of English dramatic genius yet existing. It cannot exist in these times, therefore the drama is to France for it. With equal rationality, some ignorant vulgarians refer a painter's historic picture to a possible antecedent engraving—referring the engraving to they know not what, not having yet conceived the mystery of origination. If manners are brought to such a level in this civilised epoch that they offer no individual characteristics, why should the French playwright, any more than the English one, be procreant of eccentricities. How is it, too, that English equivalents for such caricatures are so readily provided by the translation in the adaptations which they manipulate for the British stage? No wonder that the astonishment of such an inconsequential writer is great on discovering that the dramatic spirit has penetrated to the suburbs of the metropolis, and is to be found in the cuttikirts of Southwark and Islington—(he has not yet made acquaintance with Marylebone) as well as in the centre of the modern Babylon. That the City, too, should have theatres and saloons, where the *gens de police* gather in cheap masses to witness dear-bought acting, confessions him as much surprise as was felt by Mr. Croker on learning there really was such a square as Bloomsbury. These things *are*, however; and we may congratulate the humble admirers of the drama that we are not the exclusives of their taste are at length acknowledged, by their betters, or their *better offs*.

The gist of the *Quarterly* article is to recommend a congress of managers in order to save themselves from the effect of competition in the importation of French pieces. Such a combination, even were it proper, is wholly impracticable. The jealousy of managers will not permit such a consummation, however devoutly to be wished. For the sake of the original drama—which, in spite of the reviewer's opinion, we still hold to be possible in England—we entertain no hope that any such divan will ever assemble. Let us not part, however, with the condescending critic in anger. The propriety of a classification of theatres we concede to be judicious. There has, indeed, been a natural tendency to such a classification already: and its current has been but slightly disturbed, and even where it has been, will soon of necessity resume its wonted tenor. The Lyceum, the Princess', the Olympic, Sadler's Wells, and the Adelphi, have been for some time appropriated to performances having specific characteristics. The last, indeed, lately attempted a higher flight, while the first has altogether halted in the contest; but we shall speedily find them restored to their normal condition, and inevitably maintaining the relations, which though sometimes apparently suspended, always really exist.

Two inductions made by the reviewer are pregnant of suggestion. One in relation to spectacle:—

The necessity for ornament is generally in an inverted ratio to the merits of the piece on which it is expended, even as the most creative poets stand least in need of the painter's aid. Rarely are Homer, Shakspeare, or Dante successfully illustrated by artists, although the same amount of imaginative skill would have been well employed upon the pages of Roger, Moore, or Campbell. Passion, provided only it finds competent representation, will make itself felt; wit and humour, meeting with fitting exponents, will excite mirthful responses. So long as Mr. Charles Kean be performed *Benedick* and *Mercutio*, it mattered little whether the scene behind him were an exact representation of a street or a garden in Venice or Messina, or whether his dress were after the fashion of France or Italy. The elder Kean attired *Othello* in a garb that no nation could claim for its own, yet no discreet adviser would have counselled him to exchange it for the cumbrous robes of a Venetian magnifico. We thought that "Macbeth," as represented last year at the Princess' Theatre, was oppressed by the succession of sombre or brilliant scenes. We liked better the old-fashioned moors and woods, and the less sumptuous banqueting-rooms. We thought that, to these we extent, "Sardanapalus" was improved. In the one the imagination was encumbered by the multitude of picture adjuncts; in the other, it was assisted by the presentation of the Tigris and the hills of Nineveh. In the former, the spectator's imagination might have been left to supply much of the material creation; in the latter, the ornament propped and enriched the original poverty of the libretto.

The other is a memorandum anent Shakspearian readings:—

If it is good to be amused, it is better to be instructed; and if the poetic drama is more justly expounded by Mrs. Fanny Kemble than by any other performers now on the boards, it is wiser to resort to her readings than to the theatre. In some degree, both lectures and readings are a compromise between the dramatic instincts inherent in our nature, and conscientious scruples as regards the theatre. The theatre is probably affected by these causes more in the quality than the number of its frequenters. They abstract from its benches many of the more intellectual members of society, and thus lessen the demand for a higher and better order of drama. They are not, however, features peculiar to the present age. They are but repetitions of what has already occurred. At first the new comedy supplanted its rivals and predecessors, much as the modern drama has supplanted Shakspeare and Racine. Æschylus and Sophocles would no longer draw, or could not find competent representatives; and the Athenian people, who regarded the theatre as a proper object for legislation, passed a law to the effect that the elder and better drama should thenceforward be read, and not acted, at the Dionysiac festivals.

Such remarks we repeat, are exceedingly suggestive and useful. We concede, also, to the censure generally cast by the writer on the prevalence of burlesque; though not to the contempt with which he scorns every burlesque-playwright, except Messrs. Planché and Tom Taylor. The trimestrial critic has indeed a tendency to take certain authors (a very few, carefully selected) under his aristocratic protection. Thus he mentions Mr. Browning, and the author of Philip van Artevelde, as the only five act dramatists of the present day. Now, this is either affectation or ignorance; in either case, it deprives his writing of that practical value which would belong to it, if its information were full and correct, and its opinions free from interested prudence and patrician self-conceit. In his expectation, however, that a modern drama will arise, reflecting these modern times, we heartily join; and in that expectation, part with him somewhat unwillingly, and in somewhat of a dissatisfied state of good-humour, notwithstanding, in the course of our acquaintance he had frequently put us out of temper.

SADLER'S WELLS.—The new theatrical season dates with the re-opening of this theatre, which took place on Saturday, contrary to announcement, the term was not inaugurated with a Shakspearian play. Mr. Lovell's "Provost of Bruges," by some accident, had that honour. We are not sorry for this—it is a recognition of Living Poets to be welcomed. There are still wells of song, fountains of poetry on British soil, have you the divining-rod to detect their presence. The theatre re-commencing has only this to add to its laurels so honourably won, not only the resuscitation of the much too-worshipped drama of the past, but the encouragement of the genius of the present. The wealth of to-day is more than equal to the wealth of yesterday; for yesterday is the Old Man, whom every true Christian should put off, and to-day is the blooming infant, in whose cherub form lie infinite possibilities. One cheering smile of patronage would awaken in its countenance a thousand answering smiles, fresh from Paradise, and radiant with the sunlight of eternity. The "Provost of Bruges," a play seldom performed, is nevertheless one of extraordinary merit. It was the first play of the author that marked him for promise; but it was produced at the end of a cycle, that of Mr. Bunn's unfortunate management of Old Drury; and, notwithstanding the illustration which it received from Mr. Macready's genius, had not justice done to it, either by the theatrical authorities or the public. Neither had any faith—so the bread cast on the waters had to wait many days. Seasons passed before Mr. Lovell was again heard; and then it was as the most popular of dramatists. The early production, now revived, with a better chance of success than it ever had before, is not without its faults, of which its unhappy catastrophe is not the least. But its merits are paramount; the novelty of its theme, the originality of its dialogue, the variety of its characters—all distinguish it as a production of uncommon dramatic excellence. Its principal situation, that of a nobleman reduced to the condition of a serf, by having married the daughter of a serf, who had concealed her origin and intent to be the Provost of Bruges and the ruler of his Sovereign, is, perhaps, the most striking thing in the whole range of the modern drama. We recollect that Mr. John Cooper, on its production, made quite a sensation in the scene in which *Bouchard* demands an explanation of *Bertuphe*; nor was Mr. F. Robinson, on the present occasion, wanting to the crisis, though lacking the physique of its original representative. Mr. Phelps, on the other hand, rose into positive greatness; and, in fact, to the whole character of the provost gave a vitality and effect which has never been exceeded. In the pathetic passages—those in which the ambitious *parvenu* melted into the distressed father—Mr. Phelps attained a level of passionate expression, unreached as yet by any modern competitor. In dignity he may be excelled, but in tenderness he cannot be easily equalled. This point, also, is attained without stage-trickery. It is not arrived at through the media of theatrical traditions, but it is in the man, and comes out of him by the natural action of the character, and the exact point of emotion. It is more than acting—it is nature. The audience on Saturday completely filled the theatre, and gave a rapturous reception to every member of the company. If ever a season commenced with an augury of success, it may be truly stated that the present season of this now eminent theatre was inaugurated with an omen of prosperity, which, for the sake of the true drama, we may reasonably trust will be faithfully realized.

ASTLEY'S.—The "Siege of Troy; or, the Miss-judgment of Paris" is the title of the new equestrian spectacle at this theatre. It was produced on last Monday, and is professedly the handiwork of Hugo Vamp, Esq., of Marionette celebrity. The dialogue is of the usual extravaganza kind, and makes up the old and modern Greeks, with the Russians to boot, thus pointing the moral and adorning the ancient tale of Troy divine, for the benefit of the existing generation. Binon, and the Wooden Horse, are both great parts on the mythic scene, the former by Mr. W. J. Hodgson, whose comic power is considerable. The scenery of Mount Ida and Troy, of Sparta and its hunting grounds; of interiors and exteriors; a Trojan square by moonlight, and a final mythological tableau, do credit to the invention and skill of Mr. Hildenhall. Among the wonders of the arena, Herr Caristoffe occupies the third tier of the miraculous. He is termed "l'Empereur des Funambules," and his tight-rope dancing is certainly first-rate. He actually turns a summersault on the rope, with as much precision as if on *terra firma*; also, to quote from the bills, he "rises *from* his feet, and after a forty tourbillon somnily alights upon them on the rope firm and erect!" The scenes in the circle were of the wonted quality, and all more or less admirable of their kind.

HENRY RUSSELL'S ENTERTAINMENT.—On Monday last a large audience welcomed Mr. Henry Russell in his popular entertainment, at the Lyceum Theatre. His delinections of Negro life and character were as much relished as ever; and he sang his stirring melodies in his wonted expressive and touching style.

COUNTRY NEWS.

THE QUEEN'S VISIT TO SCOTLAND.—It has now been determined that her Majesty's visit to the Highlands shall take place in the second week of September, and the 14th is the day mentioned as that on which the Royal party will arrive in Edinburgh on their way northwards. They will leave London in the morning, reaching Holyrood. It may be presumed, about seven or eight o'clock in the evening. *From the Scotsman of Wednesday*

GATHERING OF LITERARY AND MECHANICS' INSTITUTIONS.—A gathering of literary and mechanics' institutions took place at Worsley Hall, near Manchester, the seat of the Earl of Ellesmere, on Saturday for the purpose of securing a friendly and social reunion of such people, and of aiding a fund to purchase a library for what is termed the Institutional Association of Lancashire and Yorkshire. Arrangements had been made with the London and North-Western and East Lancashire Railway Companies to carry passengers upon a scale which left a handsome profit to the institutions. The scheme answered very well, for there were at least two thousand persons of both sexes assembled at Worsley in the afternoon, from Manchester, Congleton, Macclesfield, Stalybridge, Stockport, Ashton, Oldham, Colne, Burnley, Accrington, Bacup, Newchurch, Bury, Bolton, Stoke, Radcliffe, Heywood, and some thirty other places. The noble owner of the grounds, who is suffering severely from gout, was not present; but the Countess, together with Viscount Bracklay and the younger branches of the family, came out in front of the hall, towards evening, to witness the dancing on the terrace, and remained there a considerable time. There were two bands in attendance.

WITHDRAWAL OF THE WAR.—MEETING AT NEWCASTLE.—In compliance with a numerous and influentually-signed requisition, a public meeting of the inhabitants of Newcastle-upon-Tyne was held in the Lecture Room, Nelson-street, on Monday, "to consider the most effectual measures to enforce upon Government the effective and *bona fide* prosecution of the war with Russia; which," the requisitionists intimate, "can be neither effectually nor honourably carried on by the continuance of any Government betrayal of its trust, nor such delay be suffered by the people without a most grave and perilous dereliction of its duty." The Lecture Theatre was crowded, and the meeting was in a most unusual one comprising between one and two thousand of the commercial, trading, and industrial classes of the town and neighbourhood. The mayor (Mr. Hodgkin Borough (Ralph Dodds, Esq.) presided, and was surrounded—upon and in the vicinity of the platform—by a number of members of the Town-council, and other principal inhabitants of the town. The meeting was addressed by Mr. George Anderson, Mr. Charles Attwood, and other gentlemen. A memorial to the Queen was adopted, in which the meeting expressed its want of confidence in Ministers, and asked her Majesty to "select for her future business necessary to call to your Majesty's councils without regard to party, men who will act honestly, vigorously, and unanimously in the present emergency, and carry on the war with Russia, in accordance with the wishes of the nation."

THE CAMBRIAN ARCHÆOLOGICAL ASSOCIATION.—The eighth annual meeting of the Cambrian Archæological Association will be held this year at Ruthin, on September the 12th, and five following days F. R. Lewis, Esq., M.P., acts as President, and a local committee has been formed to assist the association.

ETHERLEY MECHANICS' INSTITUTE.—The ninth annual meeting of this institute was held on Saturday last, in a large tent, erected in the grounds adjoining Etherley House, the residence of Henry Stobart, Esq., coal-owner. The company was, for so small a village, unusually large. About 1200 persons took tea in the tent, of whom 900 were Mr. Stobart's workmen and their wives, who were treated to this festival by that gentleman, who continues his unwearied labours, both by precept and example, for the bettering of the condition of the miners in his employ. Mr. Robert has patronised the Etherley Institute since its commencement, and every year his presence as chairman of their annual public meeting has gladdened the hearts of the committee and friends of this unpretending but thoroughly useful institution. The present festival has, however, exceeded all former ones connected with this institution, both as to number and the interest taken in the subject of the education of workmen (and one especially *princely*) by all who attended the public meeting, which was held immediately after tea.

RUSSIAN PRISONERS OF WAR.—The *Moniteur* contains a decree regulating the disposal of the Russian prisoners of war according to the provisions of a convention negotiated in May last, by Count Walewski and Lord Clarendon. The present decree to be made during the war are to be divided equally, or as nearly so as possible, between the two countries. In case one should have to entertain a larger number than the other, or the same number a longer time than the other, the difference of expense shall be adjusted quarterly. Article 4 provides that, "At whatever time the two Governments shall agree to make an exchange of prisoners, there shall be no distinction made between the respective subjects fallen into the power of the enemy, but their liberation shall be stipulated according to priority of date of capture, except in special circumstances, to be judged of by the two Governments in common.

SKETCH AT AN INDIAN RAILWAY STATION.

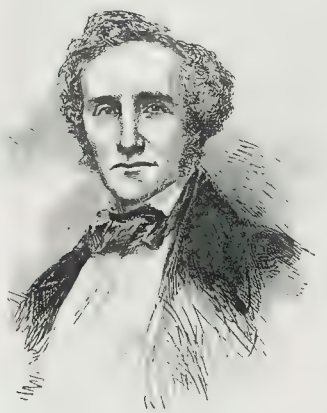
THE railways of India present many scenes of characteristic humour, not a whit less remarkable than those in the mother country; and the North-Western, Great Northern, and Taunah line; and the Eastern of other countries, all doubtless, as the iron network extends, afford as many striking scenes as their patronymics in the parent land. A Correspondent, dating from Bombay, March 14, has enabled us to illustrate this position. He writes—"Having frequently seen in your Journal Illustrations of railway platforms in England, it struck me that a Sketch of the same description, taken in India, might not be altogether uninteresting to some of your numerous subscribers. The Sketch is taken at the Byculla Station, on the Bombay and Taunah line; and in the background I have endeavoured to show the Electric Telegraph, which has at present only one wire laid on. I send you this Sketch at the desire of many friends here, who always take a deep interest in anything from their native land which appears in your Journal."

We thank our Correspondent for his artistic contribution, which has its uses beyond affording us an interesting glimpse of the picturesque costumes of the classes of a Bombay and Taunah train; for we are here reminded the twin benefits of railway and telegraphic communication have reached the Presidency, to supersede the three popular modes of accomplishing long distances in India—the *dawk*, post, or palankeen; the boat; and the march on horseback—which will, in a few years, be as obsolete as the mail-coach, or as rarely seen as the post chaise in England.

Of this line of railway four Views were engraved in the ILLUSTRATED LONDON NEWS, No. 691.

MR. EDWARD L. DAVENPORT.

THIS gentleman is a native of Boston, Massachusetts, in the United States. His early predilection for the drama led him, even at school, to follow those dictates which after years but fostered and encouraged. He was educated, as many of the first men have been in that new country, at a public school; and was intended by his father to become a lawyer, divine, or physician, as his own taste would prompt. He would embrace neither, and subsequently was placed in a large importing house, as clerk. This, too, was irksome; for he longed to give his spirit freedom, and his heart panted to try the stage. He, therefore, left home, and, under an assumed name, began his career in the character of *Parson Wildo*, in Massinger's play of "A New Way to Pay Old Debts," at a small theatre in Providence, Rhode Island. He soon became a most useful member of the company: nothing was amiss—sailors, lovers, vocal parts—all came under his list, and hence he was considered by his managers a most valuable addition. In the following season he appeared in his native town in an inferior character in Tyrone Power's "King O'Neil." He soon, however, became the lover, the heavy man, comedy, tragedy—anything. Flattering engagements, and a desire to see the world, called him to the South. Philadelphia, New York, and other cities, witnessed his slow but sure career; and at last he was selected by Mrs. A. C. Mowatt (being the best American actor), to accompany her in her tour through the country. He now became a star; and on every side he met encouragement, friends, approval. Mrs. Mowatt subsequently secured him to cross the Atlantic as her supporter; and in December, 1845, he appeared in conjunction with her at the Theatre Royal, Manchester, in the 'Lady of Lyons." The press awarded him unqualified praise, as the best American actor who had visited England. His nightly triumphs beside the eminent Macready; his great successes when placed in the scale with G. V. Brooke; and his marked excellence when standing alone, all give sanction to this one opinion; and he now returns to his native land, bearing with him the best wishes of troops of friends—a fame established by hard work and close application.



MR. E. DAVENPORT.—FROM A DAGUERREOTYPE BY MAYALL.

Mr. Davenport's last regular engagement took place in the same theatre (Manchester), where, seven years before, a stranger, unknowing and unknown, he launched his barque upon the troublous waves of public opinion. Mr. Davenport's versatility is surprising. For example, he alternated with Mr Macready *Othello* and *Iago*, *Brutus* and *Cassius*; and, when that gentleman retired, he astonished the town with his masterly delineation of *William*, in "Black-eyed Susan"—dancing and singing like a true sailor. His personation of *Old Adam Trumon* in the American comedy of "Fashion" was a strong contrast to his gay and courtly *Benedick*. Mr. Davenport sailed in the *Africa* on the 26th ult., having been engaged to open at the Broadway Theatre, New York, in the middle of September.

DR. WYLDE, FOUNDER OF THE NEW PHILHARMONIC SOCIETY.

DR. WYLDE was born in Hertfordshire in 1822, and was designed by his family for the church. His love of music, however, overruled this decision, and, at as early an age as sixteen, he embraced his present profession. His studies were pursued under Moscheles; and afterwards in the Royal Academy, under Mr. Cipriani Potter. After leaving the Academy he was made an Associate, and subsequently Professor of Harmony in that Institution; and graduated at Trinity College, Cambridge, as a Doctor of Music. In conjunction with Sir George Smart, Sir Henry Bishop, and Mr. Cipriani Potter, he was appointed one of the jurors of the Great Exhibition in 1851. The exclusiveness of the more early musical societies, who perform no other works than such as have come down to us from the old masters, and even these only at prices which make good music a luxury difficult of attainment by any except the affluent classes, suggested to Dr. Wylde the necessity of founding a new institution, to be conducted on a system better adapted to the requirements of the age. He accordingly originated "The New Philharmonic Society," which proposes not only to extend a knowledge of the works of the great masters, by the most perfect execution attainable, but to give to modern composers an opportunity of appearing before the public. The charges of admission are regulated on the lowest possible scale, so that the performances may be accessible to all lovers of the art; and it is an essential feature of the plan on which the Society has been constructed, that the programmes of the concerts shall not be confined to any particular school, but shall aim, as much as possible, at variety. The chorus consists exclusively of professional singers, and the orchestra is among the largest in Europe. It is needless to dwell on the claims which the founder of such an institution must possess on the regard of those who would elevate the standard of musical art in this country, and make good music accessible to all. Dr. Wylde is not only the founder of the Society, but director of the music and a conductor. His merits as a composer are of a high order. His enthusiastic admiration of Milton created the desire and ambition to compose music to "Paradise Lost"—a daring and difficult task, to which, however, he brought the intrepidity of genius as well as its inspirations, a rich poetic fancy, and "the passion of youth for its darling dream." The first part of this, his greatest, work was performed at the third concert of the New Philharmonic Society's second season, and the favour with which it was received was a practical refutation of the fashionable fallacy that the higher class of music is necessarily of Italian or German origin. Amongst his other works which have been published, are sonatas and sketches for the pianoforte, compositions for the pianoforte, and a set of German songs by Goethe and Schiller. Dr. Wylde now deservedly holds a high place in his profession in England, and will, we doubt not, soon enjoy a European reputation. Every one who understands music, acknowledges his learning and his high authority as a contrapuntist. Though he has studied and uses the forms of composition in favour with the high German school—Glück, Haydn, Mozart, and Beethoven—still the originality of thought of a great master is everywhere apparent, and on everything that he has attempted the figure and inscription of creative genius are radiantly impressed. He possesses great inventive power, skill in the treatment of his subjects, boldness in instrumentation, and the song creating power, without which all else in music is as nothing. The work which has chiefly raised his reputation to its present position, is his music to "Paradise Lost." It is evident that he has deeply studied the divine poem he has chosen for his subject, and his music is thoroughly imbued with its spirit. The argument is precisely that of Milton's Epic. His treatment of the subject is masterly; and it is but due to him to say that we know of no native musician who could have handled so elevated a topic with greater skill.

DR. WYLDE.

In his managerial capacity, and as chief director of the music of the New Philharmonic Society, it is not too much to add that Dr. Wylde has fulfilled all the promises held out in the prospectus of the Society; and that he has discharged the duties of that position in a manner which entitles him to receive the best acknowledgments it is our privilege to bestow upon all successful aspirants to public favour and reputation.

MR. JOHN B. GOUGH.

SOME few years back, in the early morn, staggering from a drunken debauch, might be seen a young man in the American town of Newburyport; he had reached the churchyard of the town, and had come there to die. In the wide world he stood alone. His wife was dead. He had

MR. J. B. GOUGH.—FROM A DAGUERREOTYPE BY MAYALL.

AN INDIAN RAILWAY STATION.—(SEE PRECEDING PAGE.)

no friends. He was overwhelmed with misery and debt. As he turned round his anxious eye, he saw no way of escape, and no ray of hope. There was nothing left for him but the drunkard's unhonoured grave. Another drop and he would have become a suicide; but the bottle struck his lips, and that saved his life. He went back to the town. A Temperance meeting was held, and he was induced to sign the pledge. He did more, he left his humble calling—that of a bookbinder—and became a zealous advocate of the instrumentality that had done so much for him. Friends gathered round him. As an orator he was perpetually in request. For ten years he spoke three hundred times a year, travelled ten thousand miles a year: his name was John B. Gough.

His fame reached this country and a twelvemonth since he was engaged by the Committee of the London Temperance League to visit England. He came originally for six weeks, but he was induced to stop two years. Nor will those acquainted with Exeter-hall oratory wonder at the result. See Gough as he stands upon the platform, and you at once learn the secret of his success. He is a spare, thin man, with premature age stamped upon his face, with a stature by no means imposing. Dressed in ordinary black, you would take him for a very ordinary man, and the first few sentences that fall from his lips strike you as little better than commonplace. Wait awhile, and the orator will warm: the mass before him will respond, and it will beat as with one pulse, while he convulses it with laughter, or melts it into tears. The effect is striking. The scoffer is touched; the drunkard is reclaimed; the most degraded feels that there is yet hope and happiness, and heaven for him. And what is it that does all this? Not learning; for Mr Gough has never been to school since he was twelve years old; not reasoning, for he makes no pretensions to the possession of argumentative powers; not rhetoric, for he tells a plain unvarnished tale, and leaves it to others sophously to illustrate, or gorgesmsly to declaim. But the fact is, that he is in earnest; that it is the terrible story of his life he unfolds; and that, saved as by fire himself, he devotes to the salvation of others; a natural eloquence that never tires, a zeal that never wearies; and a tongue that never grows dull. To save the drunkard—to stop the ravages of intemperance—to build up a barrier between the intoxicating cup and the unpolluted lip—to bid man be true to himself and the Divine principle within him; and to dash down the "flowing bowl" wreathed, as it may be, by flowers, and presented by Beauty, for beneath lurks a serpent that may sting as an adder: such is the work of Mr. Gough—such is his unvaried theme. Had he been an orator alone, he must have failed long before this; but he is an actor as well: he has unusual flexibility of face and voice. His features can express every shade of feeling; his tones can give utterance to every emotion of the human heart. He can be all things in an hour: he is the very Proteus of the platform. He walks up and down it as one inspired; and you tremble all the while lest the speaker and the audience, in the frenzy of the moment, should rise up, and do something extravagant or mad. You feel what a wonderful instrument the human voice is—what power the orator wields. You feel that he has as much power over men as when the Hebrew Paul spoke and Felix trembled, or as when the Athenian Demosthenes roused the decaying hearts of his countrymen, "and fulminated over Greece."

Mr. Gough has now been twelve months in this country, of which he is a native—for he was born (Aug. 22, 1817) and spent the first twelve years of his life, at Sandgate. Since he has been here he has travelled over England and Scotland, and has delivered 237 orations to audiences of an average of at least 1500 persons. He is accompanied by his second wife, an American lady, to whom he was married in 1843. His father was a soldier, and lives on a pension, in London. He has a sister in America, where he has purchased a small estate at Boylston, Worcester county, about forty miles from Boston, where he usually resides three months of the summer, and where he enjoys the society of his numerous friends, who visit him during the season of his relaxation.

REMAINS OF CALDICOTT CASTLE.

THE KING'S LYNN UNION WORKHOUSE.

This ancient building, which fell to the ground on the morning of Sunday, the 13th ult. (by which two lives were lost), was a structure of considerable archæological interest, and was one of the most striking objects in the town of King's Lynn—possessing even some little claims to be considered picturesque; but its central and most prominent portion is reduced to a heap of rubbish. The edifice was formerly a church (or rather chapel of ease to St. Margaret's church), built in or about the thirteenth century, and dedicated to St. James. It is stated to have been erected by Bishop William Tarbus, or de Turbville, at the same time as the original chapel of St. Nicholas, and in a similar style of architecture—the Early English. It appears by the Corporation records, to have been used by some of the ancient religious and charitable guilds; and its churchyard was the scene of the forced recantation of William Sautre, who afterwards became the Protestant proto-martyr of England. In 1544 its ritual plate was sold to raise funds for "repairing the walls of this town against the rage of the sea." In 1538 it was ordered to be taken down "from the steeple downwards." In 1550 four of its bells were sold for purchase of artillery for the defence of King's Lynn; and, in the same year, it was again ordered to be taken down—the lead, timber, and stone to be in use for the Corporation," provided that the timber work of the quire be reserved and covered again with tiles at their charge." In 1560, we read, "a deputation from the Lords of the Council came to Lynn to examine into the state of St. James's Church, but were opposed and resisted by the Corporation." In 1568 "it was agreed that the Duke of Norfolk his Grace shall have twenty loads of freestone from the chapel of St. James, gratis." In 1582 the chapel was converted into a workhouse; and considerable sums of money were fruitlessly spent in employing the poor therein upon the manufacture of baize. In 1590 it was for some time a petty sessions house. In 1597, the plague being prevalent, the chapel was converted into an hospital. In 1613 the wainscot ceiling of the fore-room was sold for £5, towards repairing St. Margaret's Church. In 1645 it became a pest-house. In 1682 it was fitted up by subscription as an hospital for "fifty decayed old men, women, and children." In the twelfth year of William III. it was assigned to the guardians of the poor of St. Margaret's, for the parish workhouse; and, on the passing of the New Poor-law Act, it became the workhouse of the King's Lynn Union.

The several orders which were made for its destruction appear to have been only partially carried out; and, until the recent catastrophe, there remained erect the greater part of the central tower (square at its base, but octagonal towards the summit), which was originally placed at the junction of the nave and transepts of the church. The lanthorn by which it was formerly surmounted had, however, been replaced by a cupola, round which was an external gallery, affording a very interesting prospect of the town and surrounding country. The cupola was at an elevation of about eighty feet from the ground, and contained a bell which chimed the hours, and was connected with a clock below, the face of which was illuminated at night. On the north and south sides of the tower were wings (about twenty feet lower), occupying the site of the old transepts, but built probably about two centuries since. There were other additions of more modern buildings in the front and rear. The front of the building had several immense buttresses of solid stone. Their strength, however, and the support they afforded, proves to have been more apparent than real. It is not known how long back apprehensions existed as to the safety of the tower. It is not improbable that, when the other portions of St. James's Church were pulled down, the strength of the tower was materially impaired. As many as thirty years ago a settlement was observed, and it was then recommended that this portion of the Workhouse should be rebuilt. No steps, however, were taken to carry this into effect, and the tower therefore remained, a source of continued and increasing danger: and the wonder is, now that all the circumstances are known, not that it fell so suddenly, but that it stood so long.

THE UNION WORKHOUSE, AT KING'S LYNN.

NOOKS AND CORNERS OF OLD ENGLAND.

CALDICOTT CASTLE.

This picturesque ruin was visited on Tuesday (last week), in one of the excursions made by the British Archæological Association, then holding their eleventh annual Congress at Chepstow. The stately old remains elicited admiration by the extent and the beauty of the masonry in the round tower or keep, and some other portions of the Castle. The walls contained traces of the thirteenth and fourteenth centuries. Mr. Freeman considered that the oldest part of the building was some remains of a fireplace in the inner hall, which were Early English. He could find nothing Norman in it. While viewing the castle, a storm came on, and the archæologists were obliged to screen themselves in the towers and recesses. In one of these was a rustic of the neighbourhood, full of traditional lore, who assured the company that the tower in which they were had been built and inhabited by Julius Cæsar, who was buried underneath the floor, and he stamped his foot to enable those present to hear the hollow sound of the coffin.

At the evening meeting of the Association at Chepstow, Mr. Wakeman gave some account of the Castle, which, he stated, was held by Duran, the Sheriff at the time of "Domesday Book," who had it from the King, when it was rated at a knight's fee and £6 a year. At that time the land was chiefly covered by forest. From him it descended to his son, Walter Fitzroger, the builder of some castles, and, among others, that of Gloucester, in 1122. The tenure of land was somewhat precarious at the time Duran possessed the lordship; and, no doubt, the knights who composed his train, with a few tenants, held their land in return for fee-service alone. After noticing some peculiar ties in the construction of the tower, or keep, which was built on the solid ground, a mound being thrown up round it by the construction of the moat, he observed that Mr. Octavius Morgan, in his history, attributes the building of the tower to Humphrey de Bohun, who married the heiress of Caldicotts. It remained in that family till the year 1320 or 1400, when, by the marriage of one of the daughters to Henry IV., it reverted to the Crown, and now formed an apanage of the Duchy of Lancaster.

ST. NINIAN'S, PERTH.

At a late Synod, this church was appointed to be the Cathedral of the diocese of Dunkeld, St. Andrew, and Dunblane. The edifice is interesting, as being the first built by the Scottish Episcopal Church; and as being, in fact, the only Cathedral used as such in Scotland. The plan of the building consists of a nave with side aisles (having a tower at the western extremity of each), transept, choir, and chapter-house.

The portions of building first finished were the choir, transepts, chapter-house, and one bay, or compartment of the nave. This was, in the meantime, walled in, and Divine Service was performed every day twice; there being a full choral service each time. Other bays of the nave are in progress, and it is hoped that the whole building will soon be finished. The effect of the interior is wonderfully good, considering its small size. The rood-screen is supported on polished granite pillars, which have a very good effect; but the whole of the wood carving is temporary, and of polished deal. The organ, which is placed on the north side of the choir, will, when finished, be a very fine one. It is to have three rows of keys, and thirty-four stops, with pedals, &c. The only portion as yet completed are six of the twelve intended stops of the great organ; the swell and choir being not even begun. On the altar, which is raised on three steps, and covered with crimson silk, are placed two gilt candlesticks and a cross, of silver-gilt, set with amethysts. The chapter-house is on the north side of the choir. The nave and transept are filled with low, open seats, and accommodate about 800 persons.

ST. NINIAN'S CATHEDRAL, PERTH.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

There has been considerable buoyancy in the Consol Market this week. The transactions, both for money and time, having considerably increased, prices have advanced one per cent. The unusually favourable results of the harvest, both here and on the continent, and the increased supply of money for commercial purposes, have, no doubt, tended to strengthen the market, and to give confidence as respects the future. In Lombard-street the rate of discount for first-class paper is fully one-half per cent under the bank rate; whilst in the Stock Exchange it is very little over 4 per cent per annum.

Scarcely any gold has been on sale; but the demand for it has fallen off, and the shipments have been on a very moderate scale. The imports have amounted to 1,600,000 dollars from Mexico, &c., and 1,300,000 dollars from New York. The fact that the mines, both in Australia and California are still yielding largely, that more than the usual amount of the importations of the precious metals will be large during the remainder of the year. Evidently the trade with America is greatly in our favour; but the heavy shipments of specie to this country prevents any accumulation of gold in the New York banks.

The Market for Consols on Monday was tolerably firm. The Three per Cents Reduced marked 94¾ to the Three per Cents Consols, 94¾ to ⅞; the New Three-and-a-Quarter per Cents, 94⅞ to 95; and Consols for Account, 94⅝ to ⅞. Long Annuities, 1860, were done at 4 11-16; Ditto, 1859, 4 7-16; India Stock, 259 to 261; Ditto Bonds, 2¾ to 3¼ pm.; Exchequer Bonds, 1858, 98¾; Ditto, 1859, 98¾. On Tuesday Bank Stock realised 263¾ to 210. The Three per Cents Reduced were 94⅝ to 95; the Three per Cent Consols, 94⅝; Consols for Account, 94⅝; New Annuities, 95¾; and the New Three-and-a-Quarter per Cents, 95¾. Long Annuities, 1860, 4 11-16. India Bonds, 3s. to 6s.; Exchequer Bills, 3s. to 2s. pm.; and par; Exchequer Bonds, 1860, 99¾. There was a considerable firmness in prices on Wednesday. Bank Stock advanced to 210½; the Three per Cents Reduced were 95¼ up to 95½; the Three per Cent Consols, 95¼ to 95⅜; Consols for Account, 95¼; the New Three-and-a-Quarter per Cents, 95¾ to 96; the New Two-and-a-Half per Cents, 81; Long Annuities, 1860, 4⅛; Ditto, 44; India Stock, 228; India Bonds, 3s. pm.; Exchequer Bills, 3s. to 2s. pm.; Exchequer Bonds, 98¾ to 99. On Thursday the business doing was not so extensive as on the previous day, and numerous parties having realised with a profit, prices gave way. The Three per Cents Reduced were 95¼ to 95⅜; and 95⅜; the Three per Cents Consols, 95¼; and the New Three-and-a-Quarter per Cents, 95⅝ to 95⅞; and the New Two-and-a-Half per Cents, 81; Bank Stock, 209½ to 210½; Long Annuities, 4 1-16th each; India Stock, 228; India Bonds, 3s. pm.; Exchequer Bills, 1s. to 3s. pm.; Exchequer Bonds, 1859, 99¾.

An arrival of 30,000 dollars has taken place on account of the Mexican dividends. For all Rents, at which the market has been active, extreme rates. Buenos Ayres Six per Cents have been done at 55; Chilian Six per Cents, 104; Ditto, Three per Cents, 73; Mexican Three per Cents, 25; Sardinian Five per Cents, 87¾. Spanish Three per Cents, Coupons Deferred, 16¾; Turkish Scrip, 6¾ pm.; Dutch Two-and-a-Half per Cents, 64¾; Dutch Four per Cents, 94; Swedish Four per Cents, 87; Peruvian Four and-a-Half per Cents, 71; Ditto Three per Cents, 52¾; Danish Five per Cents, 104¾; and Brazilian Five per Cents, 101.

The transactions in Joint-Stock Bank Shares have been very moderate; yet prices have ruled firm:—Australasia have marked 84; Commercial of London, 32; English, Scottish and Australian Chartered, 11¾; Oriental, 47; Union of Australia, 66. Miscellaneous Securities have commanded a steady demand:—Australian Agricultural have been done at 47¾ and 48; Canada, 90 to 94; Crystal Palace, 28; London Dock, 105; Victoria Dock, New, 17; Electric Telegraph, 87; Peninsular and Oriental Steam, 86¾; Scottish Australian Investment, 2¼; Submarine Telegraph, Scrip, 1¾; Van Diemen's Land, 13. Canal Shares have changed hands to a fair extent, a very full quotation existing:—Ashby, 34 and Oldham, 125; Birmingham, 94¾; Derby, 80; Grand Junction, 67; Grand Surrey, 48; Loughborough, 375; Neath, 150; Oxford, 110; Rochdale, 66; Stafford and Worcester, 107; Stourbridge, 75; Worcester and Birmingham, 32. In Waterworks' Shares very few sales have taken place:—Berlin, 14; East London, New, 29 prem.; Grand Junction, 73; Kent, 76; Lambeth, 70; Southwark and Vauxhall, 98; West Middlesex, 100 ex div.; ditto, new, 32¾. Gaslight and Coke Companies have ruled as fol ows:—Brighton, 15; Equitable, 26; Great Central, 11¾; Imperial, 86¾; Phœnix, 6; Ratcliff, 70; United General, 10¾; Westminster chartered, 36; Di to, New, 6¾. Insurance Companies' Shares have kept up remarkably well:—Comhy, 125; Crown, 18; European Life, 19½; Globe, 66; Guardian, New, 3¾; Hand-in-Hand, 3¾; Imperial Fire, 153; Rock Life, 7¾; Royal Exchange, 223½; Sun Fire, 250; Ditto, Life, 65; United Kingdom, 3. Bridge Shares have retailed the following quotations:—Hungerford, 12; Vauxhall, 21; Waterloo, 4¾; Ditto, Old Annuities of £8, 28¾; Ditto, New Annuities of £7, 25.

The half-monthly account in the Share market has gone off well. The business doing in most Railway Shares for Money has considerably increased. The "calls" for the present month are £602,873. During the first nine months of this year, they have amounted to £10,080,771, against £7,968,956 in the same time in 1853; and £5,855,977 in 1852. Subjoined are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 22¾; Caledonian, 63¾; Eastern Counties, 12; Edinburgh, 77½; Glasgow, 95¾; Great Northern, 86¾; Ditto, A Stock, 68; Great Southern and Western (Ireland), 93¾; Great Western, 74 ex div.; Lancashire and Yorkshire, 79¾; London and Blackwall, 8; London and Brighton, 103¾; London and North-Western, 104; Manchester, Sheffield, and Lincolnshire, 25; Midland, 69¾; North-Eastern—Berwick, 76¾; Ditto—York, 86¾; North British, 36; North Staffordshire, 8; Scottish Midland Junction, 57; Shrewsbury and Birmingham, 74¾; Ditto Oswestry, 16¾; South-Eastern, 65¾; South Wales, 33¾; South Yorkshire and River Dun, 12.

LINES LEASED AT FIXED RENTALS.—Northern and Eastern, 59¼.

PREFERENCE SHARES.—Eastern Counties New Six per Cent Stock, 13¾ ex div.; Great Western-and-a-Half per Cent, 100; Manchester, Sheffield, and Lincolnshire New £10 Shares, 11¾.

FOREIGN.—Antwerp and Rotterdam, 6¾; Dutch Rhenish, 6¾; East Indian, Four-and-a-Half per Cents, 102; Grand Trunk of Canada, A Issue, 4¾; Ditto, Six per Cent Stock, 93; Great Central of France, 11¼; Great Luxembourg, Limited Arcves; Great Western of Canada Shares, 17¾; Ditto, Bonds, 100¾; Hamilton and Toronto, 19¾; Northern of France, 35; Paris and Lyons, 33¾; Sambre and Meuse, 7¾.

Mining Shares have been rather neglected. Cobre Copper, 22¾; Linares, 8¾ to 9; United Mexican, 3¾.

Friday Evening

The Consol-market has been steady to-day, and prices have had an upward tendency. The Three per Cents are 95⅛; the Three per Cents Reduced, 95⅛; and the New Three-and-a-Quarter per Cents, 95⅞ to 96. The Unfunded Debt is tolerably firm. Foreign Bonds and Railway Shares continue steady.

THE MARKETS.

CORN EXCHANGE (Friday).—The show of new English wheat to-day was moderate—of old, limited. As the disturbance of harvest is now overall, the business was limited, at a d close of from 2s. to 4s. per quarter from Monday's prices. Most of the new wheats were in excellent condition. We may expect the supplies to increase somewhat slowly, but we have no actual change to notice in the quotations. Very little English barley on offer. The show of foreign was scarcely worth mentioning, but the demand is barely last rates. The supply of malt was very dull, at our quotat ons. As the supply of oats from abroad was considerably on the increase, the trade was dull, at further decline in price of from 6d. to 1s. per quarter. Beans and peas as last advised. Flour was dull, at the full notified on Monday.

ARRIVALS.—English wheat, 10 0; barley, 20; malt, 2350; oats, 320; beans, 260; flour, 1126. Foreign: wheat, 6910; barley, 3740; oats, 26120; flour, 120 sacks, 480 barrels.

English wheat fresh and new, 42s. to 52s.; old ditto, 48s. to 56s.; grinding barley, 2s. to 28s.; distil ing ditto, 29s. to 30s.; malting ditto, 34s. to 36s. Lincoln and Norfolk malt, 51s. to 58s.; brewing ditto, 56s. to 62s.; Kingston and Ware, 60s. to 70s. Tick beans, 40s. to 42s. Tick ditto, new, 36s. to 38s. Grey peas, 40s. to 42s. Maple, 39s. to 40s.; white, 42s. to 45s.; boilers, 45s. to 50s. per quarter. Town-made flour, 50s. to 52s.; country marks, 45s. to 48s. per 280 lb. American, 37s. to 38s. per bar.

Seeds.—The supplies of new seeds are increasing; but the business doing in them is limited. Old seeds, as well as cakes, are dull.

Linseed, English, sowing, 74s. to 76s.; Baltic, crushing, 58s. to 62s.; Mediterranean and Odessa, 58s. to 61s.; bruised, 60s. to 61s. per quarter. Coriander, 19s. to 19s. per cwt. Brown mustard seed, 10s. to 12s.; white ditto, 7s. to 8s.; and tawny, 7s. to 8s. per bushel. English rapeseed, £26 10s. to £30 per last of ten quarters. Linseed cakes, English, £10 10s. to £11 11s.; foreign, £10 0s. to £11 0s. per ton. Rapeseed cakes, 6s. 6d. to 6s. 9d. per cwt. Canary seed, 50s. to 56s. per quarter. English clover seed, white, —s. to —s.; ditto, red, —s. to —s. per cwt.

Spirits.—The prices of wheaten meal in the metropolis are from 0d. to 0½d. per 4lb. loaf of household flour 0½d. per 4lb. loaf.

Tea.—The public sales held this week have gone off tolerably well, on former terms. Private only a limited business is doing, and common sound Congou is freely offered at 10½d. per lb.

Sugar.—Our market continues dull, and prices have given way 6d. per cwt. Barbadoes have stood back at 34s. 6d. to 37s. 6d.; Jamaica, 35s. 6d. to 38s. 6d.; and refined goods, 42s. 6d. to 43s. per cwt. In crushed, very little is doing. Refined goods move off slow: at from 6s. to 6s. 2d. per cwt. for lots of considerable size. The sales in the week 1,307,633 cwts., against 1,232,317 ditto in 1853.

Coffee.—About an average business has been done in good ord. native, at from 44s. to 46s. per cwt. In the value of other kinds of coffee very little change has taken place.

Rice.—All kinds are very dull, and to effect sales prices must be sufficiently supported. Prem.

Provisions.—There has been a good demand for all kinds of Irish butter, the prices of which have further improved from 1s. to 2s. per cwt. Fine foreign has sold at extreme rates: but here the trade have to be neglected. The inquiry for Kentish butter is very sensitive, at 100s. to 102s. per cwt. for fine weekly Dorset. The bacon market is firm, at from 1s. to 2s. per cwt. more to-day. In other kinds of provisions little is doing.

Tallow.—The demand has fallen off, and prices have had a downward tendency. P Y C., on the spot, have been at 62s 6d. to 63s. and for delivery during the next three months, 67s. per cwt. Town-tallow 6d. per cwt. lower.

Oils.—Linseed is steady, at 34s 6d. per cwt. Most other oils move off slowly, on former terms. Turpentine is dull, and rather cheaper. Spirits, 42s.; in puncheons, £3 1s. per cwt.

Spirits.—The sale for rum is heavy, and prices are with difficulty supported. Proof Leewards, 2s. to 2s. 1d.; East India, 1s. 10d. to 1s. 11d. per gallon. There is a large business doing in brandy, the value of which has an upward tendency. Genuine and corn spirits are rather dull

Wool.—English wool is in good request, and quite as dear as last week. In foreign and colonial qualities, very little is doing.

Potatoes.—The supplies continue large; yet a good business is doing, as follows:—Regents, 75s. to 90s.; Shaws, 60s. to 65s. per ton.

Coals (Friday).—Holywell, 15s. 6d.; Wylam, 15s. 6d.; Eden Main, 15s. 3d.; Belmont, 15s.; Braddyll, 15s. 6d.; Caerph, 15s.; Stewart's, 15s.; Tees, 15s. per ton.

Hops (Friday).—A new pocket of hops has changed hands at £95 per cwt. The quality was remarkably good. Yearlings and old hops are steady, and quite as dear as last week. This week's imports are—91 bales from Rotterdam, 2 from Calais, 1183 from Hamburg, 84 from Antwerp and 101 from Ostend. 26 4 and East Kent pockets, 412 5s to 42l 8s.; Weald of Kent, 21l 0s. to 41l 12s.; Sussex, 21l to 41l 15s per cwt.

Smithfield (Friday).—To-day's market was fairly supplied with beasts as to number, but their prime quality was very inferior. The finest breeds realised full prices; otherwise the trade ruled heavy at barely Monday's rates. We had a fair demand for sheep, the supply of which was moderate. At Monday's currency The lamb trade was firm, at very full prices. Calves sold heavily, and in most instances prices gave way 2d. per 8lbs. The supply was but moderate. In pigs scarcely any business transacted. Mid ling sorts were dull at from 5d to 6 2 0s. each, including their small calves.

Per 8lbs to sink the offal:—Coarse and inferior beasts, 3s. 2d to 3s 4d; second quality ditto, 3s 6d to 3s 10d; prime large oxen, 4s 0d. to 4s. 2d; prime Scots, &c., 4s. 10d. to 5s 0d; coarse and inferior sheep, 3s 6d to 3s 8d; second quality ditto, 3s. 10d to 4s. 0d; prime coarse woolled sheep, 4s. 2d to 4s. 4d; prime Southdown ditto, 4s. 10d. to 5s. 0d; large coarse calves, 3s. 10d. to 4s. 0d; prime small ditto, 4s. 2d to 4s. 4d; large hogs, 3s. 8d to 4s. 0d., neat small porkers 4s. 4d to 4s 8d; lambs, 6s. 2d to 6s. 6d; suckling calves, 4s to 5s; and quarter-old store pigs, 21s. to 23s each. Total supply beasts, 850; sheep, 4160; sheep and lambs, 8943; calves, 460; pigs, 456. Foreign, beasts, 2582; sheep and lambs, 794; calves, 200.

Newcastle and Leadenhall (Friday).—The general demand ruled inactive, as follows:—

Per 8 lbs by the carcase—Inferior beef, 3s. 2d. to 3s. 4d., middling ditto 3s. 6d. to 3s. 8d.; prime large ditto 3s. 10d to 4s. 0d., prime small ditto, 4s. 4d. to 4s. 6d.; large pork, 3s. 4d to 4s. 6d; inferior mutton, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d to 4s. 0d., prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 8d. to 4s. 6d.; small pork, 4s. 2d. to 4s. 8d.; lamb, 4s. 8d. to 5s. 4d.

On the 26th ult., at Tidenham Vicarage, Fanny, the infant daughter of the Rev. A. Coburn

On the 30th ult., at the Rectory, Hanwood, Salop, Charlotte Gertrude, wife of the Rev. Edward Watter.

On the 9th ult., at Hillingdon-grove, near Uxbridge, Major Charles Stuart, aged 77

On the 20th ult., at Bagne, in Switzerland, Professor Schelling, aged 79 a contemporary of Kant, Fichte, and Hegel.

MARSHAL O'DONNELL, COUNT OF LUCENA,

THE SPANISH MINISTER OF WAR.

The family of Marshal Count O'Donnell has for more than a century enjoyed high distinction in Spain and in Austria. The O'Donnells were originally emigrants from Ireland, and their history is full of romance. In the middle of last century they occupy a conspicuous position, and from the time of Elizabeth to that of the second James, they occasionally appear in those of our own country. They were formerly proprietors of a great part of the county of Tyrconnel, and the family of Tyrconnel won the glories of the exploits of the O'Donnells of Tyrconnel" formed the burthen of many a local lay and legend. In the reign of Elizabeth, the chief of the family played a distinguished part in the troubled politics of the time; and when the civil troubles broke out in England, that successor in the titles and estates of Tyrconnel attached himself with unswerving fidelity to the cause of the Stuarts. When the Battle of the Boyne finally destroyed the hopes of James the Second and his adherents, the O'Donnell of that day fled with his family to Austria, where they bore the title of Counts of Tyrconnel. In the military annals of Austria, the name of O'Donnell appears with high distinction. At the battle of Placenza, in 1746, Count O'Donnell of Tyrconnel won his grade as General. Ten years later he contested on the campaign in Bohemia, and for his services at the battle of Lowositz, he was created a Field-Marshal Lieutenant. At the battle of Kolin he commanded the cavalry; and he was soon afterwards made Governor-General of Transylvania. In the year 1768 he was promoted to the post of Governor-General of Transylvania; and he died, two years after, at Vienna. Another member of the family, Francis Count O'Donnell, in 1809, filled the post of Minister of Finance in Austria; and the present head of the Austrian house is O'Donnell, Count of Tyrconnel is a Field-Marshal Lieutenant in the Austrian service. He is married to Christina, daughter of the Prince de Ligne.

We have no record of the exact date when a branch of these Austrian O'Donnells went to Spain; but there also the family achieved high distinction. About the time when the Austrian Count O'Donnell was made Governor-General of Transylvania, the Spanish Count O'Donnell was fighting his way up in the Spanish army. He had commenced his military career in the Guards. In 1793 he fought with success and distinction against the French; and he gained his rank of General for a battle he won at Bubal against one of the Lieutenants of Napoleon For the same exploit he received the title of Count of Bubal. He had become sufficiently Spanish to have imbibed a passion for political intrigue; and, in the excited and troubled state of things which followed the expulsion of the French, he became suspected by the then dominant party. In 1813 he was imprisoned, by order of the Cortes; but, in 1814, his fortune was again in the ascendant. Ferdinand VII. named him Captain-General of Andalusia. In 1818 he was made Governor of Cadiz; and in the following year he was appointed to the command-in-chief of the corps prepared for the reconquest of the South American Colonies. The state of those affairs, however, led to his being detained in Spain, where he was made Captain General of La Mancha. While in this capacity, he declared for the Constitution, but without inspiring much confidence in the constitutional party. In 1823 he gained some advantages over the French troops sent to Spain to support the despotic principle, and this led to his being named to the command of the Army of Reserve that was to cover Madrid. Apparently, however, his spirit of intrigue got the better of his discretion, for he had entered into some negotiations with the opposite party, and his own troops revolted, deposing him from the command. Upon this he endeavoured to make his escape into France; but was seized, and put into prison at Villaviciosa. From this confinement, however, he was speedily released by the French troops, and he contrived to reach France in safety There he remained till the year 1834, when he returned to Spain. He died almost immediately afterwards, from the sudden shock he received on hearing that one of his sons had been shot by Carnalian surgery. This Count Lu Bubal was the father of Ma shal O'Donnell, the subject of this memoir. A brother of his, Henry Charles, Count O'Donnell, died in 1830, Captain General of Old Castile; and his son Charles, who had been Colonel of a Volunteer Regiment in the Carlist army, accepted the rank of General in that of the Christinos, after the Treaty of Bergara. He also commanded during some time the British Legion. The fortune of war brought him, for a time, into personal conflict with his cousin, the present Minister of War. This was in 1841, when Leopold O'Donnell had attempted a Christino insurrection at Pampeluna, which was put down by Charles. The latter remained faithful to the cause of Espartero, and commanded the Queen's troops after his downfal.

Leopold O'Donnell, Count of Lucena, Marshal of Spain, and Minister of War in the Ministry of Espartero, is the younger son of the Joseph Henry O'Donnell, Count of Bisbal, whose career is noticed above. He was born, we believe, in the year 1809. He entered the army at an early age, and while King Ferdinand VII. was still on the throne. He was a captain at nineteen, and a colonel at twenty-five years of age. When the death of Ferdinand paved the way for civil strife, Leopold O'Donnell at once declared for the cause of young Isabella, and thenceforth became a Christino. He fought on that side, often opposed to his own brothers, who had embraced the cause of Don Carlos—during the whole of the war; and at its close (when only thirty years of age) he held situations of high trust in the Christino army. He received the title of Count of Lucena, for having forced Cabrera to raise the siege of that place. He had attached himself more especially to the Queen-Regent, Christina, and he remained faithful to her, even in her reverses. He, a man of aristocratic, even of Princely descent, could not look with favour upon the rapid rise and inexplicable ascendancy of a man of mean birth, of uncertain temper, and of moderate military abilities, such as he regarded Espartero; and to this personal antagonism, as much as to any strong conviction of the superiority of Queen Christina's claims on his loyalty, must be attributed the attitude he took when the close of the Carlist war led to intrigues against Christina. For a very brief period, prior to the close of the Carlist war, O'Donnell was Chief of the Staff of the Army of Princely descent, could not look with favour upon the rapid rise and inexplicable ascendancy of a man of mean birth, of uncertain temper, and of moderate military abilities, such as he regarded Espartero; and to this personal antagonism, as much as to any strong conviction of the superiority of Queen Christina's claims on his loyalty, must be attributed the attitude he took when the close of the Carlist war led to intrigues against Christina. For a very brief period, prior to the close of the Carlist war, O'Donnell was Chief of the Staff of the Army of the North, at the head of which was Espartero. He was, however, almost immediately removed to the command of the Army of the centre; and he had this army were regarded by the Government of that day as a kind of counterpoise to the influence of Espartero and his army. He was strongly opposed to the personal slights and indignities Queen Christina received from Espartero shortly before she resigned the Regency; and at the moment when the conserver night have been expected to worship the rising sun, he rendered her very important services, protecting her with his influence, and aiding her escape from Spain. He re-joined his command, and received from Christina the Order of Charles III. and the title of Count of Lucena. Some years, O'Donnell went to France, where he resided for some time, devoting himself to the cause of Queen Christina, and ultimately risking his life in furtherance of her designs.

The Regency of Espartero was troubled with complots, of which Christina, from her residence in Paris, was the contriver, and O'Donnell the chief agent The Session of 1841 had been employed, by the Government of Espartero and the Cortes, in legislative labours, and they were ignorant of the conspiracy which menaced them from France. The prorogation of Parliament had scarcely taken place when the conspirators began their work. A formidable plot or conspiracy, organised by Queen Christina, and looked on with favour by the French Government, had for its scope of simultaneous insurrections in various parts of Spain. O'Donnell took the lead in this outbreak by heading the insurrection at Pampeluna, which, as we have said above, was suppressed by his own cousin, Charles O'Donnell, the faithful adherent of Espartero, and commander of the forces. At Saragossa the movement was under the direction of General Borso; at Vittoria, of General Piquero; at Bilbao, of Colonel Larcoha; and in old Castile, of General Orbe. In Madrid, General Concha and Leon headed the attempt at insurrection. We have seen that O'Donnell's share in the affair was unsuccessful; more lucky than some of his associates, who were taken and shot, he contrived to escape into France, where he remained until a new opening arose for his restless spirit of enterprise. But he was not quite in seclusion. No sooner had the news of his attempt at Pampeluna reached Paris, when M. Olozaga, Espartero's Ambassador to the King of the French, presented himself, personally, to the Queen Christina, and demanded that the flight of O'Donnell to his own dominions, and the consequent failure of the conspiracy of O'Donnell and his associates. She at once denied all complicity; and Olozaga, with great energy and presence of mind, sent her answer at once to Spain; so that not only were the Christinos deterred in pressing home O'Donnell's life was still further jeopardised. To console him, however, Christina, while denying complicity, publicly, and in writing, avowed her entire sympathy with him and his confederates.

Meanwhile, Espartero was governing Spain in strict accordance with Constitutional principles, but with little support from the leading statesmen of the country. It had become evident to all thinking men, that the Regency could not long endure. At the close of the year following O'Donnell's unsuccessful attempt at Pampeluna, an insurrection broke out at Barcelona, and Espartero was obliged to bombard that city before he could restore order. This was the signal for a junction between the Christinos and the ultra-Liberals. Queen Christina, from her hotel in the Rue de Courcelles in Paris, held the reins of the various insurrectionary movements which ensued. The defection from Espartero was almost universal; and, it is almost needless to say, General O'Donnell was among the most prominent of those who contributed to his downfal. On his return of Queen Christina to Spain, O'Donnell was, in 1844, appointed Captain-General of Cuba. Here he remained five years, after the expiration of which time he returned to Spain, having, it is said, amassed a considerable fortune. Subsequently, he was named a senator.

From this period, O'Donnell began to take an active part in politics. Espartero, his old antagonist, had returned to Spain, but only to live in quiet and retirement at Logrono. O'Donnell, whether he had at first adopted the objects of his former service to Christina, or that he had an understanding with her, became an active member of the Appostolical that was organised against the Bravo Murillo and Sartorius ministry. On the whole, he acted in harmony with the views perpetrated of late years by the Spanish Government, he recorded from time to time his resistance; and he continued to be a friend to the Christinos and Afrancesados party even while contriving to make himself regarded with favour by the Moderados and the Constitutionalists. The scandalous excesses of the Court appear to have provoked in him a sincere indigna ion; but, more generous than some of his contemporaries in intrigue and revolt, he attributes the personal misconduct of the Queen to causes of which he regards her as the victim, and not the perpetrator. In spite of supposing that the only remedy for the evil would be found in a change of dynasty. During the administration of Narvaez, he accepted, under that General, the office of Director-General of Infantry, apparently on the principle that in the then state of Europe the only way of saving Spain land to lend a hand in pre-erving the country from the contagion of Republicanism. He continued in this post till the year 1851.

The military reputation of the Count de Lucena, joined to his position as one of the chiefs of the political opposition, rendered him a personage of great importance. For a long time previous to the late events in Spain, he had been the head of a conspiracy, the object of which was, by a military insurrection, to compel the downfal of the existing Ministry. If Espartero had been Regent, why might not O'Donnell be Prime Minister? It appears that the Government must have

(*Continued on page 212.*)

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—Monday, and during the Week, the SPANISH DANCERS in a New Ballet, previous to their departure for Seville. The Old Chelsea every night. Monday and Thursday, The Rough Diamond; Tuesday and Friday, As Like as Two Peas; Wednesday and Saturday, A Pretty Piece of Business.

LYCEUM THEATRE.—HENRY RUSSELL, on MONDAY SEPT. 3rd, and Every Evening in his Entertainment, the EMIGRANT, and NEGRO LIFE. Doors Open at half past Seven, commence at Eight.

MR. ALBERT SMITH'S MONT BLANC, EVERY EVENING, at Eight o'Clock, except Saturdays and Tuesday, Thursday, and Saturday mornings, at Three.—Stall's, 3s.; Area, 2s.; Gallery, 1s.; Children, 2s. 6d. Family Tickets for Five, 10s. Schools admitted at the Reduced Price. Her Majesty and his Band are engaged, and will perform daily, from twelve till five.

ZOOLOGICAL GARDENS, REGENT'S-PARK.—Fellows and Visitors are informed that a FEMALE HIPPOPOTAMUS, presented by his Highness Ismail Pasha of Egypt, has been received in the Collection. The Band of the First Life Guards will perform, by permission of Colonel Parker, every Saturday at Four o'Clock, until further notice. Admission, One Shilling; Monday Shilling.

BOARD of TRADE.—Department of Science and Art.—Metallurgical School of Sciences applied to Mining and the Arts.

Director—Sir HENRY DE LA BECHE, C.B., F.R.S.

During the Session 1854-5, which will commence on the 2nd of October, the following courses of Lectures and Practical Demonstrations will be given:

1. Chemistry.—A. W Hofmann, Ph. D., F.R.S.
2. Mineralogy.—J. Percy, M.D., F.R.S.
3. Natural History.—C. C. Bladley, F.R.S.
4. Mineralogy.—W. Smyth, M.A.
5. Mining.
6. Geology.—A. C. Ramsay, F.R.S.
7. Applied Mechanics.—Robert Willis, M.A., F.R.S.
8. Physics.—G. G. Stokes, M.A., F.R.S.

Instruction in Mechanical Drawing is given by Mr. Nixon.

The fee for matriculated students (exclusive of the laboratories) is £20 for two years, in one payment or in two payments of £12.

Pupils are received in the Royal College of Chymistry, the laboratory of the Government, at a fee of £10, for the term of three months.

The name fee is charged in the Metallurgical Laboratory.

Tickets to separate courses of lectures are issued at £3, £5, and £4 each. Officers in the Queen's or East India Company's service, acting mining agents, and managers, may obtain them at half the usual charge.

Certificated Schoolmasters, Pupil Teachers, and others engaged in education, are admitted to the lectures at reduced fees.

H. R. H. the Prince of Wales has granted two Exhibitions to the School, and others have also been established.

For a prospectus and information, apply to Trenham Reeks, Registrar, Museum of Practical Geology, Jermyn-street, London.

GEOLOGY and MINERALOGY.—Elementary Collections to facilitate the study of these interesting sciences, can be had, from Two Guineas to One Hundred, of TENNANT, Geologist, 149, Strand, London.

ORNAMENTS for the DRAWING-ROOM, LIBRARY, &c.—An extensive assortment of ALABASTER, MARBLE, BRONZES, and DERBYSHIRE SPAR ORNAMENTS, Manufactured and imported by J. TENNANT, 149, Strand, London.

HEALTH GYMNASTICS.—CAPTAIN CHOSSO, Professor of Gymnastics at University College, Lecturer on Gymnastics, 38, Baker-street, Portman-square, and Gymnastic and Fencing Academy, 31, New-road. Captain Chosso's Rationale of Gymnastics. Price half-a-crown. Fencing Academy, Regent-street; and at the Academy. Price 1s. 6d.

BY PURCHASING at MERRY'S FANCY REPOSITORY, 280, Oxford-street, his highly amusing GAME of the RACE of STEEPLE CHASE, for a few minutes' play, you will always be able to dispel ennui. Every other novelty in canes, parasols, French, German, and English Toys that are sterling in value or Fancy Articles, strictly impossible to catalogue, almost daily received from the Continent and Manufacturers. Orders, enclosing a remittance, instantly attended to. Sample Rose Canes for seven stamps.—Merry's, 280, Oxford-street. Fancy fairs, bazaars, and charities supplied on a nominal per centage.

THE CRYSTAL PALACE FLOWER-BASKETS, made to the original and other patterns and designs, to variety, by W. RICHARDS, at the Wire Works (late Conquest), No. 320, Oxford-street. Flower Stands, Trellis Screens, Gardeners' Fencing, &c., &c.; Bird Cages of all kinds. Conservatories and Aviaries fitted up in a superior manner.

CRYSTAL PALACE.
GENERAL ARRANGEMENTS.

The Palace is opened on Mondays, at 9 a.m., and on Tuesdays, Wednesdays, Thursdays, and Fridays at 10 a.m. On these days the charge at the doors for admission is 1s.

It is opened on Saturdays at noon, on which day the charge for admission is 2s.

Tickets, including conveyance from London-bridge and admission to the Palace, may be obtained at the London-bridge Terminus and at the several agencies in London.

Season Tickets, including conveyance by railway, £4 4s. each; without conveyance by railway, £3 3s. (the usual discount allowed to families, may be obtained at the London-bridge Terminus.

August. By order.

REEVES' MOIST WATER COLOURS.
Warranted to keep in all climates.
19, Cheapside, London-street.

PIANOFORTES.—MOORE and MOORE'S first-class PIANOS, at 21 Guineas, carriage free. Others at 25, 28, 30, 35, 40, and 45 guineas.—J. H. MOORE, 104, Bishopsgate-street-within, London.

DIATONIC FLUTE, by her Majesty's Royal Letters Patent.—Full particulars, with certificates of Professors, including Mr. Richardson, flautist to her Majesty, forwarded free. Manufactory, 124, Fleet-street.—J. RUDALL, Patentee.

HARMONIUMS at CHAPPELL'S, 50, New Bond-street.—The HARMONIUM (Price £20), by ALEXANDRE, of Paris, is the only instrument of the kind that remains perfectly in tune; and, from the simplicity of its construction, is but slightly affected by any changes of weather, and is alike celebrated for the Church, Chapel, School, or Drawing-room.

The following descriptions are those most liked:—

No. 1. In oak case, with expression stop, price 18 guineas.
No. 2. In handsome case, with expression stop, 15 gs.
No. 3. In oak case, with three stops, 12 gs.
No. 4. In oak case, with five stops, 22 gs.; in rosewood, 25 gs.
No. 5. In oak or rosewood case, with eight stops, 32 gs.
No. 6. In oak or rosewood case, with twelve stops, 45 gs.
No. 7. In mahogany or rosewood case, with the patent percussion action, and one extra stop, 12 gs.
No. 8. In oak case, with percussion and twelve stops, 48 gs.
No. 9. Ditto, in elegant rosewood case, 45 gs.
No. 10. The New Patent Model, with expression à la Main. The most perfect Harmonium that can be made, 13 stops, elegant rosewood case, 55 gs.

Full descriptive lists sent on application. 50, New Bond-street.

WOOD ENGRAVINGS.—Illustrations for Books, Periodicals, Newspapers, &c., in a superior style, as specimens, price 5s., by GEORGE DARRINGTON, 4, Anglers-street, Gray's-inn-road.—Specimens and estimates post free.

WOOD ENGRAVING.—Mr. GILKS, Draughtsman, Engraver on Wood, &c., begs respectfully to announce that he continues to execute all Orders entrusted to him in the best style, with promptness and a due regard to moderation in charges.—Jamaica, 176, Fleet-street.

ENCAUSTIC TILE PAVEMENTS.—MAW and CO., BENTHAL WORKS, BROSELEY, SALOP, Manufacturers of the Cloister Pavement of Medieval Court, and "the successful imitation of Oppy Abraxidation in the beautiful Encaustic Tile Pavement of Cloisters of Byzantine Court, Crystal Palace" (M. D. Wyatt, in Official Handbook).—Several, without stamps, designs and estimates in this most durable material, adapted to given dimensions of Entrance-halls, Conservatories, Verandahs, &c., in every style. Specimens at 11, Aldersgate-street.

OSLER'S CRYSTAL GLASS CHANDELIERS for GAS and CANDLES.—A great variety of the newest and richest designs always on view; also, a large assortment of Glass Lustres, Decanters, Wine Glasses, Dessert Services, and every description of Table Glass, at very moderate prices. ORNAMENTAL GLASS of the newest and most beautiful description, suitable for Presents. Furnishing orders executed with dispatch.—44, Oxford-street, Manchester; Broad-street, Birmingham. Established 1807.

MERSEY LINE OF AUSTRALIAN PACKETS. Sailing from Liverpool regularly to Port Phillip, Sydney, and Adelaide. Landing Passengers and Goods Free.

Ships	Commander	Tons	Destination	Time of Sailing
Carntyne ...	D. Carlyle..	3000	Port Phillip	September
Dundalk Catherine	... ...	1800	Sydney...	...

These A 1 ships are approved of by her Majesty's Emigration Agents, &c. Apply to WM. BARRETT and Co., 8a, Philpot-lane, London.

LIVERPOOL BLACK BALL CLIPPERS.—These celebrated Ships SALAMANDER, EVERT DUYCKINCK, MELBOURNE, Sandridge, Sydney, Adelaide, and Launceston. They are all first-class, and have made the fastest passages on record. Cash orders issued in Australia from £1 upwards, and parcels forwarded. Apply to John Jeffreys and Co., Great St. Helens, London; or to the owners, James Baines and Co., Cook-street, Liverpool.

SYDNEY direct. Will Sail from Gravesend on 12th of SEPTEMBER, and will call at Plymouth, the splendid British clipper-ship WAGOUSTA, A 1, 1200 tons burden, JOHN STEWART, Commander. Sails for the West India Dock. This ship has a full poop, with unrivalled accommodation for Passengers, and will carry a limited number of Steerage Passengers. Has fitted throughout, admirably adapted for a Family conveyance. For terms of freight or passage, apply to JAMES THOMSON and CO., 6, Billiter-square, London; or to the Owners, James Baines and Co., Cook-street, Liverpool.

INDIA, CHINA, AUSTRALIA, and CAPE of GOOD HOPE.—W. O. YOUNG will despatch the following fast sailing A 1 Clipper SHIPS, at the dates named as under:—

Ships.	Tons	Commanders.	Destination.	Docks.	To Sail.
Admiral Boxer	570	T. Smith	Calcutta	Liverpool	5 Sept
Great Liverpool	697	E. Underwood	Calcutta	London	20 Sept.
Lancaster	486	G. M. Simpson	Calcutta	London	25 Aug.
Leonard	486	G. M. Simpson	Bombay	Liverpool	5 Sept.
Lord Clyde	1000	Ja Gallaher	Port Phillip	Liverpool	5 Sept.
Omar Pasha	1276	J. Thompson	Bomb ay & Chi a	W. India	5 Oct.
Shalimar	1276	J. Thompson	Shanghae	St. Kath.	5 Sept.
Ida	700	J. Reg ter	Kurrachee	...	...
Lady Anne	1000	Fra ois Ba	Bombay	West India Dock	1 Sept.
Ashburton	519	G. King	Sydney	London	4 Sept.
Queen of England	873	R. Pearson	Sydney	London	7 Sept.
Maid of Judah	758	J. Marchant	Sydney	London	25 Sept.
John Taylor	297	P. N. Edwards	Sydney	London	20 Oct.
Jane Williams	600	Baxter	Port Phillip	London	1 Oct.
Canada	570	J. Gillard	Port Phillip	London	1 Oct.
Tara	570	E. Hay	Geelong	London	30 Aug.
St. Louis	853	C. Davis	Geelong	St. Kath.	18 Sept.
Ann	350	J. Smith	Cape G Hope	London	21 Sept.

These Ships have been specially selected for their high class and fast-sailing qualities, and will be found well worth the attention of Shippers and Passengers. D. YOUNG, 13, Crosse-street, Manchester; 19, Lime street, Liverpool; and Sun-court, Cornhill, London.

THE WEST INDIA ROYAL MAIL STEAM PACKETS, which leave Southampton on the 1st and 17th of each Month, for the Spanish Main, touching at PORTO RICO, ST. THOMAS, and Jamaica, with branches to Carthagena, Chagres, Vera Cruz, and Tampico, will be carried out by the following Steamers, viz.:—TAMAR, for the 1st of September; SEVERN, for the 17th; and MEDWAY, for the 1st of October.

For all other places comprised in the Company's West India Scheme of Postage, viz., Trinidad, Barbadoes, Demerara, Grenada, Cuba, and Grand Turk, Mails for Jamaica and Panama will be conveyed by the Steamers both on the 1st and 17th of each Month.

Parcels are to be put up in Boxes, Packages, &c., and to be had on application at the Company's offices, 18, Moorgate-street, London and Southampton, where parcels, packages and publications continue to be received as heretofore.

Return Tickets issued available for six months, with a reduction of 25 per cent on the passage-money.

N.B.—Goods taken on moderate freight to and from Barbadoes, Demerara, Grenada, Trinidad, Jamaica, Honduras, Nassau, Carthagena, Cuba, and Vera Cruz, and homeward-only from Tampico, Nova Scotia, and Havanna.

Particulars as to cargo may be had of Robert Hesketh, Esq., the Company's superintendent of the cargo department at Southampton, Freight being agreed on.

H. CHAPPELL, Secretary.
Moorgate-street, London.

RAILWAY PASSENGERS may obtain Tickets of Insurance against RAILWAY ACCIDENTS for the Journey, at the Railway Stations, or at 64, Cornhill, and 10, Regent-street, Booking Clerks, at all the Principal Railway Stations, when they take a Railway Ticket. RAILWAY PASSENGERS' ASSURANCE COMPANY, 3, Old Broad-street, London.
WILLIAM J. VIAN, Secretary.

NURSERY for INFANTS, 7, Portugal-street, Lincoln's-inn Established March, 1853, for the reception of the children of poor married women who are employed from home during the day. The poor most gratefully acknowledge the benefit they receive from this Institution, and the Committee are anxious to those who may be kindly disposed to contribute to aid of its funds. Donations and Annual Subscriptions thankfully received by the Hon. John Olver, Chaplain to King's College Hospital.

GUY'S, 1854-5.—The MEDICAL SESSION commences in October. The Introductory Address will be given by JOHN SIMON, Esq., F.R.S., on MONDAY, OCTOBER 2nd, at Two o'clock. Gentlemen desirous of becoming Students must present themselves previously, as to their education and conduct. They are required to pay £40 for the first year, £40 for the second, and £10 for every succeeding year. Gentlemen may also pay the required fees by instalments, and to a perpetual Ticket. Dressers, Clinical Clerks, Assistant-Surgeons, Assistant-Physicians, and Dressers in the Eye Wards are elected according to merit. Gentlemen Students who have attended a second year. Mr. Stocker, Apothecary to Guy's Hospital, will assist Fellows and give any further information required

Guy's Hospital, August 22nd, 1854.

NORTH LONDON or UNIVERSITY COLLEGE HOSPITAL.—The Council see they leave to return their thanks for the contributions received since the announcement that they do not intend to have this year a public dinner for the benefit of the Hospital. They are bound to add that they are, nevertheless, in great need of assistance, and they trust that the funds of the Hospital will not suffer support as if an annual festival were held. The expenses are usually about £1000 per annum; this year they will be considerably in consequence of the high price of provisions. The certain yearly receipts do not exceed £3000. A debt of £2000, incurred before 1849, and which was lately, by great exertions, reduced to £1000, has also to confine to its original amount, is now gradually increasing; at the same time, with a view to effect a considerable saving, the Medical Committee intend to lower the extra expenditure of £200. In this emergency aid from the benevolent is earnestly solicited.

The Hospital affords relief annually to 16,000 persons, of whom 1000 are in-patients, and 15,000 are women in childbirth, attended at their own abode. It has room for 200 in-patients, but, for want of funds, the Governors are obliged to limit the number of beds to 120.

(*Contributors on former occasions.*)

Amount previously adver-		9 H Aslip, Esq.	... £2 0

Annual subscriptions will be received at the following bankers:—Messrs Coutts and Co., 59, Strand; the London and Westminster Bank (Pocock-street Branch); Messrs. Scott and Co., Cavendish-square. Messrs. Smith, Payne, and Co., 1, Lombard-street, by the Treasurer, the Duke of Buccleuch, St. John's Lodge, Regent's-park, by Members of the Committee, and at the Office of the Hospital, Gray's-inn-road.

Aug 24, 1854. J. W. GODDIFF, Clerk to the Committee.

UNIVERSITY COLLEGE, London.—JUNIOR SCHOOL, under the government of the Council of the College.

HEAD MASTER—THOMAS BEWITT KEY, A.M.

The SCHOOL will OPEN on TUESDAY, the 26th of SEPTEMBER, for New Pupils. All Boys between the most approved in their places, without fail, on Wednesday, the 27th, at a Quarter-past Nine o'clock.

The Session is divided into three terms, from the 26th September to Christmas; from Christmas to Easter; and from Easter to August 1.

The yearly payment for each pupil is £18, of which £6 are paid in advance for each term. The hours of attendance are from a quarter-past nine to three quarters past three o'clock. The afternoons of Wednesday and Saturday are devoted exclusively to drawing.

The subjects taught are Reading, Writing, the English, Latin, Greek, French, and German Languages, Ancient and English History, Geography (both Physical and Political), Arithmetic and Book-keeping, the Elements of Mathematics, of Natural Philosophy, and of Chemistry, and Drawing.

Any pupil may omit Greek, or Greek and Latin, and devote his whole time to the other branches of education. There is a general examination of the pupils at the end of the Session, and the prizes are then given.

At the end of each of the two first terms there are short examinations of the pupils, to ascertain their progress in the general examination. In absence by a boy from any one of the examinations of his classes is specially reported, and the cause submitted to, and approved by, the Head Master.

Strict discipline of the school is maintained without corporeal punishment.

A monthly report of the conduct of each pupil is sent to his parent or guardian.

Further particulars may be obtained at the office of the College.

CHAS. C. ATKINSON, Secretary to the Council.

The College Lectures in the classes of the Faculty of Medicine will commence on Monday, the 2nd of October; those of the Faculty of Arts on Tuesday, the 17th of October.

August, 1854.

STAMMERING.—Monsieur DUVAL successfully CURES STAMMERING, on natural and scientific principles, without chant, or any of the artificial means generally used. His Orthophonic Exercises enable Gentlemen speaking in public to be clearly and distinctly heard at a great distance. He can give the best references.—37, Bath-row, Birmingham.

IMPROVEMENT and ECONOMY in LIGHTING PRIVATE HOUSES, &c., with GAS.—A large assortment of new SLIDING LAMPS, adapted for the dining-room, drawing-room, &c., fitted up at manufacturers' prices.—H. DESAUFTE, 19 and 21, Cross-road.

PRACTICAL PHOTOGRAPHY, on GLASS and PAPER.—A Manual, containing Simple Directions for the production of Portraits and Views, by the Agency of Light, illustrating the Collodion Albumen, Calotype, Wax Paper, and Positive Paper Processes. By CHARLES A. LONG. Price 1s.; post paper, 1s. 6d.—BLAND and LONG, 153 Fleet-street, London.

BENZINE COLLA'S PATENT LIQUID, for removing GREASE STAINS from any description from Silks, Satins, Velvets, Ribbons, and Woollen Goods, without leaving any Colour mixed with oil, and to clean Gloves.—London Agents: JOHN BELL and CO., 338, Oxford-street. Sold by all Chemists throughout the United Kingdom.

NOVEL INVENTION.—Every one his own Printer.—WATERLOW and SONS' PATENT AUTOGRAPHIC PRESSES, under the patronage of the Board of Trade, Department of Practical Art, &c. The process is simple, and thoroughly practical, and will print from a few lines to [illegible] Prospectuses and Specimens sent free.—Waterlow and Sons, Manufacturing and Export Stationers, 65 to 68, London-wall, London.

HATTON-GARDEN CHAMBERS.—Lodging for respectable Single Men, 76, Hatton-garden, Holborn. The Society for Improving the Condition of the Labouring Classes have provided superior LODGINGS for respectable SINGLE MEN, as the above Chambers' Rooms, 3s. and 3s. 6d. per week. Each includes a separate furnished bed-room, with the use of the coffee-room, library, bath-room, and kitchen.
JOHN WOOD, Sec.
Committee-room, 31, Exeter-hall

EDUCATION.—BEAUMONT HOUSE LADIES' SCHOOL, Bedford Private-road, Stockwell, Surrey. Superior Education, at the inclusive terms of £18 to £40 per annum, according to the age of the pupils. The house, from choice, will be several acres of lawn and pleasure ground. Prospectuses may be had on application to Mrs. T. Beamish.

BRIGHTON.—BOARD and RESIDENCE in a Private Family, by the week, month, or year. Rooms airy, at unlim chee and healthy. Terms, 30s. to 42s. per week. Apply in C. Grenside d, Surgeon, 7, Ship-street.

THE BANKS OF THE WYE.
TOURISTS and FAMILIES TRAVELLING to and from S. TH WALES will find very superior accommodation, combined with moderate charges, at Mr. LEWIS'S ROYAL HOTEL, ROSS, HEREFORD, adjoining the far-famed "Man on the Rock Prospect," and commanding extensive views of the Wye and its enchanting scenery. It is within a convenient distance of Goodrich Court and Castle, Symond's Yat, Tintern Abbey, Wyndcliffe, Raglan Castle, &c., &c. There is continual communication from change, and a ride to the town. Families Boarded for long or short periods. Posting in all its branches. Phaeton-boats for excursions on the Wye. Rises and Omnibuses meet every train.

Ross is the "Gem of the Wye;" and for the beauty and variety of the scenery on its banks, there is no river in England at all comparable with it, nor do we believe, notwithstanding its proximity of scene of them in point of size, that there is a single river on the Continent of Europe that can boast more scenes of grandeur and picturesque and pastoral beauty. Its romantic beauties whether where it glides majestically along the rich plains of Herefordshire—through orchards, meadows, corn-fields, and villages, or deep in its channel, rises between lofty rocks, clothed with hanging woods, and surmounted, as it were, with antique towers of castellated and monastic edifice, yielding a panoramic succession of exquisite landscapes—have furnished many subjects for the poet and the painter, and cannot fail to charm every lover of nature.

ROYAL SHIP HOTEL, DOVOR.—J. BIRNHAM, Posting-Master by appointment to her Majesty, begs to inform the Nobility, Gentry, and Travellers, that he has just completed a series of extensive alterations and improvements, the object of which has been to secure each arrangements with regard to the comfort of his patrons, and the convenience of the several departments, as must recommend it to the favourable consideration of all similar establishments. To his tariff of charges J. Birmingham begs to invite special attention, as it was as a consequence with those of other hotels. Whilst deeply grateful for the distinguished patronage with which he has been, and continues to be, honoured, his hopes of its permanency are founded on the moderate charges, the accommodations, and the peculiar moderation of his charges; on this ensuring, as he pays or sells it, a fair profit. "The Ship" indisputably superior to

(Continued from page 210.)

been aware of these designs, or at least have inferred their existence, as a natural consequence of their arbitrary rule. Be this as it may, early in June an order was issued for the arrest of O'Donnell, which he evaded by first concealing himself in the capital, and subsequently at the village of Canaligo, about four miles from Madrid. Every effort was made to discover his retreat, and two Generals (Orlando and Massina) were, on the 15th June, arrested on the charge of harbouring him. Massina was fortunate enough to escape, but Orlando was sent to Galliola. Madame O'Donnell, too, the wife of the General, was ordered to be arrested; but she contrived to evade the order, and to conceal herself, although the most active steps were taken to trace her.

At length, on the 27th June, a military insurrection commenced at Madrid—General O'Donnell left the capital, at the head of one regiment and accompanied by another; he had been joined by General Dulce. For some days after, the Government, having possession of the telegraph, spread over Europe statements that the insurrection had been suppressed; and General O'Donnell was deprived of all his titles and employments. Soon, however, it became clear, from other intelligence, that these statements could not be relied upon, and that whatever might be the ultimate result of the insurrection, it was at the moment far more formidable than the Government chose to admit. On the 30th, O'Donnell was at the head of a strong force at Aranjuez, and in a position to say that, if the Ministry were not changed, he would the next day take the capital. On the other hand, it also became evident that up to this period the insurrection had not assumed a national character. The antecedents of O'Donnell had been such as to lead to the inference that he rather meditated his own advancement to the head of the Government than that of the cause of the people. Whether he had more liberal designs, but was restrained by the fear of alienating valuable Christino supporters, does not appear; but he was induced to issue a proclamation, in which he called on the nation to support him in demanding the convocation of a Constituent Cortes, and the organisation of a National Guard. Up to this time he had been but coldly supported by the Democratic party. Now, however, his position was changed, and he found himself at the head of a popular revolution. He was joined by General Serrano. An insurrection in Valencia was followed by a pronunciamento by the city of Barcelona against the Government. On the 17th of July, two days after, an insurrection broke out at Madrid, with the particulars of which the reader is familiar; and now Espartero deemed it prudent to leave his residence at Logrono, and to put himself at the head of the movement, as had been concerted from the time when O'Donnell first converted his movement from a military insurrection into a national revolution for Constitutional objects. Queen Isabella, alarmed at the march of events, attempted to stop them by the formation of a new Ministry, with a Constitutional programme; but it was too late. Espartero was advancing on the capital at the head of the Army of the Centre, with the Army of the North following in their footsteps. For some time after his original departure from the capital, O'Donnell remained in the south; but his co-operation was deemed essential by Espartero, and he was invited by him to come in. The confiscation of his titles was immediately reversed, and he was named Minister of War, besides being raised to the rank of Marshal.

It has been observed that the original attitude of O'Donnell led to the suspicion that he meditated no more than a sort of palace revolution, and to place himself at the head of a new Ministry. This design, however, must have been abandoned at the period of his second proclamation, and when he became aware that the mere name of Espartero, associated as it was with the principle of Constitutional Government, would be more powerful than his own with the Spanish nation. The Spaniards of 1854 seem to be very much in the same position as the Spaniards of 1843, wanting as their ruler some strong-handed and determined man, who would know how to deal with the French Republican emissaries, who are fomenting insurrection. Espartero has the character of being too honest a man for the position he occupies. If this be true, O'Donnell is precisely the man to second him and remedy his errors. The best friends of Spain fear that there is still a rivalry and bad understanding between these two chiefs. Espartero is suspected of a leaning towards the Democratic party, while O'Donnell is supposed to meditate a restoration of old evils in another form. At the dinner given a few days since to these distinguished men by the press of Madrid, O'Donnell certainly administered a kind of rebuke to Espartero for having omitted to put the Queen first among the toasts. His speech was warm and loyal, and in that respect perhaps patriotic. At the same time it may be premature to assume a serious difference between him and Espartero, when, in the actual circumstances of Spain, it might be desirable that the ebullition of popular excitement should expend itself in a support of Ministers seemingly opposed in public, but between whom there might be a tacit understanding.

MARSHAL O'DONNELL, THE SPANISH MINISTER OF WAR.

The person of O'Donnell is prepossessing. He is of lofty stature, and with a mouth and chin expressive of force of character. He is of fair complexion, and the original Irish type remains. His chief characteristic is determination. Throughout his chequered career he has never hesitated to risk his life and property in the cause which he may have embraced for the time being. If his objects have been personal, his conduct has been brave; and he has never been suspected of treachery. As a military man he stands high; but his opportunities of achieving a great reputation as a soldier have been limited. It is more than probable that in the period of anarchy impending in Spain his energy and determination of character, with the claim he has as the originator of the last revolution may at some future time make him the arbiter of his country's fortunes.

It may be interesting to the reader to follow the personal fortunes of O'Donnell's immediate family. We have seen that his first cousin remained faithful to Espartero, and that the two were personally opposed at Pampeluna. This was not the only case in which the family embraced opposite sides. Throughout the civil war, while Leopold O'Donnell was a Christino, his three brothers (Juan, Carlos, and Enrique), and two of his brothers-in-law, joined the cause of Don Carlos, and enlisted under Zumalacarregy. His own mother, the Countess of Bisbal, joined Don Carlos; and at the very time that Leopold was Captain of the province of Guipuzcoa, in the service of Isabella, she filled the post of Lady to Honour of Don Carlos' second wife, the Princess of Beira. The fate of his brothers was various. Juan was killed at Pampeluna, in a conflict between the Carlists and the Christinos and National Guards. Carlos O'Donnell, another brother, was made prisoner by the Christinos of Catalonia, and was confined in the citadel of Barcelona, in 1836, awaiting his exchange, under the Eliot Convention. But, in a commotion, he was torn from his prison by the populace and brutally massacred: it is even said that his head was kicked about the streets. As for Enrique, the younger brother of those three, on the signing of the Bergara Convention by Espartero and Marolo, he entered into the army of the Queen, with the rank he enjoyed in that of Don Carlos. We do not know whether he still survives.

THE GREEK COURTS AT THE CRYSTAL PALACE.

We resume our Illustration of the Series of Art-Courts, which continue to prove very attractive to the many thousand visitors to the Sydenham Palace; denoting this important portion of the vast design to be fully appreciated. We quote the details from the "Guide," by Mr. G Scharf, jun., F.S.A.:—

The principal Greek statues and bas reliefs are contained within the Greek Courts, which present an external façade with three entrances on the western side of the nave. The Courts are placed, according to the chronological position of Greece in history, between those of Egypt and Rome. The order is Grecian Doric; the proportions have been copied from the temple of Jupiter at Nemea, which are less massive than Doric buildings usually are. The centre and larger entrance leads into the principal Greek Court, and the two smaller ones into the Side Courts. On the architrave over the principal entrance is a Greek passage from Herodotus. Above the Side Courts are passages from the celebrated oration of Pericles.

Instead of triglyphs and metopes, as seen upon the model of the Parthenon, and, indeed, with hardly any exception upon all Grecian Doric architecture, the frieze of this façade is decorated with wreaths, alternating with names of the ancient Grecian cities renowned for their connection with the fine arts. The entablature and wreaths are adapted from the choragic monument of Thrasyllus at Athens. In that building the frieze is, with the exception of laurel wreaths, at regular intervals, perfectly smooth. The architrave of that monument also bears an inscription ("Stuart," vol ii. pl. 38), and the fillet below the frieze is ornamented with a series of small round dentils.

The monogram within the wreaths contains the initial letters of the Muses, Graces, the Good, and the Wise—Μουσαις, Χαριειν, Αγαθοις, Σοφοις.

The names of towns upon the external façade, beginning from the extreme left next to Egypt, are Alexandria, Rhodes, Ephesus, Mitylene, Ægina, Delphi, Eleusis, Athens, Corinth, Argos, Mycenæ, Sicyon, Olympia, Agrigentum, Pestum, and Byzantium next the Roman Court.

On passing through the main entrance we come into the central Greek Court. It is square, and, being surrounded by porticoes, resembles a Greek *agora*, or place of public assembly, the *forum*, or market-place of the Romans. The same order of architecture is continued, and the names between the wreaths on the frieze are those of poets, philosophers, artists, and a few of the chief patrons.

Three of the paintings on the wall of this Court are intended to illustrate the Grecian mythology, comprising a few of those incidents of fable which led to a more extended development; and the fourth refers to the construction of the Parthenon, affording a combination of portraits of the leading personages of that period. These paintings are prepared and executed under the superintendence of Mr. George Scharf, jun.

Proceeding onwards we enter the atrium under the gallery. The square Piers or Antæ are from Eleusis, Priene, and other examples. The richly-decorated ceiling is copied from the existing remains in the Temple of Bassæ in Arcadia, and the Propylæ at Athens; the diagonal paneling or coffers being adapted from the former. Upon the walls of this atrium have been arranged some of the finest specimens of Grecian basi-relievi, the originals of the greater part of them are still to be seen at Athens.

The chief architectural feature of the Long Gallery is a model of the west front or posticum of the Parthenon.

THE GREEK COURT, AT THE CRYSTAL PALACE, SYDENHAM.

LAYING THE FOUNDATION-STONE OF THE NEW CHURCH OF ST. THOMAS, NEWPORT, ISLE OF WIGHT; BY H.R.H. PRINCE ALBERT.

On Thursday, the 24th ult., the first stone of the new church of St. Thomas, Newport, Isle of Wight, was laid by his Royal Highness Prince Albert, with full Masonic ceremonial. The proceedings excited a lively interest throughout the island, the inhabitants of which flocked in numbers from all directions to witness them. The Masonic fraternity, also, both of the island and of the southern counties, came forward in strength to assist at the proceedings; upwards of 400 marching in procession, to escort his Royal Highness to the time-honoured site. Before further describing the events of the day, however, it may be proper to take a glance at the antecedents of the ancient Church of St. Thomas, at Newport.

The Church of St. Thomas, at Newport, as it stood till lately, was one of the most interesting specimens of early church architecture in the kingdom: containing, however, more than a fair proportion of intercolations of successive periods. The original structure was dedicated to St. Thomas à Becket, shortly after whose canonization it was built; and in course of time its Norman simplicity was diversified by additions of every successive style including Tudor-Gothic, and the anomalous Renaissance of the early part of last century. An inscription upon the wall of the south side indicated that the last considerable alterations were made in the year 1701. Of the Norman remains, the columns in the nave are the most conspicuous. The arches were of the Transition style; and the windows of the Perpendicular. The general aspect of the edifice was that of a temple, which had outlived its time: the exterior being dilapidated and crumbling; whilst within were symptoms which warned those interested in its fate, of the necessity for re-edification. Accordingly, the parochial authorities, and the inhabitants generally, bestirred themselves; a subscription was got up, and a new building was determined to be erected on the site: the architect selected being Mr. S. W. Dawkins, of Whitehall-place, London; and the builders, Messrs. Dashwood, of Ryde. The new building will be of the Florid style, and will be somewhat larger than the old one, the extension being on the west side. The interior will consist of a nave, side aisles, clerestory, north and south chapels, chancel and sacristy; and galleries at the west end only. The building will accommodate—in the body of the church, 1283; in the galleries, 203: total, 1486. About half the sittings are to be free, and open.

PROCESSION TO THE LAYING OF THE FOUNDATION STONE OF THE NEW CHURCH OF ST. THOMAS, NEWPORT, ISLE OF WIGHT.

The old tower will be retained, and carried up about 50 feet higher, being then 128 feet high. The exterior will be newly cased; and angular turrets and a splendid entrance doorway will be added. The whole will be built of the native stone of the island, with the exception of the dressings, which will be of Caen stone. The total cost is estimated at £8320.

The last services of the Church were performed within the old fabric on Sunday, the 16th July, when all Newport thronged together to take a solemn leave of a sanctuary which the fondest associations through numberless generations had endeared to them. In little more than a month afterwards the whole has been razed to the ground (with the exception of the tower, where christenings, marriages, and funerals are still performed), and the first stone of its more comely and ambitious successor laid amid its ruins.

The day of this imposing ceremony—the most important and memorable, perhaps, within the memory of "the oldest inhabitant" of the place—turned out a fine one; and under the broiling sun, the live-long morning, shoals of people in carriages, in chaises, in waggons, in carts, poured in from all the little towns, and villages and farms, which dot the face of the island in all directions; many of the joyous parties being preceded by flags and bands of music.

The day was ushered in with a merry peal from the bells of the old tower, and the whole town exhibited the appearance of a general holiday—business being suspended, and everybody dressed in their Sunday best. Flags and banners, bearing various devices, and endless garlands and bouquets of flowers, covered the fronts of the houses in the principal streets forming the line of the procession. Triumphal arches, of stately proportions, and really creditable in point of tasteful design and arrangement, were placed across the thoroughfares at stated points. First at the bottom of High-street was the Albert Arch, decorated with the France's arms; next, opposite the Town-hall, was the Corporation Arch, bearing the Borough Arms; next, in the vicinity of the Cornmarket, and just outside the gate of the church stood what was termed the Clerical Arch, exhibiting the arms of the See of Winchester; and opposite the Bugle Inn stood one more gorgeous than all, entitled the National Arch. The remains of the old church were profusely decorated; several flags flying from the top of the tower. Within the *enceinte* was a wooden gallery—calculated to accommodate 400 or 500 persons—to witness the ceremony of the day; the admission to which was by tickets, at 5s. and 10s. each; the proceeds of which went towards the building fund.

THE OLDHAM LYCEUM EDUCATIONAL AND INDUSTRIAL EXHIBITION.—THE BARONIAL HALL.—(SEE NEXT PAGE.)

Soon after eleven o'clock, a guard of honour, consisting of about 200 troops of the garrison, defiled in front of the Town-hall, and the fine band of the Royal Marines commenced playing.

The members of the Town-council met at the residence of the Mayor at half past eleven o'clock, and accompanied him to the Town-hall.

The Bishop of the diocese and about twenty of the clergy, assembled for the purpose of robing, at twelve o'clock, at the residence of the Rev. G. H. Connor, and walked from thence in procession to the Town-hall.

The officers and brethren of the several Lodges assembled at the Masonic-hall at eleven o'clock, when a Grand Lodge of the province of Isle of Wight was held, and a procession formed by twelve o'clock, which proceeded to the Guildhall, where the procession remained, to await the arrival of his Royal Highness.

At one o'clock his Royal Highness Prince Albert arrived in an open carriage and four greys; and the Royal Marine band commenced playing the National Anthem. The procession then formed.

The band decided off to the right as the rest of the procession entered the church; the mass of the latter, after entering, divided right and left, to allow the Right Worshipful the Provincial Grand Master and his Provincial Grand Officers to pass up the centre, preceded by his banner and sword-bearer, and followed by the remainder of the procession, until the whole had entered the enclosure around the stone.

The stone was suspended by a pulley from supports decorated with evergreens. It was very large, and beautifully chiselled for the occasion. We understand it was the gift of Mr. Joseph Poore, of Newport.

It bore the following inscription, engraved on a brass plate:—"On Thursday, August 24th, A.D. 1854, this foundation stone was laid by his Royal Highness the Prince Albert, Francis Fittis, Mayor, George Henry Connor, M.A., Minister; Edward Way, Henry Loosemore, Churchwardens."

His Royal Highness, accompanied by the Mayor and Masonic officers, walked through the portal of the church-tower, and the positions were taken up as follows:—

Town Clerk, James Kirkpatrick, Esq.	Equerries	The Bishop's Chaplain, Rev. E. M. All.
The Mayor, E. Fittis, Esq.	His Royal Highness Prince Albert.	The Lord Bishop of Winchester
The Mayor's Chaplain, Rev. Mr Wallis	THE STONE.	The Rev. H. D. Scott, Vicar of Carisbrooke
Provincial Grand Master, T. W. Fleming, Esq.		The Rev. G. H. Connor, Minister of
Deputy Provincial Grand Master, Sealy Worden, Mr E. War	Architect, Mr. Dankes.	St. Thomas's Church Builders.
Junior Warden, Mr Loosemore	Messrs. T. and J. Dashwood, of Ryde.	

Surrounded by the Corporation, and the whole Clergy of the Island.

His Royal Highness viewed the brilliant assembly with evident interest while the stone was being raised.

The Bishop of Winchester then said aloud, "The glorious Majesty of the Lord our God be upon us! Prosper Thou the work of our hands upon us! O, prosper Thou our handywork!"

Psalm cxxxii., verses 8 to 16 inclusive, was then repeated alternately by the Bishop and the Clergy, and a large number of the spectators.

The Architect of the building then presented to his Royal Highness the working plans of the Church, and explained to him its proposed accommodation; after which, a bottle, containing the coins of the realm and a parchment roll, was deposited in a cavity beneath the stone. The foundation-stone was then partly lowered, and a silver trowel presented to Prince Albert.

The trowel, provided by Mr Dudley, silversmith, was of most chaste workmanship, and bore the following inscription:—St. Thomas's Church, Newport, Isle of Wight. The foundation-stone laid by his Royal Highness Prince Albert, August 24th, 1854. Francis Fittis, Mayor." On the back were his Royal Highness's arms, surrounded by the Order of the Garter, very elaborately executed.

His Royal Highness then spread the cement on the lower stone, the upper stone was let down slowly, with solemn music, and his Royal Highness said, "We place this stone in faith and hope to the glory of God, through Jesus Christ our Lord."

The stone being adjusted, and his Royal Highness having given it three strokes with a mallet, the Provincial Grand Master approached the stone, and proved it to be properly laid by the plumb-rule, presented by the J.G.W.; the level, presented by the S.G.W.; and the square, presented by the D.P.G.M.

The Architect then delivered the mall to the Provincial Grand Master, who gave three knocks, at the same time invoking the blessing of the Grand Architect of the Universe; and the brethren responded—*So mote it be.*

The Provincial Grand Master delivered the plan and tools to the builder, for his use, after which he scattered corn and poured wine and oil upon the stone.

The Provincial Grand Chaplain then gave the appropriate prayer, the brethren again responding—*So mote it be*; when the Provincial Grand Master announced to his Royal Highness and the Mayor that the stone was laid.

The Bishop of Winchester then repeated an appropriate prayer, composed for the occasion; after which a hymn was sung, "This stone to Thee in faith we lay," &c.

The Benedictum having been given, the Bishop of Winchester expressed, on behalf of the Town and Town-council, and of the inhabitants, their respectful and grateful acknowledgments for his Royal Highness's great condescension in coming amongst them on this interesting occasion.

His Royal Highness, who was evidently much gratified, said—

My Lord, allow me to express to you the feeling of gratification I have this day experienced in being amongst you and assisting you in the performance of this holy work; and, in doing so, I wish also to bear testimony to the great interest the Queen takes in all matters of this kind in the nation at large, and in the welfare of this island in particular. I thank you for this honour (Loud cheers).

The ceremony being completed, the procession was again formed, and returned to the Town-hall; and, on reaching the north door, it stopped, and fell back in double line, to allow his Royal Highness to pass through the entire procession to the Town-hall. His Royal Highness had a few minutes' conversation with the Mayor, and re-entered his carriage amidst renewed congratulations, and returned to Osborne.

A *déjeûner* afterwards took place at the Town-hall, provided by Messrs. Mew, of the Bugle Inn; the Mayor presiding, supported on his right by the Bishop of Winchester, and on his left by General Lord Downes. Amongst the other guests (in all some 200 in number) were the Ven. Archdeacon Wigram, Colonel Rumley, Colonel Delacombe, T. W. Fleming, Esq., L.P. Lind, Esq., Hon. A'Court Holmes, Colonel Harcourt, M.P., Admiral Symonds, Le Marchant Thomas, Esq., Sir Henry Oglander, Bart., Captain Crozier, R.N., A. J. Hambrough, Esq., B. Kerr, Esq., &c.; and the whole of the clergy of the island.

The Masonic body had a banquet of their own in their Hall.

Before closing this account, we may refer to one incident of past history—a painful one—with which the history of the ancient church of St. Thomas is associated. Amongst the numerous mementoes which crowded the old edifice, was one to the memory of the unfortunate Princess Elizabeth, daughter of Charles I., who died a prisoner in Carisbrooke Castle, close by, in the year 1650, and was buried in this church. The memento in question was a brass tablet, set up in 1795, upon the discovery of her until then unmarked resting-place, and ran as follows:—"Here doth lie, in a leaden coffin, rest the remains of Elizabeth, second daughter of King Charles I. Obit. September 18th, 1650 æt at 14." We understand that her present Majesty has intimated her intention to erect a suitable memorial to the unhappy Princess, in the new church.

THE OLDHAM INDUSTRIAL AND EDUCATIONAL EXHIBITION.

THIS very interesting Exhibition was inaugurated on July 17 by the Right Hon. the Earl of Wilton, in the presence of the authorities of the borough, the president, vice-presidents, and directors of the Lyceum, the members of the Town-council, the Right Rev. the Lord Bishop of Manchester, a numerous and interesting assemblage of ladies, and a number of the élite of the gentry of the district.

A well-supplied Bazaar, got up by half a dozen ladies, friends of the Lyceum, was held in the gallery of the Exhibition during the first four days—the results being £628 0s. 9d. The proceeds of the Exhibition and Bazaar are to be applied towards erecting a building suitable to the advancing requirements of the members of the Lyceum; and, as Oldham has a population of seventy-three thousand persons, a project of this description is most desirable.

The Exhibition is held in the Working-man's Hall, Horsedge-street, and thrown open to the public from ten o'clock, a.m., to ten o'clock, p.m. for the admission fee of 3d., except on Wednesdays, when it is 1s. The collection consists of the usual objects of rare interest, as antiquities, paintings, sculpture, articles of vertu, natural curiosities, geological specimens, models of machinery, philosophical and scientific apparatus, manufactures, &c.

The Great Hall, 90 feet long, 64 wide, and 45 high, appears to be the chief attraction, with its terra-cotta fountain in the centre, surrounded by flowering plants. On the basement it is surrounded by [illegible] At the west end the wall is covered with valuable pictures, 74 in number, contributed by the Earl of Wilton, Messrs. W. Townend, W. Hammersley (artist), Edmund Buckley, J. Whitworth, John Platt, James Platt, John Duncuft, T. Agnew and Sons, &c. The mirrors (one 143 inches by 80 inches, manufactured by the Union Plate Glass Company, St. Helens), are contributed by Dickinson and Sharples, of Oldham. On the east side of the fountain stands Mr. Knowles's (of Manchester) prize model vase, from the Great Exhibition of 1851. On a stand on the north side is the beautiful model of the *Fairy*, her Majesty's yacht, contributed by Prince Albert.

In the Main Gallery are thirteen tables and two glass courts, well filled with busts, vases, bronzes, china, silver and electro plate, stained glass, wax and shell flowers, Bohemian glass jars, specimens of pen-manship and needle-work, articles of Turkish costume, ancient books, autographs, engravings; cases of hats, from the first stage to the last, complete (Simmons and Woodrow, Oldham); models of ships and steamers; organ, anatomical, and photographic courts, Chinese carvings, and other curiosities, &c.

On the principle of keeping to the right, we will now leave the Gallery, and descending by the steps at the centre of the platform, and so on by the north-west part of the fountain, through the No. 3 Court—in which are some of Roberts's Views in Syria, contributed by the Bishop of Manchester—proceed by the Swiss Cottage, on the left, into the Machinery Court, 60 feet long by 48 feet wide, in which are 127 distinct objects of mechanical interest, forming a little Exhibition of itself. This part is much frequented and universally admired. The steam-engine for driving the machinery is of twelve-horse power, with Rye and Crowther's "patent expansive motion."

Passing from the noisy revolution of wheels, we proceed to the Baronial Hall, which has been fitted up with great taste, by Mr. George Shaw, of Saddleworth. The room, built for the occasion, displays a style of architecture referable to the latter part of the reign of Edward III. It has an open-timbered roof, large projecting fire-place, with raised hearth, dog irons, wardo ne high up the side walls, and a minstrel gallery, the twisted railing of which is of the time of Charles II. Here, Lord Brougham, Captain de Hollyngeworth, Messrs. George Shaw, T. Willement, and G. D. Tomlinson (Huddersfield), appear to be the chief contributors. The armour, swords, shields, spears, matchlocks, crossbows, &c., are very curious.

Returning to the Great Hall, we pass under the south end of the platform, inspecting, on our left, some beautiful dioramic views. The objects exhibited are nearly a thousand in number.

The Exhibition will be kept open for nearly two months longer. We hope the directors of the Lyceum will, at the close, be enabled, out of the results of their labour, to carry into full and complete effect that noble object for the attainment of which they have worked so well.

A banquet in honour of the occasion took place, at four o'clock, on the opening day, in the Town-hall, and was attended by about two hundred ladies and gentlemen.

THE EDUCATIONAL EXHIBITION.

THE Society of Arts have certainly deserved well of the nation for the pains taken "to collect together into one common scheme of exhibition, all the best means which have been and which are used for the purposes of education, as this is commonly understood, in all countries and under all conditions." By whatever name such a collection is made known, its existence is a good, and its preservation desirable. Should it take a permanent form in the metropolis—and we sincerely hope that it will do so—it can hardly fail to be continually and widely useful.

But a mere collection of implements is not necessarily valuable; its character will depend upon the facilities afforded for examination in each department, and on the extent to which responsible parties make use of those facilities. Public curiosity being sated by two months' exhibition of apparatus and results, we would suggest that the principle of test by comparison might henceforth be adopted. We think that, were exhibitors classified, and invited to discuss the relative merits of their productions together, or in succession, the interest of the collection might thus be long maintained. It would then serve as a museum for teachers' meetings. There are many difficulties in the way of drawing teachers together, but we believe that a series of conferences might thus be ensured. At any rate we would urge upon all who are engaged in the business of instruction, the importance of such an effort to keep pace with the times. The day is gone by when "rule of thumb" teaching, like "rule of thumb" sailing would suffice; the mode of proceeding in both cases must now be in accordance with fixed principles.

Some enthusiasts, during the last half-century, here and on the Continent, have affected to look to the "school" for a regeneration of society; and they have said and written a great deal about the "mission" of the teacher. While their arguments relate to the poor Pariahs of civilisation, the homeless outcasts of our lanes and alleys, we will not oppose them; but if they are intended to apply to any other class, we are bound to declare that they have not our sympathy. We hold the "school" to be essentially a product of society, and a reflex of its character. A common school education, according to usually received notions, consists of a common-sense preparation for the ordinary requirements of life. As a people, the English are jealous of individual rights, and too mindful of domestic duties, to allow of any interference with parental prerogatives; hence, English teachers can scarcely be more than a business portion of a business community. It is theirs to discover and put in practice the most speedy and effectual modes of obtaining habits of order and of industry, together with a given amount of useful knowledge for the rising generation. Anything more than this is not likely to be required of the majority, and anything less will soon cease to be satisfactory.

The tendency of the above remarks is not, we hope, to degrade the teacher's office, but rather to elevate it, by ridding it of an onerous and objectionable responsibility. Let public instruction be raised by those who profess it to the dignity of a science, and the instructors themselves will rise in social estimation. The success of the Exhibition as a whole, is a guarantee for justice being done to any well-directed attempt on behalf of education. Few persons would, a short time ago, have thought it possible, to form such a splendid collection of apparatus, books, and other appliances; and fewer still, that the co-operation of so many eminent men as have appeared upon the list of daily lecturers would have been secured. The only point in which it has not yet realised the expectations of its projectors seems to be in the scanty attendance of those for whose benefit mainly it was designed.

Another fact, too, deserves mention—namely, that, while those schools which are intended for the poorer classes, are well and ably represented through the medium of societies, our grammar-schools and private schools are but thinly scattered through the catalogue: the inference must be, either that this movement has not become known to them, or that they do not wish to share in the undertaking. Public opinion, however, will progress, though they lag behind.

We heartily concur in the sentiments expressed by the Principal of the Middle School, Borcklohm, in his lecture of Wednesday week, on Public Instruction in Holland and Switzerland. The Legislature, even in countries in which a system of national instruction prevails, can do little for the paddling and higher classes; these are acted upon mainly by the spirit of the age. Public opinion needs direction and expression as regards the standard of attainment suited to the wants of various classes, and to the general requirements of the times. No association can be better fitted for the task than the Society of Arts; no other, perhaps, has such facilities. We should be glad to hear of their taking steps in this direction, and receiving into "union," or establishing, a set of schools conforming in practice to the principles they advocate.

Mr. Yeats's idea of an Educational Congress of working Teachers, holding its meetings wherever railroads run and steam-boats ply, does not seem to us extravagant. We think it desirable, and cannot understand why it should not be as practicable as a Peace Congress.

A GLANCE AT OUR WAR ON THE DANUBE.

(From a Correspondent.)

I HAVE certainly headed this chapter wrongly, because, save a few gallant adventurous spirits, we Englishmen have had nothing to do with the War on the Danube. Our army, of which we are so proud, was brought out with rather more care and hardly less expense than a first-class lady passenger. Poor darlings! very few of them could undergo the fatigue of the voyage at once, so they came only by easy stages, resting at Malta, at Gallipoli, baiting at Scutari, and at last, gallant fellows, reaching Varna itself, *Ultima Thule* of our valour. But no; what can withstand our troops? They actually performed—taking, certainly, some time about it—the long and harrassing march to Devna an actual distance, mighty men, of twelve miles! And there they have remained, and, considering the enemy is north of the Danube, we may say, in unassailable strength. But, joking apart, is it not so? and do not our brave fellows ju-tly chafe, as being the puppets employed in such a farce, they are full of fight, and would throw no discredit on their father's fame.

But I wish to take the reader to the town of Rustchuk, on the Danube, and see, or rather show, him what was done there just three weeks ago; and then bring him up the—no, down the—Danube to Turtukai, of which place I have the great honour of forming part of the garrison. Rustchuk is a large town on the banks of the Danube: it stands on the river's banks—here, low and swampy, more sand than mud. high hills command it behind. Rustchuk is fortified, and, with the example of Silistria before it, and defended by Turkish troops, flushed with their recent victories, would, probably, prove a stumbling-block for the Russians. One fine morning I rode in from Scrravoda, a large Christian village, where I had slept, to Rustchuk; the road was thronged with arabas—the rough, ill built vehicle of the country—drawn by two handsome little bullocks, and conducted by a poor, oppressed, beaten-down, brutish Bulgarian peasant. Poor fellow! I use the terms in no reproach to him, but in bitterness towards the brutes that have so long misgoverned this magnificent country. The foremost of the long line carried a red flag, significant of powder and combustible; nevertheless, the escort lolled and smoked on the loads, careless of consequences. My fare had been bad water and a pipe or so the day before, so I was much inclined to savage musing. First, then, I noticed that to each cart there was a soldier as guard. Now, this was odd, especially as the Turks particularly wanted soldiers in the field; and then the whole march lay through a friendly, in fact, a home, country. I solved the difficulty, however, before my horse's fast walk had brought me beyond the waggons. This was the patriotism a great Pacha had spoken to me about; how the peasantry had come forward *en masse* and provisioned the army free of cost, and how they actually came and offered the use of their arabas for nothing. Pacha, were you now really humbugged yourself, or did you wish to humbug me? I now turned over the affair in my mind. I listened to the conversation of the poor fellows; watched them when they did not watch me; saw all that was done, and arrived at the following results, which I will maintain as near tee truth as possible.

I shall startle our English world when I assert that the war has cost the Turkish Government, or the Mahomedan population, very little. It has decreased the numbers of the latter enormously, both by actual mortality and by separation from their homes; but otherwise has cost them little, if anything. As I assert so much, I conclude my matter-of fact readers will ask me to prove it. The Turkish Government, then, has seized on the provisions generally of the European provinces, the seat of war. As the wealthier country people, in fact nearly all the agricultural population, are Christians, these forced contributions have fallen almost exclusively on them; in many districts the people have not cared to receive receipts for what have been taken; in others, in exchange for their good corn and meat, they have received certificates. Now these paper receipts at best bear but a very questionable value: first, the army must be fed, say the authorities; and, spite of your receipt, which may stand over, it must be fed by you, because there is no where else to procure provisions. So the settlement of the ticket stands over, not to mention that the giver of the receipt is armed with all the authority of lawless power, and has his own ends to serve; while the receiver is a poor ignorant peasant, brought up a slave, ignorant of all but the lawless force and tyranny of his master; so the receipt, as my eyes can testify, is seldom correct, still more rarely in proper form: the poor peasant has thus had to yield his crops. Next, a requisition is made on the district for arabas or transports; these have again to be procured. The governor, a Turk, is not very likely to supply it himself, even if he could, his prejudices and bigotry would prevent his taking it from his co-religionists; and if he did attempt such an unheard-of act, they would be at war with him, make a noise, trace out his peculations, and probably find means to supplant him. Thus food and carriage have been found. Next, some authority, difficult to be evaded, sends the Governor of the district a demand for money. He temporises and evades the demand; but he has to do with men who have played just the same game themselves, and hundreds are ready if he refuses, to pay the money and take his place; so he finds cut some tax in arrears, forgets who paid it, or else boldly doubles it, and his myrmidons compel ready payment. For the use of the arabas the poor wretches receive nothing; they are collected by force, and then kept by force, and guarded like prisoners. Here, in our camp, we have many, so I do not mis-state the fact. Sometimes the fellows leave their carts and bullocks, perhaps their whole estate, and escape, happy to have got off with the loss of all they possessed, but to have recovered his freedom. Besides these demands upon the rayahs are others less regular in their form. The Irregular troops and Bashi-bozouks, who number some 80,000 men, now quarter on them indiscriminately, and what they actually consume is the least part of what they use.

The Porte, to support its finances—for years, owing to their thorough mismanagement and universal peculation, in utter confusion—has had recourse to various expedients. We all know the history of the Loan. Born in a nest of speculators at Constantinople, it added no lustre to our ideas of Turkish probity. A bank was then organised, and bank-notes issued, current only at Constantinople, bearing a high rate of interest. These were soon absorbed. The two or more firms concerned in the bank made what discount they pleased. The bank broke, and fame says its directors became very rich men. Another issue of bank-notes, not bearing interest, was made current as before, only at Constantinople. The object of limiting their currency to Constantinople was that the taxes should not be paid in paper. Hence, then an unlimited supply of paper has been issued, and is already at twenty per sent discount. To pay the army a paper currency was issued solely for Roumelia. This stuff we delight in, or rather do not delight in; but even in this coin, abundant and cheap enough, the poor soldiers are not paid. For eight months those poor, enduring fellows have not received a farthing. Another species of paper has been issued for the army of Anatolia; this is only current there. This inundation of paper has not, however, produced the bad result that might have been anticipated, for the currency was so base before that it was valueless, save as a circulating medium, and few, if any, kept Turkish money as treasure. There is little doubt that the Russians have made the Northern Danubian Provinces pay their war expenses; so that the poor people, who probably care le-t about the points at issue—namely, for them, a change of one tyranny for another—have had to turn over the whole expenses of the contest, and their very land and houses have been the prey alternately of either party. I stated before that the soldiers have received no pay,

and may add that their clothing is worse than rags. Shoes, they have not one pair amongst a dozen, the rest swathe their legs in rags, and lace a piece of hide on the sole of the foot, bringing it up over the ankle; but—will it be believed?—the superior officers are said to be, and I firmly believe are, paid most regularly. Of course many are, because they can pay themselves, as the revenue goes through their hands; and, in fact, all down to the rank of captain, are paid with punctuality. These, again, pay their followers, as a necessary precaution, to prevent their authority. I will not longer detain my reader, save to add one instance already mentioned in the public prints, and scarcely credible; though, alas! for the credit of the man, too true. Redschid Pacha—at a time when the Turkish treasury could not produce a para to pay its troops, clothe them, or pay for their food; when not a just debt could be paid for want of funds—sold his new Palace on the Bosphorus to the Sultan for twenty-two millions of piasters ready money; this palace was given then in dower to the Sultan's daughter who married Redschid Pacha's son. But I am entering Rustchuk, and wandering amidst its streets, seeking quarters for myself and men. Too much of a Turk myself to bother the Pacha, I turned into the nicest looking khan and took possession of the best rooms, while my Major took the kaim, or order for rations, to the proper authority. The khangee would as soon have seen a regiment of devils as my regiment of wild Bashi-bozouks, for he knew them of old, and how averse they were either to starving or paying, although, alas! they had little power for the latter. My men generally tethered their horses about the court-yard, and threw down before them the grass they had cut as they came along, then stretched themselves on their abals or felt, and lit their pipes of repose. Few occupied rooms, save one next mine, in which they deposited their muskets, and spreading a clean mat, kept it as a prayer-room—for most among that wild, reckless gang, lawless plunderers though they are and were, pray to their God, the Almighty living God of all. They shame us in this certainly, though it must be owned that their devotions seem to have but little effect on their lives, and they rise from adoration to detail with pride scenes that make one's blood run cold.

At nine the Pacha rose from his tenth pipe profound, and ordered the soldiers to cross the river, and take the island opposite. In front of Rustchuk, in the Danube, is a large, long island, well wooded (it is nearer the northern than the southern bank. The Turks despise such things as scouts or spies, who require ready-money payments, not promises; so the Pacha was utterly ignorant of where or what forces the Russians had; in fact, cursed the Giaours that they had not shown him their force. Well, in pursuance of the Pacha's order, some 3000 infantry were embarked in large boats and a steamer lying at Rustchuk, several English officers were attached to the force, and headed the men—as usual, the bravest foremost—one a youth who had arrived but the very evening before. I no sooner heard the news than I sealed up one small packet, directed it, looked at my pistols, wiped my sword, and, accompanied by some twenty of my best men—who loudly grumbled at foot fighting—put myself on board the steamer; and, with some 500 men already on board, we started across. Several boats had already preceded us, and were close into the island, whose nearest shore was about 600 yards from the most projecting point of Rustchuk, the channel widening elsewhere to perhaps 1000 or 1500 yards. The boats we could plainly see landing their men, wherever they could fetch, as the current allowed them. The infantry, I could see, paused; but the English officers dashed boldly out. I could see one noble fellow, in a white cap and red jacket, far in front. The men, however, followed bravely, their own officers more slowly. They did not take up their formation very quickly, and were still in disorder, when a thousand unseen foes poured in on them a deadly fire: they cheered, "Allah Keugh!" and sprang on. Fresh boats landed, and the new comers advanced, but the fire was most close and deadly. The Russians were covered by sunk trenches, from which they all, covered themselves, dealt out a furious unerring fire of rifles. I was soon on shore, and too much employed myself to have any eyes for what others were doing; but I saw the Turks on my left driven back, and retreat tumultuously to the water. I saw the white cap and red jacket alone, surrounded by a hundred foes: for a moment he stood keeping the throng at bay; but the mass closed over him, as the ocean closes over the sunken ship. I brought my left shoulder forward, and, followed closely by my wild Bashis, we dashed, sword in hand, at the throng, who massed round their fallen foe: we cleft a road among them, and, followed by the infantry, cut them to pieces; for, taken at disorder, few resisted. I was less lucky, for I encountered a huge officer, who defended himself manfully against my assault; nor was my mastery at all certain had not my Chaoush Nawaab, a gallant Peshawer man, shot him down. We recovered only the corpse of the hero, an English Royal Engineer officer, pierced with thirty-three wounds. Without pausing, save to see if life remained, we pressed on, and, driving our foes before us, gained the crest of the range which runs along the island; as we did so, our comrades on the left had taken a battery which had been playing with deadly effect on our boats. I paused for breath, and laid down, exhausted with excitement and exertion, and could, therefore, my position being favourable, survey the field of battle. On the left our men had been beaten, and driven back, and the Russians were slaughtering them in masses as they stood broken and disordered. Every English officer who led them had been laid low. On the right and centre the Russians had been driven back, and received a defeat as severe as ours on the left; not to mention that they had lost their battery, the guns of which were now turned upon them with wonderful effect. No sooner did they feel the effects of this fire, than a panic seized them, and they fled tumultuously across the bridge which connected the island with the northern bank of the river; their right felt the charge and retired, at first slowly and soldierly, gathering in their cloud of Tirailleurs; but a hot charge of bayonets on their unprepared flank shook them, and a second utterly dispersed them, and they rushed in a crowd to the bridge. We could see their officers vainly attempting to rally them: it was of no use; they thronged on, pelted with their own grape and canister, poured on them from their captured guns. Our men meanwhile were reinforced from the main, and we crossed the river, establishing ourselves in a small village, which the Turkish troops intrenched with a celerity unequalled by any other soldiers. It was a mad movement on our parts, and nobody but a madman or fool would have ordered such a useless attack—without organisation, without object. The Pacha who had, as I have related it, sat on the hills above Rustchuk smoking his pipe, looked on. Had the Russians had one spark of energy, our whole force could have been destroyed; for they had full 40,000 men encamped on the heights above Giurgevo, and we but 8000, exposed and but meagrely supplied with ammunition, without guns or horse: still they allowed us to pass the night unmolested, and drive back their pickets on the following day, when a favourable site was picked out for an intrenchment, and formidable works begun. The work over, I re-crossed the river; and, returning to my khan with my diminished suite—for I had lost four men upon the field—went to sleep; and, wearied out, dreamt not of the din or blood I had waded through during the day. On the morrow I mustered my men, spoke a short eulogy on those who had fallen, and thanked those who had so gallantly fought with me, and then took the road to Turtukai, where my orders sent me. We took the river road, and found ourselves peppered by the Cossacks, who lined the other bank—an excitement I by no means liked, for there was neither honour nor glory in such a death. They fired well, and several bullets came most disagreeably near my head. My groom and a spare charger fared worse, for they were both severely wounded—the latter irreparably. Towards night we reached Turtukai, and put up there. All along the river bank were stationed Bashi-bozouks—chiefly Arabs, from Damascus or Aleppo. These poor fellows had been in the marshes for seven months, during which time they had not heard of pay, and received only an occasional ration of bread, yet they grumbled but little; their horses, meanwhile, were fattening on the dank grass, and that was some consolation to their horsemen feelings. The large village of Turtukai is situated on the edge of high table-land overlooking the Danube. West lies the plain, low, and covered with grass, making the place an admirable cavalry station; the village, covering the hill side for some half-way down to the river, is a collection of detached houses, lying in fruit-gardens. The place contains one mosque and a chapel, but no Christian place of worship. The inhabitants had entirely fled, taking every moveable article with them—leaving but their dogs, cats, flies, fleas, and storks. The latter seem quite indispendent, using the tops of the houses as bedrooms, but feeding out. The dogs and cats soon adopted their new masters, and ate their offal: the flies and fleas, alas, made us their prey. The Russians held this place for some time; and opposite it is the battlefield of Oltenitza, of which fight remnants still remain on this side, in the shape of shot-holes and shot. Report says the Russians carried off all the inhabitants; but, more probably, they abandoned the place. We find traces of their industry in vegetable and fruit crops, which our men appropriated. I found two thousand seven hundred Bashi-bozouks stationed here, under the command of Shemsie Pacha, a Ferik, or Lieutenant General. Everybody had selected his own house, so I also took the best I could find, and soon established myself in it. It has a tiled sloping roof, two rooms, and a corridor: the broad eaves keep off the sun, and papers pasted over them keep the damp and cold from entering by the windows at night. My simple *menage* was soon established, and here I am. We have grass for our horses, rations of bad black bread occasionally, and sometimes rice and barley. We cannot say the rations are regular: but when they come we are thankful, when they do not we grumble, and say, "Allah Kerim." Our men occupy the various houses, and cull the fruits of the trees as quietly and unconcernedly as if they were their own. Many die from over-eating the unripe fruit so abundant. Occasionally we see them digging a hole in the cemetery: a few cluster round it when it is deep enough, and a poor dead piece of humanity, wrapt in cloths, is brought up on a mat laid on poles, or a door, or a ladder, and this is laid down by the side of what the shape of it had long told us was a grave; the body is laid in its bed, the earth covered over, a rude stone—taken from its watch over some long dead brother Moslem—is placed at his head. The whole then sit round, and one, squatting at his head, turns himself Mecca-ward, and addresses prayers to Allah, God of All. From my window I can hear the voice and it bears a solemn warning, for are we too not sitting on our tombs? "It is His will. God's we are. From God we came, to God we must return!" The prayer ended, they disperse; and so, without noise, slips away one from among us. Poor wild fellows, they seem to care little for it, and no sign of woe is heard. Perhaps, it may be, we are stern men of war, and the very uncertainty of our lives leaves us less leisure to grieve.

Within the last few days we have been relieved from what I freely avow was to me at least a great annoyance—5000 Russians of all arms who occupied the northern bank, and were quartered in Oltenitza, the quarantine building, and various other intrenchments and casemates they had thrown up. Strong parties occupied the island in the river on our front, and kept up an uninterrupted fire upon us. We had bullets between us and all the courses of dinner and breakfast—bullets as you showed walking along the streets—bullets as you sauntered—bullets as you stood—bullets as you rode out—bullets as you rode home. Five of our men were killed by their useless fire, and many wounded; nor had we the smallest power of returning it, for we had hardly any ammunition, and not a single musket that would range the distance. I have seen the Cossacks come down and hurl defiance at us. We were also under no small apprehension of their crossing over and attacking us, as they had several large boats, while we had not one which all our skill or efforts could render seaworthy. For ourselves we had little fear: as, had our hand-to-hand defence of the town—the only one we could have made—failed, we should have mounted and retired; but it was for our sick—in this climate, and with their imprudence, a numerous body. On inspecting the arms of our force, we find one musket to five men; useful and good muskets, one in twenty men; swords, three amongst five men; pistols, one pair to every four men; good ones very few; khangars and knives amongst all. We find six rounds each to every musket. So the reader may see how ill-prepared we were. Our men, true to their nomade natures, seem to prefer taking the straw thatch of the houses, and building themselves huts on the plain; here they can more easily feed their horses, and live the lives they are accustomed to; here they fix their spears, tether their horses, and seem quite at home. Poor fellows! they never hear of pay, seldom of rations; yet they grumble but little, and then rather at the quiet of their lives than at the wrongs and injustice of their Government towards them.

The term Bashi-bozouks means, literally, "spoilt heads" (Bashi *heads* bozouk, *gâté*, as the French say:) the meaning of the term would be—mad-cap, wild fellow. The same expression occurs in Circassia, where the same class are called Delli-khans. The Osmanli and Arabs have a wonderful aversion, for a warlike people, to entering the regular army; and the conscription is looked upon as the greatest hardship possible. This antipathy does not exten d to the irregular cavalry which is, on the contrary, a most popular service, and formed entirely of volunteers. A leader—sometimes a man who has distinguished himself—collects a lot of men; the more recruits under him, the better for him; he then offers his services to the Pacha, and offers to maintain such and such a force under him. He receives the pay for himself and men. If his recruits have not money, horse, or arms, he supplies them, and charges so much monthly for their use. I find, also, among our men, that the chiefs generally paid the half-year's taxes of his recruits, which the men worked out, of course. The pay of a Bashi-bozouk in full is 150 piasters a month (or about 26s.) For this he has to maintain himself and horse, and be armed; for rations he has bread and barley supplied him; but these articles a Bashi seldom pays for—these he considers his privilege, and takes, generally feeding on the best, and being coffee and tobacco'd wherever he goes. If the leader provides horse and arms, the man receives but 60 piasters (or 10s.) a month. Our newspapers have been lately filled with tirades against these fellows, and the Pachas, it is said, and the Turkish Government, are horrified at them, &c. &c. It may be so; but the Porte has known them of old; they are as their fathers were. Is it this cavalry that made the conquests of Islam; these are the men who have swept half Europe; and who, well led, would do all ever horsemen did. The Porte knew and who, well led, would do all ever horsemen did. The Porte knew them; they are not altered yet. She rallies them round her, not one but what was asked and enlisted by her express orders. Pay them fairly, and then exclaim if they plunder; but do not leave the poor fellows without one promise made them fulfilled, and then abuse them because they take what you ought to have given. No sooner did the furthest corners of Islam hear of the war between Islam and the Giaour, than her horsemen poured forth. We have men here who have ridden all the way from India—Cabul and Peshawur. Thousands of miles have many of them come, without baggage, without money, eager to join the fray and fight for Islam. With them there is but one war, and that a holy one: they fight not against Russian or Calmuck: they fight, and, if needs, die, certain of heaven, because the war is one of Islam against the Giaour.

A HYMN FOR THE HARVEST.

BY WILLIAM MARTIN.

FATHER! who loves for ever!
Of Good the constant giver!
Almighty and all wise!
Thy power all things sustaining,
Thy Providence still reigning
O'er human destinies:
The parent arm is o'er us,
Thy bounty is before us,
Thy goodness still supplies,
Thy mercy never dies.

Adorable of nature,
And every human creature,
Since time and earth began;
Truth's cynosure unmoving,
Life's centre heart of loving,
A universal one;
Thou savest and Thou guidest,
Preparest and providest
For every living thing
Beneath Thy shielding wing.

The little seedling knoweth
Thy vital warmth and groweth,
In darkness all intense;
And not a blossom springeth
And not an insect wingeth
In ecstasy of sense,
And not a creature calleth,
And not a sparrow falleth,
Or spirit goeth hence,
But in Thy Providence.

Though men forget Thee daily,
Pursue their pleasures gaily,
And turn their hearts away;
Thy glory wildly hidden,
Thy grace and truth forbidden
To shed a cheering ray;—
Yet Mercy never faileth,
But still on earth prevaileth,
Above our broken day,
To save us when we pray.

When many evils bound us,
And famine was around us,
And Death was standing by;
We turned to Thee to hear us,
We looked to Thee to cheer us,
Amid our misery:
To Thee our prayers were given,
From hearts woe-wrung and riven
By the stern agony
Of penitential sigh.

The spring arose all cheering,
The kindly rains appearing,
And earth awoke in glee;
The bud was kindly showing,
The blossom richly blowing,
On plant, and shrub, and tree;
The Harvest's glory brightened,
Our doubts and fears were lightened,
And faithful hearts could see
Fresh mercy still in Thee.

On every side surrounding,
On every side abounding,
Lo! corn-fields bright as gold;
The sheaves clasp one another,
Each as a loving brother,
Embracing to uphold;
The reapers' song is singing,
The Harvest sheer is ringing,
Amid the copse old,
And echoes round the wold.

Awake, O bright creation,
And join in adoration!
Spread forth eternal bow,
Thy promise arch extending,
Above the brown ears bending,
Like worshippers below!
Ye beech-trees, richly bearing,
The russet "mast," and wearing
The ripe autumnal glow,
Your adoration show!

Mount, skylark from the clover,
And sing the harvest over,
Amid the saffron sky!
Chant, each departing swallow,
From ragged crag and hollow,
A hymn before ye fly!
Trill, mavis in the thicket!
Chirp loudly, merry cricket,
Your shrill incessant cry,
In gratitude on high!

Poor souls that bear the horror,
The sickness and the sorrow,
Of the pestilence's death,
Who, in the evening, cluster
Like tired bees, and muster
Around the cottage hearth;
Now cast away your sadness,
And let a hymn of gladness
In gratitude have birth,
To grace your Harvest mirth!

Rich worldling, still enjoying,
Still surfeiting and cloying,
The woe to you unknown:
Think, think on Him who givest,
Upon whose breath thou livest,—
His mercy humbly own:
No longer fail nor falter—
Come grateful to the altar,
Where love can still atone,
And worship at his throne!

Great God of our creation!
High Lord of our Salvation!
Director of our ways!
Spirit that ever lightens,
The lowly heart it brightens
With its celestial blaze!
We now rejoice before Thee,
In thankfulness adore Thee,
And in thy smile would raise
A humble hymn of praise!

Woodbridge, Suffolk, Aug. 3, 1854.

FRENCH AGRICULTURE.*

AGRICULTURE in France—of which the accompanying pair of picturesque scenes represent the beginning and the end, the turning up of the ground by the plough, and the carrying off the last sheaf from the field—is still, compared to our own agriculture, in a backward condition. A few years ago, in many of the provinces of the South of France, it was in the same state, if not deteriorated, as in the time of the Romans. A crooked stick, shod with iron, dragged by a donkey and a woman, was in common use as the plough. The instrument now used in the North of France, as represented in the Sketch, though much superior to the crooked stick, and even superior to the wheel ploughs dragged by four horses, still in use in some parts of England, is very inferior to the swing-plough used in Norfolk or Scotland. Harrows, thirty years ago, were hardly known in the South, and the clods were pulverised by wooden mallets. Manure was carried to the fields by the men and women in baskets or tubs, on their backs; and the grapes were pressed—perhaps they are to this day—by the peasantry—men, women, and children—jumping on them, as they lay heaped in the tubs or vats. You might see the legs of all the villagers stained almost up to the knees with the juice of the grape. France, however, like the other countries of Europe has made in latter years prodigious progress; and though these primitive processes still linger in some out-of-the-way places, the agriculture of France has, since then, approximated to that of Belgium, Germany, and England.

France is considered to be more favourable for agriculture than any country of Europe. Of all the great countries of Europe it has the fewest mountains, the fewest arid and waste spots, the fewest places where nothing will grow and where nothing is cultivated. Other countries possess districts more fertile perhaps than any to be found in France—such as the rich meadows of Belgium, the marshes of Holland, the Vale of Evesham, and Lincoln Fens; but the soil generally of France is good, while it is of various descriptions, adapted to almost every kind of culture. The climate is excellent throughout, approaching that of Greece on the shores of the Mediterranean—producing oranges, pomegranates, and olives; and that of England, in Picardy and Normandy. Of all the countries of Europe, except our own, it has the greatest portion of its surface cultivated.

Mons. A. Moreau de Jonnes, a French statistical writer of considerable celebrity, informs us that only France and the British Isles have yet more than half their surface cultivated. Of 100 hectares—the former has 54, the latter 55, under cultivation. Belgium has only 48, Denmark and Prussia, 40; Italy and Portugal, 30; Germany and Spain, 27; Switzerland, 25; Holland (of which large portions are sandy wastes) and Austria, 20; Russia and Poland, 18; and Sweden and Norway, 14. The improvement in cultivation has consisted in introducing better breeds of animals; inventing and employing better agricultural implements—ploughs and threshing-machines; draining and improving marshes, cultivating greater varieties of green crops and cereals, including beet-root for sugar, of which as much as 64,000,000 kilogrammes were made in 1848; and including rice now cultivated in considerable quantities on the shores of the Mediterranean, giving abundance and well-being, where formerly were sterility and fever. A consequence of improved cultivation is that, on the average, every hectare of ground now produces 13 hectolitres of grain, including every species cultivated in the estimate; while, in 1788, the quantity produced was only 8 hectolitres. The produce of agriculture, therefore, has increased more than a half since 1788; and there is yet room for great improvement. A greater consumption of meat, which has rather decreased than increased of late years, would increase still more the quantity of grain obtained per hectare. But what has already been achieved may excite surprise; and, considering how much of the surface of Europe is yet uncultivated, it justifies hopes of great improvement yet everywhere to come in the art of agriculture, and great extension of the means of subsistence, of which our forefathers had formed, and could form, no conception.

The total average production of wheat in France is estimated at 70,000,000 hectolitres, equal to about 56,000,000 qrs., or nearly double as much as is grown in Great Britain, for a little more than one-third more people. 21,000,0000 in Great Britain, and 36,000,000 in France. The consumption of bread of one description or another, but much of it coarse, is greater in France than in England, or in any other European country. M. Moreau de Jonnes states that the annual consumption of wheat by each person is—in France, 303 litres; in Great Britain and Ireland, 163; Spain, 127; Austria, 63; Holland and Belgium, 57; Prussia, 46; Poland, 25; Sweden, 8. In other countries, the coarser kinds of grain, and principally rye or barley, or oats, constitute a much larger proportion of the food of the people than in France. In 1784 the quantity of wheat grown in France did not exceed 40,000,000 hectolitres; and then the consumption of wheat per head was

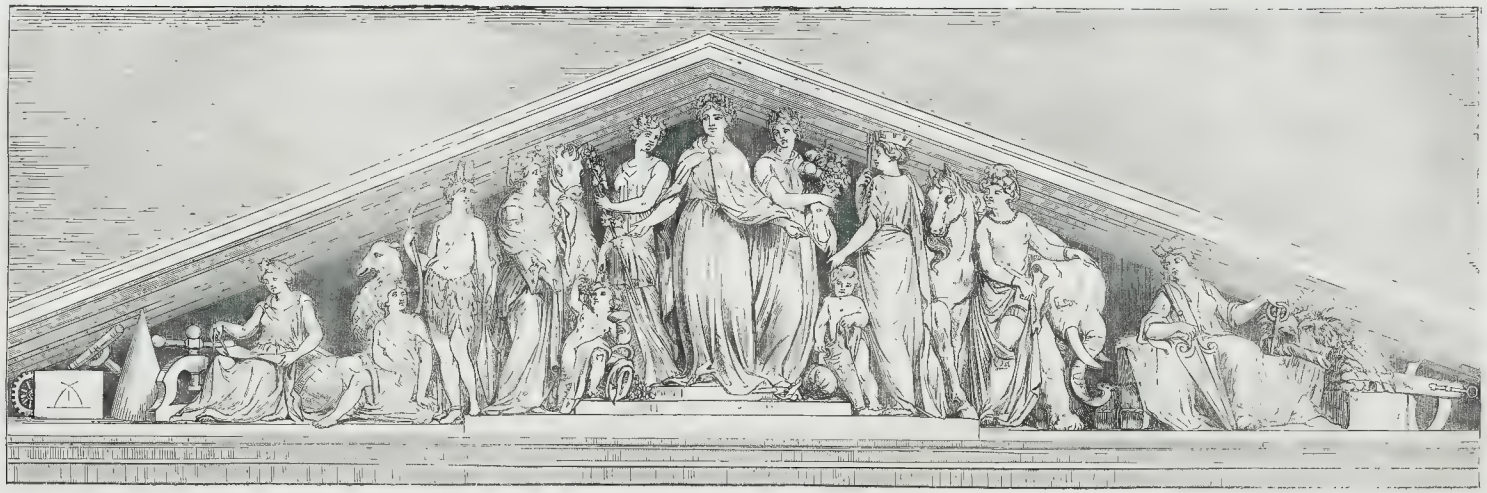
FRENCH AGRICULTURE.

PLOUGHING IN FRANCE.

not more than 125 litres. But the great extension of cultivation does not save the French, though they possess such a vast tract of fertile country and such various climates and soils, from suffering dearths and gluts. Since 1847 wheat has twice varied in price more than cent per cent, and in the present year, as compared to the year before, the price rose higher in France than in England. The variations were greater there than here; so, that at one time, price there was lower than our lowest, and at another higher than our highest price. Notwithstanding these great variations, for which France found a partial remedy in partial Free-trade, she has, in the present century, suffered neither such numerous nor such severe famines as she suffered in previous centuries. Like ourselves, the French have advanced in agricultural in all kinds of skill, in comfort, and in wealth, are better fed and better clothed, as they have increased in numbers. Their progress has been slower than ours, the increase of the people smaller, but they have both increased in numbers and improved in skill.

All travellers in France represent the French as being at present intently engaged in improving their agriculture, extending their manufacture, cultivating the peaceful arts, and anxious to acquire wealth. They have changed with their rulers, from a restless to an industrious, peaceful people, and have become good neighbours. Deriving a very large proportion of their subsistence from their own agriculture, they justly hold it in high honour, and rejoice, as we see by the sketch, in their Harvest-home, and are cheerful at the labour which prepares the field for the seed

HARVEST-HOME CHURCH IN FRANCE



PEDIMENT OF THE GREAT WESTERN ROYAL HOTEL, PADDINGTON.

SCULPTURE IN THE PEDIMENT OF THE GREAT WESTERN ROYAL HOTEL.

Of the magnificent Hotel lately erected at the Paddington Terminus of the Great Western Railway, we engraved a large view in the ILLUSTRATED LONDON NEWS for December 18, 1852. We then also described the sumptuous style of the principal façade, in the taste of the age of Louis XIV., or somewhat later; the design of Mr. P. C. Hardwick. We also spoke of the sculptural enrichments, by Mr. Thomas, including four colossal terminal figures, supporting the balcony. Above is the pediment, by the same sculptor, which we now engrave. It is filled with allegorical figures, including the four quarters, characteristically attended; Peace Plenty, Industry and Science, and their accessories. The several figures are cleverly modeled, and grouped; and the work adds to the high reputation of the sculptor, Mr. Thomas, so extensively known by his numerous statues and sculptural decoration of the New Houses of Parliament.

MODEL FIGURE BY J. DURHAM.

THIS meritorious work excited very considerable interest at the Exhibition of the Royal Academy, lately closed. The composition is the recumbent figure of Alice Evelyn, youngest daughter of Martin F. Tupper, Esq.; the epigraph in the Exhibition catalogue, being—

Not lost, but gone before.

It has the touching character of a memorial of early death.

THE BEAUFOY SHAKSPEARIAN MEDAL.

THE late Mr. Henry B. H. Beaufoy, among his other munificent presentations to the educational institutions in the city of London, invested, in 1851, one thousand guineas, the interest to be given annually to the most successful competitor among the boys of Carpenter's or the City of London School, in the production of an Essay on Shakspeare, and the immortal productions of England's dramatic bard. A silver medal was also to be presented to him as an additional honour.

The dies were prepared by Mr. Benjamin Wyon; they are said to have cost £300, most liberally defrayed by the Messrs. Beaufoy.

On the obverse, the head of Shakspeare, side-faced, to the left, from the bust on his monument at Stratford-upon-Avon. The inscription "William Shakspeare. Born April 23, 1564. Died April 23, 1616."

The reverse has the figure of Tragedy in the centre, standing erect, with a dagger in each hand. On her left, *Falstaff* seated in his chair, with a dagger in hand, relating his acts of braggart valour to *Prince Hal*. On her right, placed close to Tragedy, is the seated figure of *Cardinal Wolsey*, enrobed, but meditating on his fallen greatness, happily expressed by his holding lowly, in the left hand, his doffed hat. Standing, the back of *Prospero* is shown, with raised wand, bidding *Ariel* dispatch like nymph of the sea. The figure floats in air, and occupies, in a most artistic manner, the upper portion of the field. In the exergue, "City of London School Shakspearian Prize. Founded, 1851, by Henry B. H. Beaufoy, F R S, born April 23, 1785."

The Committee of the School having determined in 1850 that the munificent liberality shown to the School by Mr. Beaufoy should be annually commemorated by his birthday being kept as a holiday, he was pleased, in consideration of that day (23rd of April) happening to be also the anniversary of the birth and the death of Shakespeare, to offer the above benefaction for the purpose of establishing a fund for prizes to be distributed annually, with a view of promoting the following objects, viz.:—

To commemorate the birth and genius of Shakespeare, and to encourage amongst the pupils a taste for reading and studying the writings of so eminent a man, justly styled "our great national bard," whose works occupy so prominent a

THE BEAUFOY SHAKSPEARIAN MEDAL.—REVERSE.

position in English literature, and give a clearer insight into the manners and customs of the Elizabethan age than any other author; and to make them available to the pupils in the study of English history, and also as studies in comparison with the dramatic works of ancient Greek writers, as well as the dramatic writers of France and Germany and other countries.

The above-mentioned sum has been invested in the purchase of £1051 1s. 7d. Stock in the Three per Cent Consols, the annual produce of which is applicable to the objects, according to certain regulations prescribed by the deed of endowment.

LITERARY MISCELLANIES.—No. XIV.

SKETCHES OF THE MANNERS AND CUSTOMS OF A GENTEEL LITTLE SEA-SIDE TOWN.—(No. II.)

OUR AMPHIBIOUS POPULATION.

An amphibious animal, we read, is one that has the power of living indifferently, either on the land or in the water. This definition, of course, would embrace Martha Wash, our great bathing monopolist, who enjoys all the carrying trade in children on this part of the coast. It is not her briny merits, however, that we are about to dilate upon—her manners and customs, down even to her secret snuff box, are as well known as Dame Trot and Mother Hubbard to the youngest of her subaqueous victims. The amphibious people, whose social features we are about to delineate, though often seen under canvas, have never yet, we believe, appeared upon it at full length. We allude to the "hardy Norsemen" of the fisheries.

Odd specimens of the *genus homo* are these hardy Norsemen, whose homes, if not exactly like those of their ancestors, "upon the stormy wave," are never at at any great distance from it. One of them, a great human hulk, whom we know well in his giant boots, has a black quick-set beard, which nearly frightened a little boy into fits whom he took on his knee with kindly intentions. Another of our acquaintances, on the contrary, is distinguished by a most elderly-gentleman sort of figure and deportment; and, with his clear blue eye and silver hair, only needs a shovel hat and black coat, instead of a sou'-wester and a yellow oil skin wrapper, to fit him for a benevolent country parson. It often pains us to think that these poor fellows—brave, toiling, patient, loyal, and sober—should be so destitute of book-lore. The only scholar amongst them is a nice, gentle lad, about twelve years old, an orphan, whose father was drowned at sea. He goes regularly to Sunday-school; and, once or twice a week, reads the newspaper to his elders in the tap-room of the Anchor and Hope. Few things we know of are more interesting than to watch his deeply-attentive audience, as, with knitted brows and tucked arms folded, they listen to the leading article of the *Alarmist*, and sympathise with the editor in his indignation against the supineness of the British Government. It is evident that their minds at least are made up what course to pursue if an enemy attempt landing on that part of the island.

Pursuing a life of incessant toil and exposure—peril overshadowing them in all their outgoings—the capricious elements their implacable foe, and their midnight dream a seaman's grave—it is not to be wondered at that even in their hours of rest they preserve an expression of sedate and thoughtful resolution. They are fond of a quiet hand at cards, which they play in the old-fashioned tap-room of the Anchor and Hope, by the dim light of a long-wicked candle, and with a deliberate and dog's-eared pack. "Beat my Neighbour" appears to be their favourite game; which is played as it should be, with great deliberation, and without excitement or noise. "All Fives," we believe, is sometimes ventured upon, but rarely, it being considered as rather too scientific for those who are not professed gamesters.

One equally evening last summer the men were engaged at their favourite game—if possible, more silent and reflective than was their wont. Suddenly the tap-room door flew open, and a fisherman, wearing a blue Guernsey frock and sou'-wester, in a subdued but impressive tone, exclaimed, "He's come!" The players instantly dropped their cards, and hurried in a body down to the beach, where lay the lifeless form of one of their late companions, covered with a camlet cloak. He had been drowned a night or two previously, and the body had just been washed on shore—a fact conveyed in the laconic announcement "He's come!" On the following Sunday the poor fellow was buried in the churchyard of the old town. There was no undertaker present—there were no mutes—nor any of the sable trappings of funereal woe, except a black velvet pall. Supported on a bier, the coffin was borne to the grave by six young men, each carrying in his hand a bunch of some green herb, and followed by a long procession of fishermen and others. In the evening, most of the former attended Divine service at the church; after which, they adjourned to the tap-room of the "Anchor and Hope," where they made a subscription for the widow, each man putting down a sovereign.

Notwithstanding their habitual thoughtfulness, these rude, unpolished gems of ocean are distinguished by a kind of good-humour which shows itself in various odd fashions. We have never had the good fortune to be present at their wedding festivities, but we understand it is customary to hang a dog fish to the door-knocker of the abode of the young couple, to symbolise the indisputable truth, that the happy dog is "tied up" for life. Another piece of dry humour, not less amusing, consists in making the young housekeepers a present of a Mammoth fish-kettle, which, being much too large for any culinary purpose, is reserved as an ornament for the best parlour, and is kept as bright as moonlight. The young men generally marry early; and—so far as we can gain any information upon so delicate a point—make excellent husbands. Unlike the savage, ill-conditioned tenants of many inland courts and alleys, the wives here have rather the upper hand, and you will sometimes see a little spirited woman scolding most unmercifully a poor married heavy-looking culprit, who, slow of speech and dull of invention, has nothing to urge in answer to the weighty charges brought against him, of having let the potatoes for supper "boil all to pieces," or woke the baby by his awkward fondness, in pinching its little puffy cheek. The wives generally outlive their husbands, and it is no uncommon sight to behold a grey-headed old dame nursing one of her great-grandchildren.

The magnates of our genteel little sea-side town don't recognise the cold philosophic maxim, that "virtue is its own reward." So far from that they offer annual rewards to those of the humbler classes, without distinction of sect or party, who exhibit signs of the greatest moral excellence. Amongst those who compete for, or more properly-speaking merit, and accept the tribute paid by wealth to worth, the fishermen occupy an honourable place. Side by side with the knock-kneed ploughman, who receives a new pair of hob-nailed boots, or a flaming pearl-buttoned waistcoat for having been a pretty considerable time in Farms Shrubsole's service, stands an intelligent-looking little fisherboy, who is presented with a bright half-sovereign for having rescued from the foaming surge, into which it had tumbled, a toddling "wee-thing," while its proper guardian, a careless housemaid, was conversing with the rural policeman; or a clean and modest-looking young fisherman, perhaps, is rewarded with a couple of guineas, for having entirely supported his orphan brothers and sisters, since their father's sudden death by cholera, or a poor old fisherman's widow gratefully receives a similar donation, for having braided a specified number of nets, within a specified time after her husband's death;—all which money is well laid out, and reflects credit alike on donor and recipient;—while the system itself has a tint of the Golden Age about it, which makes it equally pleasing to the poet and the philanthropist.

Since the establishment of a theatre in the town, a spirit of dramatic inquiry has sprung up among the most unlettered classes, and the popular tone of conversation is more literary than it was before. Even the "hardy Norsemen," who had never previously heard the name of Avon's bard, are casting off their mental torpidity—those who don't personally patronise the legitimate drama, being, nevertheless, curious to know whether Shakspeare is played in a covered ground, like Astley's. Some of the younger men, when not otherwise employed, are glad to engage themselves as supernumeraries, at an almost nominal salary. It is to this circumstance that we ascribe the critiques which at first excited our astonishment, and to which the elder brethren listen with ill-concealed distaste. They don't seem yet quite to have made up their minds whether the ardour of those young tragedians is not slightly tinctured with insanity. A little Garrick Club of critics may now frequently be seen on the sands, whose commentaries are of a highly-original and suggestive character. Speaking of *Othello*, in connection with Mr. X. Y. Gong's performance of that part, one of these censors observed, that he suspected Shakspeare didn't know much about black men, otherwise, when *Othello* went courting *Dadenona*, he would have taken his banjo with him, as any other nigger would have done. With reference to "Hamlet," the same dogmatical person asserted that Shakspeare had never seen a real ghost "How," he demanded of his hearers, somewhat warmly, "could a ghost *walk* in armour?—it's too heavy—he ought to ride." "What on?" asked another—"a ghost-horse?" To which his opponent replied, that it wasn't impossible; and attempted to prove it—a doctrine, however, which met with little support from well-regulated minds, who seemed inclined to look upon it as Heathenish—the "ghost-horse" accordingly fell to the ground. A big-bodied old man, with large fishy eyes—who announced, with some satisfaction, that he had never seen a play in his life—wanted to know who this Shakspeare was, that there had been so much talk about lately; when a friend informed him, with perfect good faith, that Shakspeare—in his day—was First Lord of the Admiralty, and lived at Greenwich, with Queen Elizabeth.

By nature and habit a peaceable and therefore secure community, it might be supposed that there would be little need of legal authority to keep our "hardy Norsemen" in order. Yet they are watched over by a rural police, or, rather, a rural policeman -only one, so far as we can discern, having hitherto come unto these pillar sands. It seems that several old ladies, shocked at the cruelties, real or imaginary, practised on the donkey race by their naturally savage owners, memorialised the Town-council for a rural police, which, after much angry discussion, was conceded entirely for the protection of the inhabitants, to whom burglary is almost an unintelligible term. Wearing the metropolitan uniform, and holding a sinecure office, our rural policeman—a shortpodgy personage, with a small but sodden nose, thinks himself of no little consequence. His dignity, however, does not make any serious impression upon our fishermen—with whom, when smoking their short pipes on the beach, he often comes into unavoidable collision. The rural policeman maintains that his "beat" is a straight line, and that no one "whomsoever" has a right to get in his way; and, further, he has publicly announced, that if he should meet with any more obstructions in pursuing the narrow path of his duty, he shall "report" the parties offending to the borough magistrates; by whom he declares, with stereotyped decision, that they will be "persecuted with the utmost rigours of the law." His enemies accordingly ask him every day when he is going to make his threatened "report," and at what distance it is likely to be heard?

Being debarred of the excitement which his metropolitan brother derives from chasing boys, seizing hoops, and coercing apple-women, our rural policeman is reduced to the contemplative man's recreation of collecting rare and valuable pebbles, when he can find them. He has always on hand a large stock of agoryphal agates and cornelians; out of which he is sooner or later invariably defrauded by stingy parents, to whom they are exhibited, and who, instead of boldly purchasing, shabbily beg them to amuse the children with. These mean acts, we verily believe, have done more to embitter our rural policeman's existence, and curdle up his natural milk of human kindness, than even the stolid insensibility of the fishermen, who, as he justly says, "are to be pitied for their ignorance"

In addition to his ennobling privilege of doing nothing, another strong prop to our rural policeman's self-esteem consists in his knowing nothing. Though his eyes and ears are in hourly pronunciation with nautical subjects, he can see and hear as little as possible. erases any impression which they may have made upon his mental retina. A slender, elegantly-dressed young gentleman, with a glass stuck in his eye, one day had the temerity to ask our rural policeman what was meant by a "handy-dandy rigged trawling smack," to which our rustic officer curtly replied, that he didn't know nothing about them things; and referred the applicant to Mr Gaff, our accomplished coastguardman, who was standing by. Mr. Gaff, surveying the attenuate querist from head to foot, observed, in his crafty way, that he had never seen a smack in his life; but, from the conversation of some young ladies which he had overheard, and who knew more about millinery affairs than he did, he fancied that the gent himself was a pretty fair specimen of a "handy-rigged" one. The satire was coarse—quite unworthy of Gaff; and the object of it, as soon as he could master his emotion, turned on his military heel, and had no hesitation in pronouncing Gaff a "low fellah!"

One "hardy Norseman" is the most seafaring people, are, without exception, firm believers in ghosts. This will account for the severity of their strictures upon "Hamlet." As for spirit-rappings, so far as they can comprehend the *modus operandi*, they "don't hold with it." The old heads, with a sort of old Tory prejudice against ghostly innovations, seem to think the practice unconstitutional. One of their ghost stories, introducing the apparition of Michael Gray, they assure us is well authenticated. It seems—if this narrative may be credited—that, some thirty or forty years ago, a band of smugglers, who carried on a large tobacco and brandy trade with the opposite coast, had a commodious cavern under the west cliff, into which they used to run their contraband cargo. Amongst these daring free traders was a warm-hearted young fellow, named Michael Gray, who was in love with a fisherman's daughter, and secretly wooed her, notwithstanding her father had forbidden him to step over his threshold. One dark night, just as the smugglers had landed, and were carrying casks of cognac to their secret cellar, they were surprised by a party of revenue officers, whose leader in the affray that ensued was shot, the smugglers retreating to their boat, and effecting their escape; but not before several of them were severely wounded. It so happened that Michael Gray, instead of helping his companions to land their cargo, had stealthily left them, and gone up to the but of old Armstrong, the fisherman, whom he knew to be absent by a certain signal—a little bit of holly in the cabin window. Engaged in whispered conversation with Hannah, while her mother quietly pursued her netting and knitting, time glided on, till suddenly the lovers were startled by the report of fire-arms, and looking out through the clouded moonlight, Michael descried a party of the Preventive Guard bearing towards the fisherman's cabin, on one of their wounded comrades, with a handkerchief bound round his thigh. Young Michael had just time to conceal himself under a tarpauling, when—not the blockade men—but one whom he almost as much dreaded—old Armstrong—entered, with his gun over his shoulder, and his broad red forehead was more than usually severe and forbidding. "Has any one been here to-night?" he demanded, glancing at Hannah, a gentle looking girl, who, pale with terror, sat motionless by her mother's side. "I'll not harbour men," he continued, "who shed blood—depend upon that;" and returning to the cabin door he hailed the coast-guard without, and gave them leave to enter and search his house. The result was, of course, Michael's discovery and arrest. As there was no proof, however, they timed away, till, in one of the long winter nights, when the old fisherman was far at sea, and the northern gales howled round his lonely cabin, she sunk upon her mother's breast, and never spoke again.

It was the evening following that on which she breathed her last sigh, when Hannah's father and mother, and another thoughtful-looking man, sat silent and gloomy by the fireside. "What's that?" said the old fisherman, suddenly starting and looking apprehensively at his friend. "I heard nothing," was the reply; but scarcely was it uttered, when a knock, low but distinct, was heard by both listeners. Old Armstrong rose from his seat, but felt nervous and unmanned; but, summoning resolution, he opened the cabin door, and staggered back in mute dismay, as a ghastly form in sailor's garb, with his sad calm eyes, fixed steadfastly upon him, passed slowly through the room where the fisherman and his companion were sitting, into the chamber beyond, where his daughter lay in her quilted shroud. It was the shade of Michael Gray. At least so runs the story, of which we have given only a meagre skeleton.

A few more words will complete the picture of our "hardy Norsemen.' They seem to be an amicable and united fraternity, very seldom wrangling with anybody. We heard, however, that not long since a rather violent quarrel took place between two youngsters when out at sea, each trying to throw his opponent overboard. The "difficulty," as our American friends say, was soon adjusted by the senior partners of the firm, who, made no more to do, but, lashing the obstreperous youths together face to face, in that loving manner brought them quietly and safely into port.

A. A.

THE GENERAL COURTS-MARTIAL AT WINDSOR.

(From our Military Correspondent.)

It was justly observed by Livy that "Famæ damna majora, quam quæ æstimari possint," a truism painfully exemplified by the notoriety given to the proceedings of the recent military investigation at Windsor.

Like the story of the limner of old, who challenged general criticism on his painting, so, in the present day, when an unexpected occurrence offers opportunity for disquisition, those least acquainted with the subject are too prone too disseminate ill-digested dogmas as facts, swayed by prejudice at the expense of truth Anathemas are thus indiscriminately showered on the guiltless, in place of limiting condemnation to the offenders

In the case in point, the misconduct of one or more individuals has been prematurely grasped as an opportunity for hurling unmerited stigma against every member of an honourable profession. A portion of the press poured forth its bitterness in premature denunciation of practices recklessly asserted as habitual to all, and correspondents occupied the columns of the public journals with instances of intolerant persecution undergone by anonymous sufferers.

None who uphold the honour of the British Army seek to justify the unpardonable acts proved to have been committed. But the sweeping opprobrium which has been unmeasurably heaped on the service betrayed an acrimony of feeling and vindictiveness of spirit foreign to a laudable desire of benefiting a profession which, it was asserted, stood in such unquestionable need of reform.

It would not be difficult to quote instances of dereliction from restitude perpetrated by members in other professions; but, glaring as the enormity of their crimes may have been, no disposition was evinced to stamp the brand of infamy on any, beyond those whose transgressions richly merited disgrace.

To magnify errors and allow redeeming qualities to pass unheeded is inherent in our common nature, but never was unjustifiable outcry for wholesale condemnation so pertinaciously raised, as is now cast against the very men exposing life and limb in defiance of the enemies of England, the country which those who strive to vilify them boast of as their birthplace. Reiterated assertion that scenes equalling those elicited by evidence are prevalent throughout the service, evidences the utter inexperience of the calumniators as regards the interior management of regiments, since nothing can be more pointedly at variance with fact.

The saying that "one swallow does not make a summer" is as incontrovertible as the assertion that the customs of a nation cannot be gathered from isolated instances recorded from superficial acquaintance with a few of the least important of its inhabitants. Yet when depreciatory statements are bruited abroad of what has come to the knowledge of the narrator, the community at large is too prone to receive the prejudiced account as a veritable impress of the habits of a people whose pensive traits the traveller too confidently professes to delineate. The avidity shown in promulgating offensive disclosures, argues little in behalf of that charitable feeling which all avowedly profess, though at the same time little caring to practice.

Comments here introduced are in no wise purposed to convey other than unqualified approval of all that has been so justly urged against the gross misconduct of individuals. On the contrary; for most fully do we coincide in denouncing such proceedings—derogatory in every sense to the character of officers and gentlemen. But, while holding up to censure the taint so deeply infecting the honour of a particular corps, we cannot recognise the assertion that the gangrene exists with its revolting offensiveness in others. Nothing can be advanced in extenuation of oppression perpetrated as the grievous wrong of despicable tyranny; and that such acts have long cast their forbidding shadows over the pristine glory of the 46th Regiment, does not admit of a doubt.

Outrageous annoyance denotes utter absence of good feeling; and those who deserved punishment for the aggression for the gratification of momentary pastime, must be reckless of the injury they inflict on others possibly more susceptible of insult than themselves.

Stringent objections have been made against the salutary system of convening courts of inquiry previous to submitting charges, for the consideration of the General Commanding-in-Chief, which, on examination, may prove groundless. The existence of so desirable a method for ascertaining whether or not real cause exists for resorting to the last extremity should be regarded as beneficial to the accused rather than selected as an instance of oppression; since by that means an innocent person might be spared the pain of being publicly arraigned for errors in no degree attributable to his own conduct. After all that has been expressed in depreciation of the practice, in what does it differ from the course pursued in a grand jury room, before a true bill is either found or thrown out, on a case being canvassed? It may be likewise urged that in all instances where a court of inquiry is assembled, the commanding officer takes no part whatever in the investigation. Neither is he present. The duty devolves on the next seniors in the corps, unbiassed by the influence of the Colonel. All evidence adduced is taken down in writing, put forward and eventually handed to the senior officer, with whom rests the responsibility of acting according to his opinion on perusing the documents submitted for his inspection. How far the better judgement of the commanding officer held control in the case in point has by this time been unhappily decided

To brood over retrospection is futile, unless dwelt upon as warning for the future. A bitter lesson has now been taught, which will exclude the possibility of circumstances recently unveiled being repeated. It should ever be borne in mind that the reputation of the British army is not upheld by the adventitious aid of dress, coupled with brief authority. There is more to be acquired, if not originally grafted by good example and judicious education. The private soldier—from which no mental reservation should furnish the shadow of excuse for deviation—must be a fixed determination to uphold in every particular the character of a gentleman. This once resolved, and unceasingly acted up to, an officer's career will redound credit on himself, and secure lasting respect, even though possessing neither interest nor wealth whereby to enforce his claims on higher notice. A mind thus constituted will carefully eschew the possibility of giving rise to any cause for the gross unprofessional positions almost wholly exclude an opening for retaliation. British regiments are far from meriting the appellations of "bear-gardens," and "sinks of iniquity" so plenteously bestowed on them indiscriminately during the past few weeks. Yet this is precisely the position in which the Army is now placed, gross mal-practices perpetrated by "a set" being inconsiderately proclaimed as applicable to all. Those who have transgressed must expect to meet the reward of their indiscretions, but it is manifestly unjust to visit the sins of the guilty upon others who are perfectly free from reproach.

The almost unprecedented interest created by these trials will, ere long, be consigned to temporary importance by more recent, though probably less startling, exposures. By the community at large, details which, for so lengthened a period, have occupied attention, will sink into oblivion; or, if remembered at all, recollection will be taxed at the expense of disfiguring incidents so as to render an isolated case capable of bearing reference to *any* regiment.

In the hope of guarding against such an evil, pernicious to the credit of the service, attention should be drawn, not alone to the transgressions of the transgressor himself, but to the punishment as a criterion whereby to pass censure on the rest of her Majesty's Army.

That a deep blot has been cast on the hitherto unsullied reputation of a gallant regiment is incontrovertible. But common charity will allow that "*the gladiators do* may *serve our turn in the lottery of life*" are repayment in the shape of pay, medals, or what not," [illegible] account be banished "*at once and for ever from the society of gentlemen, and of all women who regard the dignity and purity of their sex.*"

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER IV.—CHATURANGA (CONCLUDED).

In the last chapter we gave the reader as full and complete a description of the game of Chaturanga as our original materials would permit; and although sundry minute points have necessarily remained unexplained, yet the account, on the whole, is far more lucid than that of any of the more ancient and common games that has come down to us. In the Chaturanga we have before us all the elements of the game of Chess, for every individual piece has precisely the same move and the same power which it continued to have in the mediæval game of Asia and Europe. The transition of the Chaturanga into the latter modification is of the simplest and most natural kind, and not nearly so great a change as the transition from the mediæval into the common game of the present day, which took place near the time of Damiano, about A.D. 1500.

Let us now examine a little into the practical working of this primæval game. Its elements are so few and simple, that almost any four persons may play it, provided one of the four be acquainted with the moves of our own game, so as to guide the others. Hence it is admirably adapted for a social family game, being like Backgammon, a mixture of skill and chance—the choice of the move being greatly restricted by the turn of the die. Whoever is already in possession of two sets of common chessmen—one of wood, and another of bone or ivory—may easily convert the same into two complete sets for the Chaturanga, in this wise—the wooden set will furnish the King, Rook, Knight, and Bishop, together with three Pawns, for the Yellow and the Black; whilst those of bone or ivory will furnish the armies of Red and Green—or instead of Green, White will do equally well. Thus we have got one set for the Chaturanga, but the convenience of it is that we have all another set in reserve, by making the one Queen, who must have had any place in the Oriental game, act the part of Kings. As to the die, nothing can be easier: any ivory-turner may make it by slightly rounding the two faces of the common cubic die, now marked six and ace respectively; or, in fact, a common tetrahedron, with the numbers *two*, *three*, *four*, and *five* marked thereon, will be quite sufficient. The board and men being thus prepared, I shall suppose myself addressing the player of the Green (or White, as the case may be), with a view to inculcate, in the simplest manner, the principles of the game, thus:—"Your main object is, in the first place, to convey your two centre Pawns to the opposite end of the board, in order that they may be promoted to the rank of Knight or Rook, which will nearly double your strength. Another object, of equal if not superior, importance, is to convey your King, by a series of careful moves, to the square of the Black King, your trustworthy ally. This gives you the command of the allied forces, which now become identified with your own, and your power is thereby vastly increased, owing to the entire unity of action which will, thenceforth, prevail in your camp; a point of the utmost consequence in warfare. In the meanwhile, you are to avail yourself of every safe opportunity, in order to damage or exterminate the hostile forces; and this, for your own sake, if not for that of your ally; for, as I already mentioned, the alliance in this case is not altogether free from selfishness. Having gained your ally's throne, and consequently the command of his forces, the main point then is to capture the hostile Kings, thus gaining the Chaturáji, or, in other words, completely winning the game." These appear to me to be the general principles of the game of Chaturanga; but, as I have already stated, there are a number of minor points, not touched upon in the text, which are open to mere conjecture; at the same time, it is my belief, that if four intelligent Chessplayers were to play over, and carefully observe a few of these primitive games, they would soon be able to prove fixed laws for every contingency that might occur. The points I allude to do not in the least affect the nature of the game, which is simply Chess in its oldest and rudest form. They are mere matters of detail, which the ancient poet (supposed to have been Vyása himself) did not deem it necessary, in becoming his high dignity, to enter upon. I may here mention a few of those doubtful points, and I have reason to believe that several others may present themselves in the course of play.

CASES OF UNCERTAINTY.

In the first place, we shall suppose a player on his first throw turns up four; the text says, in such case, "the Elephant must move." Now we see clearly that the Elephant cannot, just then, move. The question is, what was to be done? Was the throw forfeited, as is sometimes the case at backgammon? or was it allowed in such case to move the elephant's Pawn instead? Again, suppose a player, for his first move, has pushed Elephant's Pawn one square, and on his second move the die turns up *two*, in which case the Ship ought to move—what is he then to do? The Ship's path is clearly over the Elephant's Pawn. Perhaps the simplest mode of settling all such contingencies is, to suppose that the throw went for nothing, and passed on to the next player, as happens in backgammon, when "you cannot enter." Another query presents itself thus:—What becomes of the King's Pawn, and Ship's Pawn on reaching the opposite extremity of the board? Was their career then finished? or were they allowed a minor sort of promotion, like the *ferzis*, in the Persian game? We have seen that a Pawn reaching the Elephant's square or the Knight's square, became an Elephant or Knight accordingly: and as the book says nothing about the original Elephant or Knight having been previously removed, we are left to infer that they immediately received their promotion; and, consequently, each of the four players must have been furnished with a spare Elephant and Knight to meet such favourable conjunctures.

All these, and to others I might add, are minor points, on which I do not despair of obtaining clear and specific information from India, where the game is, no doubt, still cherished among the Brahmans of Rádha. Kant told Sir William Jones, sixty to seventy years ago, "that the Brâhmans of Gaur, or Bengal, were once celebrated for superior skill in this game; and that his father, together with his spiritual preceptor, Jagannáth, then living at Trihaut, had instructed two young Brahmans in all the rules of it, and had sent them to Jayanagar, at the request of the late Rája, who had liberally rewarded them." Since the days of Sir William Jones a great change has taken place in India. Many of the higher classes of Hindûs are now well versed in English literature; and, by consequence, readers of the ILLUSTRATED LONDON NEWS. Should these unmixed, and necessarily imperfect, efforts of mine meet the notice of any such, I trust they will kindly communicate to me any further information they may possess on the subject. It is not to be for a moment supposed that the Brâhmans of the present day have altogether lost sight of the very ancient and national game of Chaturanga, although our modern European game, at which they are proficients, may have gradually diminished their interest in the former, as the shatranj, or mediæval game, must have done many centuries previously.

In the preceding chapter I have taken the liberty to point out freely the errors into which Sir William Jones had fallen—errors which arose partly from his imperfect acquaintance, at that period, with the Sanskrit language, but chiefly from his having been very little versed in the history and practice of the game of Chess. Sir William entirely misconceived the description of the simple and primitive Chaturanga, which, in consequence, he considers to be "more complex and more modern than the simple Chess of the Persians." Above all, he was himself misled by a strange paradox, savouring infinitely more of the past than the philosopher. He states, in his discourse delivered to the Asiatic Society of Bengal, about 1788:—"the beautiful simplicity, and extreme perfection of the game, as it is commonly played in Europe and Asia, convince me that it was invented by one effort of some great genius—not completed by gradual improvements; but formed, to use the phrase of Italian critics, *by the first intention*."

In a paper more recently written on the same subject, in the "Asiatic Researches," vol. vii. page 481, by Captain Hiram Cox, the latter very justly remarks, on the above passage:—

But it appears to me that all he (Sir William Jones) afterwards adduces on the subject is so far from corroborating, that it is in direct contradiction of this opinion; and I trust my further combatting it will neither be deemed impertinent nor invidious. The errors of a great mind are, of all others, the most material to be aided against; and Sir William himself, had he lived to reconsider the subject, I am sure would have been the first to expunge a passage of so unqualified construction. Perfection has been denied, undoubtedly for many purposes; and progression is necessary to the happiness of our existence. No human invention is so perfect but it may be improved; and no one is, or has been, so great, but another may be greater.

Sir William Jones's mistake arose simply from the circumstance of his not being aware that the so-called "beautiful simplicity and extreme perfection" which he so much admired, were not attained till about the beginning of the sixteenth century; and that the game, as played by the Persians even to this day, is the same as that described in the Shâhnâma—in other words, the mediæval game of Asia and Europe. Nor did he by any means admit the "simplicity" either of the modern game of chess, or of the mediæval, which, compared with the Chaturanga, are of so profound and complex a nature, that it would be little short of a miracle in any "great human genius" to have invented either species of them "by the first intention." In fact, Sir William has misapplied this pretty simile altogether. We will grant that Raphael and Michael Angelo could each conceive and execute "by the first intention" a painting at once sublime and beautiful—the admiration of future ages; but, then, how many years of painful labour and close study had those eminent masters passed before they could have performed such wonders! But it is needless to dwell any longer on this point. We know that Chess, like all other human arts and inventions, arose from rude beginnings, and gradually advanced towards comparative perfection. I have now little more to say on this very ancient game; but ere I conclude I think I am fully justified in subjoining the following plain deductions from what I have advanced in this and the last chapter, viz.:—

1st. That the game of Chaturanga is, in all essential respects, the same as the game of Chess; the elements and principles of both being identical, and the minor points of detail in which they differ being the mere result of such slow and gradual improvements as time and circumstances have developed.

2nd. That the Chaturanga was invented by a people whose language was Sanskrit is evident on the most unerring etymological grounds, in addition to the direct testimony of the Purânic poems, and, consequently, that the invention belongs to the Hindû family.

3rd. That the Chaturanga, whether judged by its own intrinsic nature, or by the testimony of ancient writers, existed long before that modification of it called Shatranj, or the mediæval game.

4th. That the Chaturanga is the most ancient game, not only of Chess, but of anything approaching Cards, of which any account has been handed down to us. It claims an antiquity of 5000 years; and, with every allowance for poetic license, there is margin enough left to infer that it was known and played in India long before it found its way to China—even on the showing of the Celestials themselves.

CHESS.

TO CORRESPONDENTS.

PHILIDOR.—In the position cited, Black cannot take the Rook, because the White Bishop, notwithstanding his inability to move, protects any piece within his subsequent range.

JUNIOR.—The problem you have kindly transmitted is far from being the "oldest-read." Ancilotto di Modena, and well deserves the praise it has received. Place the pieces carefully as follows:—White: K at Q Kt 5th; Q at K 4th, B at K Kt 8th, B at Q Kt 2nd; Pawns K B 5th, Q Kt 3rd, and Q R 2nd. Black: K at the K sq, Q at her 4th, Kt at Q R 5th Pawns at K R 3rd and K Kt 2nd. *Black* to move and play, and mate in four moves.

L. Hanson.—Your problems are now under consideration.—With respect to the paper, your best course will be to remit a year's subscription in advance to the publisher, Mr. W. Lloyd, Milford Lane, Strand, who will then enter it regularly on the next list for publication. We will report on the sufficiency of the proposed match, and in answering the four last letters addressed to him.

H. V. Pearson.—The game just terminated by correspondence, between Preston and Shrimpton, has been received, and shall have attention.

J. C., of Ryde.—Letters to hand: to be noticed next week must be at the Office by Tuesday.

S. R. G.—Much below the standard.

C. L. (Cheltenham).—We cannot answer your letter, which we decline, solely because the books named are not issued.

SCANDERBEG.—Mr. Staunton's challenge has never been accepted. 2. There is a small Chess Club at Penzance, who it seems attend the Western Hotel on Tuesday and Friday evenings.

MINERVA.—Apply to the publisher, Mr. W. Lloyd.

FARMINGTON.—The Brighton Chess-club holds its meetings every Monday, Wednesday, and Friday evenings at the Town Hall. Send your card to the President, J. E. Adams, Esq. 2. The members of the Leamington Chess-club assemble at their rooms, 5, Upper Parade, every day. Apply to the Vice-President, the Rev. W. Temple.

SOLUTIONS OF PROBLEM No. 545, by Jack of Worcester, J. P., Delmon, M. T. W., D. D., Rugby-boy, M. P., —— Hall, Julian, Semper Eadem, Phiz, are correct.

SOLUTIONS OF PROBLEM No. 546, by R. F., Royal Artillery, J. P., Dalston: Cranberry, Subaltern, Omer Pasha, D. D., M. P., Di Vernon, Quesiphone, Stukie, Audi, Phiz, Stockland, Salvio, Jack of Worcester, F. H. S., Old Style, Quiz, S. S., Sir, Ivory, Young England, Holopte, are correct.

SOLUTION OF ENIGMA, by Jack of Worcester, is correct, all others are wrong

*** Any Amateur wishing to play a game at Chess by correspondence, may hear of a competitor by addressing *E. S.*, care of Mr. W. T. Roberts, 145, High-street, Exeter.

SOLUTION OF PROBLEM No. 546.

WHITE.	BLACK.	WHITE.	BLACK.
1. K to K R 8th	K to K 5th	3. Kt from Q Kt P moves	
2. R to K B 5th	K takes R	3rd to B 6th	
		4. P to K 4th—Mate.	

SOLUTION OF PROBLEM No. 549.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q B sq (d, e, 6th)	Q takes Q	2. B to K Kt 8th (ch)	K to K sq
		2. Kt to K B 6th	

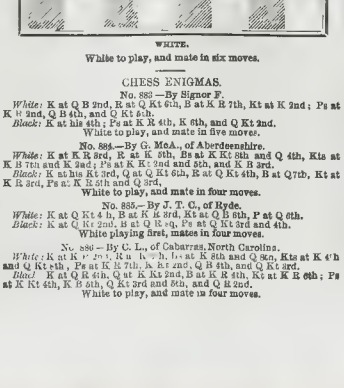
And, play as Black can, he must be mated next move.

PROBLEM No. 550.

By SILAS ANGAS.

This fine stratagem formed one of the Prize Problems of the Tourney alluded to in our last.

BLACK.



WHITE.

White to play, and mate in six moves.

CHESS ENIGMAS.

No. 883.—By Signor F.

White: K at Q B 2nd, K at Q Kt 6th, B at K R 7th, Kt at K 2nd; Ps at K B 2nd, Q B 4th, and Q Kt 4th.
Black: K at his 4th; Ps at K K 4th, K 6th, and Q Kt 2nd.
White to play, and mate in five moves.

No. 884.—By G. McA., of Aberdeenshire.

White: K at K R 3rd, R at K 4th, B at K Kt 8th, and Q 4th, Kts at K B 7th and K 2nd; Ps at K K 2nd and 5th, and K B 3rd.
Black: K at his Kt 3rd, Q at Q Kt 6th, R at Q Kt 4th, B at Q 7th, Kt at K R 3rd, Ps at K K 5th and Q 3rd.
White to play, and mate in four moves.

No. 885.—By J. T. C., of Hyde.

White: K at Q Kt 4 h, B at K K 3rd, Kt at Q B 5th, P at Q 6th.
Black: K at Q Kt 2nd, B at Q R sq, Ps at Q Kt 3rd and 4th.
White playing first, mates in four moves.

No. 886.—By C. L., of Cabarras, North Carolina.

White: K at K 1st, R at K B 7th, B at K 3rd and Q 8th, Kts at K 4th and Q Kt 8th; Ps at K R 7th, K Kt 2nd, Q B 5th, and Q Kt 3rd.
Black: K at Q R 4th, Q at K Kt 2nd, B at K R 8th, Kt at K B 6th; Ps at K Kt 4th, K 5 5th, Q Kt 3rd and 5th, and Q R 2nd.
White to play, and mate in four moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

Lord John Russell has consented to preside at the opening of the Bristol Athenæum, which is fixed for the 25th of October.

Since the King of Prussia arrived at Putbus he has been too unwell to commence sea-bathing. The sudden death of the late King of Saxony has affected him much.

His Highness Duke Augustus of Saxe-Coburg gave a grand dinner to the King of Portugal at Vienna, on the 20th. Lord Westmoreland and Count d'Alvensleben were among the guests.

The Duke of Newcastle and Sir J. Graham, who has just returned with his colleagues at the Admiralty, from a tour of inspection, dined with the Lord Aberdeen and a select party, at Argyll house, on Tuesday evening.

By an order of the day, published in the Official Gazette of Dresden, the King of Saxony declares himself Chief of the Artillery of the Saxon army.

The Hôtel du Nord, at Boulogne, has been engaged from the 2nd inst. (to-day), for the accommodation of the King of the Belgians and his Royal Highness Prince Albert, who will visit the French Emperor there during the ensuing week.

Queen Christina is said to have left Madrid for Lisbon at seven o'clock on Monday evening. Her departure was not obstructed.

The Scottish Rights Association has determined on entertaining the Earl of Eglinton at a magnificent public entertainment, to take place early in October.

The Duke of Hamilton, accompanied by the Archduke Ferdinand Maximilian, has returned from Ischl to Vienna. His Majesty is understood, will terminate his visit shortly.

Sir Henry Bulwer has returned from the baths of Gombo to his residence in Florence.

A Russian agent, the Chevalier Okoneff, second secretary to the Russian Legation at Rome, has arrived there from St. Petersburg, with despatches relating to the question of the Holy Places.

The Duke of Marlborough has subscribed £50, and Lord Londesborough £25, to the fund raising to indemnify Mr. Perry, of the 46th.

Senor Olozaga left Madrid on last Sunday for Paris, as Ambassador to France.

The report of Mr. Smith O'Brien having arrived in Belgium is premature. Mrs. S. O'Brien is at present in Dublin, and will proceed with her family to Brussels to meet him.

General Narvaez has demanded passports with a view of visiting foreign countries.

The inhabitants of the town of Brecon are about to raise a statue of the late Duke of Wellington, to be placed on the Bulwark, about fifty feet from the church. The height of the statue and pedestal will be eighteen feet; the former being eight feet and the latter ten.

The equestrian statue of Napoleon I., executed by the Count de Nieuwerkerke, was inaugurated last week, at Napoleon Vendee, with great pomp.

Viscountess Stratford de Redcliffe and the Hon. Misses Canning, who have been staying in this country since the noble Viscount resigned his diplomatic duties at the Court of the Ottoman Empire, have left Grosvenor-square, for Vienna, via Paris, to join his Lordship at the British Embassy at Constantinople.

M. Emile de Bray, *ensigne de vaisseau*, has just been named Chevalier in the Legion of Honour, for his services in the Polar Seas in search of Sir John Franklin.

Seventeen thousand pounds is the sum to be paid to Madame Grisi and Signor Mario for a six months' engagement in the United States. They will sing three nights a week. Half the sum has been paid in advance.

Horace Vernet has returned from Varna, and is at present staying at the Therapia. He sails for France on a day or two, having given up all intention of following the army *en artiste*.

Professor Maurice lectured in Leeds on Saturday week on Shakspeare; and on Monday week, on Co-operation as applied to Industry and Education.

The right of publishing the "History of My Life," in five volumes, by Madame Georges Sand, has just been acquired by *La Presse*, at the cost of 180,000 francs.

Professor Scheiling died on the 20th inst. at Ragaz, in Switzerland, at the age of seventy-nine. He was a contemporary of Kant, Fichte, and Hegel.

The well-known portrait-painter, M. Edouard Kaiser, is now on his journey to the head-quarters of Omer Pacha to take the portraits of the renowned Turkish leader and his principal Generals.

Among the artists who have recently turned their steps towards Baden-Baden are Sophie and Marie Cruvelli, Ernst, Ernst, Seligmann, Madame Nissen-Saaman, Madame Lagrange, Goria, &c. Theodore Dohler is at Wildbad, endeavouring to re-establish his health: he is accompanied by his wife, née Countess Clermontfeldt.

The new castle at Balmoral now presents a very imposing appearance, and casts the old house into the shade. When completed, it will be a lofty and picturesque pile of granite, handsome edifice, worthy of the fine country in which it stands, and of the illustrious Sovereign who is to occupy it.

A number of coal operatives, of Pittsville (U. S.), have advanced about 20,000 dollars to Mr. Tucker, President of the Reading Railroad, to relieve him from his present difficulties.

One of the various steamers that left Stockholm on Sunday week, for a pleasure trip to Bonarsund, was chartered for the purpose by 100 members of the Exchange there, and took out, as a present to the troops, about 1000 bottles of champagne, with a variety of *comestibles* not usually to be found in a country on a Spartan population.

At a late sitting of the French Academy of Sciences, M. Castels, manufacturing chemist, at Puteaux, presented a sealed paper, containing a description of the discovery that he alleges he has made of the artificial production of quinine.

It is a gratifying evidence of the continued decrease of crime in Ireland, that arrangements are in progress for placing the prisoners of the county of Galway and the assize town in one prison, and thus saving the expense of one of the two separate prisons.

Several provincial Juntas in Spain—and amongst them that of Cadiz—have decreed the abolition of death for political crimes; and at Madrid a petition is being signed, praying the Government to extend the measure to all the kingdom.

An extensive land-slip took place at the new dock works, West Hartlepool, last week, whereby two labourers lost their lives, and a third was seriously maimed.

The Egyptian Railway, from Alexandria to Cairo, in all about sixty-five miles, is expected to be opened early in the spring. Its retardation is said to have been principally caused by the necessity of raising its embankments in the vicinity of the Nile some two feet above what was originally designed.

The directors of the New York Crystal Palace have determined to dispose of the entire place for one-half its actual cost.

The *Aberdeen Journal* intimates that the electric telegraph to that town is expected to be in operation about the end of November.

It is calculated that the Canadian surplus of wheat for export will be twelve millions of bushels—five millions more than last year. The crop in the United States at the south and west promises well, and will be even larger than it was last year.

Messrs. Evans and Arrowsmith, of Bristol, received at their establishment, the other day, a sheet of paper weighing 3 cwt. and measuring 2,784 feet in length, or more than half a mile.

The subscriptions opened at Marseilles in favour of the victims of the cholera amount to 190,693f.

The Greenock journeymen coopers, who have given in, after a strike of twelve weeks, have not gained a single advantage more than they were at first offered.

The salmon fishery is more productive this season in the west of Ireland than it has been within the memory of the oldest persons. In the Ballynahinch fishery alone upwards of a hundred tons of fish had been taken at the close of July, which, at an average price of 8d. per pound, would have realised about £6000.

A negro woman, the property of Mrs. Eliza F. Carter, near Upperville, in Fauquier county (U.S.), died on the 17th of July, having attained the age of 140 years.

Mr. T. P. Shaffner, the American agent, has obtained leave to construct an electric telegraph from North America, over Greenland, Iceland, and the Feroes, to Norway and Copenhagen. A plan is in agitation for a continuation of the Danish electric telegraph direct to England over the sea from Denmark.

A fugitive slave, who recently passed through Vermont to Canada, is described as twenty years of age, tall, well-formed, and of far more than ordinary intelligence, able to read fluently, a member of the Methodist church, and the daughter of her master!

Harvest work is proceeding with activity throughout Ireland. In the vicinity of Limerick the harvest labourers are getting 1s. 6d. a day, with their diet.

Very few farmers are leaving Ireland, the bulk of the emigrants being farm labourers, or the families of persons of that class who had settled in the United States and remitted money to enable their relations to join them.

The London General Mourning Warehouse,

247, 249, and 251, Regent-street.

THE PAXTON ROSE.—The Ladies are certainly much indebted to Sir Joseph Paxton for this beautiful production. G. W. JONES, of 101, Oxford-street, has a copy of the Rose in a coloured, mounted, in wreath, dress triumphe, bouquets, &c., to which, with a choice assortment of Head-dresses, he respectfully invites the attention of every lady.—G. W. JONES, Crystal Palace, Fabric Court, No. 1; and 101, Oxford-street.

VALENCIENNES LACE (the largest quantity ever imported).—Messrs. WHITE and COMPANY, 192, REGENT-STREET, have just received the largest consignment by the last mail of a large Valenciennes Lace Manufacturer's Stock, at such an immense discount from the o lgnal cost as will enable them to furnish it to the public at one-half of the prices usually charged for this beautiful article of ladies' attire, for example, their first price will be 2½ per yard, and at 42d. a set of 50,000 yards, such as has been hitherto sold at 84d.; from that price up to 10s., and from 10s. to 21s., are sums equally astonishing, surpassing by far anything of the kind before introduced into this kingdom. Patterns to be had at WHITE and Company, 192, Regent-street, and wholesale, at 56, King street

---

DRAWING-ROOM, Dining-Room, and Library CURTAINS and PORTIERES.—JACKSON and GRAHAM respectfully inform the nobility and gentry that they are in direct communication with the most eminent manufacturers of France and Germany, and hold the largest and most magnificent STOCK in London of rich SILK DAMASKS, brocades, velvets, tapestries, and other fabrics, which they offer at more advantageous prices than they can be purchased for at the Establishments making their account day and fe.. gee of importation. They have also a most extensive stock of all the newest and best fabrics for Window furnishing, together with a choice selection of Swiss and Scotch lace, lace, and muslin curtains, of new and elegant designs.—Nos. 53, 54, and 55, Oxford-street.

STAYS SUPERSEDED.—Mrs. WHITTAKER'S Improved ELASTIC BODICE, for elegance, economy, surpasses all others offered to the public. Ladies' Elastic Belts, also, Breast Supporters, Corsets, Directions for comfort of stamp. 4, Gerard-street, Soho; and Soho Bazaar, Cornhill.

A SINGLE STAY.

Carriage Free

To any part of the Country,

On receipt of a Post-office Order.

Waist measure only required

Drawings sent on receipt of Address.

The Paris Coutil .. .. 12s 6d ,,

C. and H.'S ELASTIC BODICE, with simple fastening in front, is strong, elegant, and durable.

Families waited upon by experienced persons, within ten miles of London, free of expense.

CARTER and HOUSTON, Stay Manufacturers and Importers, 90, Fleet-street, 3, Ratcliffe-cross, 3, Ratcliffe-road, Stepney, and at South Gallery, Crystal Palace, Sydenham. Established 1817

MARION'S RESILIENT BODICE and CORSELETTE DI MEDICI. By Royal Patents.

Infinitely superior to anything of the kind yet introduced, and to point of style and workmanship it is alike unexceptionable.—Editorial notice in "Le Follet," the leading journal of fashion

They combine firmness with elasticity, fit closely, clasp easily in front, and are adapted for every age, figure, and habitude. Enlarged prospectus, illustrations, details of prices, explicit directions and papers for self-measurement, &c., on receipt of Two Stamps for postage. All country orders sent carriage paid, or post free.

Mesdames MARION and MAITLAND, Patentees and Sole Manufacturers, 36, Connaught-terrace, Hyde-park, London.

FIFTEEN THOUSAND AGENTS WANTED.

WALMER, Kent.—Mr. WILKINS, residing at Bedford Cottage, half a mile from the Beach, RECEIVES LITTLE BOYS, from seven to twelve years of age, to PREPARE for the PUBLIC SCHOOLS. Terms, 70 to 100 guineas.

T. F. SCHATTENKERR, at Doesborgh, and T. O. WEIGEL, at Leipsick, have published COMMENTARIUS in ECCLESIASTEN in usum JUVENTUTIS ACADEMICÆ. Scripsit Dr. D. SCHULTZ, Conrector at Stettin. Editionem Hebream Prælegerior in Gymnasio Dronthargensi. Price £1 4s. 0d.

DAY SCHOOL.—A LADY, who has been accustomed to tuition for several years, wishes to establish a first-class LADIES' DAY SCHOOL in a healthy near London. Any family or families desiring such an acquisition in their neighbourhood, will please address ESTELLE, Post-office, Huddersfield.

INDIA.—To PARENTS.—A LADY, whose husband is about to reside in a house in the neighbourhood of Hyde-park and Kensington-gardens, is desirous of taking CHARGE of TWO or THREE LITTLE GIRLS, or of a FAMILY, whose parents are abroad, to whom she will endeavour to act as a judicious and kind friend, giving them all the advantages of a home education, with the assistance, where desired, of masters.—Address E. S., Post-office High-street, St. John's-wood.

HANWELL COLLEGE and PREPARATORY SCHOOL.—The Term divides this day. A sound, rapid, and economical preparation is secured for the Universities, the Queen's and East India Company's Military and Civil Services and peculiar facilities are afforded for the Parallel course of the French language. Prospectuses on application. J. A. EMERTON, D.D., Principal.

CITY of LONDON SCHOOL, Milk-street, Cheapside.—Established by Act of Parliament, and under the management of the Corporation of London. Head Master, the Rev. G. F. W. MORTIMER, D.D. The ensuing TERM, extending to Christmas, will COMMENCE on TUESDAY, SEPTEMBER 5. Persons desirous of entering their sons as pupils, may obtain prospectuses of the scheme, particulars of the scholarships, exhibitions to the University, and other advantages attached to the school, between the hours of Ten and Four. Two of the Masters reside in Gardens. THOS. BREWER, Secretary.

FRANCE.—To be SOLD, on account of the death of the late occupant, an excellent FAMILY RESIDENCE, situate at Ambleis, on the river Loire, with Grounds, Vineyard, &c. Further information will be given at the office of the Advertiser, and may be obtained on applying at the Office of Messrs. Maughan and Dixon, Solicitors to the Treasury, 11, Raymond-buildings, Gray's Inn, London, and 12, Rue Royale, Paris.

HER MAJESTY'S MINT.—Messrs. HUNT and ROSKELL, appointed by the Master of the Mint for the Great of the PROOF PLATE in 1838, have the honour to announce that the same are now ready for distribution

196, New Bond-street, August, 1854.

BRETT'S GINGER BRANDY. For CHOLERA.—A powerful aromatic carminative and deli ious beverage. Imperial gallon, 14s.; ½ gallon, 7s. 6d.; ¼ gallon, 3s. 9d. 28s. the dozen.—Henry Brett and Co., Old Furnival's Distillery, Holborn.

ALLSOPP'S INDIA PALE ALE, in bottle, genuine and in fine condition, as recommended for INVALIDS and the TABLE, by Baron Liebig. The undersigned has always a supply in bond of the famous Old Light Brewing, imported July, 1845, in the pure state as pressed from the grape, of a peculiar dry character and flavour. Also, Cognac Brandy, Cases free to all English Railway Stations. JOHN TATTERSALL, No. 6, Lower Arcade, Bloomsbury-market, Charing-cross

---

CIGARS.—If you want a genuine Foreign Cigar, go to 28, ST. MARTIN'S-LE-GRAND. Finest imported Havannah, from 6s. 6d. per lb.; fine Dutch British Havannah, 4s. per lb.; Bremen, Cigars, 14s. per lb.; Silberh ry's Smoking Mixture, 6s. per lb. The trade supplied, and goods sent to all parts.

USE BARLOW'S MARKING-INK, for Writing on Linen with a common pen, without preparation; the best ever known. In bottles, 1s. each, by J. BARLOW, 14, King William-street, Mansion-house. Only try it.

NO VENT-PEG REQUIRED for BARLOW STOPPER-TAP.—By all means so called self-in explained. Supplying the public with a perfect article.—JAMES BARLOW, 14, King William-street, Mansion-house.

PURE AIR in SICK ROOMS.—Cholera and Fever are disarmed by the use of SAUNDERS'S ANTI-MEPHITIC DISINFECTING FLUID, which completely destroying every bad smell in a moment, and refreshing the a m sphere of the chamber with a salubrious and delightful odour.—J. T. SAUNDERS, Manufacturer, 215 B, Oxford-street, Regent-circus, and all druggists and perfumers. Price 1s.

LEADEN COMBS.—The pure Leaden Comb, for gradually darkening light, red, or grey hair, to a brown or black, is to be had genuine only of the Sole Manufacturer and Proprietor, T. ARMITAGE, 4, Bishopsgate-street, Bremo-court, Paris free by thrift stamps, securely packed, with directions for use. They are recommended by the Faculty as superior to all cosmetics. See "Family Herald" and "London Journal."

INVENTIONS.—Mr. WILLIAM BROOKES, Patent and Registration Agent, Radnor Chambers, 73 Chancery-lane, Gratis, A GUIDE to INVENTORS, containing full information relative to protecting Inventions, may be had free, on application.

SIR HARRY.—The eminent success of this new SEEDLING STRAWBERRY at the Royal Floral and Horticultural Exhibitions where it has been shown, viz.—Chiswick—1st Class Certificate; Ist Class Certificate; highly commended; Birmingham; Edgbaston—1st Prize; indorse the Proprietor (hitherto an Amateur grower only) to offer it for SALE. The characteristics of the Plant are these. Ripening as early as Keen's Seedling, but combining more than double the size—a great recommendation, having a very large handsome dark colour berry, which carries that superb colour not until quite ripe. Its flavour is very rich, and, whilst being both firm and juicy, is separates itself entirely from its ca yx without having a tasteless core. The Plant is a strong grower, and, from its habit of dwelling with its high perfume, throws vigorous runners into the shade the Keen and British Queen. The leaves are few, and the vigorous extension of its bearing branches renders it most valuable for exposure to the sun. Each plant of which exposure is a great fallen, in many sorts of the coast of plant. A full Packet of a one-year-old runner, with the plentiful fruit in the respective stages of growth (as detailed from nature), is to be seen in the Exhibition Room of the Society of Arts, and coloured Lithographs have been taken from it by an eminent London Artist, when ready for public application, price 2s. 6d. each, to pay charges. The plants will be ready for sending out (not less than a score) on the 15th September, price, 12 for 5s., 25 for 10s., 50 plants, £1 4s., 100 plants, £2 12s. 6d. plants; £1 4s. for a score. A few Plants in Pots may be had early in October, price 2s. 6d. each. Apply to Mr. RICHARD LINDELIUS, 6, Barry-road, Dulwich. Bills to them, as applicant to the Proprietor, with a Post-office order (at Birmingham), or cash, to receive attention.

August, 1854.

HER MAJESTY'S ROYAL LETTERS PATENT (Messrs. S. and B. SOLOMONS, Opticians, 39, Cornhill, and 6, Piccadilly, opposite Obyente the Turn House, for vistas a and extraordinary Improvement in the most powerful and Achromatic TELESCOPES, CAMP, PERSPECTIVE, RACE-COURSE, and OPERA-GLASSES, to know the distances of objects viewed through them. Officers in the Army, Navy, and others, are supplied with Mendel Gunn on Glass. These Lenscopes possess such astonishing powers, as to define objects at 30 miles. With an extra eye-piece, will show distinctly objects 8 miles. Saturn a Ring, and the Double Stars, with the same distinctness as can be seen a person's countenance 15 miles distant, and an object from 16 to 20 miles; for the waistcoat pocket, and are of large size, and all sizes, with increasing power accordingly. The Royal Exhibition, 1851, valuable, newly-invented, very small, powerful, waistcoat-pocket glass—the size of a walnut—by which a person can read fine print and know a coin and a half distant. They answer every purpose—on the race course, at the opera-house, country seats, and at sea they are clearly seen at 12 to 14 miles. They are invaluable for shooting, deer-stalking, yachting, to spectators, gunmakers, pawnbrokers, and travellers. Opera, camp, race-course, and perspective glasses, with wonderful powers; an object can be nearly seen from the Nore to Greenwich, and in the Army, Navy, and others; glazed with Mendel Gunn on Glass. These Lenscopes possess such astonishing powers, as to define objects at 30 miles, with

THE ILLUSTRATED LONDON NEWS

No. 701.—VOL. XXV.] SATURDAY, SEPTEMBER 9, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE COLONY OF THE FIDDLE.

TIME and distance transformed the ancient benefactors of mankind into heroes and demigods. Hercules, who cleansed the Augean stable, was deified; as Lord Palmerston or Sir Benjamin Hall may be a thousand years hence, if either of them will perform the more difficult and more beneficent task of cleansing the river Thames—a thing ten thousand times more filthy and pestilential than the stables of the King of Elis can have been. If Dr. Jenner had been a Greek, instead of an Englishman, and lived in the days before Homer, he doubtless would have taken his place in the popular mythology as a hero—if not as a demigod—who slew a monster more ill-favoured than Cerberus, and more cruel than Hydra. The *Argo* and the Argonauts of the ancients might be paralleled by the *Mayflower* and the Pilgrim Fathers of the moderns. Even the deeds of Orpheus himself—that great myth, who caused not only wild beasts, but rocks and trees, to move with delight to the music of his golden harp—may find their match in our prosaic age, in the marvellous strains of a Cremona fiddle, in the hands of a man who still lives and moves amongst us. We know but little of the real achievements of Orpheus, or of their value to the world in which he flourished; but we have the records of the present day, and the testimony of living witnesses, to prove what music may accomplish. A few centuries hence, perhaps in a shorter period, the memory of Ole Bull—to whose recent deeds we desire to draw attention—will be enshrined in the popular memory of a great nation, and poetry and romance will throw a halo around his name. In the meantime, however, the world should know its benefactors; and for this reason, without the aid either of poetry or of romance, we think we shall perform a duty in recording what the musician has attempted for the elevation of his countrymen.

Ole Bull, struck with sympathy for the distressed condition of his countrymen in the overpeopled valleys and on the teeming hill-sides of Norway, appears to have organised an extensive system of emigration to the United States. After spending several months in visiting the most desirable spots for the foundation of a great Norwegian settlement, whither the poor and able-bodied might flock with their Lares and Penates, he fixed upon a fertile district, lying out of the beaten track, in Potter County, in the state of Pennsylvania. Finding the climate to be healthy, and the soil to be suitable for his purpose, and "to be heavily timbered with maple, cherry, beech, ash, white pine," and easy of access to the New York, Philadelphia, and Baltimore markets, he secured, "by purchase and other ways, the control of between one and two hundred thousand acres," on which to build a city and several smaller towns, and to locate his people. He caused the country to be surveyed, and laid out into farms, and to be offered to the Norwegians at prices just sufficient to cover cost—"the terms of payment being so easy, that each man, in a few years, may become an independent landowner in his own right." He has arranged that each town shall have a church, where the people may worship according to the dictates of their consciences; and that each district shall be provided with a school, where the children may be taught the English language. Ole Bull started from New York in June last, with a number of his countrymen, including masons, carpenters, joiners, smiths, tailors, shoemakers, and other artisans, and bent his way to a place called Augusta, in the backwoods of Pennsylvania. Here a large concourse of emigrants awaited his arrival, gathered round a flag, "bearing the Cross of Norway in the centre, surrounded by the Stars and Stripes of the United States." "As soon as Ole Bull appeared in sight (says the New York paper from which we quote) the emigrants commenced the most enthusiastic cheering, which Ole Bull and his companions answered by standing up in the waggon, waving their handkerchiefs, and swinging their hats. *Ole Bull could not wait for the slow motion of the horses, but leaped from the waggon, and ran to embrace them!*"

After a fat ox had been slaughtered, roasted, and consumed, Ole Bull selected a site for a house for himself, and also sites for twenty-five other houses. Whilst thus engaged, his people prepared to name and inaugurate the new city. "As a flag was needed, a beautiful straight evergreen was cut down, which the Norwegians trimmed, leaving the topmost branches as an ornament to the flag-staff. This they raised from the top of the hotel: as soon as it was elevated and fastened, a large flock of birds came and perched upon it."

The colonists were charmed by the music, for "the birds," says the writer, "sang in the gayest and most delightful manner. It appeared," he adds, "*as though they were inspired by the scene, and were giving utterance to their feelings of joy and welcome to the great Norwegian and his followers*" Regarding it as a good omen, they all united in giving the birds a hearty round of applause!

But the main ceremonial of the day was to name the new city, and it was arranged that a flag should be hoisted as the signal for its baptism. "The flag ascended slowly and gracefully to its place, a gentle breeze waved it proudly in mid air, and the name of

ABO, THE CAPITAL OF RUSSIAN FINLAND.—(SEE NEXT PAGE.)

OLE BOWA was given to the new home of the Norwegians. Thirty-one cheers (one for each State) were given, and one for Ole Bull." Mr. Bull then started, "with his engineer," and soon found excellent water-power, and selected sites for "a saw-mill, a grist-mill, a cabinet-maker's shop, a tannery, a church, and a school." Everything passed under his own eye; and "his intuitive quickness of perception, untiring energy, soundness of judgment, promptness and decision, and capacity of physical endurance," are described as being "beyond that of any human being ever seen by his beloved Norwegians." But all this time the Cremona of the great musician was idle; his bow lay quiescent; the soul of music slept. But he was too fond of his art, and of his countrymen, to deprive them of the gratification of hearing those magic strains, the beauty of which had provided him with the means of becoming a founder of States, a lawgiver, and a patriarch. "After an early supper at half-past seven, he went to a room by himself, with his violin, *to compose some music suitable to the occasion.* At nine o'clock the emigrants arranged themselves in the road in front of the hotel, a chair and lights having been placed in the upper balcony of the piazza for Mr. Bull. The bonfires were lighted in every direction, "which," says the enraptured historian of the Colony, "made it as light as day around the hotel; whilst the unbroken forests and lofty hills which made up the background appeared, in the dread gloom and magnificence with which they were clothed by the contrast of light, to be the solemn spirits of a bigoted and tyrannical age, come to take their last look of the scenes of their former oppressions, and then to vanish before the light of Christianity and Liberty into darkness and desolation for ever!"

At half-past nine the *maestro*, having composed his music, appeared on the balcony, and "the hills resounded with echoes from the loud shouts that went up to greet him." We are informed that "he appeared to be oppressed with the greatness and solemnity of the occasion; and that, whilst he gracefully and modestly bowed his acknowledgments, the tears were choking his utterance." His speech was poetical, and highly-coloured, but by no means inappropriate; and, at its close, the Norwegians knelt down, and, with bare heads, and hands raised to Heaven, swore they would obey the laws of the United States, and do their utmost to be worthy of such protection.

After silence was restored, Ole Bull took his violin and commenced an anthem. "No language can describe this music," says the witness of the festival to whose pen we are indebted for these particulars; "the audience, the attendant circumstances, and the occasion, appeared to have given a new and unearthly inspiration to the great artist. He touched every chord of every heart in his audience. At times the Norwegians wept like children, as the strains reminded them of kindred and friends far beyond the ocean; then the strains of liberty would pour forth from the enchanted instrument till his audience were overcome with delight and rapture."

The Colony founded in this singular manner bids fair to be prosperous. The land in the vicinity has already quadrupled in value, and towns and villages are rapidly springing up. Encouraged by his success, the violinist is about to repeat the experiment in California. We sincerely hope that his benevolence and patriotism may meet their reward; and that he may long continue to fiddle and to colonise, to his own delight, and to that of thousands who will justly consider him, not only as the first of fiddlers, but of benefactors. The dancing trees of Orpheus no longer appear so very marvellous, when we compare the achievements of the ancient harp with those of the modern violin. Ole Bull's music has already transformed a wilderness into the populous home of a thriving community; and the mythological Orpheus bids fair to be outdone by the palpable realities of a plain man, in the nineteenth century.

ABO.

THE capital of Russian Finland has again become a point of great interest, as will be seen by reference to the despatches last received from the gallant Commander-in-Chief of her Majesty's ships and vessels in the Baltic. The View engraved upon the preceding page is from a series of spirited lithographs lately published at Copenhagen.

The city of Abo (pronounced Obo, the Finnish name is Turku), contains about 14 000 inhabitants. It has four or five barracks, some of them built of wood, which, in time of peace, have in them from 3000 to 4000 Russians, as the Finns call all soldiers.

A short time since it was reported that Admiral Plumridge's squadron had destroyed the fortress and town of Abo; which rumour could not have been correct, as there is no fortress to destroy. The town is defenceless as to forts and fortifications. There is an old Swedish palace at the mouth of the river, called the Slott (palace or castle), now used as a prison and barrack; but it has no guns or defence, except its walls, which in some places are six or eight feet thick, with small windows strongly grated with thick bars of iron. The low buildings in front appear much older than the two long wings. There has been a moat in front from the river to the sea to the right; but it has little water, and resembles a large ditch. Behind the Slott is a bridge half a mile long, made of piles, and connecting the island of Runsalla with the main land.

Runsalla was given by the Government a few years ago to the town. It is one of the very few islands off the Finnish coast upon which the oak grows: it is divided into lots, which are sold for building villas upon, but the purchaser may not cut down an oak (even if it interferes with his view or his building) as they are reserved by the Crown for ship-building, though they are nearly all rotten. Opposite Runsalla is the island of Beckholm, where large ships anchor and discharge into lighters, as there is not water enough in the river for vessels drawing more than twelve to fourteen feet. Passenger steamers proceed up to the lower bridge, though they sometimes get aground in the river when the water is low, as it is when there is an east wind.

The only transaction in the Baltic of any importance since the taking of Bomarsund was a reconnaissance of the state of affairs at Abo, where the Emperor of Russia seems to have made great preparations against an attack. The vessels employed in reconnoitring were the *Gorgon*, *Driver*, *Odin*, and *Alban*.

They found, much to their delight, that Abo is situate at the bottom of a large bay, instead of on an intricate river, and that they could approach near enough to shell the town with fifteen feet water. In front of the town a boom is moored, behind which, at some little distance, lay four small steamers and eighteen gun-boats, eight of which, however, only showed themselves; three, as our steamers approached, came up to the boom and commenced firing, their shot not reaching more than half-way; but they seemed not to care about that—they were ordered to fire, and they did. Captain Scott, of the *Odin*, who commanded, had orders not to fire, if he could avoid it; but, getting so far in, so unexpectedly, he fired some shot, in hopes that the batteries, by returning it, would point out their position; and he was not disappointed, for three immediately replied; and, as he had found them out, he made a note of them. A fisherman who was taken by the *Alban*, stated that 5000 men had arrived from Hango, to reinforce the garrison of Abo. If this be true, it corresponds with the statement given elsewhere regarding the demolition of the fortifications at Hango by the Russians.

The following despatch from Captain Scott, which appeared in the *Gazette* of Tuesday, gives a more detailed account of the reconnoissance of Abo:—

Her Majesty's ship *Odin*, Ledsund, AUG. 25, 1854.

SIR,—I have the honour to state that in pursuance of your orders, dated the 18th ult., I proceeded with her Majesty's ships *Odin*, *Gorgon*, *Driver*, and *Alban*, under my command, towards Kumblinge, and the island's east of it.

2. Having procured a pilot at Dageby, we felt our way on with boats and leads, through a most difficult and intricate navigation, in the course of which every ship has been on shore (*Gorgon* and *Odin* frequently), but we hope with no further injury than that done to the copper in various places.

3. At Kumblinge and the adjacent islands I was unable to obtain any information of troops or gun-boats; but learnt on Sunday, at Asterholm, that a small fast steam-boat from Abo was in our immediate vicinity.

4. Rather than return to your flag without intelligence, I resolved to attempt a passage to Abo; and, on Monday at daylight, leaving the larger ships at anchor, I took all the masters in the *Alban*, surveyed, and buoyed off a passage for ten miles to Bergham, and then returned for the other ships; but the *Gorgon* grounding, delayed us for that night.

5. On Tuesday we made our way in safety into the comparatively main open track to Abo, beyond Bergham; at two p.m., observed a small steamer watching us, and at three p.m. several gun-boats moving a body of troops from the point (a mile and a half to the north-west) up to the chain across the narrow entrance to the harbour.

6. Having approached to within 3000 yards, the *Alban* stood in to sound the entrance of the harbour was closed by two impediments—the one in front appeared to be a chain laid on a floating platform; the other, of stakes and booms, between which the gun-boats were stationed at regular intervals, and the steam-vessels (four in number) were under the shelter of the points.

7. About four p.m. the *Alban* fired the first shell, which burst over one of the gun-boats. I then commenced firing, and was followed at intervals by *Gorgon* and *Driver*, but with little or no effect that we could discover, except that of fully answering my purpose in drawing a return from the masked batteries and gun-boats. Only one of the former at the end of the boom mounted a gun, or guns, of large calibre and long range, but which was concealed from our view by a point of land. The others, three in number, about one mile to the west of the boom, as far as we could judge, did not, in any one case, mount more than five, or less than three, small guns. A fort, of apparently eight or nine large guns, at a little pace, constructed to enfilade both passages, fired repeatedly; but the shot invariably fell a very short distance beyond the south end of Little Beckholm.

8. As my object was not to attack Abo, but to examine its defences, I contented myself with firing a shot occasionally at the gun-boats, or shell over looked like a masked battery. In the meantime Commander Otter, in the most zealous and gallant manner, after going as close as it was prudent in the *Alban*, pulled in with his gig, sounding just within range of the gun-boats and batteries, which were all the time keeping up a constant fire.

9. The sum of the information I have been able to obtain, with his assistance and that of Commanders Cracraft and Hobart, amounts to this—seventeen row boats, two guns each, and about twenty oars on each side; four steam-vessels (all small), two having the flag which I cross another in it; and another was observed steaming away through the Channel to the eastward of Beckholm. Three (if not four) masked batteries, and another I think in course of construction, for the position of which I refer you to the very clear delineation executed by Commander Otter.

10. The channel appears to be very narrow, and the thick woods were evidently full of soldiers. We learnt that our arrival had been anticipated (as we expected, knowing that we had been watched by a steamer for some days), and that 4000 additional troops had been sent on the previous day, and 6000 more were expected to arrive on the following day; that there were six steamers—five small and one large (the latter we did not see), and eighteen boats and two guns, and eighty men, besides soldiers in each.

The weather was so bad on Thursday that I was detained under Bersö, and went into Somarsund this morning; when, having communicated with Captain Warren, and received his despatches, I proceeded to join your flag.

I have only to add my very anxious hope that my proceedings may meet with the approbation of the Commander-in-Chief—I have &c.,

FRANCIS SCOTT, Captain.

Vice-Admiral Sir Charles Napier, K.C.B., Commander-in-Chief, &c.

In a general memorandum which was read on board all the fleet in the Baltic, Sir Charles Napier, after giving due praise to both officers and men for the zeal and gallantry displayed in the capture of the Aland Islands, winds up by saying:—"The Emperor of Russia has left Somarsund, on which he had spent an enormous sum of money; and had he completed his gigantic work, he would soon have been master of Sweden and Denmark." The intention of the Czar was to build eleven additional round forts, and one like the main fortress of Somarsund. The foundations of some of them were already begun, and the large fort would have been about twenty feet high.

The *Phlegethon*, which had been on a cruise up the Gulf of Finland, returned to Lee Sund on the 26th ult. The crew state that when off Hango they saw the Russian blow up the forts. If the fact be, it agrees with the report that the Emperor intends concentrating his forces at Abo for the winter.

A proclamation has been issued by the Commanders of the Allied expedition, in which they authorise the civil authorities of the Aland Islands to continue in the administration of their respective duties. The blockade is declared to be no longer in force. The public are informed that they are at liberty to trade with Sweden on the same conditions and privileges as heretofore; but all are cautioned against holding any communication or intercourse with the enemy or Finland. Any one found aiding them in any way will be punished severely.

A POPULAR MOVEMENT IN DENMARK.

Public opinion in Denmark is beginning to manifest itself against the Government in a somewhat ominous manner. Those who have been watching the struggle going on there between the Danish Court party and the people will remember that, in July last, the Cabinet issued a Constitution *octroyer*, providing chiefly for the establishment of a Constitutative Chamber of Notables. About the same time the Constitutional party, whose leaders in Parliament had suffered proscription at the hands of Government, formed a Constitution Society, to promote its views by argument, and to enforce them by public opinion. The peculiarity of the case was that the vast majority of the Parliament voted a want of confidence in the Ministry, and the Ministry replied by dissolving the Parliamentary leaders, and decreeing a new Constitution.

The Danish Parliament was to open on Saturday last. Four days before its opening, an immense meeting of the Constitution Society was held in the elegant theatre called the Casino—the largest hall in Copenhagen. Government had forbidden all political meetings in the open air, but it could not hinder 8000 patriots from assembling on Tuesday week, to protest against its tyrannical conduct. The meeting comprised the *élite* of the moneyed world, of the journals, the bar, the universities, and the people. There was no much speaking, but what was said was to the point. The whole proceedings were characterised by unquestionable unanimity and great moderation of language. They condemned the ordinance of the 26th July as a violation of faith with the people, and as unconstitutional; they hinted at the dangers which might result from the Ministerial policy, and they pledged themselves to support the Parliament in defending the rights of the nation. The resolutions were couched in general terms; but their purport should not be misunderstood. M. Broberg, the largest shipowner in Denmark, distinctly put it to the meeting whether they perfectly understood that the resolutions implied the impeachment of the Ministry and the refusal of taxes. He was answered by a storm of applause and a unanimity of affirmatives, which appeared endless; hats and handkerchiefs adding their confirmation. Equally great was the feeling displayed when Mr. Adler proposed a fund "for supporting the patriots dismissed from office by a tyrannical Cabinet for their votes in Parliament, and for the assistance of the national press against illegal and ruinous prosecutions." His speech carried the meeting, as by a resistless stream; and when he laid down his first subscription, 1000 Danish dollars, the whole meeting rose to declare that they would add their mite. A very large sum was subscribed in the room, and a regular national fund is to be organised.

ARRIVAL OF THE MUNOS CHILDREN.—Among the passengers by the Peninsular Mail steamer *Madrid*, which arrived at Southampton on Saturday night, were the sons and daughters of the Duke of Riansares (Munoz) and Queen Christina, the Queen Mother of Spain. They embarked on board the *Madrid* at Lisbon *incognito*. The daughters are three in number, and grown up; the sons are two in number, and are mere boys. They travelled as the children of a gentleman named Eugene de Ochoas, who was on board with them, and whom they addressed as papa. Several servants travelled with them. Eugene de Ochoas is believed to be an assumed name. He is understood to have been a Spanish journalist in the interest of Christina. The quality of the children was soon discovered on board the *Madrid*, a passenger's servant having previously known them. One of the girls has the Bourbon features strongly marked.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE meeting of the Emperor and the King of the Belgians at Calais seems to be the principal matter of interest during the last few days. On the arrival of the latter at the Hôtel Dessin, the Emperor descended in person to receive his Royal guest; and, offering his hand, said, "Sire it is long since I have had the happiness of seeing you. I feel somewhat *en cérémonie* with you." The son-in-law of Louis Philippe replied, "Sire, I am happy to have the opportunity of becoming well acquainted with you. I have the honour of presenting to you my son." The Sunday was passed by the Emperor and his guest at the Camp at Boulogne, from whence the King of the Belgians started in the evening for Ostend. The arrival of Prince Albert and the young King of Portugal completed the sensation caused by the meeting of so many illustrious personages on an occasion of so much interest. The Emperor, it is said, purposes going, accompanied by the Prince Jérôme, to Tournay, on the 12th inst., where they are to be received by the whole of the Belgian Royal Family. The Prince Jérôme has left the Palais Royal for his favourite residence at the château of Meudon; which he will probably quit about the 20th, to finish the autumnal season at his property of Villegénis. The young Jérôme Bonaparte, grandson of the Prince by his marriage with Miss Paterson, has, we are told, decided on accepting letters of naturalisation in France, and the grade of Lieutenant in the French army. What tends to confirm this report is the fact that he has tendered his resignation of the same post in the army of the United States; the resignation has been accepted. The accounts of the health of Prince Napoleon are sufficiently satisfactory. The Duc d'Abrantès, Aide-de-camp to the Prince Jérôme, has left Paris, in order to join him at Varna or Constantinople or to follow him to the Crimea if the expedition against Sebastopol takes place, and his division takes part in it. The Emperor on his return from the Camp, purposes passing some days at Compiègne, to recover from the fatigues of his inspection. He intends starting about the 17th inst. for Biarritz to rejoin the Empress, and accompany her back to Paris. Her Majesty's health seems to be almost entirely restored by her stay at this spot; the beauty of which, with the magnificent weather, which has continued with little interruption since her arrival there, has caused her much enjoyment. The Imperial residence in progress there is to be named the Villa Eugénie.

We are happy to be able to announce once more that the cholera, which a fortnight since had returned with such violence to Paris, has now entirely lost its grave character; and the probability that the lateness of the season will preclude the return of the great heats which principally caused its re-appearance, seems to guarantee the city from any fresh attack of an alarming nature. This, with the extremely satisfactory manner in which the crops are now been got in all over the country, seems greatly to re-assure the public mind. Another cause of gratulation is the fact that the immense number of new buildings completed and in progress of construction is already beginning to produce an effect (which cannot fail to increase) on the rate of rents, which had risen to such an exorbitant extent as to cause the most serious distress to the working class, and much inconvenience to every other. In fact, a prospect of the conclusion of the war is now all that is wanting in external circumstances to place affairs on an entirely satisfactory footing; but this hope, which a few days since was strongly entertained, seems now definitively, by the reports of the Emperor of Russia's intentions. To return to the subject of the cholera, a singular fact in natural history has been observed, namely, that the swallows—which had entirely deserted Paris during the time that the epidemic raged—are beginning to return. To prove how much the existence of the malady influences these feathered visitors, we may state that in the month of June, 1849, when the cholera was at its height in Paris, a flight of swallows, passing over Paris, while they had previously deserted, a large number fell dead, and were picked up in the streets or floated down the river.

Among the articles to be sent from India to the Great Industrial Exhibition here, is a carpet, or rather mat, entirely composed of ivory. This mat is twenty feet long by six wide, and is made of strips of the material plaited together, and the price is £300.

The new racing-ground at Longchamps, of which we spoke some weeks since, is now completed, and about to be opened on the 17th inst., with a grand steeplechase, prize 5000 francs; a race, prize 3500 francs; and hurdle-race, 2000 francs. So great is the extent of the course, that there is room for four races to take place simultaneously; everything is arranged to contribute to the convenience of both actors and spectators, and the closing of the course is to be an occasion of the utmost brilliancy and attraction.

The prevalence of fires, both in Paris and the provinces, has been this season a source of the greatest trouble and loss—in some instances of life, in almost all of much and valuable property. In the department of Var a band of incendiaries have destroyed whole leagues of forest, with the cottages and farms scattered among it; and in Isère the village of St. Laurent-du-Pont has been almost entirely destroyed, in consequence of a cart of hay taking fire while being conveyed through it. In Paris the Prot-stant church in the Rue de Provence has been burnt to the ground; and on Monday night, during the representation at the Opéra Comique, there took place an alarm of fire, which had communicated itself from a jet of gas to the framework of a window in the *salle d'attente*. The fire was, however, quickly extinguished, with little damage.

The annual *fête des Loges*, at St. Germain, is taking place under the most favourable auspices, in consequence of the magnificent weather, and is most brilliantly attended. The illness of Mélingue, caused by over fatigue, has interrupted "Schamyl" at the Porte St. Martin, after the 64th consecutive representation.

SPAIN.

The news from Spain is not of much interest. It appears that Queen Christina and the Duke of Riansares left Madrid on the 28th ult., at a little before eight in the morning, escorted by Brigadier Garrigo and a squadron of Fransesio Cavalry, and took the road to Alcoroon, i.e., towards Estremadura and Portugal. The hour fixed for leaving was six a.m., and the delay in the preparations for departure had nearly prevented it altogether. Groups were collected about the palace, and they were fast increasing, and murmurs and expressions of indignation and rage were heard. Indeed, it is said that in another half hour it would have been impossible for them to have left, the crowd was collecting so fast. They went out by a door at the back of the palace, and through the Campo del Moro, and so to the bridge of Segovia, where the Estremadura road commences. Queen Christina looked seventy years of age, and the Duke of Riansares was also much altered. Their departure produced a great deal of excitement at first. The feeling of the mutinous part of the multitude was very much directed against Espartero, who, they said, had deceived them. The Government has decided on the removal of Queen Christina from Spain, the stoppage of her pension, and embargo of her property. The *Gazette* contains the message, which is in the shape of a circular, signed by all the Ministers, and addressed to the Governors of provinces.

A telegraphic despatch from Madrid, states that Queen Christina was attacked, on her way to Portugal, with an illness which inspires the greatest alarm. The despatch which was in French, calls the illness an *exaltation cerebrale*; but whether this is stated by error for *fievre cerebrale* (brain fever), or is meant as a distinction, is uncertain. By *exaltation cerbrale*, in France, is generally understood a violent attack of insanity, rather than the ordinary brain fever, of which insanity is the necessary consequence.

THE CRIMEA EXPEDITION.—RUSSIAN PREPARATIONS.

We are still without any more reliable information regarding the long-projected expedition against Sebastopol, than telegraphic despatches, and these have so frequently proved false that very little attention is now paid to them. The latest and most circumstantial announcement on the subject is given by the *Vienna Lloyd*, a semi-official paper, which states that—

Marshal St. Arnaud has issued an order of the day, dated Varna August 26, acquainting the troops that the destination of the expedition was the Crimea; and that the duty of the Allied forces would be to take Sebastopol as a pledge of peace. The flags of the three Powers, says the order, will soon be erected on the walls of Sebastopol with cries of "Vive l'Empereur!"

It is added that, from the 1st instant all provisions were to be forwarded to the Crimea, and that the entrance to the port of Sebastopol would be closed by steamers

The *Soldaten Freund* and *Fremden Blatt* have the following reports, which, although from Russian sources, may be not far from the truth:—

A part of the great expedition under the command of Admirals Dundas and Stopford, with 23,000 men on board, under Lord Raglan, left Varna on the 26th. The *gros* of the fleet, under Admiral Hamelin and Brest—and General Canrobert, with 20,000 French and 5000 Turks—was to follow on the 28th and 29th. The third and smaller division, under Admiral Lyons, was to leave Constantinople the 1st or 2nd of this month, with Marshal St. Arnaud. The vessels which left Varna on the 26th sailed towards the north.

The *Fremden Blatt* has advices from Galatz of the 1st, which state that a number of French and English gun boats entered the Sulinah mouth of the Danube on the 21st ult., and that another flotilla of gunboats was about to enter the Kilia mouth of those river.

Letters from the south of Russia mention that the Russians have thrown a bridge of boats across the Dnieper, with the view apparent y of facilitating the transfer of masses of troops withdrawn from the Danubian Principalities to the Crimea, now threatened by the Allies. This bridge of boats caused the accumulation of a large number of craft laden with linseed and other produce, which are prevented from pursuing their voyage down the river to the Russian ports on the Black Sea. The Russian forces at Cherson, on the 26th ult., consisted of 20,000 infantry, 5000 cavalry, and 85 pieces of artillery. The orders of the Emperor are that none of the towns on the Black Sea or the Danube are to be allowed to fall into the hands of the Allies. In accordance with this order, the Russians are said to have destroyed all the fire-engines and other requisites for extinguishing a conflagration at Odessa, Reni, Brailow, Galatz, and Ismail, with the intention of setting fire to these important towns, should they be obliged to abandon them.

As regards the health of the Allied troops, all the accounts recently received from the Black Sea agree in declaring that the cholera has declined with a rapidity which could not have been hoped for. The amelioration which has taken place in the sanitary state of the Allied armies continues, and increases every day, by the happy influence exercised over the minds of the troops by the prospect of being soon in face of the enemy.

THE BATTLES OF BAYAZID AND KURUKDERE.

Full particulars of these two battles, which have proved so disastrous to the Turkish army in Asia, have now been received, and they amply confirm the previous reports respecting the superiority of the Russian forces. The battle of Bayazid took place on the 30th of July, and the defeat sustained on that occasion was entirely owing to the obstinacy of Selim Pasha, who persisted, contrary to the orders of Mustapha Pasha, in attacking a Russian army of much greater strength. His instructions were to retreat to Kars, in the event of the enemy advancing. Instead of doing so, Selim Pasha, who had only 2000 regular troops, with seven guns and a party of irregulars, attacked the Russian army, which consisted of 8000 men, with thirteen guns. The result might easily be anticipated. After a confused struggle, the Turkish battalions gave way and fled wildly towards Van, leaving 1800 killed, wounded, and prisoners. Three cannon fell into the hands of the Russians. The pursuit lasted 1200 Turks, with the commander, Selim Pacha, arrived in the greatest disorder in Van; where it was said part of the Russian force followed them.

The intelligence of this defeat was brought on the 3rd August to the Turkish army of Kars, encamped at Hadji Velikoi, and the Mushir, Zarif Mustapha Pacha, at once decided upon attacking the Russian army, under Generals Bebutoff, before it could be reinforced by the victorious garrison of Erivan. On the 5th August the Turkish army—which consisted of 20,000 infantry and 3700 cavalry, with 78 guns, and from 4000 to 5000 Bashi-bozouks marched on the Russian position at Kurukdere, and fell into the hands of the Russians by daybreak. The Turkish left wing was belated, and arrived too late on the field. The right wing was opposed by the entire Russian force, and routed. The left wing was only able to protect the retreat of the defeated right; and nothing assailed by the whole strength of the Russians, it gave way and fled. The Russians were too crippled to pursue, or the whole Ottoman army, which had been completely disbanded, would have been captured. The fugitives arrived in parties of three and four in Kars

The Russian army, which was much reinforced after the battle, has had been led to believe, consisted of 16,000 infantry, 4600 cavalry, 4000 irregulars, and 64 guns. The loss on the part of the Turks was said to be 2000 killed and wounded, 2500 prisoners, and 2000 fugitives. Only 16 guns were left on the field, and these were lost owing to the want of reserve horses. The Russian loss was heavy; not less than 2000 killed and wounded. Great blame is thrown upon the Allies for not having taken measures to prevent such a defeat. France and England were well aware of the doubtful condition of the Turkish army, and had been only lately warned by the defeat of the Batoum corps. The English consular bodies in that part of Asia have never ceased impressing upon their responsible head the necessity of the presence there of an English or French division, however small the number. Three thousand would have sufficed, for it was needed only to encourage the Turks by their example.

The latest news from the Leghian frontier of the Caucasus, received at St. Petersburg, but not published in the *Invalide Russe*, reveals the appointment of the Czar's Lieutenant in Georgia, and fully adounts for the hesitation of the Russian General commanding on the Turkish frontier to follow up the advantages gained on the 6th ult. According to St. Petersburg letters of the 27th ult., the recent incursions and present position of Schamyl have imposed a powerful check on the Russian army. The Imaum has only with him a force of fifteen thousand men, but these are picked men. The corps has left, now here, now there, and generally where least expected, announcing itself by a heavy blow, and leaving behind it wailings for captured men, women, and cattle. The recent defeats in Cachetia were of this character. Letters received via Constantinople state that, with due assurances of support, the Caucasian tribes would develop their military resources to a surprising extent, and, instead of contenting themselves with these raids, would co-operate in a plan of general operations to an extent which we do not think of. At present, however, Schamyl and his little utilised as is that which the soldiers composing the Turkish army in Asia might render, were justice done to their bravery by the appointment of proper officers.

Through the representations of Lord Stratford de Redcliffe, General Guyon has been appointed to the chief command in Asia, in place of Mustapha Pacha; and Ismail Pacha, the hero of Kalafat, is appointed to a high post in the same a my.

TURKEY AND AUSTRIA IN THE PRINCIPALITIES.

The *Augsburg Gazette* gives some details relative to the arrangements entered into between Omer Pacha and General Hess for the occupation of the Principalities by the Austrian troops. The Austrians, it says, are to place garrisons in eighteen towns or large villages of Lesser and Greater Wallachia; but all the fords of the Danube, and all the forts lated points from Kalafat to Galatz and Ibrailla, are to receive Turkish garrisons. Omer Pacha is to pass the Jalomitza with 6000 infantry and 24,000 cavalry, and 120 pieces of cannon, and to advance to the river of Buseo, where he is to establish his head-quarters. After the Russians shall have evacuated Galatz and Ibrailla, the forks are to continue their advance on both banks of the Lower Sereth, and are to take up a position there.

Baron Hess, Commander of the 3rd and 4th Austrian army corps, issued the following proclamation when the Austrian troops crossed the frontier:—

Inhabitants of Wallachia and Moldavia.—In accordance with a convention concluded between the Emperor, my most gracious Sovereign and the Porte, the Austrian troops now enter into the Principalities. They will remove from you all the evils of war, and bring you the blessings of peace. Receive, then, those who will care for your future peace and security with kindness and confidence, and they will prove worthy of them by their behaviour, discipline, and subordination. The privileges granted to you by the Sublime Porte will remain in full force, but I expect from the authorities all possible assistance in providing proper quarters and provisions for the troops, for whose necessities indemnification will always be made. From the people I expect tranquility and order; for every disturbance, or even a menace of the same by riotous persons or parties, will be punished with the full severity of the law. All the authorities are now instructed from this day forward (the date is not given) to apply in all matters to F.M.L. Count Coronini, who has been appointed by his Majesty to the command, under my direct ons, of all the troops in the two Danubian Principalities, or to the military organs by him nominated.

The Russian Embassy at Vienna has received notice that the greater part of the Russian army will have quitted Moldavia by the 20th of September, and the remainder by the beginning of October, unless hostile operations should render a fresh construction necessary. Osten Sacken has announced to the Moldavian authorities his retreat from the Principality. The Moldavian militia has been forcibly incorporated into the Russian troops, which has caused great indignation among the people.

AUSTRIAN NEUTRALITY.

A Cabinet Council was held at Vienna, on Wednesday, at which the Emperor Francis Joseph presided, when it was decided that the rejection by Russia of the guarantees required by the Western Powers, through the Austrian note, does not amount to a casus belli. Austria, however, will persevere in supporting the said guarantees, as necessary for the restoration of peace and for the maintenance of the balance of power; and in the meantime will await the result of the operations undertaken by the Allied Powers against Sebastopol. Austria, for the present, is satisfied with having maintained a strict neutrality.

Meantime the Czar seems no more disposed to resent the conduct of Austria, in assisting the Turks to thrust Russia out of the Principalities than he was to quarrel with England and France for helping Turkey last winter, by shutting up his fleet in Sebastopol, and leaving his forts on the Black Sea without supplies.

THE AUSTRIAN AND PRUSSIAN NOTES TO RUSSIA

The following is the despatch addressed by Count Buol to Count Esterhazy, setting forth to the Cabinet of St. Petersburg the four points laid down as *sine qua non* bases for an arrangement with Russia:—

VIENNA, Aug. 10.

I had the honour to make known to you, by my despatch of the 9th ult., the impression which has been produced on the Imperial Cabinet by the communications which Prince Gortschakoff was charged by his Govern ment to make to it, as well as our intention to make known to the Maritime Powers the elements contained in those communications which might serve as the bases for negotiations for the re-establishment of peace. Although we do not conceal from ourselves the difficulties of the mission, since the overtures of Russia only imperfectly respond to the demands which we ourselves had addressed to her, we have not yet considered it our duty to point out to the Maritime Powers in what spirit the Emperor, our august master, desired to see them received, in attaching a particular importance to the resolutions which these Powers might come to. We have reminded the Cabinets of Paris and London that the common efforts of the Powers ought to be invariably directed towards the re-establishment of a solid and durable peace. We have expressed to them the opinion that no Power ought to expose itself to the reproach of having neglected any means calculated to put an end to the horrors of war, and we have concluded that the Maritime Powers would consciously weigh the question as to whether the reply of the Cabinet of St. Petersburg did, or did not, contain the germs of an understanding which might lead to a definitive pacification. The Cabinet of the Emperor endeavoured to procure for the overtures of the Court of Russia a reception by the Maritime Powers so that happy results might be obtained from them. We are, nevertheless, compelled to state that the first effect produced on the French and English Governments by the communication of the Cabinet of St. Petersburg, has not answered our expectation. The French and English Cabinets persist in considering the evacuation of the Principalities as the preliminary condition of any understanding, and they appear to think that no doubt should present that the integrity of the Ottoman territory will not be threatened by Russ a so long as it shall be respected by the Powers who occupy the waters and territory of the Sublime Porte. These Cabinets have also warned us that the answer to the despatch of the Chancellor of the Russian empire seeks to establish between the presence of the Allied troops, which was demanded by the Sublime Porte, and which took place in virtue of a diplomatic agreement, the effects of which must cease by common accord, and the fact of the entrance of the Russian troops on the Ottoman territory. As far as regards the religious question, the Courts of Paris and London think they see that in the opinion of Russia the religious protection which she pretends to exercise over the Greeks of the Oriental rite ought to be founded on a European guarantee, and they consider the full and entire independence of the sovereignty of the Porte could exist with such a system. The Courts of France and England, while proclaiming the interest which they take in the amelioration which is hoped for by the rayahs, nevertheless think that the reforms which are to be introduced in the administrative regulations should emanate from the initiative of the Ottoman government, and that any foreign action on that subject can only be in the form of good advice, and not by an intervention based on treaties, which no power could sign without renouncing its independence. The Cabinets of Paris and London have, in fine, observed that the Russian Cabinet has avoided touching on that point of the protocol which ought to have excited its particular attention, and which was, in the opinion of those Cabinets, of the greatest importance, as it implied the necessity of sufficient guarantees against any fresh attacks upon the balance of power in Europe. The Governments of France and England think that the sacrifices which they have made are too great, and the object they have in view too important, for them to allow themselves to be stopped until they are certain of not having to recommence the war. From all these motives the Maritime Powers have thought their duty to reject peremptorily any proposition which might lead to a suspension of hostilities on their part, and they have even hesitated to declare their opinion on the conditions of a treaty of peace, because those conditions depend too much on eventualities for them to be determined in at present. On our urgent representations, these Powers have, however, consented to make known to us their views, under the reserve of such modifications as circumstances may render necessary, the guarantees which appear to them indispensable to found solid bases for the re-establishment of peace, and the maintenance of the balance of power in Europe, and they leave to us the liberty, if we think proper, of declaring our opin on on the subject in our own name to Russ a. These guarantees are pointed out in the identical note, of which the copy is subjoined, and which the representatives of France and England have addressed to the Imperial Cabinet, and as they agree with the principles laid down in the protocol of the 9th April, they are consequently in conformity with our own views. The Imperial Cabinet, which sees no other practical means of entering on the path of negotiations than the acceptance of them by the Cabinet of St. Petersburg, warmly recommends them to the serious attention of that Cabinet. In reading the present despatch to the Count de Nesselrode, and in leaving a copy of it, point out all the motives which speak in favour of an unreserved acceptance of the bases on which alone we think it possible to put an end to the calamities of war which have already cost so many sacrifices, and which must inevitably acquire increased extension. Austria sees in the free acceptance of these bases the only necessary condition for a solid peace, and the chance of a general understanding. If the Cabinet of St. Petersburg acceded to the four guarantees in question, it may rely on our zeal for the serious representations which we shall address to the Maritime Powers, in order to induce them to open negotiations as soon as possible on these bases, and to obtain at the same time the suspension of military operations. We once more conjure the Court of Russia to consider the immense importance of the resolution which is about to come to, and it is unnecessary for us to recommend you to employ all the means in your power, in order to cause that resolution to be in favour of peace. As the importance of the state of affairs will excuse the impatience with which we await the reply that will be given to you by the Russian Cabinet, I beg you transmit it to us as soon as possible. Accept, &c.,

BUOL.

The following letter has been addressed by M. de Manteuffel, the Prussian Minister of Foreign Affairs, to Baron de Werther, the Prussian Minister at St. Petersburg.

BERLIN, August 13.

I had the honour to transmit to you with my despatch of the 5th inst a copy of that which I addressed on the 24th ult., to the representatives of the King at Paris and in London, in order to communicate to those Cabinets our impressions on the Russian replies of the 28th and 30th July, and to express to them our hope that they would agree with us in seeing therein the elements of an understanding and of negotiation. Although we have not received either from London or from Paris any direct reply to these overtures, confidential and verbal communications which have been made to us will not allow us to conceal from ourselves that the manner in which the Governments of France and England appreciate the Russian declarations differs essentially from ours, and that there is little of a nature to offer to us a common starting point. It was particularly the prolonged presence of the Russian troops in the Principalities, which, in the opin on of the Western Powers, would prevent them from attaching any practical value to the pacific enunciations of the Cab net of St. Petersburg. The adhesion to the principles laid down in the protocol of the 9th April, did not, moreover, appear to them sufficiently complete, since it makes no mention of the guarantees which, according to the same protocol, were to be sought for, in order to more closely attach the existence of Turkey to the general balance of power in Europe. The Cabinets of Paris and London have not concealed from us that in their opinion these guarantees ought to contain several principal points, which, subject to modifications dictated by events, would naturally form the indispensable basis for a negotiation of peace or armistice. These points were afterwards set forth in the identical notes which the representatives of France and England sent to the Cabinet of Vienna, and to which the latter adhered in its reply. In informing us of it, it announced to us at the same time that it considered them as being founded on the principles laid down in the protocol of 9th April; and that, consequently, it could not too warmly recommend its unreserved acceptance to the Cabinet of St. Petersburg. I request you, Monsieur le Baron, according to the express order of the King, to give all the support in your power to this step of the Court of Austria. Our august master considers it to be dictated by a sincere desire to prepare the path of negotiations and a suspension of hostilities on all sides, and his Majesty also thinks it suitable to facilitate that result. The Emperor himself will be convinced of the necessity of obviating for the future the inconveniences and the dangers which, both for Russia as well as for the repose of Europe, are attached to the institutions which form the public law of the Danubian Principalities and of Servia, and the enlightened solicitude of his Majesty for those countries will not fail to point out to him the advantages and benefits which would be secured to them by a collective guarantee of their privileges by the European Powers. The free navigation of the Danube cannot but be favourable to the real interests of Russian commerce; and although the obstacles to which it is subjected at the mouths of that river are not yet entirely removed, the enlightened spirit of the Emperor and the reiterated declarations of his Cabinet leave no doubt as their firm intention to put an end to them promptly. As to the privileges of the Christian subjects of the Porte, it is not only by adopting the protocol of the 9th of April that his Imperial Majesty has declared himself in accord with the principle of a joint and collective solicitude of the Powers for the condition of our co-religionists; the same idea had already presided over the measures which the Cabinet of St. Petersburg made some time since on this subject at Berlin; and as the independence and sovereignty of the Sultan have been solemnly recognised and so loudly proclaimed as being in conformity with the political views of the Emperor, his Majesty could not refuse his co-operation to the united efforts of the Powers to reconcile the amelioration of the condition of the Rayas with the interests of the Ottoman Government, by securing to the latter the initiative which it requires to maintain its independence and its dignity. The treaty of the 13th of July, 1841, was the result of such peculiar circumstances, that its revision by all the contract ing Powers cannot in principle meet with any difficulty; and Russia, as the Power adjoining the Black Sea, appears specially called on to unite in the examination of the important questions attached to it. Such, Monsieur le Baron, are the general considerations which induce the King, our august master, to desire earnestly that the Court of St. Petersburg should accept as the basis of an ulterior negotiation the above mentioned points, such as they have been set forth by Austria in accord with the Cabinets of London and Paris. Be pleased, therefore, to avail yourself of the kindness with which the Emperor deigned to honour you immediately on your arrival at St. Petersburg, and of the full confidence which M. de Nesselrode has testified towards you, to make the Imperial Cabinet comprehend the immense importance attached to its decisions, the broad perspective of peace which they may open to Europe, and the victorious effects which they must produce over the detractors of Russian policy, if they prove to be adversaries on which side really pacific dispositions are to be found. It is needless for me to mention Monsieur Le Baron, with what impatience we await your communication as to the reception, and the effect of the present despatch, which you will please make known without delay to the Chancellor of the Empire.—Accept, &c.

MANTEUFFEL.

AMERICA.

The steam-ship *Arabia*, which left New York on the 23rd ult., arrived at Liverpool on Saturday evening last. Congress having adjourned, the political as well as the fashionable world is at the watering-places. Philhemonic expeditions are, however, openly spoken of as in progress, and the number of men, stands of arms, and even day of sailing indicated. The results of the August elections are, in general, favourable to the Opposition. The Administration have carried North Carolina by a decidedly increased majority, and have lost ground in Missouri. The Whigs have, for the first time, carried Iowa on anti-Nebraska grounds.

A great pressure still continues in the Money-market throughout the country, not caused so much by scarcity of money as by want of confidence. Money is in fact abundant where the securities are of undoubted character. The downward tendency of railway securities continues.

The cholera was gradually disappearing from New York. Another fatal fight had occurred between the Irish and Americans. At a small village near Boston, a party of Irishmen had attempted to hoist a liberty pole on the top of it. This caused a riot, and resulted in the death of two or three persons.

THE MAURITIUS AND CAPE OF GOOD HOPE.

The mail-packet *Argo* arrived at Plymouth on Monday evening, with the mails from Mauritius, Madras, and the Cape. She left Mauritius on July 10; the Cape, on July 26. Cholera was still prevailing at Port Louis, although the epidemic is very fatal in some of the rural districts. About one-fifteenth of the population have been swept off by this fatal scourge—nearly 4000 from Port Louis, and the remainder from the rural districts. The negro population suffered most, as distinguished from the Indians and Europeans.

The Cape of Good Hope Parliament commenced its sittings on the 26th June. The colony is enjoying profound repose within and without its borders. The only novelty is the copper-field in Namaqualand, which promises to equal the famous mines of South Australia. Several companies have been already formed to work them: the whole district appears to be one mass of copper.

A SKIRMISH AT SHANGHAE.

A private letter from Shanghae, of June 21, which we have received, contains the following account of a skirmish between the Imperialists and a party of English Marines:—

Shanghae, June 23.

On the afternoon of the 21st June, a smart skirmish took place between a party of several hundreds of the Imperialist soldiers and fifteen Marines of the guard commanded by an officer of H.M.S. *Grecian*. We have heard that it began thus:—Vivia, the Imperialists had attacked the city we is and defenders with unusual vigour. Heavy firing was kept up on both sides. In the ardour of the fray the Imperialists advanced so close to the walls of the foreign settlements as to endanger the lives of those within it, and to render it necessary to call out the guard. The Marines had with them a favourite Chinese boy, whom they sent to tell the encroaching party to move further off, and warn them away. This boy was fired upon. The Marines are said to have returned the fire, and balls were flying thickly about—one Marine was shot through the jacket. Next day the Admiral, dressed in full uniform, went to the Chinese General, and spoke strongly to him—made him understand that, if he did not mind what he was about, he would bring on hot war with the English, and would not leave a single Chinese junk afloat or up. He gave him four hours, and within that space of time five Chinese were sent in to the Consul accordingly.

THE CHOLERA.

The severe outbreak of cholera in part of St. James's parish, and in the adjacent parts of the parish of St. Anne, Soho—as the weekly deaths from cholera are reported in the Registrar-General's return for last week—has been promptly met by the sanitary and other preventive measures carried out by the Boards of Guardians, under the advice of the General Board of Health. The President of the Board himself went over the affected district on Tuesday morning, with the view of seeing for himself the real amount of evil, to encourage local efforts, and allay alarm by his presence. He visited Dufour's place, Broad-street, Silver-street, and other infested localities in the neighbourhood. Groups of people formed themselves in the street, and evinced much gratitude at his presence. The scenes in those districts are of a most distressing character. The Guardians are acting most energetically, and every credit is due to them. The same may be said of many other districts.

Inquiries have been instituted and assistance rendered, where necessary, in the following parishes and unions:—Lambeth, St. Saviour's, St. George's, Southwark; St. Mary, Newington; Camberwell, Kennington, Rotherhithe, Greenwich, St. Olave's, Stepney, Poplar, Bethnal-green, Shoreditch, St. George's in the-East, Whitechapel, Chelsea, and Paddington. Each of the other districts of the metropolis will shortly be reported on. The President has directed special attention to the supply of water in the several localities; the source of supply; whether filtered or not before supply; and when two companies supply in any one district, the inspector is to state whether the disease is more prevalent in one district than in the other, having due regard to similar classes of dwellings. Inquiry also will be made into the state of the sewers. The inspector is also to report whether in those places which were the seats of disease in past years, the epidemic has appeared in a less virulent form where drainage and general improvements have been carried out. House to house visitation is strongly recommended, and distinct areas are to be allotted where necessary. It is reported satisfactory to find that the local authorities have exhibited the greatest willingness to adopt any suggestions from the General Board of Health. After the inquiry is concluded, each inspector will make a report on the district assigned to him. He will state the powers given to local authorities, and the defective state of those powers (if any), that the subject may undergo the consideration of the Legislature next session; and in the meantime the inspectors send in daily reports to the Board, which are noted by the President and returned to the inspectors early next morning, before they proceed to their inquiry. Inspectors are also appointed to visit the shipping in the river, and report thereon.

SKETCHES AT CONSTANTINOPLE.

THE FRENCH SCREW STEAMER "CHARLEMAGNE" PASSING THE CASTLES OF EUROPE AND ASIA.

THE "CHARLEMAGNE" AT CONSTANTINOPLE.

WE have been favoured by two Correspondents at Constantinople with the two accompanying Scenes from that capital, which possess considerable interest, from their connection with incidents of the war. The waters of the Bosphorus have teemed with transports and steamers for the last few months; but on the 15th ult., there was an unusual activity, and many vessels passed up into the Black Sea.

On the 14th, the French screw-steamer, *Charlemagne*, represented in the accompanying Sketch, sailed down from Buiuk-dere, anchored before Dolmatseghdaché, where she embarked a large number of troops, and took on board two *chalands*, or lighters, one on each side. On her way up, the day following, she took two transports in tow. She is here represented passing the Castles of Europe and Asia, opposite Bevek, whence the Sketch is taken. In the background are seen the Anatolie Hissar, or Castle of Asia, and the Valley of the Heavenly Waters. The sea is higher than is usual for the Bosphorus; but, as was the case then, when a very strong north wind blows for several days successively, it succeeds in agitating to a great degree the waters of the usually smooth surface of the Bosphorus. In this particular place the current is very strong, and many a time both tugs and steamers have scarcely been able to stem its impetuosity, and frequently they are carried over to the Asiatic shore before they are able to pass up; in some instances the hawsers have parted, and the vessel in tow has been carried down the stream. The *Charlemagne* had great difficulty in passing up; at times it appeared as if she would not be able to withstand the force of the current; at last she steamed over to the other side, and finally made the passage.

FRENCH MILITARY BARRACKS OUTSIDE PERA.

THIS fine building was erected for a medical school, and was used as such until recently, when the Turks have permitted the French to use it as a Military Hospital. It is finely situated on the top of Dolmabagdché-hill, and commands a splendid prospect of the Golden Horn, Seraglio Point, Scutari, the Marmora Sea, with its Princes' Islands, and the snow-capped Olympus, at the foot of which Brôsa lies, in the extreme background. You can also see up the Bosphorus a considerable distance. The burying-ground at the back of it is an Armenian one; but no one need fear its proximity, for, although travellers talk about the thick mist which hangs over the burying-grounds here, the reality is quite different. This one in particular is much resorted to as a promenade. At the foot of this hill is the Sultan's new palace, a small portion of which is visible in the Sketch.

By the latest intelligence received from Constantinople, it appears that, although a decided improvement has taken place in the health of the British and French armies, cholera still exists, and much fever. General d'Espinasse, and forty-five other French officers, have come from Varna invalided. A great number of British officers are staying at Therapia and Buyukdere, invalided. Prince Napoleon is still at Therapia; he will return, however, shortly to Varna. His Royal Highness the Duke of Cambridge, who is likewise unwell, is expected here to spend a few days. Captain Smyth, of the *Simoom*, has died of cholera; he dined with the Admiral the day before he was first taken ill, and the day following he had ceased to live.

The *Himalaya* was getting up her steam—it is supposed to re-embark the Scots Greys, who are quartered at Kuleli, in the Bosphorus, and said to be ordered up to Varna.

THE FRENCH MILITARY BARRACKS, OUTSIDE PERA.

REAR-ADMIRAL PLUMRIDGE.

This gallant officer, whose activity and judiciousness in the recent capture of Bomarsund are distinguished by high commendation in the official despatches, entered the naval service in 1799, in the *Osprey*, on the home station. In August, 1806, he received his commission as Lieutenant; and subsequently served in the *Leda*, at Egypt; the *Defence*, at Trafalgar. For upwards of seven years after his promotion, he served in various ships in home, West India, Baltic, Cape of Good Hope, and Mediterranean stations. On May 1, 1809, we find him commanding the *Melpomene's* boats, and effecting the destruction, with admirable gallantry, of a Danish cutter-of-war of six guns and several merchantmen lying under the protection of a tremendous fire in the harbour of Hulbo, on the coast of Jutland, where the British sustained a loss of one Lieutenant, George Rennie, and five men severely wounded; and, not long afterwards, contributing to the repulse, by the same ship, of a flotilla of twenty gun-boats, whose fire in the course of a vigorous action killed and wounded thirty-four of her people, besides inflicting considerable damage on her hull, sails, and rigging. In December, 1810, he assisted at the reduction of the Isle of France; in October, 1813, he had charge of the boats of the *Resistance* at the destruction of the batteries and the capture of a convoy in Port d'Anzo; and, in 1814, he acted as Sir Edward Pellew's aide de-camp at the reduction of Genoa. He was made Commander in 1814; and acting Captain of the *Amphitrite*, 38, in 1817; and, in 1822, he was posted. Since this time he has been employed—in 1831, in the *Magicienne*, on the East India station; in 1837 he was appointed Superintendent of the Packet Establishment at Falmouth; and, in 1847, to the *Cornubian*, 40, in the East Indies, where he had his broad pennant flying as second in command. From 1841 to 1847 Captain Plumridge sat as M.P. for Falmouth. In 1842 he was appointed Storekeeper of the Ordnance; in 1847 he was awarded the Good Service Pension; and, on the 1st October, 1852, he received his flag as Rear-Admiral. He wears a medal with two clasps for Egypt and Trafalgar. Admiral Plumridge was appointed to command the squadron of paddle-steamers attached to the Baltic Fleet, and has his flag in the *Leopard*, whose services at Bomarsund received this high encomium from Vice-Admiral Sir C. Napier, Commander-in-Chief:—"I owe much," says Sir Charles, "to Admiral Plumridge for the manner in which he placed his squadron to prevent reinforcements being thrown in; and I am informed that two Russian Admirals were sent among the islands to see if it were possible to pass the blockading squadron, and they returned in despair. Rear-Admiral Plumridge, as second in command, I have removed into the *Neptune*."

REAR-ADMIRAL PLUMRIDGE (BALTIC FLEET).—FROM A FAMILY PAINTING.

NEW SOUTH WALES REGATTA CUP.

This very elegant Plate Prize, has been designed and executed by Messrs. Hunt and Roskell. It is altogether a very characteristic composition. Surmounting the cover is a group, representing Wisdom instructing a youthful British sailor in the art of navigation. The handles of the Cup are formed of sea-horses; and in the panel on the body is a relievo of a yacht race. The body is decorated and supported with aquatic plants, such as the lotus, bulrush, &c., rising from rocks, over which water is flowing; around the base are a Triton and a Naiad.

NEW SOUTH WALES REGATTA PLATE.

The Cup is mounted on a black wood pedestal, which is decorated with silver panels, containe the following inscription:—

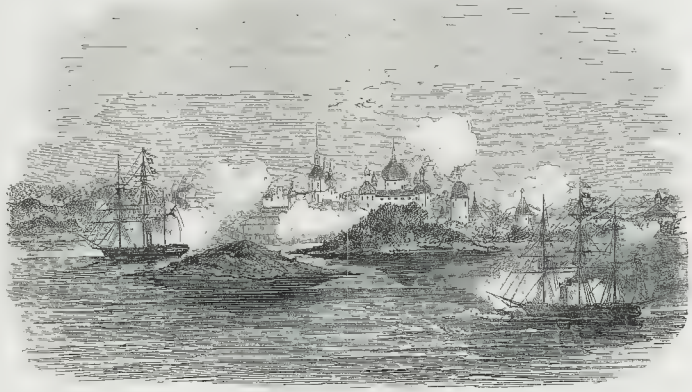
This Cup, of the value of 200 guineas, is presented by the Committee of the Anniversary Regatta for 1855, to the owner of the race for first-class yachts, in commemoration of the foundation of the colony of New South Wales, having been purchased out of the surplus funds of the Regatta for 1854.

OPERATIONS OF THE WHITE SEA SQUADRON.

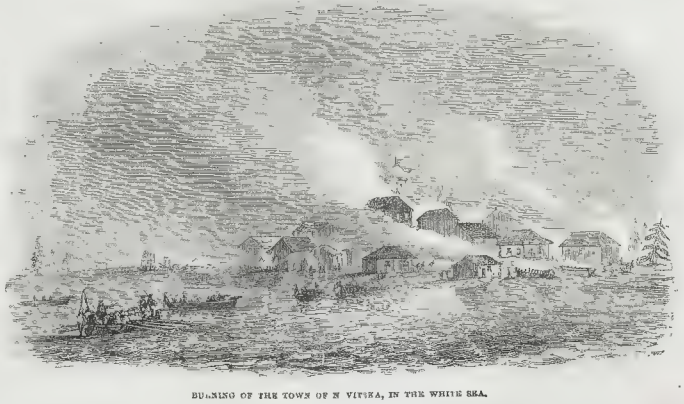
The Intelligence from the White Sea, which comes down to the end of July, shows that the English squadron in that distant region has not been idle. On the 26th of June the three vessels of which the squadron consists arrived off the bar of the Archangel river, having boarded a large number of ships, chiefly Dutch, on their way down the White Sea. The weather is described as being bad: what with brisk gales, thick fogs, and strong currents, the men have quite enough to do to keep the vessels out of danger. On the 3rd of July they tried to get the steamers over the bar of the Dwina, inside of which lay a 12-gun Russian brig, two steamers, two schooners, and nineteen gun boats, each mounting two long 32-pounders. Unfortunately, the depth of water on the bar was not sufficient, and they were obliged to give up the attempt. They ascertained that the Russians had a garrison of 6000 men at Archangel, and that they had thrown up several strong batteries to defend it. Our ships, however, will not be able to attempt anything against it this season, as the *Miranda* and the other two vessels draw so much water that they cannot approach within three or four miles of the fortress.

The town of Novitska was burned to the ground on the 23rd July, by the steamers *Brisk* and *Miranda*. Our Correspondent, who has forwarded two Sketches of the place—one as it appeared previous to the fire; and the other while it was in flames—speaks of another town, which he calls Saviocteka, having been bombarded "with shot, shells, grape, canister, and red-hot shot, from seven in the morning till five in the afternoon. We drove them from their batteries fifteen times, and their loss must be immense." The following extract from a letter from a Marine on board the *Miranda* gives a short notice of both affairs:—

We have been to a place called Savelisgney, and we sent the boat on shore with a flag of truce; but they would not surrender it, so we had to fight; but, after twelve hours' fighting, we had to give it up for some time longer. There were only the *Brisk* ship of four ten guns, and the *Miranda* of fifteen guns. We left our largest ship here, until we came back, to protect an English coal brig that had come out to us with coal. The *Brisk* lost no one, nor had she any wounded; we had a man killed—King Marshall, a black man. We had one that had his right arm shot off, but he is getting on nicely. We left there the next day for another place, where there was a small monastery, but they paid ransom for that, so we left that for another place, and when we came there they would not come to terms, so we manned and armed boats the next morning, and landed our marines and sailors to the left of the town, and proceeded up closer to the town with the gun-boats. They opened fire on us, but hurt no one. We soon silenced their guns, took the town, and burnt it to the ground. We left the same night for another monastery, twenty miles from the place we left; but they paid ransom some say five thousand pounds, others fourteen thousand pounds; but I think the last is right. The *Brisk* then sailed for Cross Island, we for Archangel Bay. We took one prize that night, burnt her, arrived at Archangel the next day, sailed for Cross Island, took another prize, arrived next morning at Cross Island, and coaled ship. We all sail to-morrow for the place we could not take. There is the *Euryalus*, 28 guns; *Miranda*, 16 guns; *Brisk*, 14 guns. I think we shall take it this time, for we shall man and arm boats; but I have not the least doubt but that there will be slaughter on both sides, for this is a very bushy country. We shall leave here in about six weeks, for it will soon begin to freeze. I expect this will be our last action this year.



ATTACK ON THE TOWN OF NOVITSKA, IN THE WHITE SEA, BY THE "MIRANDA" AND "BRISK."



BURNING OF THE TOWN OF NOVITSKA, IN THE WHITE SEA.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 10.—13th Sunday after Trinity. Mungo Park died, 1771.
MONDAY, 11.—Thomson (poet) born, 1700. Lord Thurlow died, 1806.
TUESDAY, 12.—Siege of Vienna, 1683. Battle of Aberdeen, 1654.
WEDNESDAY, 13.—C. J. Fox died, 1806. General Wolfe killed, 1759.
THURSDAY, 14.—Duke of Wellington died, 1852. Moscow burnt, 1812.
FRIDAY, 15.—Mr. Huskisson killed, 1830.
SATURDAY, 16.—George I. landed in England, 1714. Buck-hunting ends.

TIMES OF HIGH WATER AT LONDON-BRIDGE
FOR THE WEEK ENDING SEPTEMBER 16, 1854.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.—A COMPLETE SET of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (24 Vols.), in cloth, £22 17s.; £16 17s. in paper.

Any of the Volumes, in paper or cloth, can be had separately.

Price of each Volume in cloth:—Vol. I., 21s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 25s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in paper, 5s. per volume less.

TO CORRESPONDENTS.

J. C.—King Charles I. was executed on a scaffold erected in front of the Banqueting-house, at Whitehall, towards St. James's park, i.e., facing the present Horse Guards. The warrant directs that the King should be executed "in the open street before Whitehall;" and Lord Leicester's diary, Dugdale's diary, and a single sheet of the time, preserved in the British Museum, prove that the King was beheaded at Whitehall gate. Herbert's minute account states that there was "a passage *broken through the wall*, by which the King passed unto the scaffold." Dugdale's view states that the King "was conducted to the scaffold out of the window of the Banqueting-house;" which is confirmed by an engraving of the execution published at Amsterdam in the same year, and by the following memorandum of Vertue's, in the copy of Tarasseen's large engraving of the Banqueting-house, preserved in the library of the Society of Antiquaries:—"It is, according to the truest report, said that out of this window King Charles went upon the scaffold to be beheaded, the window-frame being taken out purposely to make the passage to the scaffold, which is equal to the landing-place of the Hall withinside." The window marked by Vertue belonged to a small building abutting on the north side of the present Banqueting-house. Cunningham's "Hand-book of London," 2nd edition, says Whitehall. The doubt upon the latter point would appear to have arisen from Herbert's representing it as "a passage broken through the wall," whereas it was made by taking out the window-frame. The statement that the execution took place at the back of the Banqueting-house, and that the statue of James II. is pointing to the spot where his father was executed, is a two-fold vulgar error, long since exposed, though still repeated.

A SUBSCRIBER, Durham.—You will find your questions respecting Militia Regiments fully answered by an article in another part of this day's impression.

CIVES may well be annoyed. It is never very agreeable

To see ourself's as others see us;

and he may rely upon our Correspondent having seen all he described. The best reply to his remarks will be to adopt such measures as should hereafter defy similar strictures.

STAY AT HOME needs no reply. He is doubtless best at home.

DELTA, Quebec.—We have not space for the details of your suggestion, that plank roads should be formed from Varna, or other points of disembarkation along the main routes pursued by the army, forming, thus, most efficient lines of operation; which could be traversed with little fatigue either to men or horses, and with a rapidity which would be most sensibly felt in the transmission of provisions, or heavy stores

M. D. Dublin, is not recommended to make the experiment

AN EPAULETTE MAKER complains, that, by the recent decision to discontinue the wearing of epaulettes in the dress of our Army, several hundred makers of those articles are thrown out of employment; the publication of which fact, the writer hopes, may obtain the sympathy of the public.

TORY.—Militia regiments may be sent to any part of Great Britain or Ireland, but not to foreign stations. The only exception is the Royal London Militia, which is free from all save local duties.

W. C., St. James's; M. B.—Declined.

CALEDONIA.—*Le sabre-baionnette le furil* is manufactured under the supervision of M. Treill, chief of the Artillery squadron. It has a very small bore, and represents a weapon of nearly seven feet long. It is loaded at the breech, and can be charged with such rapidity that several rounds may be fired in a minute. It carries a distance of 1200 *mètres*, French measurement. The principal Government manufactories for sabres are at Chatellerault and Lisle. The state Imperial foundries for guns and projectiles are at Douay, Strasburg, and Toulouse. We are not aware that any specimen of this arm has hitherto reached England.

*** In a small portion of the Early Edition of our Journal of last week, the large ENGRAVING, at pages 204 and 205, was described as a Panoramic View of Varna, instead of SULINA, and the Adjacent Coast.

THE ROYAL MEETING AT BOULOGNE.

On SATURDAY next, will appear in

THE ILLUSTRATED LONDON NEWS,

A SERIES OF SPLENDID ENGRAVINGS
OF THE
ROYAL MEETING AT BOULOGNE;

The Camp; and the Grand Reviews; and other Illustrations of this very Interesting Event.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 9, 1854.

SOME of our youthful readers may require to be informed, and readers no longer youthful may thank us for reminding them, that in the year 1804 the heights above and about Boulogne were covered, as now, with armed men, their camps formed, as now of thatched huts—that the harbour of Boulogne, with all the neighbouring harbours, from Dunkirk to Havre, were filled with armed boats, and that the flotilla and troops, gathered together around Boulogne, were called the Army of England, and were intended to invade it. They only waited the appearance in the Channel of the combined fleets of France and Spain, to make a descent on the country. A serious apprehension of invasion then filled the minds of our statesmen, and disturbed the repose of the people. The whole nation was armed for its protection. At Boulogne, the legions were animated by the fiercest hatred of the English, and the most ardent hopes of the great booty they were promised, as the reward of their courage and success in conquering the "Peru of Europe."

In the middle of August, 1804—fifty years ago, to within a few days—the first Emperor of the French was reviewing, at Boulogne, the flotilla and the troops by which he threatened and alarmed England. Another Emperor is now in his place, again the heights of Boulogne are covered with armed men, and again the harbour of Boulogne is crowded with vessels. They are now, however, the vessels of England, which have borne to France the husband of the Queen, surrounded by her Ministers, Generals, and Nobles. Her own yacht has headed the squadron, bearing in unity the standards of France and England; and the Prince and the Emperor, as the former steps ashore, join hands heartily in friendship. Their only rivalry is, who shall display most friendliness and be most courteous. The music of the French army welcomes the Prince with the English National Anthem. The Emperor, amidst English cheering, hastens to conduct his guest to his Palace, and to exhibit, for the Prince's admiration, the great military power he has assembled. All its strength and magnificence are displayed; and the Prince, with the Ministers and Generals who surround him, see in the display only advantages and security for England. Crowds of Englishmen share in the exhibition, and sleep all the sounder after witnessing the great power that was formerly used to terrify their fathers. From such a state of mutual hostility to such a state of mutual confidence and friendship, in the short period of fifty years, the change is more striking than any recorded in the whole history of the two nations.

It has, nevertheless, been gradually and perceptibly brought about. When the barrier of war was removed from between the two people, each learned to admire in the other many qualities besides the patriotism that had made them enemies. They became mutually friendly and mutually serviceable. Under the elder Bourbons—under Louis Philippe—under the present Emperor—the approximation of the two people has been rapid and continual. It has been much promoted by their present rulers. Their intercourse has extended, their mutual trade has enlarged, their policy has assimilated, till people and Governments have become united in the pursuit of a common good. Their interest and their progress in civilisation have become identified; in the cultivation of the arts, in the enlargement of science, and in the improvement of morals, they are one. Were they not now friendly and united, Barbarism might get the upper hand, and the old combination of Despotism and Serfdom again prevail throughout Europe. The present policy of the Sovereigns of England and France accords with the best interests of their people—is founded on these, and has no personal objects. It is not dictated by dynastic interests or private ambition. Gradually, through a period of forty years, the two nations, under the natural influence of mutual benefit, have been growing more friendly; and the meeting at Boulogne, between the Emperor of the French and Prince Albert, very important historically in itself, is still more important as a type of the union between the two people. It continues and strengthens the mutual friendship, and is a guarantee for the continual progress of Civilisation, and its ascendancy over Barbarism. To compare it with the meeting between Henry VIII. and Francis I., called the Meeting of the Cloth of Gold, comes aptly to every reader of history; but that was intended to display the rival prowess and finery of the two first gentlemen of the age; while this is to consolidate and confirm a union which time and nature, after long ages of hostility, has brought about between the two greatest nations of the globe. For upwards of two centuries, with slight intervals, the rival interests and the hostility of France and England have been the parents of continual disturbances in Europe, in Asia, and in America. The meeting, which is the type of their friendly union, and meant to consolidate it, may be regarded as the herald of a still more durable peace, after the present necessary contest is brought to an end, than the world has enjoyed by their mutual agreement for the last forty years. Till a recent period it was, with some reason, apprehended that the Sovereigns of Europe had ceased to be, as in the olden times, the leaders of the people, and were becoming united in a league to stop their progress, and the progress of Civilisation. The Queen of England and the Emperor of the French have dispelled the apprehension, and, by their united policy, have placed themselves at the head of the peaceful progress which tends to amalgamate civilised nations, and secures at once the stability of Thrones and the freedom of the People.

SOME bread-riots have taken place this week at Nottingham and Aylesbury, and considerable agitation on the subject of dear bread has arisen at Taunton, Devonport, and other towns in the West of England. Complaints, too, have found their way into the metropolitan journals, of the continued dearness of bread, though the price of wheat and flour has fallen very much. For the blessing of an abundant harvest—the wheat-crop being on the whole the largest probably ever grown in England—the nation cannot be too thankful; and the people, after experiencing for some months the calamity of dear bread, are very naturally impatient to share fully in the bounties of Providence. The way, however, to obtain their share, is not to collect into mobs, and break the windows of bakers, but to buy of the cheapest tradesmen, and so encourage them all to sell at the lowest reasonable rate. In the bakers' shops of the metropolis, we see such notices as "Down again—the four-pound loaf 6d.;" and, generally speaking, bakers are so numerous, the trade is so completely free and can be so easily carried on—it being competent, too, for every housewife to make and bake her own bread—that it is almost impossible for the bakers to keep the price unduly high. They do not in general make large fortunes suddenly, and we do not believe that, as a body, they are deserving of public condemnation. The millers, at present, stand in a different position. The condition of the harvests and markets abroad, and an existing prohibition in France to export, which remains in force till the end of the year, relieves the millers, for the moment, from any competition from abroad. Only a very small quantity of the new wheat can yet have reached them, and they are likely to resist, as long as they can, a fall in the price of flour, which must affect all the stock of wheat and flour in their possession acquired at a higher price. It is, accordingly, remarked that flour has not yet fallen in proportion to wheat; but, even if the millers, over anxious for their own interest, have kept the price of flour too high, they should no more be mobbed than the bakers. A reference to the price of wheat and price of flour, a few weeks ago and now, with a probability of flour being speedily imported from Spain and Hamburg, will be more efficacious in correcting their conduct, than attacking their mills. In the first week in July, the top price of white wheat in Mark-Lane, was 82s., and the top price of town-made flour, per sack, was 68s. At present the top price of white wheat is 58s., and of English flour, 55s. While the price of wheat, therefore, has fallen 24s., or very nearly thirty per cent, the price of flour has only fallen 13s., or not quite twenty per cent. But it must be remembered that there is no fall in the wages of the additional labour employed by the miller, and we must not expect flour always to fall exactly in proportion as wheat falls. The one, too, must come after the other, and a further fall in flour may be expected next market-day; while the latest report of the Corn-market is that the price is firm, and, possibly, a further reduction may not now take place. At present, flour is relatively too high-priced. To subject every kind of business to a fair public examination is highly useful, but it must be accompanied by leaving every market free and every tradesman fully at liberty to sell or not on the terms which he thinks proper to ask. The very abundant harvest promises most favourably for the people; but they must remember that, at present, the stocks of old wheat are certainly not large; that we have for several years imported annually large quantities of wheat and flour; that, at present, prices abroad—which must have a great influence on prices at home—are not lower than here; and the people will show themselves very ill-deserving of the great blessing of freedom of trade, which has caused them, in a year of great general dearth to be well supplied with food, if they now riotously interfere with the liberty of either bakers or millers.

LATEST INTELLIGENCE.

THE CRIMEA EXPEDITION.

There is no longer any doubt as to the sailing of the expedition against Sebastopol. By the *Perseles*, which arrived at Marseilles on Tuesday from Constantinople to the 30th ult., have been received. Up to the 29th the whole of the Duke of Cambridge's division, comprising the Guards, and the 42nd, 79th, and 93rd Highland regiments, as well as the 28th and 44th Regiments, had embarked. The Light Division was under orders to embark. Lord Cardigan's brigade was also under orders to embark. The 1st battalion of the Rifles, and several other regiments, had gone up to Varna.

The first division of the fleets will convey 14,000 men belonging to the Fourth Army, and from 500 to 600 horses, with seven batteries, mounting thirty-six guns. The other will convey the Ottoman army, of about 10,000 men and 800 horses. The British army, a part of which is already on board the steamers which have arrived direct from England, will also be thrown on the coast of the Crimea to the number of 21,000 men and 1000 horses, with thirty-six guns. Thus, the first expeditionary army will land about 50,000 troops; who, six or eight days afterwards, will be reinforced by an additional number of from 25,000 to 30,000 French troops, and from 6000 to 8000 English troops.

The names of the Allied fleets have asked, and obtained, the honour of forming part of the storming-party at Sebastopol. The whole of the troops are described as being animated with the most intense enthusiasm. It is also most gratifying to learn that the cholera has entirely disappeared.

Fodder being wanted for the cavalry round Varna, the strength of the French horse, the Hussars, and a part of the Chasseurs d'Afrique, have been thrown from Constantinople to the 30th ult., have been received. Up to the 29th the whole of the Duke of Cambridge's division, comprising the Guards, and the 42nd, 79th, and 93rd Highland regiments, as well as the 28th and 44th Regiments, had embarked. The Light Division was under orders to embark. Lord Cardigan's brigade was also under orders to embark. The 1st battalion of the Rifles, and several other regiments, had gone up to Varna.

The first division of the fleets will convey 14,000 men belonging to the Fourth Army, and from 500 to 600 horses, with seven batteries, mounting thirty-six guns. The other will convey the Ottoman army, of about 10,000 men and 800 horses. The British army, a part of which is already on board the steamers which have arrived direct from England, will also be thrown on the coast of the Crimea to the number of 21,000 men and 1000 horses, with thirty-six guns. Thus, the first expeditionary army will land about 50,000 troops; who, six or eight days afterwards, will be reinforced by an additional number of from 25,000 to 30,000 French troops, and from 6000 to 8000 English troops.

The names of the Allied fleets have asked, and obtained, the honour of forming part of the storming-party at Sebastopol. The whole of the troops are described as being animated with the most intense enthusiasm. It is also most gratifying to learn that the cholera has entirely disappeared.

Fodder being wanted for the cavalry round Varna, the strength of the French horse, the Hussars, and a part of the Chasseurs d'Afrique, have been thrown into Varna from Gallipoli, and from 4000 to 5000 English troops.

The names of the Allied fleets have asked, and obtained, the honour of forming part of the storming-party at Sebastopol. The whole of the troops are described as being animated with the most intense enthusiasm. It is also most gratifying to learn that the cholera has entirely disappeared.

Fodder being wanted for the cavalry round Varna, the strength of the French horse, the Hussars, and a part of the Chasseurs d'Afrique, have been thrown from Constantinople to the 30th ult., have been received. Up to the 29th the whole of the Duke of Cambridge's division, comprising the Guards, and the 42nd, 79th, and 93rd Highland regiments, as well as the 28th and 44th Regiments, had embarked. The Light Division was under orders to embark. Lord Cardigan's brigade was also under orders to embark. The 1st battalion of the Rifles, and several other regiments, had gone up to Varna.

The first division of the fleets will convey 14,000 men belonging to the Fourth Army, and from 500 to 600 horses, with seven batteries, mounting thirty-six guns. The other will convey the Ottoman army, of about 10,000 men and 800 horses. The British army, a part of which is already on board the steamers which have arrived direct from England, will also be thrown on the coast of the Crimea to the number of 21,000 men and 1000 horses, with thirty-six guns. Thus, the first expeditionary army will land about 50,000 troops; who, six or eight days afterwards, will be reinforced by an additional number of from 25,000 to 30,000 French troops, and from 6000 to 8000 English troops.

THE ROYAL MEETING AT BOULOGNE.

(*Continued from page 238.*)

THE RECEPTION OF PRINCE ALBERT.

We here engrave a Sketch of the very interesting scene of the first meeting of Prince Albert and the Emperor, described at pp. 237, 238. Next week we shall more fully illustrate this splendid event.

We add another account of the reception:—At ten o'clock the Royal yacht, with its tall masts—carrying the tricolour on the fore, and the Royal standard at the main—could be distinctly seen from the piers. Another quarter of an hour, and the Royal yacht was at the entrance of the harbour. A salute of twenty-one guns was given by the Artillery, and three volleys were fired by the infantry from the heights. The Emperor, accompanied by two squadrons of the Cent Guards, drove rapidly down the quay, and, alighting from his carriage opposite the Custom-house, awaited the arrival of his Royal Highness, and watched from the extreme edge of the landing-place the approach of the Royal yacht. As the *Victoria and Albert* steamed slowly down the harbour, the Prince, who was standing on the deck, was loudly cheered by the vast concourse of people assembled on each side of the water; the Prince bowing respectfully as he passed. At twenty minutes past ten the Royal yacht was moored along-side, and Prince Albert, recognising the Emperor, took off his hat and saluted his Majesty, who most gracefully returned the compliment. As soon as the gangway was made, his Royal Highness stepped hastily ashore, the Emperor advancing to the foot of the gangway to meet him. A most cordial shake of the hand was exchanged as the Emperor and the Prince stood uncovered in each other's presence. The splendid band of the "Guides" struck up "God Save the Queen," and "Rule Britannia," which national airs were followed by the French national air. Loud cheers of the English and the *vivas* of the French mingled with the martial and heart-stirring strains, as the Prince, seated on the right of the Emperor, was driven off, escorted by a squadron of the Cent Guards, to the Imperial hotel. Then came a long array of military and official personages in all the dazzle of brilliant uniforms, the Duke of Newcastle, the Minister-at-War, Lord Seaton, and other officers, passed along in an open carriage. Then rolled along the carriages filled with the aides-de-camp of the Emperor and of Prince Albert, then a carriage filled with French general officers and officers of the Etat Major, then the personal attendants on the Prince—each and all of whom came in for their share of cordial cheering and attentive inspection by the vast crowds assembled.

The fluttering of flags from the vessels in the harbour, the *Vivid* and *Albion* (General Steam Navigation) dressed from stem to stern, the balconies of the windows of the Folkestone packet-office and of other houses on the quay crowded with ladies, and every house decorated with flags and banners, the glittering dresses of the Cent Guards, the long lines of military, and the thousands of spectators, made up a scene of the most exciting and interesting character, and one which his Royal Highness evidently greatly enjoyed.

The Prince was looking remarkably well, and wore the uniform of a Field Marshal. He was attended by Lord de Ros and Captain Du Plat.

The Royal yacht was an object of vast interest and admiration among the Boulonnais, who had certainly never before seen so fine a vessel enter the harbour; and immediately after the Prince had landed, a very general rush was made by ladies and others to get on board. A company of tars, however, manfully resisted the attempt to board the Royal craft, and, standing at the head of the gangway, forced the invaders to beat a retreat, much to the annoyance of the boarding party, and the evident amusement of those who had not the courage or rashness to attempt so desperate an undertaking. The union-jack and the tricolour during the day floated in the breeze from the main.

THE REVIEW AT ST. OMER.

His Majesty the Emperor and his Royal Highness Prince Albert reviewed the troops on Wednesday in the Plaine de Bruyeres. The Emperor, with his Royal guest and suite, arrived at the camp in two Imperial carriages and a *char-à-banc*. The Emperor and the Prince occupied the first carriage. In the second were the English Minister of State for War, the Duke of Newcastle; the French Minister of War, Marshal Vaillant; Lord Seaton, and General the Duke de Montebello. After passing through the camp, the troops being paraded in front of their huts, the illustrious visitors proceeded to a cottage at the foot of the hill, in the small village of Wiserne, where they partook of a *déjeûner* and remained until the arrival of the horses from St. Omer.

Shortly after eleven the first detachments of the troops began to move towards the Plains de Bruyeres. The whole of the forces on foot consisted of the 4th, 17th, 24th, 33rd, 44th, and 49th Regiments of Infantry, three companies of Engineers, and two battalions of Chasseurs de Vincennes. The Cavalry consisted of four regiments of Cuirassiers, a squadron of Chasseurs à Cheval, and some squadrons of Light Dragoons; and there were four batteries of Artillery. The whole were under the command of General Carralet, the General of the Camp.

By twelve o'clock the whole of the troops had arrived, and had taken up their position; and at half-past twelve a cloud of dust rising up the hill announced the approach of the Emperor and his illustrious guest. The Royal personages entered the plains from the left of the road, and rode down the front of the foremost line, passing back at its rear, and in front of the second line of infantry. The Emperor and Prince then rode along the fronts of the artillery and two lines of cavalry. While inspecting the artillery and cavalry the infantry moved off in column to the extreme left of the plain, about a mile distant, and took up a position preparatory to marching past. His Majesty and the Prince, with their staff, proceeded to a small eminence near the centre of the plain, and the troops commenced to defile past. The infantry marched past, in open column of companies, in admirable order, and proceeded to the right of the ground, where they halted near the road. Next came the artillery, which, having walked past, trotted off the field along the roads to the camp and to St. Omer. The cavalry then marched past in open squadrons, and the fine appearance of the first regiment—all the men mounted on greys—attracted the marked attention of the Prince. The Cuirassiers having all defiled past, formed in two magnificent lines. The first line advanced by a splendid charge to within a few paces of the spot where the Emperor and Prince were standing, and retired by squadrons through the second line, which then charged in the same excellent style, and retired in like manner. Columns of squadrons were then formed, which afterwards deployed into two lines, and two other fine charges were made; and finally a charge was made by one grand and imposing line of the whole four regiments. After this charge the Cuirassiers again formed in two lines, and the Emperor and Prince rode along the front from left to right. On reaching the end of the line, the Emperor summoned all the Generals and Colonels of the respective regiments, and presented them to his Royal Highness. The presentation having been completed, Prince Albert rode up to the officers as they stood in line, and addressing them in French, expressed the great gratification with which he had witnessed the admirable manner in which the various evolutions were performed, and the general excellent appearance and bearing of the troops on the field, and expressed his earnest hope that the *entente cordiale* which now so happily subsisted between France and England might long be continued to the mutual advantage of both countries. The Emperor and his Royal Highness then entered the carriages and proceeded direct to Boulogne.

BOULOGNE, Thursday.

According to public announcement, the grand display of fireworks came off last evening, about eight o'clock, on the heights of Chatillon, near Capecure. The display was of an exceedingly brilliant character, the principal feature being intended to represent the taking of Bomarsund. A large castle, with numerous towers, was represented on the heights, alternately illuminated by varied coloured fires, and finally disappeared in a large conflagration amid a shower of rockets, Bengal lights, and other pyrotechnic artifices. The quays were crowded to such an extent with joyous spectators that it was with the greatest difficulty any movement could be effected.

The three missing men-of-war, which should have accompanied the Royal yacht, arrived yesterday morning, and cast anchor a short distance from the mouth of the harbour. The vessels fired a Royal salute on coming to anchor. The Emperor walked down to the pier, and witnessed the firing of the salute, at half-past seven o'clock.

On Tuesday evening Lord Cowley and a distinguished party had the honour of dining with his Majesty.

REPRESENTATION OF WIGAN.—Mr. Acton, Mayor of Wigan, has come forward in the Liberal interest. Mr. Henry Woods has declined to stand; and the general impression now appears to be that there will be no contest. Had two Liberal members appeared, and the party been thus divided, it is probable that Mr. F. S. Powell (who was defeated at the last election) would have offered himself as a candidate upon Conservative principles.

CALEDONIAN ASYLUM.—On Thursday, at the usual quarterly court of the Governors of this charity, out of eight applicants for admission, six were recommended for election in December. As the Asylum has been founded for the education of the children of Scottish soldiers, sailors, or marines, who may have suffered in the service of the country, it was thought advisable to diminish, for the present, the number of admissions, in order to be able to meet the claims which may originate in the present war.

THE MEETING OF HIS ROYAL HIGHNESS PRINCE ALBERT AND THE EMPEROR OF THE FRENCH, AT BOULOGNE.

SWEDEN AND NORWAY.

(From a Correspondent.)

GOTHENBURGH, August 30th, 1854.

A small paddle-steamer, under French colours, and said to be carrying despatches relative to the preliminaries of a treaty including Sweden in the Allied movement against the Czar, passed this morning, bound westward, but how far the rumour of its mission is well founded I do not pretend to vouch. The popular feeling in this part, and I am assured throughout Sweden, is strongly in favour of the Allies; but it does not appear that the nobility and the executive unanimously participate in this enthusiasm. Some of the aristocracy, and a portion of the Administration are said to be attached by prejudices and *interest* (a significant emphasis being laid on the latter term) to the cause of Russia. It is very evident, however, that the predominating influence under which the Government of Sweden is acting, or rather shrinking from action, is that of fear; whilst, on the other hand, the policy of the proclamations issued by the Allies, and more especially by General Baraguay d'Hilliers, in the Aland Islands, has been to compromise the Swedish Government by making the recent conquests appear to have been accomplished with the object of restitution to Sweden; for by this means a suspicion has been cast upon the genuineness of the neutrality, and the Swedes may, perhaps, have as much cause to dread the bugbear revenge of Russia as if they had really been active in the affair, and so may be driven into participation in hostilities.

The notion, at any rate, is rife amongst those who have the best sources of information, that it will not be long before the Government at Stockholm officially signifies its adhesion to the cause of the Western Powers, and a contingent of troops is furnished to aid in the operations concentrating towards Cronstadt; and the crisis which is expected to urge the Government to such an issue seems to be devoutly hoped for by the majority of the population. The strength of the forces to be furnished has been put down at 6000 men, of all arms. This rumour has gained credence amongst the soldiers, and has elicited many a hearty cheer from them. They appear eager enough to join. As there are still Russian vessels in Swedish ports, there is a question of much delicacy to be disposed of. Some time ago two vessels were sold at Christiania, and their crews proceeded, viâ Copenhagen and Lubeck, to make the best of their way home. There is one Russian vessel in this port even now.

The general disposition of the *people* of this country in the pending dispute cannot be better illustrated than by stating that they speak with some vexation of the *slowness* of our operations.

The *Gothenburgh* screw-steamer, belonging to the North of Europe Steam Navigation Company, and plying between London and this place direct, has been subjected to ten days' quarantine, owing to the cholera; and the unfortunate passengers have only just got emancipated, and are complaining bitterly; for, besides the inconvenience and discomfort of the detention, they complain of having been to enormous expense—not less, I am assured, than one pound each per diem for maintenance on board. They do not appear to have had any hint from the company or its officers that they might possibly be detained. For those who have occasion to come this way, or who wish to visit the interior by way of the lakes, I should strongly advise the route by Hamburg, Lubeck, and Copenhagen, or by the two former places only, as I cannot say much for the accommodation, and far less for the civility experienced in the company's steamers from Hull (which port is not at present visited with quarantine regulations here).

Oddly enough to those who have been accustomed to the profuse and *ad libitum* supply of England, France, Germany, and even our distant colonies, the public press here seems to be anything but a vehicle of public information, so that there is some difficulty in gathering details.

MARRIAGE OF THE SULTAN'S DAUGHTER.

THE nuptials of Fathma Sultane and Ali Gholib Pacha, son of Redschid Pacha, have just been celebrated, with great magnificence, at Constantinople, at the Palace of Baltaliman, which the Sultan has presented to his daughter as a part of her dowry. On the 7th ult., a large number of persons began to assemble in the beautiful valley of Baltaliman, which lies some distance above the castles of Roumeli. The palace itself is on the water's edge, and is a stone building of fine design. The valley is behind the palace, is of considerable extent, very even, and remarkably adapted for the purpose of kef-making, as the Turks call pic-nic parties. Thirty magnificent tents were erected on both sides of the plain, for the accommodation of the Pachas and other distinguished individuals; besides a great number of smaller tents for servants, cooking, &c. One of the large tents, situated on the highest ground, and from which there was a very good view of the whole plain, was appropriated to the representatives of Foreign Powers. Picturesque clumps of trees are scattered over the place, and greatly contribute to the beauty of the scene.

On the 8th ult. a large number of boats conveyed that part of the dowry which consisted of household furniture, &c., from the Palace of Tcheragan to that of Baltaliman. The boats were arranged in a long and imposing line, and were freighted with furniture of the richest kind. There were also mangals (coal pans), mirrors, and divans; trunks covered with blue, green, red, and purple velvet, and studded with gold, silver, and precious stones.

On the 10th the crowd was still greater, and the scene very animated. On that day the bride was conveyed to her new home, accompanied by all the chief men of the nation, and the ladies of their harems. At four p.m. the procession started from the Imperial Palace of Tcheragan, and took the road to the bridge. The whole road was lined with spectators in holiday dress. The order of procession was as follows:—

A band of music on horseback. A regiment of the Imperial Lancers on white horses. A regiment of the Imperial Dragoons, on bay horses. The Turkish Grandees, in suits splendidly embroidered with gold, and riding fine Arabian horses. Ulemas in green and purple robes. Ulemas in gold and green robes. The Sheik-ul-Islam (Turkish Pope), in many white garments. Imperial Guard. Four beautiful carriages, containing the Sultan's sons. A number of Eunuchs. The golden carriage, drawn by six horses,

MARRIAGE PROCESSION OF THE SULTAN'S DAUGHTER, AT CONSTANTINOPLE.

which contained the bride. (This was the great attraction, and is a magnificent piece of workmanship. Even the spokes of the wheels are plated with gold. Curtains of the richest materials concealed the young lady from view. A silver carriage, drawn by six horses—also very beautiful. A golden carriage, with six horses. Two handsome enamelled carriages with four horses. Another silt carriage with four horses. About twelve enamelled carriages, drawn by four horses each. A regiment of Lancers. A band of music. After which followed a long train of carriages and people on foot.

When the bride reached the Palace of Baltaliman, she was conducted in by the Pachas; who after congratulating the bride's room, repaired to the tents prepared for them, and partook of a sumptuous banquet At half-past seven in the evening the fireworks commenced and lasted till eleven o'clock. They were the finest ever seen in Constantinople.

Next day, Redschid Pacha and Ali Gholib Pacha went to see the Sultan, and tendered their homage, with the profound expression of their devotion to his service. In the afternoon the Sultan paid a visit of three hours' length to his daughter, Fathma Sultane.

Our own Artist, at Constantinople, has sketched the Procession—a long file of Imperial carriages. At the foot of the hill is the new palace of Baltaliman; below is the Bosphorus, with a man-of-war lying at anchor; on the opposite (Asiatic) side are minarets peeping from groves of cypresses.

The bride's carriage is closely shut, and the curtains are drawn. In front of it rides the Chief of the Eunuchs, his breast covered with stars and cordons; he wears a General's epaulettes, and his dress is embroidered all over. His horse, a magnificent bay, is caparisoned with gold trappings, and he is attended by two officers. Around are eunuchs, caracoling on their chargers. Every one of them is attended by two servants on foot, wearing the Sultan's livery. Immediately before the Chief of the Eunuchs rides the Chief of Ulémas, an aged man dressed in white, in the old Turkish fashion—a white cloak and turban, with gold streamers coming down behind the shoulders. He rides between two high dignitaries, in military dress. The Procession is a repetition of the above, and comprises an immense file of officers, dignitaries, &c., mounted on splendidly caparisoned horses, each with two attendants The bride's carriage was drawn by six fine English black horses, harnessed with red and gold. Right and left, on the plains, commanding a view of the road, booths were erected in the rudest way, ornamented with foliage and flags, and filled with women of every costume and nation, regiments of foot and cavalry, and troops drawn up in line, presenting arms.

The second Illustration shows one of the bridal fêtes, given in the rear of the Palace of Baltaliman, in a large field, where hundreds of tents, in the European style, had been erected for the officers, attendants, high functionaries, &c.

Here might be seen sitting and smoking pipes and narghilés, those persons who had formed part of the cortége, and who were watching the dancers, though without ever betraying the slightest symptom of gratification. The dancers both play castanets

The arena is attended by a clown, painted and dressed as in our equestrian ring. Spectators crowd round the tent; ladies pass in their carriages (arabas) in front of it, to look at the dancers, and the company for whom the dance is performed. Musicians, seated on the ground, play guitars, clarionets, tamboorines, and sing most uproariously. The same scene takes place before every tent simultaneously or successively throughout the rest of the day, and at night the fête closes.

ENGLISH MILITIA AND YEOMANRY CAVALRY—(SEE NEXT P. 61.)

4TH MIDDLESEX (OFFICER.) GLOUCESTERSHIRE HUSSARS. YEOMANRY UNDRESS. YEOMANRY CAVALRY. YEOMANRY CAVALRY. 4TH MIDDLESEX. SOUTH LINCOLN. ESSEX FIFTY.

MILITIA AND YEOMANRY.

MORE than half a century has elapsed since the Militia and Yeomanry of the United Kingdom were placed on an establishment far surpassing that of the present day. Numerically speaking, the force recently embodied is nothing to what was formerly contemplated, and, by degrees, brought to perfection. During the Peninsular War, the Militia proved a most efficient and constitutional adjunct to the State, and by it the ranks of the regulars were principally strengthened. In nothing but the name did they differ from the line. Fully equipped, and subjected to discipline and martial law, this armament was competent for the performance of any service whether at home or abroad. The bounty then given to volunteers proved too attractive an allurement to allow other considerations to mar the alacrity shown whenever opportunity offered for joining their countrymen in the field. Correctness in evolutions, and regularity in their interior economy, were co-equal with the system adhered to by the regulars, and in every respect the Militia presented a prominent feature of our national defences, as valuable as it was imposing. Cessation of hostilities, consequent on Napoleon's abdication of the throne of France, necessarily affected this body equally with other costly establishments unavoidably maintained during a long and harassing Continental struggle. Eventually the Militia was disbanded; and men who for years had been trained to the purposes of war, resumed their agricultural or their peaceful pursuits, or suddenly interrupted by the exigency of the time. As a nursery for the Army, these organised bodies were ready depôts from whence troops could at all times be drawn for foreign service; especially at a period when difficulty was otherwise experienced in obtaining soldiers, and the population was considerably lower in amount than at now is. Once initiated into the routine of barrack life, a preference was soon evinced for active employment, rather than continue the dull, monotonous existence passed in constant drill, varied only by the details of guard mounting in some garrison town. In a physical point of view, a finer body could not have been collected, and to that source some of our most distinguished battalions owe the renown they obtained in the Peninsula. The last official list of Militia (exclusive of cavalry and volunteer infantry corps in England, Scotland, and Ireland, was published by authority of the War office, dated 30th April, 1820. Although the force therein specified had for some time been disembodied, the nucleus of each remained, and the record of their having existed was made public. The particulars were as follows:—English regiments of Militia, 78; Scotch, 15; Irish, 38. Volunteer cavalry and volunteer infantry corps in England, Scotland, and Ireland, 493; amounting altogether to 623 of various denominations and strength. The aggregate varied so continually, but principally in the volunteer infantry battalions, that it would be difficult to fix the exact number at any given period, without reference to returns, which, after such a lapse of years, might be impossible to discover, even should they be extant. But, without entering into detail, it is obvious that the total bearing arms comprised a very considerable army. As rapidly as their ranks were thinned by volunteers joining the regulars, so readily were their places supplied by draft from their various counties. Another great inducement to volunteering was found in bestowing commissions in the line on militia officers, in proportionate rank with the number of men they could induce to declare themselves candidates for general service. This measure, however open to animadversion on many grounds, was, nevertheless, mainly instrumental in compassing the object entertained by Government. We have now only seventeen regiments of English militia embodied. Others will ere long be called out, but whether as a reinforcement or relief, has not been declared. The progress of the war will, undoubtedly, influence the decision, and the conclusion may be reached that until the intentions of certain of the European Powers are more manifestly developed nothing on this point will be definitely settled. The following returns give a statement of the regiments of English Militia, now under arms, denoting the strength of each, and particularizing their head-quarters:—

Regiments.	Station.	Strength.			
		Officers.	Non-commissioned.	Drummers.	Rank and file.
Bucks	Berwick-upon-Tweed ..	18	23	4	550
Royal Bucks ..	Wooden	22	23	14	677
Red South Devon ..	Devonport	19	30	13	591
Kent's Rifles ..	Canterbury	17	29	8	732
South Hants	Gosport	24	37	9	945
East Kent	Woolwich	28	25	8	518
1st Royal Lancashire ..	Under orders for Plymouth ..	21	31	9	515
Royal South Lincoln ..	Berkester	20	30	7	915
Royal Monmouth ..	Newport	20	26	6	841
Northampton	Under orders for Ireland ..	23	28	15	990
4th Middlesex	Under orders for Portsmouth ..	27	29	9	1015
Somerset	Plymouth	24	31	15	614
1st Stafford	Dover	30	26	19	599
Royal Wiltshire ..	Portsmouth	24	36	12	672
East West York	Under orders for Dublin ..	32	34	10	600
West West York	Dublin	34	40	18	753
Cambridge	Ely	No return.			

No encouragement now offers for volunteering. Why the practice should be discontenanced by the Secretary-at-War we do not pretend to explain; but, until established for, division from old-established rule bears the impress of error, without any apparent benefit arising to counterbalance the effect of innovation. The extraordinary number of recruiting parties scattered over England and Ireland vouches for the anxiety felt, and the difficulty experienced in obtaining men. Well-drilled soldiers must ever be more welcome to commanding officers than novices, who cannot be perfected, even as infantry, under several months' tuition. As a marked contrast between the recruiting department in our day, and what was the case towards the termination of the last century, it is stated that, from the month of July to that of November, in the year 1795, no fewer than 24,377 drilled soldiers passed from the Militia to the Line, under the influence of the volunteer system. Doubts have recently been started touching the expediency of rendering the constitutional and internal strength of the country subservient to external operations; but, at the date at which three laws are passed, England has little cause to dread an invading foe. Our Militia musters about 12,000 bayonets, and could readily be increased to almost any amount. The leading objection against following in the track of our predecessors would probably rest on the expense; but sacrifices are inevitable in furthering the gigantic projects inseparable from carrying an army into the enemy's country. Casualties in the field cannot now be rectified with that celerity which marked authorised decision in days gone by. The illustration of the Militia Regiments, engraved in the preceding pages, is perfectly correct as to costume; but the uniforms of the Yeomanry Cavalry there represented have not as yet been taken into general wear. The clothing of the first-mentioned force is supplied by the Ordnance, and, in various ways, adds considerably to the outlay forced upon the line. Should the embodied regiments continue on permanent duty, the worthlessness of the dress, as regards durability and comfort, will be exemplified long before the period arrives which, by her Majesty's regulations, a fresh issue will be sanctioned.

A BREAD RIOT IN NOTTINGHAM.—General discontent has for some time prevailed among the poorer classes of Nottingham, owing to the bakers not having lowered the price of bread in proportion to the abated cost in corn; and hints have been from time to time thrown out that violent measures would be resorted to unless their trade met the wishes of the populace. On Tuesday a crowd of persons, numbering about 1000, assembled about eight o'clock at a large area at the south-eastern extremity of the town, commonly called the New Market, and, having listened to one or two speeches from the ringleaders, started off on their work of destruction. They appear to have confined their operations to that quarter of the town; proceeding first down Fisher-gate and along Narrow Marsh, returning by the way of High Pavement to Bridlesmith-gate, and Clumber-street, smashing the windows of the bakers on their route, breaking in doors and breaking ends into the chamber windows; accompanying these demonstrations all the while with shouts and cries of "Down with the price of bread!" and other expressions of a like import. The police appeared eventually in apprehending a few of the rioters, when the rest dispersed. On Wednesday evening the riots were renewed, the Riot Act was read, and the military ordered to be in readiness. A number of the bakers have resolved to shut their shops for the present.

RIOTS AT KIDDERMINSTER.—On Friday evening week a number of turnouts made an attack on the factory of Messrs Pardoe, Hooper, and Pardoe, at Kidderminster, demolishing about two hundred panes of glass; and were only prevented from doing further mischief by the activity of the police. On Saturday evening the appearance of the streets was so alarming that the magistrates thought proper to read the Riot Act, and next day portions of six troops of Worcestershire Yeomanry entered the town. This display of power in support of law and order had the desired effect: the men came to an arrangement with their masters, agreed on Monday night to return to their work, and so relieved the town from all peril and anxiety.

THE GENERAL COURT-MARTIAL AT WINDSOR.

(From our Military Correspondent.)

ANNOUNCEMENT of positive decision on popular questions regulates disquisition held in temporary abeyance during the doubtful issue. The wider the distance between expectation and proclaimed certainty, the greater must be the excitement. But when the sentence promulgated proves diametrically opposed to anticipated hopes, demonstration, nurtured by disappointment, finds vent in opprobrious invective. And such has resulted on the "finding and sentence" of the General Court-martial held on Lieutenant Perry, of the 46th Regiment, becoming known. It is not here purposed to expatiate on the peculiarities and mismanagement ineffaceably stigmatising those proceedings. Yet, in defiance of all that has been urged to the contrary, a military tribunal, if *properly conducted*, offers fairer chances for the accused than can be met with in a civil court of law. But when a President permits the dignity of his office to waver from the strict line of duty, at the suggestion of the prosecutor, the consequences must, in all human probability, prove detrimental to justice. In the case in point admission of extraneous matter was not alone sanctioned, but occasionally encouraged. The annals of military history cannot furnish an example where a General Court-martial so far lost sight of the paramount obligations devolved upon the members as was exemplified a few days since at Windsor. On the abstract question, touching the guilt or otherwise of the accused, it would be superfluous to comment. Her Majesty has been recommended to approve the minutes; and all the threats held out by Lieutenant Perry's adherents will count as nothing. Anticipated censure from the House of Commons is held up *in terrorem* to the Court, and equally directed against the advisers of the Crown. Innocuous menaces are worse than puerile. It would be more to the purpose were the advocates of a fallen cause to point at the objectionable course which misguided counsellors persuaded their votary to steer. The locked-for haven proved a rock upon which all hope of acquittal was irrevocably wrecked. From the moment the obnoxious letter penned by his solicitor, casting invectives against a superior was heard, every vestige of a favourable issue passed from the minds of those acquainted with military discipline. Well might Lieutenant Perry exclaim, "Defend me from injudicious friends!" for a worse or more fatal measure could not have been surmised than the one so inaptly chosen by his adviser. But when the accused failed in substantiating the averments, his position became desperate indeed. The rules whereby the service is governed have from immemorial custom become immutable. An intimate knowledge of their working must have been unknown to Mr. Perry's solicitor, or he never would have resorted to recrimination as a means of defence, particularly when the stigma was directed against a subaltern's commander. The Articles of War declare that any one "who shall feel himself aggrieved," &c., shall meet with redress by application to his superiors; but woe betide the unfortunate who has the temerity to impugn the acts of those placed in authority over him. So well is this understood in the Army, that an officer would rather at once resign his commission than prefer charges against a senior; conscious that the accusation, however just, never would be countenanced. The system is not of novel growth, but on the contrary, an evil of long standing, fostered, without a single exception, by the unvarying dictum of the late Commander-in-Chief. If proof were needed to substantiate the fact, occurrences which took place in one of our distant colonies, a few years back, would convince the most sceptical. It was within the knowledge of the authorities at the Horse Guards, that the General alluded to was mad. In that state, and goaded on by his immediate satellites, for reasons of their own, he placed the two senior officers on the staff in close arrest, threatened to put one of them in irons, and attempted to frame charges destructive to their characters, which, in the absence of a shadow of evidence, were of necessity abandoned. For months they were deprived of all pay and allowances, and finally were ordered to embark for England at forty hours' notice, the passage-money being withheld. The whole of their property in the colony was thus unavoidably left at the mercy of servants. This persecution was put in force without a single instance of disrespect, insubordination, or neglect of duty being openly alleged in extenuation of the tyranny. On reaching home, the unexampled severity of these measures was repudiated as originating from head-quarters. The illegality of the General's decision was tacitly implied by the officers being instantaneously released from arrest, and their pecuniary stoppages made good. Nevertheless, they were deprived of their staff appointments, and refused permission to return to the station in order to collect their possessions. In vain they solicited an audience with the Commander-in-Chief for the purpose of pleading their cause in person. All access was denied. To oft-repeated requests that their conduct might be thoroughly sifted by a General Court-martial, a court of inquiry, or any description of tribunal, a decided refusal was peremptorily given. The reasons alleged for the denial were two—first, "The Duke has decided;" and, secondly, "Too much may come out." These officers were, however, informed that the General would be withdrawn from his command. But what satisfaction was that to men who had undergone deep humiliation, anxiety, and pecuniary loss, at the caprice of a superior, whose mental faculties were pronounced by the principal medical officer as not being under rational control. These are facts well known throughout the Army. It was a maxim of the Duke of Wellington invariably to support the seniors, and from that rule he never swerved. If Lieutenant Perry's solicitor had been aware of the dangerous path he was threading, he would not have allowed his client to produce a letter so irretrievably condemnatory to himself as was the one laid before the Court. Complaints instituted by an officer high in authority against a subordinate in military rank will ever meet attention. Reverse the case and the prosecutor is lost.

On Monday the French steam-frigate *Souffleur* passed through the Downs, with General Bosquet, Governor of Boumarsund, on board, and a number of Russian officers, also taken prisoners at Bomarsund, bound for Havre.

On Tuesday morning the *Hannibal* arrived off Deal with 323 Russian prisoners. The *Vernonpond*, 24, screw steam-frigate arrived at Sheerness on Tuesday, from Bomarsund, with 196 rank and file of Russian soldiers, and one woman; also three officers and their [illegible] the Hon. Captain Stewart gave the officers and their wives a farewell dinner previous to their being sent on board the *Devonshire* by the *Wilgrin*. After dinner, Captain Sweprof, of the Engineers, proposed the health of the Captain; and for himself and his associates, he begged to return him their most sincere thanks for the marks of kindness shown to them and their wives during the time they had been on board that ship. He stated by these officers that the Emperor does not grant them any pay while prisoners of war, nor allow them to enter on parole of honour not to serve. They appear all perfectly happy at the idea of residing in England, but most sorrowful over their homes that our Government will give them the same liberty that was given the officers of the *Tiger*—namely, to reside on shore in private lodgings at their own expense. They have no wish beyond this, as they have their wives with them. Their wish has been granted, so far as going on shore is concerned, and there is no doubt but that Government will allow their wives to reside with them.

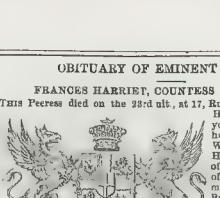
It has been officially notified from the Horse Guards, that a regiment of English Militia will be sent direct to Cork, to take the duties of that garrison; but neither what particular corps, nor yet the period for its embarkation, has been specified.

NAUVOO, the original seat of Joe Smith's Mormon rule, is being resuscitated under Mons. Cabet, the French adventurer, whose outset made so much noise some two years ago. He proclaims it the Icarienne Colony; and has established a newspaper, printed in French, devoted to the cause of Cabetism reform.

OBITUARY OF EMINENT PERSONS.

FRANCES HARRIET, COUNTESS OF CAITHNESS.

THIS Peeress died on the 23rd ult., at 17, Rutland-square, Edinburgh.



Her Ladyship was the youngest daughter and co-heir of the late Very Rev. William Leigh, of Rushall Hall, county Stafford, and of Plumstead, Norfolk, Dean of Hereford. In 1813, she married Alexander Lord Berriedale, who became at the death of his father, thirteenth Earl of Caithness, and by him, who still survives, leaves issue two sons, James, Lord Berriedale, and the Hon. Alexander-Eric-George Sinclair.

LADY WILLIAM SOMERSET.

THE death of Lady William Somerset occurred at Clifton, on the 31st ult. Her Ladyship (Frances-Westby, daughter of the late Henry Brady, Esq., of Raheens Manor, county Clare, and widow of Cornelius O'Callaghan Esq., of Ballynahinch) married, 24th September, 1844, the Rev. Lord William G. H. Somerset, son of Henry, 5th Duke of Beaufort, and became his widow in January, 1851.

CHARLOTTE ALBINIA LADY TAYLOR.

THIS lady, the widow of the late Lieut.-General Sir Herbert Taylor, G.C.B., G.C.H., Private Secretary to King George IV., was daughter of Colonel Edward Desbrowe, of Walton Hall, county of Derby. Vice-Chamberlain to Queen Charlotte, by the Lady Charlotte Hobart, his wife, daughter of George, third Earl of Buckinghamshire. Lady Taylor enjoyed a pension of £280 per annum, and had a residence at St. Katherine's, Regent's-park, of which her deceased husband was Master. She leaves an only daughter, Charlotte.

THE REV. CHARLES COXWELL, M.A., OF ABLINGTON HOUSE, COUNTY GLOUCESTER.

THIS gentleman died at the above House, Dowdeswell, on the 30th ult., aged eighty-three. He was the representative of a family established in Gloucestershire for many centuries, and resident at Ablington, in constant succession, since the reign of Queen Elizabeth. Mr. Coxwell was born 23rd April, 1771 (the eldest son of the late Rev. Charles Coxwell, of Ablington-house, by Mary, his wife, daughter of Joseph Small, Esq., of Cirencester), and married, 17th June, 1796, Anne, youngest daughter of the Rev. Richard Rogers, LL.B., of Dowdeswell; by whom he leaves, with other issue, a son and heir, Richard Rogers, who has taken, by Royal license, the surname and arms of Rogers, and is the present Richard Rogers Coxwell Rogers, Esq., of Dowdeswell.

CAPTAIN RICHARD FREEMAN ROWLEY, R.N.

THIS gallant officer died on the 18th ult., at the house of his father-in-law, John Angerstein, Esq., Woodlands, Blackheath. He was fourth son of the late distinguished Admiral, Sir Charles Rowley, G.C.B., G.C.H., and grandson, paternally, of an equally eminent naval commander, Sir Richard King, Bart. Inheriting thus a strong predilection for the sea service, he entered the Navy in 1819, and obtained his first commission in 1825. The rank of Commander he reached in 1827, and was made Post Captain in 1830.

Captain Rowley married, 12th July, 1838, Elizabeth Julia, daughter of John Angerstein, Esq., and leaves issue.

THE THEATRES.

HAYMARKET.—The fascinations of the Spanish dancers yet continue; and this week they have added two new ballets to their repertoire—one "La Flor de la Macarena;" and the other, "Los Manolos de Madrid. Their vivacity and piquancy, however varied, still possess the same power of delighting; and Senora Pepa Nena, with her "twinkling feet" and seductive movements, is as attractive as ever. This result, in one instance, she has to accomplish in the smallest possible space, her village friends sitting round her in chairs, and contesting her arena; not thereby, as it would appear, impeding her efforts, but simply intensifying the expression. The houses still fill at half-price to witness these unique entertainments, which, however, will soon terminate, as the Queen is about to visit Berlin.

SADLER'S WELLS.—Shakspeare's "Cymbeline" was re-produced on Monday, and afforded singular delight to an attentive audience. This delightful play, full of poetry, intellect, and romance, was finely illustrated by the performers on these boards; who now, from the experience of several seasons, have become more fitted for the representation of our classical drama than those of houses where the Elizabethan play is seldom acted. Miss Cooper's *Imogen*, though not perfect, has many beauties; and Mr. Phelps' *Posthumus* is an admirable interpretation of a character requiring the utmost skill and practice. Our commendations are also expressed due to Mr. Marston, for his gallant bearing in *Jachimo*, and his picturesque style of dealing with the situations, as well as his fine articulation of the poetical discourse with which he is so lavishly endowed. We were much pleased with Mr. Lewis Ball's *Cloten*, which, without caricature, was effective. *Belarius* and his two sons were surprisingly well acted by Mr. Barrett, Mr. Hoskins, and Mr. Robinson. The season at this house, so far, has been worthily inaugurated.

Some street-criers of Paris recently hoaxed the public rather cleverly. They went bawling about "Death of the Emperor of Russia, with a full account of his life and crimes." The purchasers found that they had got a bit of dirty paper, headed "Life and Death of Paul, the first Emperor of Russia."

In the leading public streets of Paris, such as Vivienne, Richelieu, Rue de la Paix, St. Honore, &c., three-fourths of the tradespeople have since their shops on Sunday. Previous to December last, there were not, on the average, half a dozen in each street who did so.

The Archbishop of Lucca has allowed the use of meat on fast days during the cholera, and interdicted all processions and other ceremonies calculated to assemble large crowds during the prevalence of the epidemic.

THE CRYSTAL PALACE GUIDE.—Mr. Samuel Phillips's general Guide to the Crystal Palace and Park has come to a second edition, and considerable pains have been bestowed upon it in its passage through the press. Many of the features of the Exhibition itself were, in a more or less unfinished state, at the time of the opening in June last, and the Descriptive Guide necessarily displayed incompleteness and evidence of hurry in many points. In the interval which has since elapsed, the arrangements of the Crystal Palace have become more matured; and Mr. Phillips's clever Guide displays proportionate improvement. Considerable additions have been made in the literary department, the whole of which has been carefully revised; and several additional engravings have been inserted, the most important of which are detailed plans of the several Fine Art Courts, affording great facilities for reference.

BEAUTIES OF THE CRYSTAL PALACE.—Under this title a very elaborate and interesting serial has just been commenced, intended to illustrate all the most important and picturesque features and contents of the Crystal Palace. The engravings are executed on wood, by W. Thomas and R. Harral, after photographs by Philip Delamotte, and original designs by G. H. Thomas and other artists; and, if they are all selected as judiciously and executed as satisfactorily as those in the first part, now before us, they will prove in every way worthy of the occasion, and cannot fail of gratifying in a high degree all who view with interest the origin and progress of this great industrial undertaking. The subjects in this part are:—1. "The Group of the Royal Party on the Opening Day." 2. "A View in the Gardens of the Crystal Palace." 3. "The Bronze Fountain," by Monti. And 4, "The Greek Court south side." Whilst on this subject we may mention, with commendation, a very accurate lithograph of the Wealden—containing the restorations of the extinct animals in the Crystal Palace Park, as restored by B. Waterhouse Hawkins—by W. R. Woods, which has just been published.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. E. R. Hampden to Cradley, near Malvern; the Rev. W. Bell to Illingston Parrell, near Buckingham; the Rev. W. B. Doveton to Sandford Peverell; the Rev. W. H. Cox to Eaton Bishop, near Hereford; the Rev. A. Baker to Godmanstone, Dorsetshire. *Vicarages:* The Rev. A. J. Sandelands to Denford, with Ringstead annexed, Northampton; the Rev. B. V. Tompkins to Toringdon, near Arundel; the Rev. C. D'Oyley Grenville to Thaxted, Essex; the Rev. A. A. Edwards to All Saints, Leeds. *Archdeacon:* The Rev R. M. Master to the office of Archdeacon of Manchester. *Incumbencies:* The Rev. C. Bushbridge Snepp, LL.B, to Perry Barr, near Birmingham; the Rev. J. Rowe to Bampton, Devon. Abstentions: the Rev. J. Senior to St. Mary's District Church, Wakefield.

RESIGNATION OF ARCHDEACON WILBERFORCE.—Archdeacon Robert Wilberforce has resigned his preferments in the Church, partly in consequence of the steps which have been taken in reference to his publications on the subject of the Eucharist, and partly in consequence of increasing doubts on the question of the Royal Supremacy. He has addressed a letter to the Archbishop of York, announcing in step he has taken; and since then he has made a formal resignation of the Archdeaconry of the East Riding of York, and of the Vicarage of Burton Agnes, the two appointments he held in the diocese. He intends to explain fully certain objections alluded to in his letter, by means of a work, which will be issued in a few days, entitled "An Inquiry into the Principles of Church Authority; or, Reasons for recalling my Subscription to the Royal Supremacy."

NEW CHURCH AT MANCHESTER.—On Saturday the Bishop of Manchester laid the foundation stone of a new church in St. George's district, Hulme, Manchester. This church will owe its origin entirely to the humbler classes. It is situate in a district containing 10,000 persons, the greater portion of whom are of the working class, and of the subscriptions obtained for its erection, the majority range from 2s. 6d. to 10s., given by working people. The entire cost of the church, including the land, will be about £3500. There is sufficient land in the purchase, for Sunday and day schools, which will hereafter be built.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, SEPTEMBER 7.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature obtained the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The corrected reading of the barometer has varied but little during the week; the highest reading being 30·40 inches, on the 5th; and the lowest 30·16 inches, on the 7th. The mean for the week, at the height of 82 feet above the level of the sea, was 30·292 inches.

The mean temperature of the week was 61°, being 2·6° above the average of the corresponding week during 38 years.

The range of temperature during the week was 38·8°, being the difference between the lowest reading of the thermometer, on the 3rd; and the highest, on the 4th.

The mean daily range of temperature during the week was 32·7°. The greatest was 37·1°, on the 4th; and the smallest, 26·8°, on the 5th.

The weather during the week has been very fine, the sky almost cloudless, and the air at times has been exceedingly clear.

For the month of August the mean reading of the barometer, at the level of the sea, was 30·087 inches. The highest temperature during the month was 83·5°, on the 30th; and the lowest was 42°, on the 25th. The range of temperature during the month was, therefore, 40·5°. The mean of all the highest temperatures, by day, was 72·9°; and of all the lowest, by night, was 51·7°. The mean daily range of temperature during the month was, therefore, 20·2°. The mean temperature of the month was 61°, being the same as the average of the corresponding month during 38 years. The mean temperature of evaporation for the month was 56·1°. The mean temperature of the dew-point was 53·4°. The mean degree of humidity was 77 (complete saturation being represented by 100). The fall of rain during the month was 2.2 inches.

Lewisham, September 8, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending Saturday, September 2, the births of 916 boys and of 869 girls were registered within the metropolitan districts. The average for the same week in the nine preceding years were 695 and 672 respectively. The number of deaths within the week were no less than 2615; of which number 1254 were males, and 1361 females: the numbers in three different periods of life were 1068 under 15 years of age; 357 above 60 years; and 1073 between these ages. These numbers are about double the averages under 15, and above 60, and about the mean of the numbers at ages in the prime of life. In the west districts, out of a population of 370,427 in the year 1851, there were 474 deaths, and 200 of these were caused by cholera: in the north districts, out of a population of 490,396, there were 322 deaths: of these, 99 were attributed to cholera; in the central districts, out of a population of 393,356, there were 344 deaths, cholera having caused 69; in the east districts, out of a population of 485,522, there were 445 deaths, of which cholera caused 149; and in the south districts, out of a population of 614,295, there were 1013 deaths, and of these no less than 570 were caused by cholera. The deaths from cholera during the last nine weeks have been 1, 5, 26, 133, 289, 644, 729, 847, and 1267; and thus 4071 lives have been lost in the metropolis in the eight weeks ending September 2. Up to September 1st, 1849, the epidemic in London had continued fifteen weeks, and had destroyed 5117 lives. On the south side of the Thames the mortality is still heavy: 101 persons died of cholera last week in Bermondsey, and there was a remarkable outbreak in Deptford; and on the north side of the Thames there was another in the St. James's district. The local authorities should immediately make arrangements for carrying out the instructions of the Board of Health. No time should be lost. Inspection, and the house-to-house visitation should be at once instituted. The maxim with everyone now should be:—Follow your usual pursuits; live temperately, but well: fear nothing; but the instant you perceive any disorder, however slight, in your diet or any means of your family, apply for medical advice. On the water companies that supply the population with the dirty water of the rivers a serious responsibility rests. The water of every company is as impure as it was in 1849, except in one instance. The Lambeth Company now procures its water from Thames Ditton; and in the districts which it partially supplies, the mortality from cholera is largely reduced.

THE ARCHITECTURAL MUSEUM, CANNON-ROW, WESTMINSTER.—A series of lectures are being given every alternate Monday by gentlemen interested in the progress of this excellent institution, founded for the encouragement and cultivation of a purer taste among our carvers, masons, and workmen employed in building and decorating. On Monday evening Sir Walter C. James, Bart., delivered an interesting lecture on colour and its application to architectural requirements, which he illustrated with diagrams and examples of stained glass; and the large and attentive audience were especially interested in a beautiful painting by Turner, which Sir Walter had brought with him to show as an instance of fine harmony and colour.

A New York journal states that rain water is selling at 6d. a pail in Brooklyn, and very scarce at that.

Dr. Viotti, a physician of Acqui, narrowly escaped being assassinated by the country people, who had taken it into their heads that the doctor had poisoned the fountains. To dispel this illusion, Dr. Viotti proceeded to a fountain said to be poisoned, and took a copious draught of the water, whereupon he was released,

MR. N. P. WILLIS.—The American newspapers represent this well-known writer to be in so bad a state of health, that the close of his life at an early date is anticipated.

FIRE IN SACKVILLE-STREET, PICCADILLY.—A FEMALE BURNT. On Thursday morning, between one and two o'clock, a fire of a most alarming character broke out at Miss Elizabeth Morton's lodging-house, No 5 Sackville-street, Piccadilly. The inmates were aroused by the most piercing shrieks for help issuing from the back room on the ground floor. On entering it, they found Miss Mor on, wrapped in flames. An alarm was immediately raised, and the fire-engines were promptly brought. In the meantime, Miss Morton was extricated from her frightful situation, and the house was inundated. Every assistance was afforded by some medical men residing in the house; but, as there the extensive injuries she has received that not the slightest hopes are entertained of her recovery. The fire was caused by a candle setting fire to the furniture while reading in bed.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

THE recent very wise appointment of Mr. Tom Taylor to the office of Secretary to the newly-constituted Board of Health, reflects great credit on the Government and on Sir Benjamin Hall. This is a common y expressed feeling both within and without the circle of distinguished authors. Nor is the feeling awakened by Mr. Taylor's appointment confined to an expression of approval. There is a regret generally current, that we must of course lose some of his literary services. And this, no doubt, is much to be regretted; but Mr. Taylor is a young man, he has already a name in literature, and he is now sure to achieve a reputation for civil services to the State. Literature, it is true, can ill spare a man of Mr. Taylor's versatility; but we must put up with our public loss in one way by our public gain in another.

The vulgar error that authors are unfit for business is now all but exploded. Prior, it was said by the Whigs, was a bad Ambassador; but then Prior was a Tory. And Addison, it was said by the *Tories*, was a bad Secretary of State; but then Addison was a Whig. Authors have been too long kept out of political and State employment. "Your verses, Sir, are not poetry," said Ben Jonson to a young nobleman; "they will not hinder you rising in the State." Shakspeare's opinion would have been invaluable on any point of difficulty—on the Vienna Note—Wood, of Gloucester's, case—Perry's trial—or the Broad and Narrow Gauge. Our best authors are fit for other work than bookmaking. The best financial Secretary of the Treasury in our time is the present editor of the *Edinburgh Review*; the author of the "Commercial Dictionary" has, in his position of Comptroller of her Majesty's Stationery-office, been the means of saving many thousands a year to the public; and, what is just as serviceable, the means of devising new ways of executing work not only at a smaller cost, but with greater rapidity and accuracy. A better justice, "with hands more clean," never sat on the bench of a police-court than Mr. Gilbert a'Beckett. The great literary attainments of a late editor of the *Examiner* are found of daily importance at the Board of Trade; and the author of the "Handbook of London" (so the *Civil Service Gazette* informs the public), has just been appointed chief clerk in one of the largest and best of the Government offices. "Who," says Johnson—

> Who can tell the effects of chance?
> Here Hunt may box or Mahomet may dance.

How odd—should the fourth estate (the newspaper press, weary authors, that wise creation of the people), prove at last the hot-bed and support of two estates—Lords and Commons!

Gossip What have we to tell when the *Athenæum*, that wakes at cockcrow for such matters, has no gossip. This is not the fault of our contemporary. There is in this September season in London nothing doing in literature. Authors, publishers, booksellers, stationers, bookbinders, and even critics, are out of town. The *rules* of authors are not, as of yore, restricted to the Beach or the Mint. Pope, who delighted in taxing authors with their poverty, and their habitation in purlieus, could not do so now. Our living Hogarth, Mr. E. M. Ward, would fail in finding a distressed poet for a companion picture to that truthful representation of a poet, when Pope was the terror of dunces and of some men of genius. Mr. Dickens is enjoying himself, and entertaining others, in the best villa in Boulogne, and no one deserves such success or wears his public honours more meekly than our great novelist. Mr. Thackeray has just had a fall from his high-mettled horse, in Hyde park, but has escaped (we are glad to think), much as Cromwell escaped two centuries ago, and nearly (if we mis take not) on the same ground. Had Defoe lived in our time his opportunities of wealth had indeed been great. Were not Fielding and Smollett, for their own comfort in this life, born a century too soon? Had their births been later, their graves would not have been at Lisbon and Leghorn.

A pretty controversy is waging in print about the year in which "The Dunciad" first appeared. It is said, by Pope, to have been first printed in Dublin, in the year 1727, but no Dublin edition of that date has yet been discovered. We believe that no such edition ever existed, and that the date is—what Warburton said to Johnson of Pope's printed statement about the Odyssey—"a lie." Pope's whole life was not only a warfare upon earth, but a continued course of generous actions and crooked devices. He delighted in puzzling and playing the politician even in ordinary matters.

This mention of the difficulty about the date of the "Dunciad" reminds us of the long-sanctioned practice of booksellers to give a date in advance to all new books issued before the expiration of the year in which they are actually printed. A new and amusing instance of this is now before us—"Soyer's Shilling Cookery Book," an August publication, bears the date "1855;" and the portrait of Alexis himself is seen facing this date, as if (like Shakspeare) he was not for an age, but for all time. The year affixed to a book is far from being actual proof of its appearance in that year. Before eighteen hundred and fifty-five our friend Alexis may be where we have no wish to see him.

The only subject of conversation in art is the entire annihilation in this country of the noble science of line engraving—of a school boasting of the great names of Woollett, Strange, Sharp, and Raimbach. Mr. Robinson (himself a master) sometimes amuses himself with his old needles and gravers; and his "Mother and Child," after Leslie, is a fresh instance of his skill; but Le Keux has gone into railway employment; Doo has taken to portrait painting; and Burnet has turned a mezzotinto scraper. Smoked ink (or mezzotinto) has, by its cheapness and quickness of execution, given the go-by to line. But there is a day of revival; and the art will always be admired.

Dr. Waagen is travelling in England, seeing what he has not already seen. Few see our English collections one-half as well as the Director of the Berlin Gallery.

VICTORIA LONDON DOCKS.

THE Docks of London have been the growth of the present century; and, vast as in their extent, they are altogether inadequate to the rapid increase of the trade of the port, which increased nearly 35 per cent within two years. To meet these requirements a Company have undertaken the construction of the above Docks, which are to bear the name of the reigning Sovereign. The site is on the northern bank of the Thames, on the open tract of land extending from Bow Creek to Galleon's Reach, known as the Plaistow Marshes, and adjoining the North Woolwich Railway; by which they will have ready access to the heart of the City, and be placed in direct communication with all the great railways in the kingdom. The works are a Wet Dock and a Tidal Basin on the western side, with an entrance from the river a little below Bow Creek, as well as a Canal on the eastern side of this Dock, with proper basins and gates, to form another entrance from the Thames at Galleon's Reach. It is intended to confine the undertaking, for the present, to the formation of the Western Dock and Tidal Basin, and to the purchase of the land which will be necessary for the formation of the Canal and other extensions at some future time. The Western Dock and Tidal Basin will afford, together, an area of water accommodation of ninety acres, and upwards of a mile of Quay and Wharfage-room, together with 160,000 feet of fire-proof Warehouses, on a single floor, adapted for the reception of every description of merchandise. The Landing Jetties and Warehouses will be fitted with rails, communicating with the main line of railway, so that goods may be taken from the ship to all parts of the kingdom, without the delays, waste, and cost attendant upon housing and unhousing, and repeated removals from one place to another. The Company will possess sites suited to the construction of Graving Docks and Ship-builders' Yards, by which the necessity for examining vessels in the stream will be obviated

The width of the entrance gates of these Docks will render them available for the largest class of steamers engaged in the home and foreign trade of the port of London.

The quays, warehouses, and land, provided by two contracts with Messrs. Peto, Betts, and Brassey, consist of a half tide Basin of 16 acres, an Inner Dock of 74 acres, more than 11 acres of Warehouse floor, Jetties affording 6000 feet of quay frontage, in addition to the sides of the Dock, and 110 acres of land. The report of the engineer (Mr. Bidder) on the 18th ult. states the whole of the excavation to be now completed, and the puddling of the bottom of the Dock commenced; and the embankments round the Dock are brought to top-level and ballasted. The whole of the [illegible] to the Lock is finished; the brickwork, cast-iron shutting sills, and [illegible]dation-plates to the upper and lower gate platforms are completed. The sluice-pipes and boxes for the lower gates are fixed, and the brickwork and masonry for the side walls of both lower and upper gates are being proceeded with. It will afford some idea of the vast extent of the brickwork to state that 120,000 bricks are being laid daily in the walls and vaults of warehouses; which rate of progress will shortly be doubled.

According to present arrangements, the whole of the cranes, as well as the three pairs of gates, the lock-sluices, the swing bridge, and four capstans at the entrance, will be worked by hydraulic power, to the saving of the labour of from 400 to 500 men, when the Docks are in full operation.

Our Artist has sketched a portion of the Works in progress. The land approach is about half a mile east of How Creek, on the Barking-road, emerging from the latter by a new road on the side of the recently built Victoria Tavern, and close along the line of the North Woolwich Railway, till it terminates by the north bank of the river. Along this road many new buildings have lately sprung up—among which we observed, on a knoll, cluster, an "Essex Arms," a "Bell and Anchor," a "Lord Nelson;" a "Prince of Wales," and a characteristic sign, the "Excavators' Arms;" thus creating a new and a bustling neighbourhood where but lately there was only vacant ground.

HENRY RUSSELL.

WE give in our present Number the portrait of a man who is not only one of the celebrities of the day, but whose name, in conjunction with those of our Arnes, Dibdins, Shields, and Bishops, will descend to posterity in the records of English music. Others may have accumulated a greater amount of scholastic lore, and gained a greater command of the technical resources of the art; but none have been more successful in applying it to its best objects, and in bringing into action its wholesome influences on the minds of the people. And this he has done—in the only way in which it can be done—by allying Music with Poetry—by marrying sweet sounds to "immortal verse." Of all the kindred arts, those which directly address themselves to our perception of the beautiful, poetry and music are the most nearly akin; indeed, they may almost be regarded as branches of one and the same art. Grand and expressive music stirs the soul like poetry: rich and harmonious verse charms the sense like music. Separate they are powerful; united they are irresistible.

Poetry and music, moreover, whether separate or together, in order to produce their full measure of power—in order to exert the greatest influence on the greatest number—must be simple. In best art, the strongest effects are produced by simple means. Handel, the greatest of musicians, was also the simplest: and it was when he was most simple that he was greatest. Many of his airs are injured by the artificial taste in melody prevalent in his day; but the divine effusions of feeling, "He was despised and rejected," and "I know that my Redeemer liveth," are as simple as the melody of a national song; and in his unity "Hallelujah Chorus," plain broad masses of harmony are felt at once in all their grandeur by thousands to whom the chromatic complications of Spohr are an inextricable maze. Handel's music, moreover, the greatest part of it, proceeds from its association with the loftiest of all poetry—the poetry of the Bible.

Mr. Russell is one of the comparatively small number of musicians who have looked upon their art as the twin sister of poetry, and have cultivated it accordingly. This tendency appears to have guided him in the direction of his studies, and led to all the product ons of his genius. His earliest instructions were received from a sound English musician, Mr. F. King, the celebrated glee composer; and his subsequent studies were pursued in Italy—a country in which it is, in many respects, has not lost the reputation, enjoyed for ages, of being pre-eminently "the land of song." We have no doubt that it was in the vocal school of Italy that he acquired the gift, so general among the singers of this country, and so rare among our vocal and especially instrumental education which contributes so much to the impressive effect of his performance. After his return, he remained only a short time in his native country; but left England for the United States in 1834, when he was only twenty, with the intention, as we have heard, of settling in the backwoods as a farmer—disappointed, it would seem, in his too sanguine hopes of immediate success at home. Be that as it may, however, he did not persist in his resolution: for he had not been long in America before he began his musical career; and when he returned to England, after a nearly ten-years' sojourn in the United States, he brought with him a brilliant reputation both as a vocalist and a composer.

On his appearance in London the judgment pronounced by the Americans was fully confirmed. The novelty of his style, the beauty and expression of his melodies, the interesting subjects and fine poetry of his songs, his impressive manner and vocal power, attracted immediate and general attention. His rooms were crowded, night after night, by eager and delighted audiences. Similar triumphs awaited him in the provinces, in Scotland, and in Ireland; and we need scarcely tell our readers that the tide of success which then began to flow, has never ebbed for a single moment. A constant succession of beautiful songs—beautiful alike in their poetry and in their music—has kept alive the public interest, and preserved the freshness of his Entertainments.

The main source of Mr. Russell's success is to be found in the subjects of his songs. He has a manly intellect as well as a poetical spirit, and despises the namby-pamby verses which serve as food for the musicians of the day. We are not aware that he has himself written any of his songs, though it is evident, from the manner in which they are incorporated with his entertainments, that he must often have suggested their subjects. But his songs are generally (if not always) from other pens, and it is in their selection that his judgment and taste are conspicuous. A collection of Russell's songs would, of itself, form a "moral anthology" of great poetical interest, including many beautiful lyrics, produced expressly for him, by some of the most eminent writers of the day.

In every one of his songs there is a purpose. He seeks to cherish the best affections of domestic life, to soften the heart by exciting compassion and sympathy, to paint the miseries of vicious passion, and to rouse the spirit of patriotism by animated appeals in behalf of national liberty and social progress. Such themes, strengthened by the powers of poetry and music, find an echo in every breast.

We hear many persons, while they admit (for who can deny?) the effect of Mr. Russell's performances, yet underrate him as a musical artist, because his melodies are plain and natural, void of those [illegible]-matic modulations and other devices whereby composers are fond of displaying their science, superficial critics of them deem a vital point. Such judges are not aware that apparent artlessness is often the consummation of art. To imagine a simple strain of melody, plain as a nursery tune, yet new, individual, and possessed of that nameless quality which fixes it in the heart and in the memory, is a greater achievement of genius than a whole mountain of modern German songs, bristling with charps and flats, and wandering through all the keys of the system. The famous Carissimi, the most charming melodist of the seventeenth century, when some one made a remark on the simplicity of his music, exclaimed, "Ah, questo facile, quanto è difficile!" Such is the simplicity of Mozart, of Arne, of Dibdin, of Bishop; and such is the simplicity of Russell. His melodies are technically pure and regular; they are exquisitely adapted to the spirit and sentiment of the poetry; they at once seize the ear, and are never forgotten; they are heard in our drawing-rooms, in our theatres, in our streets, in our fields, throughout the empire. Take one of them—one of the slightest in construction—"Cheer, Boys, Cheer!" and remember how it mingled in the recent scenes when our brave regiments were

THE NEW VICTORIA DOCK WORKS, PLAISTOW MARSHES.—(SEE PRECEDING PAGE.)

departing for a foreign shore, when its inspiring notes, clanging from the martial instruments, were mingled with the shouts and acclamations of thousands. This simple strain has already taken its place among the national songs of England.

But many of Russell's songs are so extended in design, and so skilful in construction, that they vouch at once for the composer's attainments as an artist. Among these it is sufficient to mention "The Maniac" and "The Ship on Fire"—works which are not merely songs, but belong to the class of descriptive cantatas, in which the sentiment and passion of the poetry are expressed by the vocal melody, and the scenery and situations are vividly painted by the picturesque instrumental accompaniments. It would have been easy to make these pieces more elaborate and ostentatiously learned; but we are very sure that all the efforts of elaboration and all the parade of art would only have marred the effect produced by their pathetic simplicity.

Mr. Russell's powers as a singer are akin to his qualities as a composer. They are founded on a masculine intellect, and a pure taste. He is gifted by nature with a fine voice—rich, mellow, and sufficiently flexible for every purpose of execution. But he never makes a display of its strength or its sweetness. He uses it as the organ with which he "discourses eloquent music," as the means whereby he heightens the

MR. HENRY RUSSELL.—(FROM A DAGUERREOTYPE BY MAYALL.)

expression of beautiful and affecting poetry. With him the sound is always the echo to the sense; every word is spoken with clear articulation and emphatic expression; so that the poetry, instead of being rendered unintelligible or indistinct utterance and frivolous flourishes, is strengthened by a just declamation, while its effect is enhanced by the charms of appropriate melody. This is the secret of Russell's great success as a singer. He sings to the mind and the heart, as well as to the ear, of his audience.

Mr. Russell is still in the strength and vigour of middle age, and, in the course of nature, has a long career before him. We hope that, in pursuing it, he will continue to cultivate his genius as a composer, and make large additions to the genuine vocal music of England.

SUGAR MANUFACTURE IN BRAZIL.

The application of novel machinery to the manufacture of so important an article of consumption as Sugar, is an interesting fact in the history of invention. Such is the accompanying view of the interior of the Mill-house on a Brazilian Sugar Estate during the time of grinding, with a Mill of an improved construction, which gives a very powerful pressure to the canes. It was patented by Messrs de Mornay in 1851, and was introduced into that country soon after by Dr. Domingos de Souza Leao, the owner of the above estate, who speaks very highly of the advantages he has gained by its adoption. Two black women are seen feeding the mill with canes, which others are bringing from a heap shown on the right of the picture, where they have been thrown from the carts

The mill consists of an upper roller, three feet in diameter; a small roller, twelve inches in diameter, placed directly below it, which substitutes the objectionable cane-turner of the common mill, and at the same time gives the first squeeze to the canes; and, thirdly, is another roller of equal diameter to the upper one, braced close up to it. The canes pass between these two large rollers, after receiving the first squeeze from the upper one, and the small one already mentioned. The "trash" is then carried away over the lower large roller, and falls into a pit, whence it is conveyed away, to be used as fuel. The rollers are supported in cheeks, firmly held down to a bed plate, which receives the juice: and from thence it is conducted by troughs to the boiling-house, whence the steam from the "teaches" is seen issuing. Steel springs which cover the brasses of the upper roller prevent damage to any of the parts of the machine, in the event of anything harder than cane getting between the rollers; and they also enable the latter to adapt themselves to all irregularity of feeding. These mills, on some of the estates, are constructed with two small rollers; in this case an extra pressure is obtained, but those with only one appear to give nearly an equal result. On repeated experiments made at the Caraúna estate, from 70 to 74 lbs. of juice were obtained from 100 lbs. of canes; while from the mills in use in the West Indies the yield does not average more than 55 to 60 lbs. to the 100 lbs.

In Pernambuco and the adjacent provinces, the grinding season commences in September, and is generally concluded by April, when the winter rains commence.

The Brazilians bring very little science to bear in their operations in the cane-field; but this is rather owing to the abundance of rich land they have at their disposal, and to the excellence of the climate, than to any want of energy on their part. In most cases, the large increase of outlay attendant on manuring, drainage, and other artificial appliances, would not bring a corresponding increase in production.

The Brazilian planter defecates and concentrates in open pans, and clays his sugar according to the old system. A very large quantity of the sugar exported from Pernambuco is clayed, and this reduces the gross weight of produce, which, on estates far from a seaport, is of considerable advantage, owing to the bad overland carriage.

The principal sugar-producing provinces of Brazil are Pernambuco, Bahia, Sergipe, and Alagoas: in Maranham this industry is only just commencing; but it bids fair soon to rank with those above mentioned.

The great impediment to the extension of agricultural pursuits in Brazil is the want of roads. Since the extinction of the slave-trade, the Government has wisely turned its attention to this subject.

In 1851 a law passed the Houses of Assembly authorising the construction of a railroad to Rio Janeiro, with a guarantee to the undertakers of a minimum profit of five per cent. This railway would traverse the principal coffee districts, and afford them easy means of transporting their produce to the capital. In 1853 a privilege was conceded for the construction of another line in Pernambuco, with a similar guarantee, which is to traverse the sugar districts of this province, and ultimately connect the river San Francisco, above the great falls of Paulo Affonço, with the chief sea port and capital town of the province. By this railroad, in connection with upwards of 1000 miles of inland navigation on the above river, an outlet will be given to the produce of all the central provinces of the empire.

FORT NOTRICH, BOMARSUND—BREACH MADE BY AN ENGLISH THREE-GUN BATTERY—FROM A SKETCH BY C. W. BRIENLY—(SEE NEXT PAGE.)

FORT OR PRAETO.

THE CAPTURE OF BOMARSUND.

A Baltic Correspondent of the *Morning Chronicle* (Sept 7), writes:—"Send me out the Number of the ILLUSTRATED LONDON News that has the Views after the taking of Bomarsund. The reason I ask is, because the day I was up there (Thursday last) I met the artist (Mr. Brierly) sketching, and he showed me some of his pictures, and they were admirable. I am curious to see how they will look engraved." The large Illustration upon the preceding page is from one of the Sketches above referred to. The principal object in the view is Nottich, the northern fort of Bomarsund, showing the breach made by the English guns, three 32-pounders, worked by English blue-jackets and marine artillery, under command of Captain Ramsay of the *Hogue*. The Sketch is taken from the position of Long ish g un upon a hill, about 800 yards to the westward of the fort: it shows what three ship's guns, worked by our men behind sand-bags did against the dreaded Russian stone walls in a few hours.

The Sketch is one of more importance than appears at first glance, as it bears upon the question of English guns *versus* granite walls. This is the only breach made in the fortification. The French, who took the corresponding fort on another hill, did their work in first-rate style, but had mortars and lighter guns; but all in the fleet are more interested in this breach than anything yet effected at this seat of the war.

NATIONAL SPORTS

From twice one hundred thousand throats rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course or more.
SIR FRANCIS DOYLE.

THE late meeting at Warwick was the most successful that has ever been held over her pleasant meadows. Early Bird was "wanted" at last, and won his race very cleverly, though The Reiver (who had to give 3lbs. for his year) showed in better form than he has done since the last St. Leger day. The betting shadows of that great race, which stands for decision next Wednesday, were more marked here than usual. Bolardo was firmer than ever in the premiership, and Autocrat was very freely supported. Derricks was also brought into notice again, at 20 to 1; but we fancy that *Bolardo* and *Acrobat* will represent Scott's stable and *Marley Hill* go to make the running for them Frank Butler (who is now 10 st.) will most probably never ride again, and certainly not this season. Symptoms will therefore be on Bolardo, and perhaps Marlow or Alfred Day on his stable-companion. The Maltonians pin their faith firmly on Bolardo, but after what we saw of his light middle and non-staying propensities in the spring, we incline to that capital public record Derrick as safest. If he had who rode him for the Chester Cup had not stood to win some hundreds on Epaminondas, and therefore utterly ruined his chance by racing with everything that came to the front, he would have gone to the post with an unstained escutcheon. As it is, there has been so much eccentric mystification about Lord Derby's three year-olds, all this season, that the public would not be sorry to see the black jackets beaten. We hear that, besides the above trio, some twelve to eighteen others will start; and, as far as we can learn, they will be selected from the following:—*Calamus* (Marson), *Scythian* (Wells), *Punchbox* (Bartholomew), *Amalgamation* (Aldcroft), Knight of St. George (Busham), The Spinner ( ), Midsummer (Charlton), Autocrat (Whitehouse), Arthur Wellesley (Holmes), Hannibal (A. Day), The Trapper (Nat), Middlesex (Simpson), Grey Plover (Osborne), Professor Buck (—), Ivan (Rogers), Barret (Abrahams), Tros (G. Oates), and one of Mr Knowles's (Bumby) Midsummer is believed by some to be Baron Rothschild's property, and Calamus is rather under suspicion of lameness

The Champagne Stakes seems likely to produce a strong contest between Ronnie Morn, Dirk Hatteraik, and, perhaps, Lord of the Isles. Dirk has only travelled Middleham, Newmarket, and Epsom; and Flying Dutchman's old box; and his trainer is very sanguine that he will win both his Doncaster races. Virago has "gone home to gallop" from Warwick, where making her own running, she chopped down Kingston and the Oaks winner, Bunermont, in a mere exercise canter. The same ground has been sadly against West Australian's preparation, and if rain does not come, he will hardly start for the Doncaster Cup. Kingston gave the mare 33 lbs. at Warwick, but, as the running proved that he has not the least pretensions to stay for 2½ lbs. at Doncaster, the friends agree from the Ascot Cup result, where Kingston gave West Australian 9 lbs., that she must beat the latter easily at 22 lbs. Lord Londesboro's horse, however, was very short of work then, and, according to Job Marson (who rode Kingston), he won very cleverly.

The sale list for Doncaster is not very large as yet, and includes (besides Mr. Brown's greyhounds), the Oswaldkirk, Teversham, and "A. Johnson" yearlings. It seems that Lord Londesbro' is determined that the "blue and silver livery" shall not be disgraced when West Australian leaves the turf, and has given John Scott 1000 guineas for his Irish Birdcatcher and Cyprian colt. "Bovver" Yellow also becomes no contemptible colt-glory, while Adurini Rous (who, by-the-by, is never very lucky—Bon Mot and Justice to Ireland to wit—with his high priced bargains has purchased Lord Chesterfield's Orlando yearling colt, for Mr. Mare, for 1200 guineas! At this the first time we have seen the produce of the celebrated mare of Tyree, Omco, and Bayaway, all bred from the same dam, in successive seasons. Mr. E. R Clarke also purchased a high-priced Van Tromp colt, at York, and seems likely to race more than he has done of late: while the accession of Sir Robert Peel to the Danebury ranks, is hinted at Sir Robert has been a tart *habitué* for some time past, but has not, at least, publicly owned horses. Earl Derby has given a 300 sovs cup to be run for at York next year; and Lord Exeter's stud is advertised to be sold in the Second October Meeting

Mr. Holl has just brought out a very capital Derby portrait of Andover, with Alfred Day on him Six or seven of the leading horses are introduced in the background, descending from the paddock to the starting. the most characteristic of them being the little chestnut Hospodar. Alfred Day's likeness has been capitally hit off; but he would have looked all the better if he had worn Mr. Gully's time-honoured white cap, instead of a red one, in the fray

Just at this clever young jockey has thus early taken his rank among the first jockeys of the day, poor Sam Chifney disappears from the racing scene, in which his "rush" had passed into a proverb. It is about ten years since he hung up his whip and saddle, and hence many modern turfites passed in the same weather-beaten old mahogany-whose 5 feet 7 inches stature, black surtout, and large broad-brimmed hat, gave no indications whatever of his profession—as he took his favourite stroll between Tattersall's and Weatherby's, knowing what he was. His riding career extended over nearly half a century, during which he won two Derbies, five Oaks, two Ascot Cups, &c., and ran second for four St. Legers. Although he was always considered his great rival in jockeyship, his luck and the number of his mounts were far below James Robinson's. In early life he was a favourite jockey of George IV., and rode a great deal for the Duke of Rutland, the Duke of Cleveland, Mr. Thornhill, and several of the first owners of his day. He died at Brighton, on the 29th ult., in no very affluent circumstances, and in his sixty-ninth year.

TATTERSALL'S, THURSDAY EVENING.

GREAT YORKSHIRE STAKES.—3 to 1 agst Ra ajill (t).
DERBY.—5 agst Orestes (t).
CAM.RIDGESHIRE.—14 to 1 agst Lady Bird 40 to 1 agst Ir (mel
CESAREWITCH.—7 agst Bonnie Scotland (3 to 1 agst Addington (t); 50 to 1 agst Satan (t)
ST LEGER.—7 to 4 agst Rolando (t). 5 to 1 agst Trapper (t); 8 to 1 agst Acrobat (t), 12 to 1 agst Autocrat (t); 12 to 1 agst Midsummer (14 to 1) 33 to 1 agst Derwin

WARWICK RACES—TUESDAY.

Racing Stakes.—Katinka, 1. Mortimer, 2.
Queen's Plate.—Kingston, 1. Adine, 2.
Short's Handicap. C by Vetellius, 1. The Cripple, 2
Leamington Stakes.—Banlbee, 1. Hungerford, 2
Castle Hill Stakes.—Dividend, 1. Miss Nipkin, 2
Corinthian Stakes.—Glenstrae, 1. The Dandy, .

WEDNESDAY

Selling Stakes.—Katinka, 1 Mortimer 2
County Plate.—The Early Bird. 1. The Reiver, 2.
Avon Stakes.—Pole Star, 1. Plausible, 2.
We'ter Cup.—Dalkeith, 1. Little Davie, 2.
Warwick Cup.—Virago, 1. Kingston, 2
Town Plate. Florist, 1. Noisette, .
Borough Handicap.—Hanover, 1. Rose, 2
Scurry Handicap.—Magnet, 1. Orphrey, 2.
Warwickshire Stakes.—Off by consent.

LICHFIELD RACES—FRIDAY.

Gold Cup.—Candlestick, 1. Whisk bone, 2
Queen's Guiness.—Kingston, 1. Le Juif, 2.
City Stakes.—Cambria, 1. Ruby, 2

CHATHAM RACES—FRIDAY.

Railway Plate.—Oxus, 1. Merry-knocht, 2
First West Kent Stakes. Nightshade, 1. Diminutive, 2.
Members' Plate.—Warbler, 1. Little Naughty, 2

CURRAGH SEPTEMBER MEETING.—TUESDAY.

The September Meeting, which commenced this day, was most brilliantly attended. His Excellency the Lord-Lieutenant and suite arrived at the platform by special train shortly after one o'clock, and was received by the Ranger and Deputy-Ranger. The course was conducted to the Stand-house—which has undergone considerable improvements since last meeting; where his Excellency and the distinguished party who accompanied him partook of a splendid déjeûner. The Viceregal party appeared interested and gratified with the amusements of the day, which were of a first-rate character. The Grand Stand, which was crowded, presented a brilliant appearance with elegantly-dressed ladies.

Scurry Stakes.—Simpleton, 1. Bacchus, 2.
Sweepstakes, 10 sovs. each, 40 added. Simon Pure, 1. Lambay, 2
Anglesey Stakes.—Leila b. c., 1. Mother Carey's Chicken, 2.
Scurry Corinthian Stakes.—Morgan Rattler, 1. Mayday, 2.

NATIONAL PROVINCIAL LIFE ASSURANCE SOCIETY.—On Thursday the third annual meeting of this society was held at the offices in Cheapside; J. Keating, Esq., M.P., in the chair. The report congratulated the society on the increase of business and the assurances effected during the past year being to the extent of £210,712, yielding a new revenue of £7687 10s. 6d. per annum; being an increase of 20 per cent on the assurances effected in the corresponding period of 1853. The number of claims during the year were twenty-eight, assuring £2,347 17s 4d.; making the total claims from the establishment of the society £3,261 2s. 1½d. The report was adopted, and a dividend at the rate of six per cent per annum, free of Income-tax, declared.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent).

The absence of the leading jobbers from the Stock Exchange has been productive of a very limited business in the Consol-market, this week. Prices, however, have ruled very firm: arising, chiefly, from the unusually favourable accounts at hand from nearly all parts of the country, including Ireland and Scotland, on the subject of the crops, and the in mense yield of wheat in particular. That the large produce will tend to check the outflow of bullion, and much ease money, and it is gratifying to learn that the crops have turned out well in most of the Continental States. Our American advices are, however, of a most unfavourable character. The exports of bullion from the United Union have increased enormously of late; failures have been reported by a most every packet; and, unfortunately, the growth of corn—arising from the long drought—has proved a failure in many of the States of the Union. This circumstance will prevent many parties from sending flour and other produce here, in exchange for manufactured goods, besides increasing the demand for bullion

The Stock market, on Monday, was rather flat. The Three per Cent Consols were marked 93¾ ¾, the Three per Cents Reduced, 93¾ ¾, the New Threes, 93¾ ¾. The transfer books of the New Three per Cents Quarter per Cents were closed for the dividend; Long Annuities were 9⅞. Bank Stock was firm, at 209 to 211; India Stock, 225½ to 226. Exchequer-bills rallied to 58 prem. Exchequer-bonds realised 98¾. On Tuesday, the Three per Cents Reduced were 93½ to 95; the Three per Cent Consols, 93¾ and 93½. Consols for Account, 93½ ⅝; Long Annuities, 1859, 9 5-16; India Bonds, 4s; Exchequer bills, 6s. to 8s. prem. Exchequer-bonds, were done at 98⅝; Bank Stock, 209½ to 211. Very few transactions took place on Wednesday. The Three per Cent Consols were 93½ ⅝; the Three per Cents Reduced were done at the same figures. Consols for Account realised 93½ ¾. Long Annuities sold at 9 5-16; India Bonds, 4s. to 7s.; Exchequer-bills, 4s. to 7s. prem.; Exchequer bonds, 98 On Thursday, the Three per Cent Consols opened at 93½ ¾, and afterwards fluctuated from 93⅝ to 93½ The Reduced Threes, Bank Stock, and Long Annuities, were shut for the dividend. India Stock, 226 to 228. India Bonds, 5s. to 8s. Exchequer-bills, 5s. to 8s. prem.

There have been very few sales reported in the Foreign Market; yet we have to notice very firm prices. Brazilian Five per Cents have realised 102; Ditto, Small, 101½; Buenos Ayres Six per Cents, 57; Ecuador Bonds, 3½; Mexican Three per Cents, 19; Peruvian Deferred Six per Cents, 71¼ ex div. Russian Bonds, after Coupons, ex dividend, 99; Four-and-a-Half per Cents, 90; Sardinian Five per Cents, 88½; Spanish Three per Cents Consolidated Debt, 21½; Turkish Scrip, Six per Cent, 8½ to 6 prem. Dutch Two-and-a-Half per Cents, 61; Dutch Four per Cents, 94¼, and Swedish Four per Cents, 86 to 87.

The returns of the Bank of England for the month and six months ending on the 5th ult., show very favourable results. The exports were as follows—

	For the Month.	For Six Months.
1854	£8,272,191	£51,806,194
1853	7,266,086	49,861,643
Increase	£1,006,105	£1,944,550

There has been a moderate inquiry for Joint-stock Bank Shares, the prices of which have been well supported: Australasia have marked 84½; English, Scottish and Australian Chartered, 11½ ex div.; London Chartered of Australia, 5½; South Australian, 44; Union, 67½. Miscellaneous Securities have been steady:—Australian Agricultural, 41; Canada, 97 to 104; Ditto, Six per Cent Bonds, 109½; Crystal Palace, 2; North British Australasian, 6½; Peninsular and Oriental Steam Navigation Company, 85½; South Australian Land, 36½; Submarine Telegraph, 30½; Last and West India Dock Stock has been dealt in at 158; Van's Waterworks, 15; County Freehold Land Society, 15½; Ditto, Deferred, 12½; Guardian, 7¼; Imperial Fire, 338; Law Life, 55½; National Loan Fund, 9½; Pelican, 40; Phœnix, 153; Sun Fire, 252; Union, 230. Canal Shares have been quite inactive:—Ashton and Oldham, 104; Birmingham, 84; Derby, 80; Coventry, 200; Grand Surrey, 48; Loughboro', 76; Neath, 160; Oxford, 110; Regent's, 16; Stafford and Worcester, 40; Stourbridge, 285; Worcester and Birmingham, 32. Gas and Coke Companies have been done British Provincial, at 21; Brighton, 15; Equitable, 26; Imperial, 86½; Phœnix, 26¼ ex div.; United General, 20; Westminster Chartered, 38; Ditto New, 6¾. In Bridge Shares, very little doing:—Hungerford, 12; Waterloo, 4¾; Ditto Old Annuities of £8, 28½; Ditto New, of £7, 2s; Vauxhall, 21

The week's imports of bullion have been over 1,000,000 dollars from New York, and £200 000 from other quarters.

The market for Railway Shares has been rather firm. Prices, almost generally, have been fairly supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 22½; Ambergate, Nottingham, and Boston Junction, 6; Caledonian, 66½; East Lancashire, 7; Edinburgh and Glasgow, 63½; Great Northern, 89; Ditto A Stock, 72; Great Western, 74½; Lancashire and Yorkshire, 75; Ditto Wilts, 13½; London and Brighton, 104; London and North Western, 96½; Ditto Quarter Shares, 18; London and South-Western, 84½; Manchester, Sheffield, and Lincolnshire, 36½; Midland, 71½; Norfolk, 36½; North Western (Hor ick), 17½; Ditto, Lease, 16½; Scottish Central, 76½; Scottish Midland Junction, 58½; Shrewsbury and Birmingham, 18½; Oxford, Worcester, and Wolverhampton, 55; South Eastern, 67¼

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 98½; London, Tilbury, and Southend, 11½; Midland Bradford, 83½.

Friday Evening

There has been a very limited business doing in the market for all National Securities to day, and prices have ruled lower. The Three per Cents for Money have been done at 93⅝ ⅞; and 93⅝ to 95 for the Account. Very few transactions have taken place either in Foreign Bonds or Railway Shares.

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's arrival of English wheat up to our market, coastwise, has been moderate. Keep, this day, is very limited. Prices, per cripls by land carriage were steadily hence the value of samples was by no means extreme. For most kinds we had a very moderate inquiry, at Monday's currency. The supply of foreign wheat was good; but the imports have been only 3 0 quarters. On the whole, the demand was in a sluggish state, at Monday's rates. Barley was in limited supply, and rather dull, at Monday's currency. The arrivals from Denmark, Prussia, and Russia, have been 2 0 new peas on offer were much neglected; but we had a good inquiry for Indian corn. Flour was steady. Several parcels of Spanish have sold for Belgium. Arrivals this week:—ENGLISH AND IRISH.—English wheat, 2,000 quarters; malt, 1870; oats, 8,000; flour, 600. Foreign: wheat 30 barley, 3,501 oats, 70 0. flour, 240 barrels.

Mark Lane.—Wheat, Essex and Kent, 40s. to 44s.; ditto, white, 50s. to 55s.; Norfolk and Suffolk, red ditto to 50s.; ditto, white, 45s. to 51s.; rye, 33s. to 35s., grinding barley 4 to 4 , distilling ditto 5 to 5 ; malting, ditto, 30s to 32s.; Lincoln and Norfolk malt, 55s to 60s.; Ware, Hertford, and Kingston and Ware, 70s. to 75s.; Chevalier, 75s. to 78s.; Yorkshire and Lincolnshire feed oats, 21s. to 23s.; potato ditto, 25s. to 26s.; Youghal and Cork, black 17s. to 18s.; ditto, white 21s. to 22s.; tick beans, 40s. to 42s.; grey peas, 35s to 37s.; maple, 34s to 36s.; white, 40s. to 42s.; boilers, 42s to 45s. per quarter. Town-made flour, 50s to 53s.; country marks, 42s to 45s. per 280 lbs.

Seeds.—The demand for most seeds continues inactive, at our quotations

Linseed, sowing, 55s. to —; Baltic, crushing, 50s. to 52s.; Mediterranean and Odessa, 48s to 52s.; hempseed, 40s. to 44s. per quarter. Coriander, —s. to —s. per cwt. Rapeseed, English, new, 32 to —; white ditto, 7s. to 9s., and tares, —s. to —s. per bushel. English rapeseed, £30 10s. to £30 per last of 20 quarters. Linseed cakes, English, £9 0s. to £9 5s. ditto, foreign, £9 10s. to £11 10s. per ton. Rapeseed cakes, £6 0s. to £6 5s. per ton. Canary, 60s. to 65s. per quarter. English clover seed, new, —s. to —s.; ditto, red, —s. to —s. per cwt

Bread.—The prices of wheaten bread in the metropolis are from 8d. to 9d. of household ditto 7d. to 7½d. per 4 lbs. loaf

Imperial Weekly Average.—Wheat, 43s. 8d.; barley, 32s. 6d.; oats, 27s. 8d.; rye, 34s. 6d.; beans, 40s. 3d.; peas, 37s. 7d.

The Six Weeks' Average.—Wheat, 44s. 5d.; barley, 34s. 4d.; oats, 28s. 9d.; rye, 37s. 2d.; beans 47s. 6d.; peas, 41s. 5d.

Tallow on Foreign Corn.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Quantities of Grain sold last week.—Wheat, 36,244; barley, 2314; oats, 9861; rye, 329; beans, 1795; peas, 1137 quarters.

Tea.—Our market is still very inactive, but we have no change to notice in the quotations. The common sound congou is selling at 10½d per lb. Duty was paid to Saturday last on 20,896 908 lb.

Sugar.—The demand for all kinds of raw sugar has continued heavy, and prices have been in favour of buyers. Barbadoes has changed hands at six to 30 s. 3 crushes 2s 6d. to 33s 6d.; Mauritius, 24s 6d. to 43s., and yellow Havannah, 33s. to 38s. per cwt. Refined goods move off slowly at from 43s 6d to 45s 6d per cwt.

Coffee.—There has been rather more doing in this article. Good ordinary native has realised 43s.; and Plantation Ceylon, 55s. 6d. to 62s. 6d., closing an advance of 6d per cwt.

Rice.—The demand has improved. About 6000 bags Bengal have sold at late rates, 6s. 3d. per cwt, being former rates.

Provisions.—The market for Irish butter is heavy, and the quotations are somewhat lower. Foreign qualities are heavy, at a fall of from 3s. to 4s. per cwt. Bacon are offering on easier terms. Room is very dull, and 2s. to 3s. per cwt. cheaper. All other kinds of provisions command scarcely any attention.

Tallow.—The demand is heavy, and prices are drooping P Y C., on the spot, 62s. 9d.; and for forward delivery, 62s. 6d. to 63s. 9d. per cwt. Town Tallow, 57s. 6d.; rough fat, 3s. 4d. Stock at present in the port of St. Petersburg, the 1st year, amounted, to 30,733 casks, against shipments less year amounting to 38,776 ditto About 8000 casks have already arrived

Oils.—Linseed oil is very dull at 32s. 6d. per cwt. In other oils the business doing is limited. No quotation has given way to per cwt

Hay and Straw.—On Smithfield hay, 2l. 2s. to 4l. 12s.; new ditto, 2l. 8s. to 4l. 4s.; old clover, 3l. 8s. to 4l.; new ditto, 2l. 16s. to 4l. 4s.; and straw, 1l. 14s. to 2l. per load

Potatoes.—The supply is moderate, and the demand steady. Kidneys are in fair request, and prices rule from 80s to 90s. per ton

Coals.—Stockton's West Hartley, 20s.; Hedley's Hartley, 17s.; Hedley Main, 14s. 9d.; Tanfield Moor, 15s.; Whitwell Seaton, 18s. 6d.; Hedley, —s.; Bo'ness Primrose, 14s.; Haswell, 14s. per ton.

Hops (Friday).—A few packets of new hops have sold this week, at from £18 5s to £2 per cwt. Fine samples are in request, and command full prices. Duty, £60,000 to £65,000. The inquiry is again large, with 344 bales from Ostend 998 from Hamburg, 49 from Antwerp 186 from Rotterdam, and 60 from Amsterdam. Mid and East Kent pocke s £12 12s. to £16 16s.; Weald of Kent, £11 11s. to £14 14s.; Sussex, £11 11s. to £13 13s per cwt.

Smithfield (Friday).—There was only a moderate supply of beasts on sale in to day's market, but the meat trade ruled dull Most of the best descriptions changed hands at Monday's quotations. The supply of sheep was compar at vely small; here the ea, the sale was in a sluggish state, on former terms. We had but a limited supply of lambs, and the trade was dull at late rates we received short supply and some what improved in quest In some few instance s prices had an upward tendency. Pigs were dull but unchanged. Calves met with a dull inquiry, at from £14 to £18 each, including their small calf.

Per 8 lbs. by the carcass.—Inferior beef, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d to 3s. 10d.; prime large ditto, 3s. 10d. to 4s.; prime small ditto, 4s. 4d. to 4s. 6d.; large cows, 3s. 2 to 3s. 4d.; prime ditto, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 3s. 10d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 8d. to 4s. 0d.; small pork, 4s. 2d. to 4s. 8d.; lamb, 4s. 2d. to 4s. 6d.

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL, prepared for Medicinal Use in the Lofoden Isles, Norway, and sent to the best of chemists, analysis. The most effective remedy for CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, CHRONIC RHEUMATISM and all SCROFULOUS DISEASES.

Arbor vitæ.—This oil is prescribed by SEDGELIUS, LIEBIG, WOEHLER, JONATHAN PEREIRA, FOCQUIER, and numerous other distinguished scientific chemists; prescribed by the most eminent Physicians, and supplied to the leading hospitals of Europe—effecting a cure, or ameliorating symptoms, much more rapidly than any other kind.

Extract from the "LANCET" July 15, 1854:

"After a careful examination of ten different kinds of Cod-liver Oil, Dr. De Jongh gives the preference to the Light Brown Oil over the Pale Oil, which contains scarcely any volatile fatty acid, a smaller quantity of iodine, phosphoric acid, and the elements of bile, and upon which basis depends the efficacy of Cod-liver Oil, no doubt, part y opposite. some of the deficiencies of the pale Oil are remedied able to the use kind of its preparation and quantity to its Extra Ion through the stomach, in the preference of the Light Brown Oil that Pale Oil we fully concur."

"We have carefully tested a specimen of the Light Brown Cod-liver Oil, prepared for medical use under the direction of Dr D Jongh, and obtained from the wholesale agents, Messrs Ansar, Harford, and Co., 77, Strand. We find it to be genuine, and rich in iodine and the elements of bile."

Sold wholesale and retail, in bottles labelled with Dr. de Jongh's stamp and signature, by

ANSAR, HARFORD, and CO., 77, Strand, London,
Sole Consignees for the United Kingdom and the British Possessions, of the following prices:

THE GRAND MILITARY MASS, AT THE CAMP AT HONVAULT, NEAR BOULOGNE, ON SUNDAY LAST.—(See Page 237.)

THE ROYAL MEETING AT BOULOGNE.

The meeting of Royal personages, this week, at Boulogne, is one of the most note-worthy events of the day, in many respects. A few weeks ago a report that Prince Albert and the King of the Belgians would pay a friendly visit to the French Emperor, and visit, along with him, the Camp of the North, then forming between St. Omer and Boulogne, was looked upon by most people as an unfounded rumour What was only rumour then, is now a matter of history, and the significant fact will not tend greatly to comfort the Czar, or the King of Prussia, under their present gloomy aspect of affairs.

The Emperor of the French arrived at Calais on Saturday last from Boulogne, in order to meet the King of the Belgians, who, with his Royal Highness Prince Albert, had been invited to witness a series of grand military manœuvres by the army forming the Camp of the North. As the troops are commanded by the Emperor in person, it was thought that the presence of the exalted visitors would not only be regarded as a personal compliment by the French Monarch, but would have a wholesome influence on European politics by evincing the strong sympathies which bind the people of France, England and Belgium, in the course of policy pursued by the two great Powers. It was originally arranged that King Leopold should visit the Emperor of the French at Boulogne, and that the two Monarchs should there await the arrival of Prince Albert. On Thursday last, however, the Emperor received a communication from the Belgian Monarch announcing that the resignation of his Ministry would render it impossible for him to be absent from his dominions for more than a single day. The Emperor thereupon offered to come to Calais expressly to meet the King, and on Saturday the Royal interview took place.

The Emperor arrived at Calais at noon, escorted by a detachment of Cuirassiers, and proceeded at once to Dessin's Hotel, which was specially engaged for the reception of the two crowned heads. A salvo of artillery announced the Emperor's arrival, and he received an enthusiastic welcome. His Majesty's visit to the Pyrenees has been of great benefit to his health, the improvement in his personal appearance since he visited Calais to witness the embarkation of the troops for the Baltic being remarked by every one. The civil and military authorities of the town were assembled in official costume at Dessin's to receive the Emperor. A deputation of *poissardes*, clad in pretty chintz dresses and black linsey-woolsey petticoats, were honoured with an interview, at which they presented a fine dish of fish. The peasant women were also admitted to an audience, and tendered a superb bouquet for the acceptance of his Majesty. A little before two o'clock another salute of artillery indicated the arrival of the King of the Belgians, who entered the town by the Dunkirk road, escorted by a detachment of Cuirassiers, headed by their band. His Majesty, who was accompanied by his eldest son, the Duke de Brabant and General Comte de Montebello, was received at the entrance of the town by the authorities, and conducted, amid the cheers and *vivats* of the people to Dessin's Hotel, from the windows of which the French and Belgian tricolores floated in friendly juxtaposition. Leopold appeared gratified by the cordial welcome given him, and repeatedly acknowledged the shouts of the crowd. The Emperor had left his apartments to receive his distinguished visitors; and, when the carriage arrived, he was standing in the court-yard of the hotel, surrounded by a small suite. Upon alighting, the two Monarchs bowed, and the King of the Belgians said, "I am charmed to make your acquaintance; allow me to introduce to you my son, the Duke de Brabant. The Emperor replied by a few kindly words, and took the King and the Duke to his private room, where the three Royal personages were closeted alone for three-quarters of an hour.

About five o'clock the Emperor, the King of the Belgians, and the Duke de Brabant entered a carriage, and were driven to the harbour, where the Emperor's private steam-yacht *La Reine Hortense* was lying. This beautiful steamer, which was profusely decorated with flags, recently conveyed General Baraguay d'Hilliers and his suite to the seat

SKETCH OF A PORTION OF THE CAMP AT ST. OMER

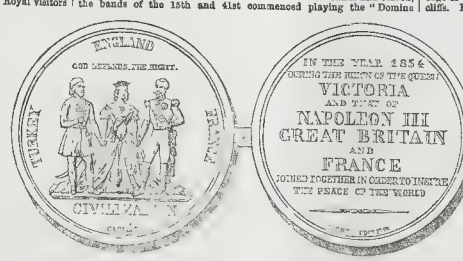
of war in the Baltic, and is now waiting to take out the *bâton* of a Marshal of France to the successful soldier who has added another leaf to the military laurels of *la belle France*. Having inspected the cabins, which are fitted up with great splendour, the Royal party walked along the deck, where the crew were drawn up in line, the Emperor stopping occasionally to address a few questions to the men. The Royal visitors then walked to their carriages through the crowd which had assembled on shore, and whose salutations they duly acknowledged. As soon as the Emperor had left the ship, the crew ran up into the rigging and gave several hearty cheers. When the Royal party had gained their carriage, the Emperor refused to ascend first, and gave the pas to the Belgian monarch. They then returned to their hotel, where they dined together, with the members of their respective suites, the Prince de Chimay, &c.

On Sunday morning the Emperor, accompanied by his illustrious visitors, the King of the Belgians and the Duke de Brabant, arrived at Boulogne from Calais, at a quarter-past ten o'clock. The Royal party, who travelled in an open carriage, escorted by a detachment of Imperial Guards, were received with acclamations on their way to the Emperor's hotel at Capécure. After partaking of some refreshment, the Emperor conducted the King and the Prince to the site of the *bassin flottant* which it is proposed to construct. It was intended that their Majesties should assist at the celebration of a Grand Military Mass at the Camp; but the heat was so excessive that the order for the Royal carriages was countermanded, and the Royal party remained at the Imperial Hotel until the departure of the King of the Belgians, which took place on Sunday evening, at six o'clock. Nearly the whole of the population in Boulogne assembled to witness his embarkation in the Belgian mail packet, for Ostend, on his way to Brussels, where his Majesty was to preside at a Cabinet Council, at noon on Monday.

THE GRAND MASS AT THE CAMP.

A large proportion of the inhabitants, resident as well as English, left Boulogne at an early hour, *en route* to the Camp at Honvault, for the purpose of witnessing the celebration of the Grand Mass, at which it was expected the Emperor and the King of the Belgians would be present. As we have already mentioned, neither his Imperial Majesty nor his Royal visitor was there. The spectacle, however, was not the less grand on that account; indeed, it was one which the presence of Royalty and Imperial pomp could not have rendered more imposing. At eleven o'clock the whole of the troops were paraded, and inspected in from of their respective camps, and at half-past eleven they marched off to the vicinity of the chapel, which has externally one large central and two smaller side compartments, with lofty gable thatch roofs of deep pitch. The roofs are supported by poles tastefully covered with evergreens. The altar is raised some few steps above the ground, and is of course duly provided with the vessels requisite for Divine Service. The central and side roofs are ornamented with crosses and tricolour flags. At the back of the chapel is the robing-room for the priest and his attendants. When the troops arrived at the chapel, they formed in close column of companies on the front and the two sides of the altar, leaving a large open space immediately in front, for the officers in command. The visitors occupied the fourth side of the open square, and were in line with the altar. The Royal visitor was there. The spectacle, however, was not the less grand on that account; indeed, it was one which the presence of Royalty and Imperial pomp could not have rendered more imposing. At eleven o'clock the whole of the troops were paraded, and inspected in from of their respective camps, and at half-past eleven they marched off to the vicinity of the chapel, which has externally one large central and two smaller side compartments, with lofty gable thatch roofs of deep pitch. The roofs are supported by poles tastefully covered with evergreens. The altar is raised some few steps above the ground, and is of course duly provided with the vessels requisite for Divine Service. The central and side roofs are ornamented with crosses and tricolour flags. At the back of the chapel is the robing-room for the priest and his attendants. When the troops arrived at the chapel, they formed in close column of companies on the front and the two sides of the altar, leaving a large open space immediately in front, for the officers in command. The visitors occupied the fourth side of the open square, and were in line with the altar. The Royal visitor was there. The spectacle, however, was not the less grand on that account; indeed, it was one which the presence of Royalty and Imperial pomp could not have rendered more imposing. At eleven o'clock the whole of the troops were paraded, and inspected in from of their respective camps, and at half-past eleven they marched off to the vicinity of the chapel, which has externally one large central and two smaller side compartments, with lofty gable thatch roofs of deep pitch. The roofs are supported by poles tastefully covered with evergreens. The altar is raised some few steps above the ground, and is of course duly provided with the vessels requisite for Divine Service. The central and side roofs are ornamented with crosses and tricolour flags. At the back of the chapel is the robing-room for the priest and his attendants. When the troops arrived at the chapel, they formed in close column of companies on the front and the two sides of the altar, leaving a large open space immediately in front, for the officers in command. The visitors occupied the fourth side of the open square, and were in line with the altar. The Royal visitor was there. The spectacle, however, was not the less grand on that account; indeed, it was one which the presence of Royalty and Imperial pomp could not have rendered more imposing. At eleven o'clock the whole of the troops were paraded, and inspected in from of their respective camps, and at half-past eleven they marched off to the vicinity of the chapel, which has externally one large central and two smaller side compartments, with lofty gable thatch roofs of deep pitch. The roofs are supported by poles tastefully covered with evergreens. The altar is raised some few steps above the ground, and is of course duly provided with the vessels requisite for Divine Service. The central and side roofs are ornamented with crosses and tricolour flags. At the back of the chapel is the robing-room for the priest and his attendants. When the troops arrived at the chapel, they formed in close column of companies on the front and the two sides of the altar, leaving a large open space immediately in front, for the officers in command. The visitors occupied the fourth side of the open square, and were in line with the altar. The 18th battalion of the Chasseurs de Vincennes, the 15th Line, and the 23rd, 41st, and 56th Regiments of the Line; the whole division being under the command of General Renaud. The service commenced at twelve o'clock, and during the earlier portion of the celebration of the Mass, the bands of the 23rd and 56th Regiments played in admirable style the overture of "Robert le Diable." There were some few present who, to an unmistakeable Saxon accent, did most undevoutly give expression to an encore. The beautiful music was hushed for a few moments, the ripple of the waters on the beach alone was heard. The sound of the bell told of the coming elevation of the Host—the non-military part of the congregation stood reverentially uncovered—the word of command, "Portez armes!" ran through the vast congregation, followed immediately by the clashing noise of the muskets; immediately after came the second order, "Armes Bras!" a third time the bell sounded, and with it was heard the "Genoux à terre!" and "Presentez les armes!" and on the instant ten thousand men had bent the knee and presented their arms in reverent homage at the elevation of the Host. Few scenes could be more interesting, or better calculated to awaken religious emotions; and the sight of the regiments as they knelt was imposing in the extreme. On one side of each of the regiments knelt the Sappers, with their long white aprons and colossal beards; and upon the other, but slightly in advance, were the gay colours and eagle of the regiment, borne by the ensign, and surrounded by a small guard of honour. The colours were drooped as the Host was raised, and remained so during the whole period of the elevation. For some minutes the whole of the troops remained kneeling.

As the bands of the 23rd and 56th commenced to perform an exquisitely plaintive *morceau*—"L'Homme en Peine"—the troops rose and remained standing at their ease. As soon as these bands had ceased, the bands of the 15th and 41st commenced playing the "Domine



MEDAL STRUCK AT THE MINT, AT PARIS, TO COMMEMORATE THE ANGLO-FRENCH ALLIANCE

Salvum," a large number of the men singing the well-known words. At the conclusion of the ceremony the troops formed line in front of their camps, and were inspected by the General, after which they marched past in open column companies. General Renaud, who is a fine specimen of a military man, watched the troops as they defiled past with the most marked attention and keenest scrutiny. As the different regiments passed, the bands marched on one side, and remained playing during the passing of the whole of the troops.

We have engraved this magnificent scene of the Mass. The site of the altar is grand and picturesque, about twenty yards from the cliff, with a great expanse of sea, towards the English coast. The day was beautiful, the sky was without a cloud, and there was scarcely any wind. The ocean in the rear of this grand religious and military spectacle was very impressive.

ARRIVAL OF THE KING OF PORTUGAL.

The departure of one crowned head was speedily followed by the arrival of other Royal personages. The inhabitants and sightseers at present thronging the busy and picturesque port of Boulogne had scarcely recovered from their undisguised astonishment at the sudden departure of the Belgian Monarch on Sunday evening, when the guns of a battery on the Capécure side of the harbour, in the immediate vicinity of the railway station, thundered forth a Royal salute to welcome the arrival of his Majesty the King of Portugal, who, accompanied by his Royal Highness the Duke d'Oporto, and attended by the Duke de Terceira and a numerous suite, came into Boulogne by the Great Northern Railway, at twelve o'clock on Monday. The King and his Royal brother arrived at Ostend on Saturday evening, from Vienna; and, by previous arrangement, proceeded to Boulogne on Monday, to be present with the august visitors who honoured the Emperor with their presence. A guard of honour, composed of a company of the Imperial Guard, were in attendance at the railway station to receive the illustrious visitors. The King and his brother, on alighting from the railway, entered one of the Emperor's carriages, and, escorted by a detachment of the Guides, proceeded at once to the Hôtel Brighton. The Emperor descended to the vestibule of the hotel to meet his august guests. His Majesty welcomed the King very cordially, and conducted both him and his brother to the Imperial apartments, where they remained for some time in consultation with the Emperor.

At two o'clock the Emperor, accompanied by the King of Portugal, the Duke d'Oporto, and a brilliant staff, left the Hôtel Brighton, in five of the Imperial carriages, escorted by a detachment of the Cent Gardes—a superb corps of one hundred men selected for the especial guard of the Emperor from the finest cavalry regiments of France—to pay a visit to the Camp of Honvault, about two and a half miles east of Boulogne, on the heights overlooking the Channel. The Emperor, accompanied by the King of Portugal and the Duke d'Oporto, arrived at Honvault shortly after two o'clock. The Imperial party were received at the entrance of the Camp by the General-in-Chief and a brilliant staff of officers. The troops had previously been drawn up in line in front of the Encampment, and when the Imperial carriages halted, the Emperor was received with shouts of "Vive l'Empereur!" by the soldiers. The Emperor and his Royal guests alighted for a few moments after their arrival, and walked to the edge of the cliff, from which they could distinctly observe the English cliffs. Having re-entered the Imperial carriage, the august party drove along the whole line, greeted, as they passed, by loud *vivats* from the soldiery. On arriving at the extremity of the Honvault Encampment, the Imperial carriages returned and halted about the centre; when the Emperor again alighted, and, with the King of Portugal and his Royal brother, inspected the interior of one of the clay houses occupied by an officer, and also one of the common soldiers' huts. The Emperor entered the latter with the King, and minutely explained its construction to the young monarch. While this was going on, a crowd of sightseers (many of them English) pressed somewhat closely upon their persons. The gensdarme showed some disposition to interfere for their Imperial master's convenience; but the Emperor would not permit the people to be driven back, and in the most agreeable tone gave orders that all might be allowed to approach him.

The Emperor, on re-entering his carriage, insisted, as he had previously done, on giving the *pas* to the King of Portugal, who sat throughout the day on his Imperial Majesty's right hand, with the Duke d'Oporto opposite. The troops having marched past the Imperial carriage, the Emperor left the ground, and returned to the Brighton Hotel at half-past three o'clock.

At six o'clock in the evening, greatly to the astonishment of the good people of Boulogne, the newly-arrived Potentate left Boulogne by the railway for Brussels, amid a salvo of artillery. Conjecture has been utterly at fault in attempting to account for this hasty departure, but it was confidently stated that the young King and his brother would return to Boulogne in a day or two, accompanied by the Duke de Brabant.

THE ARRIVAL OF PRINCE ALBERT.

The reception prepared for, and the welcome given to, his Royal Highness Prince Albert, proved how anxious the Emperor was to show the deep sincerity of the friendly feelings which pervade the whole French people towards their English allies, by paying the highest compliment in his power to the distinguished representative of the British Crown upon the occasion of his first visit to France under the Imperial dynasty. In order to give the reception a proper degree of éclat, several regiments of the line marched into the town at an early hour this morning from the adjoining camps, and lined the streets and bridges along the route from the Custom-house to the Hôtel Brighton.

The arrival of the English squadron had been generally announced as likely to take place about half-past nine o'clock on Tuesday morning, at which hour the flood-tide would enable the *Victoria and Albert*, with her draught of seventeen feet water, to go alongside the quay opposite the Custom-house. The interest felt in Prince Albert's arrival did not, however, allow the Boulonnais to remain in their beds. As early as seven o'clock the pier-heads were well lined by spectators, armed with telescopes and long-sighted glasses, with which they swept the horizon to the westward, in the hope of being the earliest to give intimation of the Royal approach. Eight o'clock and nine o'clock passed, and still, although the horizon was so clear that a mere speck might have been observed on the surface of the waves, yet no sign of the squadron could be observed. Meantime, the quay became thronged with military; and all the windows and roofs of the houses opposite the harbour were filled with gaily-dressed spectators. At a few minutes after nine o'clock, several of the Imperial carriages were driven down to the Custom-house, and now the quidnuncs began to speculate upon whether the Emperor would so far deviate from his reception of the Monarchs who had previously visited him as to attend the disembarkation of the Prince Consort of England. The King of the Belgians had been received by the Emperor in the court-yard of Dessin's hotel at Calais—the King of Portugal had been welcomed at the Boulogne Railway station by the Aides-de-Camp of the Emperor, who first saw the young Monarch in the vestibule of the Hôtel Brighton. The Imperial carriages were now sent to the quay unattended, and therefore it was urged the Emperor could not intend to pay a higher compliment to Prince Albert than had been previously accorded to the Sovereigns of Belgium and Portugal. The result demonstrated that the Emperor on this, as on many previous occasions, setting aside the ordinary formalities of Court etiquette, had, of his own free will, and to the evident gratification of his people, taken opportunity to pay the highest compliment in his power to the representative of the Majesty of England.

At half-past nine o'clock the first signal of the approach of the

English squadron, then distant about nine miles, was given from the pier-head. The troops were at once formed, and a large square opposite the Custom house cleared for the convenience of the disembarkation. There was very little craft in the harbour. Beyond the General Steam Navigation Company's ship *Albion*, and a vessel belonging to the Royal Yacht Squadron, both of which were gaily dressed, there was no naval display. The commander of the *Albion* politely devoted the desk of his ship to the accommodation of as many spectators as could conveniently be crowded together, and, from the point where she was moored, a very good view of the squadron, as it neared the harbour, was obtained. The approach of the *Victoria and Albert* having been communicated to the Emperor at a quarter past ten o'clock, his Majesty left his hotel in an open barouche, drawn by four superb English horses, for the quay. The Emperor was escorted by a detachment of the Cent Gardes. His Majesty was received with loyal manifestations along the line of route, the troops joining the popular outbursts with loud shouts of "Vive l'Empereur." On arriving opposite the Custom house the Emperor alighted, and was received by the officers of the staff, and by the *entire* and municipal authorities of the town. Lord Cowley, the British Ambassador at Paris, M. Drouyn de Lhuys, French Foreign Minister, and other distinguished notabilities, were present. The *Victoria and Albert* was now distinctly visible, with her stern well set in the mouth of the harbour. The Emperor, separating himself from the officers of the staff now advanced to the edge of the quay, and with great apparent interest, watched the approach of the English Royal yacht His Majesty remained in this position for some minutes, and almost until the *Victoria and Albert* had been brought up alongside the quay. As the ship neared the Custom house, the fine band of the Imperial Guard played the English National Anthem, and the voices of the populace rose loud and shrill above the roar of a Royal salute which thundered forth from the heights above the town, from the moment the yacht entered the harbour until she was finally moored. The Prince Consort stood upon the main-deck, attired in the full uniform of an English Field-Marshal, and watched with evident interest the brilliant reception prepared for him. His Royal Highness was attended by the Duke of Newcastle, General Lord Seaton, the Hon. Charles Grey, Captain Du Plat, and other officers of distinction, in full uniform. At the same moment the Emperor and the Prince recognised each other, and exchanged salutes by raising their hats to each other. As soon as the Royal yacht had come alongside, a handsome gangway, covered with green cloth, and decorated with gold fringe, was thrown across from the quay to the deck of the vessel. The Prince Consort instantly stepped ashore on to the quay, where the Emperor, who advanced with much cordiality of manner to welcome his Royal Highness. The Emperor and the Prince, uncovered at the same moment, and the next instant the hand of his Imperial Majesty was warmly clasped by Prince Albert.

A few kindly words of welcome to the French territory were addressed by the Emperor to his Royal Highness, who was introduced upon the quay to Lord Cowley, M. Drouyn de Lhuys, and other distinguished personages there assembled. The Emperor then led the Prince to his carriage, and insisted upon his Royal Highness entering first. The Prince did so, and took the left-hand seat; but the Emperor following, insisted upon his Royal Highness occupying the seat of honour upon his right hand. Prince Albert raised his hat, in recognition of the Imperial courtesy, and the Royal carriage drove off amid loud manifestations of French and English loyalty, the British cheers and French *vivats* contending for supremacy, until the Imperial carriage was out of sight.

The Emperor and the Prince Consort alighted at the Hôtel Brighton, at half-past ten o'clock, and remained there in close conference during the day. At four o'clock his Imperial Majesty, accompanied by his Royal Highness and a brilliant suite, left the Hôtel Brighton, on horseback, to pay a visit of inspection to the Camp. The route was through the town and along the Calais road to Ambleteuse, at which point the Imperial party entered the Camp. After having made a minute inspection of this Camp, the Emperor and the Prince, accompanied by their respective suites, and attended by a brilliant staff of officers, rode along the whole line extending from Ambleteuse, by Wymereux, to Hermelet, a distance of more than seven miles. The troops were all drawn up in line, and as the Emperor passed along, the band of each regiment played a few bars of the English National Anthem. His Majesty was mounted on a superb dark chestnut charger; the Prince Consort riding a bay charger, of great beauty. The Emperor and the Prince rode alongside each other, and were followed by Marshal Vaillant, Minister of War, Lord Seaton, and a host of distinguished officers. The escort was composed of a detachment of the Guides—three squadrons of Cent Gardes and three Life Guardsmen forming the respective body guards of the Emperor and the Prince Consort. The people were out in great numbers, and received both the Emperor and the Prince with the greatest enthusiasm. It was half-past six o'clock before the Emperor and the Prince returned to their hotel.

The Emperor addressed the following proclamation to the Army of the North:—

Soldiers,—In coming to take the command of that Army of the North, a division of which has so recently distinguished itself in the Baltic, I ought already to address you in the names of France, for you have now for two months gaily supported the fatigues and privations inseparable from a similar agglomeration of troops.

The formation of camps is the best apprenticeship to war, because it is the faithful image of war, but it will not profit all if the reasons of the movements to be executed are not brought within the comprehension of every soldier.

A numerous army is obliged to divide itself in order to subsist so that it may not exhaust the resources of a country, and yet it ought to be able to reunite itself promptly on the field of battle. Here is one of the first difficulties of a great concourse of troops. Every army (said the Emperor) that cannot reunite itself in twenty-four hours upon a given point is an army badly placed.

Ours occupies a triangle of which St. Omer is the apex, and of which the base extends itself from Ambleteuse to Montreuil. This triangle has a base of eight leagues upon twelve of height, and all the troops can be concentrated in twenty-four hours upon any point of the triangle whatsoever. These movements can be effected with facility if the soldier is accustomed to march as he carries with ease his provisions and ammunition if each *chef de corps* maintains on the march the several distances—if the different columns which direct themselves by different routes have well reconnoitred the ground, and never cease to maintain a communication with each other—in fine, if each army does not obstruct the march of the other, notwithstanding the immense abundance of a great number of horses and vehicles. The troops once arrived at the place indicated, it is necessary that they should understand each other, that they should protect themselves by a military position, and bivouac.

This is what you are about to be called upon to put in practice. Without at present speaking of the engagements and manœuvres of military tactics, you see how all is linked together in the art of war, and how much the most simple detail must contribute to the general success.

Soldiers, the experience and habits whom I have placed at your head, and the devotion which animates you, will render the command of the Army of the North easy to me. You will be worthy of my confidence, and, if circumstances should exact it, you will be ready to respond to the appeal of our country. NAPOLEON.

Boulogne, Sept. 2.

(*Continued in the Number published with the present Supplement*)

MEETING OF THE BRITISH ASSOCIATION IN LIVERPOOL.—Most of the invitations have been accepted, the guests comprising many distinguished noblemen, and others eminent in various branches of the arts and sciences. Amongst the nobility may be enumerated the Earl of Derby, the Earl of Harrowby, the Right Hon. the Earl of Sefton, Sir Robert Inglis, Lord Londesborough, and Lord Rosse, Lord Enniskillen, &c. The list of eminent men who are to take a prominent part in the proceedings includes Sir R. Murchison, Dr. Neill Arnott; Professors Forbes, Stokes, Owen, Graham, Phillips, Latham, Miller, Balfour, Faraday, and Baron Powell; Colonel Sykes, Colonel Sabine, and Mr. Robert Chambers, of Edinburgh. A number of distinguished foreigners have also signified their intention of being present. These include M. Fornari, the discoverer of the operations of the great pendulum; Professor Dové, the most eminent meteorologist of the present day; M. Quetelet, of Brussels; Mons. de la Fosse; Mons. Dubocq, and the Abbé Maignot. The Geological Section will include almost every eminent geologist living, namely, Murchison, Sedgwick, Buckland, Sir C. Lyell, Jukes, Phillips, Bowerbank, and Ramsay. The conversazione in St. George's Hall, at which all the distinguished guests are expected to be present, will probably be the most brilliant affair that ever took place in Liverpool.

ASCENT OF MONT BLANC BY A LADY.—There has been another ascension of Mont Blanc—the third this season. It was successfully performed on the 21st ult. by Mr. and Mrs. Hamilton, the latter being (since Mlle. d'Angeville, in 1838) the first lady that has ventured on this very trying expedition. The intrepid tourists were saluted by the inhabitants, on their return to Chamouni, by loud acclamations and a discharge of firearms.

THE NEW PENNY BILL STAMPS.—The new penny bill and note-stamps will not come into force until the 10th of next month. They commence at 1d. to £5, 2d to £10, and so on progressively, and nothing is to be charged for the paper under £100 stamp.

NOTES OF A RAMBLER.—No. III.

FIFE—ABERDEEN.

COMFORTABLY seated in the centre compartment of the centre carriage of the train formed at Burntisland to receive the passengers from Edinburgh, whose destination is St. Andrews, Dundee, Perth, or Aberdeen, we have ample time allowed to observe some of the peculiarities of the people among whom we are now journeying. The first thing that strikes the eye as characteristically different from the activity, and frequently unnecessary bustle, at a railway station in England, is the perfect composure that prevails here. It is not morosemess, it is not sulkiness of temper, nor indifference to duty, that gives to every official employed, and to almost every passenger carried, a certain air of cool complacency. There is no hurry in their movements; the action is precise, and the step measured. They move to and fro as if duly impressed with the magnitude of their several responsibilities. There is no offensive assumption of superiority on the part of the superintendent over the inspector, the inspector over the porter, or the porter over the lamplighter. While each keeps his place, and faithfully performs his duty, there evidently exists the best understanding among them, as exhibited in the friendly familiarity of their intercourse. Jackson does not shout for Brown; Brown does not bully Smith; Smith does not scold Jones in a tone of real or affected authority; but Jemmy addresses Robert, Robert speaks to Sandy, and Sandy talks to Johnny, in the friendliest tone of pleasant kindliness. In England, men are generally addressed by their surnames, which produces the effect of authoritative command. In Scotland, the Christian name is commonly used, and orders and instructions from superiors to inferiors sound, to the uninitiated, like asking a personal favour. There is in this probably some slight remains of the family feeling, or close association, which has ever prevailed in this country. In her days of danger it was her strong defence, in times of prosperity, her chief pride. There is everywhere observable the peculiarity which quaintly characterises their houses, where only one family lodges under one roof; they are "self-contained," as contradistinguished from the large houses where one flat or floor is occupied by a family, and seven flats (a singular term, but not applicable to the people), or seven families, may be covered by one roof. Although all must enter at the same outer door, and ascend the same general stair, yet, basement is considered beneath the observation of the ground-floor. Ground-floor may hold no intercourse with flat number one; while flat number one may be wholly ignorant of the physiognomical lines that distinguish the occupant of flat number two; and so on until you reach the uppermost flat, which, although the loftiest, is esteemed the lowest.

Our travelling companions are of the fair sex—quiet, gentle, unaffected, yet self-contained. There are secrets to tell, and they whisper pleasantly; appointments are to be made, and they are pleasantly arranged and duly noted. There are dresses worn by stranger-new to their fancy, and they must be scanned and criticised, not with the slighest approach to impertinence, yet with that laudable curiosity and thirst for knowledge which is said to be a prominent quality in the female mind. An American lady would, without hesitation, tell you that she admires the colour, shape, and style, of the beautiful bonnet, ask the name of the maker, and inquire the cost. The Scottish lady observes and thinks. Nevertheless, it is not particularly pleasant to raise your eyes from your vain endeavours to solve the "Bradshaw" puzzle, and find yourself being quietly measured from top to toe. Were we sure of approbation being the verdict we might feel comparatively comfortable; the uncertainty makes us miserable.

We everywhere observe the unmistakeable satisfaction with which the Scottish people pride themselves in having given, although remotely, an Empress to France. The well known style in which that distinguished lady lifts the hair from the forehead is all the rage among the young ladies who, fashionably attired, promenade the sandy beach of the popular watering-place. To some it is most becoming; but, when you find it associated with thin cheeks, high cheek-bones, and a forehead rather masculine, I must confess it says little for the taste of the wearer; and good taste in dress is a prime accessary to women, as it indicates, more accurately than words can describe, the well-ordered and properly-trained mind.

The long delay in starting, and the sleepy pace at which we are progressing, have kept us longer in the meshes of national peculiarities than we intended; but here is the lovely town of Kirkaldy, famed as the birthplace of Adam Smith. Why it is called a town would puzzle a St. Andrew's doctor to explain What constitutes a town is necessarily a preliminary that would require to be settled. If a row of irregularly-built and irregularly-placed houses, of all sorts and sizes, as if a shoal of antediluvian monsters had crawled from the ocean and become petrified on the spot where the instinct of each led it to repose, may be called a town, then Kirkaldy is a town—ay, and has churches too, and a pleasant aspect towards the sea; and, we doubt not, a pleasant enough place to spend a few hours in annually.

We are not surprised that Fife folk should be proud of their county—or kingdom, as they exultingly proclaim it. Delightfully undulating on the surface, pleasant streams, fertile valleys excellently cultivated, and numerous lakes and waterfalls, with an abundance of wood, make up landscape pictures most agreeable to look upon. Talking of pictures, here was David Wilkie born; and, probably, of all the great-men-producing counties of Scotland, few, if any, have given more to the roll of fame than this kingdom of Fife. If railways have their annoyances they have also their advantages even for the tourist who desires to see everything. If the hoped-for prospect from the summit of a hill is cut off by an impertinent cutting, the glens and valleys are pleasingly revealed from the accommodating elevation of a high embankment; and matters, on the whole, are balanced and adjusted.

The evening begins to close, and we must close with a slight sketch of Aberdeen. We have contrasted London and Edinburgh; we may now contrast Edinburgh and Aberdeen. Edinburgh is learned, quiet, and sedate; her seaport is so far removed from her midst, that her streets are undisturbed by the nocturnal bluster of emancipated seamen. Aberdeen is also learned—how learned, let the distinguished men who have been students there tell; let the innumerable host of poor Highland lads who have been there educated gratuitously and equipped for the struggles of life, in the army, on the sea, and in the colonies, tell. But she needs not this: her hardy sons, her dauntless seamen, her enterprising merchants, tell to the civilised world the glory of Aberdeen. She has, also, her seaport; her seaport is her power, and her seamen are rolling everywhere, with gait peculiar to their profession. Aberdeen is a unity, and cannot be divided without injury to the rest. Her various parts commingle, apparently incongruously, yet work up a perfect harmony. The stone of which Edinburgh is built is of a perishable nature, and rough on the surface, so that dust and soot adhere to it, and give it an air of age and unsubstantiality. But Aberdeen, constructed of blocks of granite, seems destined to endure for ever, while every storm of rain cleanses the houses from all external impurities; they look as if insensible to the effects of age. We by no means desire to express ourselves so as to make it appear that such are the differences and destinies of the cities, we only describe what externally impresses a stranger—the one looks evanescent, the other permanent.

Aberdeen may well be likened to Boston, the chief city of Massachusetts. The Pilgrim Fathers at first intended to settle in Virginia, where the fertility of the land was undoubted; but their course was over-ruled, and they landed in Cape God, on the stern, inhospitable shores of New England, where chiefly rocks and water abounded; yet by the aid of that water and out of those rocks they have raised people the hardiest, wealthiest, and most intelligent of that—educationally considered—highly-favored continent. So, also, Aberdeen—her rocks have become her wealth, her waters her abundance. Great knowledge and indomitable perseverance have split and carried her rocks everywhere to form the pathways of the crowded cities of England; giving rise to the saying that the produce of her industry is kicked, spurned, and trodden under foot. Her harbour is fine, though its approach is dangerous; and Britain has not a nobler street than the Union-street of Aberdeen.

Those who delight in watching the progress of skilled labour, cannot fail being gratified by a visit to the granite-works of Mr. Macdonald, where gigantic blocks of stone are, by the power of steam, sawn asunder with the facility of a log of timber, though the progress is somewhat slower. Columns for the halls of public buildings and ornamental structures seem chiefly to engage the attention of a large body of workmen. Here was cut and supplied the pedestal for the memorial to poor Tom Hood. There is now in progress a family tomb for an English nobleman, to be erected near London. "But," said the workman, "they're no to be buried in the yirth, they're to be laid on stane shelves inside." "It matters little," said we; "some people are shelved, and some shelve themselves; better be shelved after than before death." "Deed, yes," rejoined our appreciating friend, as he dropped his chisel for a moment to regale himself with a pinch of snuff. One of the wise arrangements at these interesting works is, that they are freely open to all visitors, without fee and without ceremony, and we understood that the workmen have instructions to answer civilly all questions, and render ample information on any point that may be desired. In all our wanderings—and they have been many—we have never been more gratified than we were with these works of Mr. Macdonald, whom we know not, and to whom we are personally unknown. RAMBLER.

LINES,

ON READING AN ABSTRACT ACCOUNT OF THE PRISON HORRORS AT BIRMINGHAM, AND LORD DUDLEY STUART'S REPORT OF THE STATE OF OUR HOSPITAL AT CONSTANTINOPLE, IN THE "TIMES," FRIDAY, JULY 28, 1854.

[Lord Dudley Stuart said, that anything so disgraceful as the present state of the hospital at Constantinople he could not conceive. The noble Lord here read a statement made by a medical gentleman at Constantinople descriptive of the condition of the hospital, and the insufficient accommodation afforded to the sick. He (Lord Dudley Stuart) had gone over the hospital, and was shocked to find that the description given did not exceed the reality; and the unfortunate seamen who were the inmates of the place were obliged to pay an enormous sum (he was told at Constantinople between £5 and £6 a month, while they were only receiving £3 a month wages.) The French hospital at Constantinople presented the greatest possible contrast to the English hospital; and, both by day and night, the sick were carefully attended to by those estimable women the Sisters of Charity, and paid one-third of the amount exacted from the English seamen in the British hospital. The hospitals in Constantinople for the use of the Turks were magnificent buildings, both for the military and for civilians of all ranks. He found the same to be the case at Adrianople. When he found these infidels acting in this noble way he felt shame at the contrast which the hospitals of this great Christian (?) country presented. He begged to express a hope that the noble Lord the President of the Council would communicate upon this subject with the Secretary of State for Foreign Affairs, so that this monstrous evil might be immediately corrected.]

I AM most thankful that Thy truth lies deep—
Too deep within my soul for aught of earth
To shake or to disturb. Yet I could weep
That we, who ought to bless Thee for our birth
In this free Gospel-lighted isle, in deeds
Are darker than those lands whose erring creeds
We must condemn. Whence is it, Lord, the tree
That promises so fair should blighted be
From crown to root,
Save here and there a shoot,
To show what might be, were the sap Divine
Suffered to flow through all, and bear its fruits Divine.

Our sick, our wounded! Lord! oh! can it be
That those who battle on the stormy sea,
Or lie untented on the gory plain,
Exposed to all the dangers, dread, and pain
Of warfare, should no fitting hospice find,
No righteous mercy, and no ministering kind;
While those we judge in error, can pour forth
On their poor sick the hand and heart's rich worth
Of human love, and heavenly sympathy!

O Lord my God I fear me that the cry
Of sin and cruelty on every side,
The frightful thirst for gold -the dreadful tide
Of blasphemy—the foul inebriate flood—
The mothers' hands steeped in their infants' blood—
The holy Sabbath startled by the din
Of wordly traffic and each desecrating sin—
The prison horrors, where the poor child, doomed
For venial fault, comes forth, alas! full plumed
In vice's every dye, or tortured, seeks an end
To life, without a hope, a God, a help, a friend!
I fear me that the cry
Of all these monstrous things
Must reach Thy throne on high.
The sorrowful sighing of the prisoners, Thou hast said,
Shall not come up for ever; nor the stings
Of cruelty and vice be alway unrepaid.
Therefore, I fear me for this land—
Fear that thy justice-guided hand
Must find us out: that the dread, guilty Past
And Present shape a Future forth
We may not brave unshrinkingly.

Oh, my poor country, I had hope for thee!
Hope that the vengeance which must come at last
On Earth's corruption might, by the great worth
Of good men's prayers, have been turned off from thee
But now I fear,
And the sad tear
Of dread foreboding dims the eye,
Which yet is lifted up on high.
Let me pray on, oh, God!
Let me pray on, nor faint; the uplifted sword
Thou yet mayst sheath. Oh, stay Thine hand!
Bid Thy Destroying Angel spare our land!
"Strike Thou our lintels!" with the precious blood
"Sprinkle our door-posts!" Let the fiery flood
Of thy great wrath sweep not our doomed way!
But let us stand unharmed before Thee in that awful day!

CHESS.

TO CORRESPONDENTS.

SOLVERS BUSH.—That last sent shall be considered. Of the former, one only is presentable. B. W. F. Is good enough, in future, to write the initials of the pieces—as, W K, for White King; B K, for Black King, &c. Your present mode of representing the men gives a great deal of trouble, and leads to many mistakes.

J. P., Dalston.—It shall be examined one more.

SECRETARY. Our Problems must be more difficult or amateurs are too industrious, for we certainly receive much fewer correct Solutions than formerly.

B., Leamington.—The game between Lord Lyttelton and Mr W. England are piquant and pleasant enough. They shall be inserted shortly.

SOLUTIONS OF PROBLEM No 548, by S. S., Munro, Rob-Roy, P. T. W., Ernest, Kris, S. P. Q. R., Fabx and Perseus are correct.

SOLUTIONS OF PROBLEM No. 550, by J. P. Dalston; S. D., M. P., Hull, Major, Phillip, are so too.

SOLUTIONS OF ENIGMAS by S. S.; J. P., Falkx, K. H., and Norwich are correct. All others are wrong.

SOLUTION OF PROBLEM No. 550

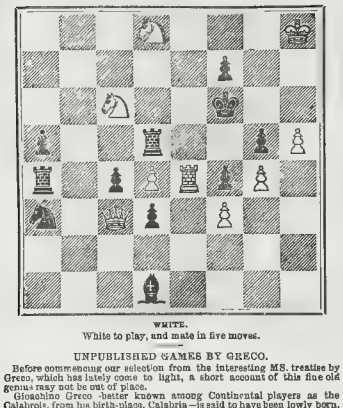
PROBLEM No. 551.

By B. W. F.

BLACK.



WHITE.

White to play, and mate in five moves.

UNPUBLISHED GAMES BY GRECO.

Before commencing our selection from the interesting MS. treatise by Greco, which has lately come to light, a short account of this fine old genius may not be out of place.

Giocchino Greco -better known among Continental players as the Calabrois, from his birth-place, Calabria—is said to have been newly born, and to have owed all his success in life to his skill at Chess. His remarkable aptitude for the game induced a celebrated amateur, Don Mariano Marano, to take him home; and, under such tuition, Greco improved so rapidly that he was accounted almost a rival of his master.

He subsequently went to Paris and London; and, in the former city, earned golden honours, by defeating the Duke de Nemours, M. Arnaud, Chaumont and La Salle, the chief players of France in that day. In the *Mercure Galant* of June, 1683, the following complimentary effusion is addressed to Greco:—

A peine dans la Carrière
Contre moi tu fus lu ver,
Que par la docte cohorte
Tous mes pas te furent lus;
Je vois des que tu t'avances
Cette toute vera def ences
Tomber tous mes e'anpi ons:
Lan : mes feints ton vas ze,
R. i. Chevs ier, fire si Serre
Sont ne n'est que tes Pions.

These lines were probably written at the time of his death; since, if the date given by Twiss is correct, he must have been between eighty and ninety years old in 1683. He is reputed to have realised a good fortune, and to have died in the East Indies at a very advanced age. His celebrity was undoubtedly great, and seems to have been lasting, for Bayle has thought him worthy of a place in his "Dictionary," wherein he says "Giocchino Greco played Chess so skilfully that it cannot be thought strange that I consecrate to him a little article. All who excel in their profession to a certain degree, deserve that distinction. This player did not find his match anywhere; he went to all the Courts in Europe, and signalised himself there, at Chess, in a most surprising manner," &c. Greco's work was originally written in Italian, probably about 1618 1639; but it does not appear to have been printed for many years. The first edition we have any knowledge of is an English translation of 1656. This is less complete than the French Edition, 1669, from whence all the modern editions, including that published by Lewis, in 1819, are taken.

Of the originality and genius of Greco's Treatise there can be but one opinion. He has many faults—want of soundness being his greatest; but he exhibits more imagination than almost any of the old writers, either of Italy or Spain; and his book has an attraction for the student, independently of the fresh fancies with which it is imbued, from the games in most cases being carried out to the very end; so that we play them over not as a task, but with the zest one feels in going through games which have been actually contested.

The following specimens of the King's Gambit afford a good idea of Greco's manner, and have never, we believe, been published in any translation of his book:—

(King's Bishop's Gambit.)

BLACK.	WHITE.	BLACK.	WHITE.
1. P to K 4th	P to K 4th (a)	8. Kt to K B 3rd	P to Q 3rd
2. P to K B 4th	P takes P	9. P takes Kt P	K B takes P
3. B to Q B 4th	B to K 2nd (b)	10. R to K R 6th	Q B the K Kt P
4. P to Q 4th	B to K R 5th (ch)	11. R takes B	B takes Kt (d)
5. K to B sq	B to K Kt 4th	12. R takes Kt (ch)	R takes R
6. P to K K 4th	B to K R 3rd	13. Q takes B	
7. P to K Kt 4th (c)	P to K Kt 4th	And Black has won a Piece.	

(a) The opening moves of this game are given as follows in the MS.: "Giocando il nero la pedina di sua re 3. casa, il bianco fara il simile il nero giuochera la pedina di sua alfiere 2. casa, il bianco pigria la pedina contraria con la pedina di sua re, il nero giuoca il suo alfiere alla 4. casa dell' alfiero di sua donna, il bianco fa il proprio il suo alfiere a 4. di suo re."

(b) A most of Greco's games at this opening the Queen gives check here as in the present day.

(c) It must be borne in mind, that, according to the Italian school of play, a Pawn can pass an adverse Pawn (passar battaglia) without being liable to capture.

(d) In a variation Greco makes White take the Rook with his Queen at this moment, and pursues the game thus:—

11.	Q takes R	13. Kt takes K R P	
12. Kt takes Q	B takes Q	Winning a Piece	

(King's Gambit.)

BLACK.	WHITE.	BLACK.	WHITE.
1. P to K 4th	P to K 4th	8. Q takes K B P	P to Q 3rd
2. P to K 4th	P takes P	9. Castles, K to K R sq & K to B sq (b)	P takes Kt
3. Kt to K B 3rd	P to K Kt 4th	10. Q takes P (ch)	Q to K 2nd
4. B to Q B 4th	P to K Kt 5th	11. Q takes Kt	Q takes Q
5. B takes K B P (ch)	K takes B	12. R takes Q	B to K Kt 2nd
6. Kt to K 5th (ch)	K to his sq (a)	13. R to K B sq	Kt to Q B 3rd
7. Q takes P	K to K B 3rd	14. Kt to Q R 3rd	

And Greco dismisses the game as in Black's favour; but his opinion is questionable.

(a) In the only game of Greco's at this opening published, the second player now moves K to his 3rd, and the attack then proceeds with great spirit as follows:—

6.	K to his 3rd	13. Q takes B (ch)	K to his sq
7. Q takes P (ch)	K takes Kt	14. Q to K R 6th (ch)	K to his 2nd
8. Q to K B 6th (ch)	K to Q 3rd	15. Castles	Q to K sq
9. P to Q 4th	B to K Kt 2nd	16. Q to Kt 5th (ch)	K to his 3rd
10. Q B takes P (ch)	K to his 2nd	17. R to K B sq (ch)	K takes R
11. B to K Kt 5th (ch)	B to K B 3rd	18. Q takes Kt (ch)	K to Q 4th
12. P to K 5th	B takes B	19. Kt to Q B 3rd (ch)	

And wins in a few moves.

(b) The present and several other instances of Castling in the MS. before us tend to disprove the long-received opinion that Greco Castled only in the way now generally adopted in all parts of Europe, except Italy. The truth appears to be, that he, like all other players of the time, Castled according to the usages of the country he was playing in; but the translators of his work in England and France deemed it advisable to publish only games wherein Castling from one corner at all, or in which the operation is effected in the fashion then prevalent in those two countries. In the series of papers on Mediæval Chess, by Sir Frederick Madden and Mr. Hamilton, this and other fallacies concerning the old Chess masters, we have reason to know, will be fully exposed and corrected.

NOOKS AND CORNERS OF OLD ENGLAND.

BELSIZE HOUSE.

THE artists who met, during last summer, at University College, to consider what steps should be taken to preserve Hampstead Heath, and the neighbouring grounds, in their present order, for the purpose of art-study, confined their attention, apparently, to the proposed measure for enclosing the Heath. They did not seem to be aware that a very considerable revolution was about to take place in one of the most beautiful parts of the immediate neighbourhood of Hampstead, by the contemplated destruction of Belsize Park. Last autumn, the furniture, paintings, and books at Belsize House were brought to the hammer, preparatory to the pulling down of the mansion, and the leasing of the noble park to such Londoners as may wish to retire from the smoke and bustle of the town to that pleasant, airy suburb, rendered classical by the famous spirits by whom it has been inhabited during the last two centuries. Sir Henry Vane, Sir Richard Steele, Mark Akenside, Coleridge, Joanna Baillie, Leigh Hunt, Shelley, Keats, Hazlitt, and Lamb are a few of the celebrities whose names have been associated with that delightful upland district, as residents, or frequent visitors. It was from his secluded dwelling among the pleasant lanes of Hampstead that Leigh Hunt, while editor of the *Examiner*, in its earlier days, was transferred, by the harsh mandate of judge-made law, to Surrey gaol, for calling the Prince Regent "an Adonis of fifty;" and from that prison he addressed the following—and many another—beautiful sonnet to his favourite haunts:—

Sweet upland! to whose walks with fond repair,
Out of the western slope, I took my rise,
Day after day, and on these feverish eyes
Met the moist fingers of the bathing air,
If health, unearned of thee, I may not share,
Keep it, I pray thee, where my memory lies.
In thy green lanes, bro an dells, and breezy skies,
Till I return, and find thee doubly fair.

Belsize Park, which is now being broken up, and will soon be converted into a London-surburban-villa district, with its fine modern church, its pretentious tavern, and all those other parasitical edifices which grow up so rapidly in such a locality, is only a small remnant of the ancient manor of Belsize. At one time, as we learn from Park's *History of Hampstead*, the manor extended all the way down to Kentish Town, including the beautiful slope on the right hand as you ascend Haverstock Hill, which commands so fine a view of Highgate, one of the most picturesque villages in England, in spite of its nearness to the "Fog-Babylon." Antiquarians have found notices of the "manor of Belses, near Hamstead," as far back as the commencement of the fourteenth century; but there are not many particulars regarding any of its residents, till we come down to a later period. In the reign of Henry VIII., a Sir Armigall Wade, Clerk of the Council to that monarch, resided at Belsize House: and at a later period, his son, Sir William, who was Clerk of the Council to Queen Elizabeth, and afterwards Ambassador to Spain, lived there also. Old Gerard, who was at that time gardener to Lord Burleigh, was in the habit of botanising in that locality. In describing the *habitat* of botony with white flowers, he says, "I found it in a wood, by a village called Hampstead, near unto a worshipful gentleman's house (one of the Clerks of the Queen's Council, called Mr. Wade), from whence I brought plants for my garden." Belsize was afterwards the seat of Thomas Lord Watton, whose eldest daughter and co-heir married Henry Lord Stanhope, son of the first Earl of Chesterfield. The estate, which is held under the Church of Westminster, continued in the hands of the Chesterfield family till 1807, when the lease was sold to Thomas Forsyth, Germain Lavie, Thomas Roberts, and James Abel, Esqrs., in separate lots—the latter holding that portion which contained Belsize-house and park. The house, which was taken down last autumn, was a modern edifice, having been built on the site of the old mansion about the latter end of last century. Among other tenants who have lived there during the present century the most noted was the Hon. Spencer Perceval, who was assassinated by Bellingham. The last tenant was Mr. Palmer, of Bedford-row.

OLD BELSIZE HOUSE, HAMPSTEAD.—FROM A PRINT OF THE TIME.

The most famous portion of the history of Belsize was the twenty-five years, commencing in 1720, the year of the South Sea scheme, and ending in 1745, the year of the Rebellion. During the whole of that time it appears to have been the most famous place of public entertainment in the neighbourhood of London; indeed, it must have been much better patronised by the nobility and gentry of that age than any of our public places of entertainment of a similar description at the present day. In *Read's Journal*, July 15, 1721, we read that—

Last Saturday their Royal Highnesses the Prince (afterwards George II.) and Princess of Wales dined at Belsize-house, near Hampstead, attended by several persons of quality; where they were entertained with the diversion of hunting, and such others, as the place affords; with which they seemed well pleased, and at their departure were very liberal to the servants.

From a broadside, without date, but which is understood to have been published about the same period, we take the accompanying view of the mansion, said to have been erected in the reign of Charles II., and also the following placard:—

BELLSIZE HOUSE.

These are to give Notice that Bellsize is now opened for the whole season, and that all things are most commodiously concerted for the Reception of Gentlemen and Ladies, the Park, Wilderness, and Gardens being wonderfully improved, and filled with variety of birds, which compose a most Melodious and Delightsome Harmony. Every Morning at Seven a Clock the Musick begins to play and continues the whole Day thro'; and any persons inclined to walk and divert themselves in the Morning may as cheaply breakfast themselves there on Tea or Coffee, as in their own Chambers. And for the convenience of single Persons or Families, who reside at Hampstead, there are Coaches prepared to ply the 2 places, which, by the least notice given, shall attend at their lodgings or Houses for sixpence per Passenger; and for the Security of his Guests, there are 12 stout Fellows completely armed to patrole betwixt London and Bellsize, to prevent the Insults of Highwaymen or Footpads which may infest the road.

The latter sentence would sound rather strange in a Cremorne-garden handbill of 1853; but highwaymen and footpads were to be found on all the roads round London in those days. The papers of that time contained frequent proclamations, offering a reward of £100 for taking any highwayman within five miles of London or Westminster; and "a pardon to any accomplice who should discover and apprehend such highwayman." The satirical poem called "Bellsize House," published about two years after the opening of the place as a public garden, throws ridicule on the patron announcement, and even questions whether the men appointed to protect the visitors would not be the worst aggressors:—

Assuring them that thirty men shall be
Upon the road for their security:
But whether one half of the rabble guard
(Which at t'other half's *asleep on watch and ward*)
Don't rob the people they pretend to save,
I to the opinion of the reader leave.

It appears to have been a place of resort for people of all classes. There was no charge for admission, the proprietor trusting solely to the profit he derived from the refreshments furnished. Certain days of the week, however, were set apart for visitors of quality, when immense crowds attended. In the *St. James's Journal* of June 7th, 1723, we read that "On Monday last, the appearance of nobility and gentry at Bellsize was so great that they reckoned between three and four hundred coaches; at which time a wild deer was hunted down and killed in the park, before the company, which gave near three hours' diversion." The amusements were not always of so innocent a character. Whatever they may have been on fashionable days, they seem to have been so rough at other times as to have provoked magisterial interference.

The *St. James's Journal*, May 24th, 1722, contains a notice that "the Court of Justices at Hickes-hall have ordered the high constable of Holborn division to issue his precepts to the petty constables and head-borough of the parish of Hampstead, to prevent all unlawful gaming, races, &c., at Bellsize-house, and the Great Room at Hampstead." From all accounts Belsize appears to have far exceeded Vauxhall, or any of our modern places of public entertainment in immorality and dissipation. The last notice we have seen relating to it is in the newspapers of 1745, in which year it is understood to have been converted into a private residence.

Those who wish to see the place before it is completely metamorphosed into modern crescents, terraces, and squares, may still have an opportunity. We are glad to learn that the beautiful avenue leading from Hampstead-hill to the house, which belonged to the place when it was open to the public, will not be cut down. It is also said that the palms will be left standing in the park and grounds as much in their present state as possible. In that case the public will derive great gain from the breaking up of the park, as it will be thrown open to pedestrians, instead of being so carefully walled and hedged round as it has been ever since we can remember.

A WINDFALL.—The late Thomas Spooner, Esq., of London (who died in 1839), went from Westmoreland, his native place, when about twenty-one years of age, to London, where he amassed a very considerable property, which, on his decease, he disposed of by a somewhat remarkable will. After bequeathing pecuniary legacies (amounting to about £25,000 in the aggregate), and also certain annuities to relatives, friends, and domestics, and devising the whole of his real estate to his wife for her life, he proceeds to say: "*I at present lease* my real estate after the decease of my said wife and the residue of my personal estate *undisposed of.*" The testator never made any future disposition thereof; and, as he was an only child, and died without child or parent, there sprang up at his death a host of claimants as heirs-at-law and next of kin, several of whom prosecuted their claims to the residuary personal estate (about £15,000) in the Court of Chancery. The claim of the two co-heirs seems to have been so well established that the formality of a trial in court was dispensed with by their opponent, Spooner consenting (on the advice of his professional adviser) to a verdict being entered in favour of Smythe's devisee and Willan, they giving a conditional promise to pay £1000 to Spooner. Thus these persons become the inheritors of real estates in several southern counties worth about £50,000.

THE WHITE RIVER IN CENTRAL AFRICA.—A letter from Cairo, 20th ult., states that M. Vaudry, the Sardinian Vice-Consul, who for several years past has established commercial relations on the banks of the White River in Central Africa, has been massacred by the tribe of the Bahris at a place called Koudokoro, near the Austrian Mission. That mission has lost the greater number of its members, but still maintains itself through the indefatigable energy of Father Knobnecher.

RUINS AT VARNA, AFTER THE RECENT FIRE.

VARNA AFTER THE RECENT FIRE.

We have been favoured by a Correspondent with the accompanying Sketch of the appearance of Varna after the conflagration described in our Journal of last week. Our Correspondent states:—

"Varna, which is one of the dirtiest labyrinths of modern times, was very nearly destroyed by the recent fire. As there was a fresh breeze blowing, the whole street of the Bazaar was soon in a blaze. Adjoining this street there are, unfortunately, three large magazines, filled with powder and shells, &c., and the danger of an explosion was imminent. Seamen from the fleet, with small fire-engines, and French and English soldiers from their camps on the hills around Varna soon swarmed into the town. Blankets were served out in hundreds and covered the roofs of the magazines, which were then played upon by the engines. In the mean time large bodies of troops were engaged in pulling down houses to cut off the progress of the fire. French and English all worked together, and on the tops of many a house were to be seen Zouaves and English sailors with their hatchets, working in the most heroic manner, and exposing themselves to the greatest dangers. Below them, in the streets, the scene was not quite so creditable to the two nations. Robbery and drunkenness prevailed among a few; but the temptation was certainly great.

"The streets were strewed in every direction with Turkish linen, bales of tobacco, cigars in thousands, pickles, brandy and wine-casks, preserved meats, bottles of beer, Turkish books, money-chests; and, worst of all, large casks of spirits, with the contents of which many a man's canteen was speedily filled. The poor Turks fled away as fast as they could, with what goods they were able to save. The Sketch shows the aspect of the town the morning after the fire; the powder-magazines are on the left. The French and English lost large quantities of grain and provisions, which had been contained in large storehouses."

BOAT ATTACK, ALAND ISLES.

THE accompanying Sketch, which we have received from an officer of the Baltic Fleet, represents a gallant affair in the Aland Isles, on the 9th ult., when H.M.S. *Gorgon*, unsupported by the fire of any other ships, cut out eight of the enemy's boats. In the gig were Captain Cracroft, and Mr. Llewellyn, Assistant-Surgeon. In the cutter, Lieutenant Michell; and in the pinnace, Mr. Royse, midshipman. The pinnace threw several shell amongst the trees; and the fire from the other boats was so well directed, that the enemy would not show themselves. In the Sketch the cutter is represented pulling in under fire of the other boats. The loss of the enemy was unknown: they fired very badly. There were no casualties on the part of the English.

IMPROVED DIETARY FOR THE RUSSIANS.—The scale of victualling the Russian prisoners of war on their arrival is to be two-thirds of A. B. allowance, except in bread, which is to be served out to them in full allowance, viz. 1lb of biscuit or 1½lb. of soft bread. Their articles of food will be as follows:—Biscuit or soft bread, sugar, tea or chocolate, oatmeal, mustard, pepper, vinegar, fresh meat daily (when it can be procured), or fresh vegetables; or salt pork, or salt beef, peas, flour, suet, and currants or raisins, when fresh cannot be procured. There are at present only three Russian fishermen on board the *Devonshire*, and they express themselves highly satisfied with their rations. They declare they eat more meat in one week where they now are than they could obtain in one month when they were at home at their avocation as fishermen, and they would be truly happy to have their families to share their present fare with them.

RUSSIAN ENCROACHMENTS.—The Norwegian Storthing has lately held several protracted sittings respecting an appeal to be made to the Executive for getting the common frontier of Russia and Norway fixed and settled. It has been complained that for years past Russia has been quietly encroaching on the Norwegian territory, and the Storthing demands that to this sneaking style of invasion the Government of the United Kingdom will put an end.

BOAT ATTACK, BY H.M.S. "GORGON," ON ONE OF THE ALAND ISLES.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

(The two following letters have been, by some means, considerably delayed; as will be seen by reference to our Correspondent's Letters in the ILLUSTRATED LONDON NEWS of Aug. 26.)

GIURGEVO, July 25, 1854.

GIURGEVO which, a week ago, contained but fifty people, daily resumes a more busy appearance. One cannot exactly say how it happens; but dwellers appear in the morning where not a soul was seen overnight. It puzzles naturalists to ascertain how certain ponds are stocked with fish. It is quite impossible to discover how such a town as Giurgevo is repopulated with men, how it recovers the inhabitants which it had lost, and how they return to their homes. Were they hidden in cellars, or in haystacks, or in fruit-trees? Lines of posts are placed across each street at night. Patrols are busy at every moment of the day; yet the

MONUMENT AT CROCE DI PETRA, AT KALOUGAREN. (SEE PAGE 243.)

people enter without being seen or questioned; they find their way into their houses, and may be seen endeavouring to introduce some order into their dwellings, which, in most instances, have not been respected by the Turks. Giurgevo has not been lucky in this respect. In 1828 the Russians destroyed the citadel on the Danube bank, and levelled the works landwards. It is now an open town, with a few main streets diverging from a common centre. When the Russians occupied Wallachia last year they took possession of Giurgevo in force, and the Turks were unable to discover a better means of annoying them than that of bombarding the town. They accordingly spent a whole day in casting projectiles of all kinds into the houses of the inhabitants, and succeeded in doing considerable damage to their own subjects, without inflicting any injury on their enemy; for, with the exception of a few generals and officers, the Russians were encamped out of reach. The Russians, however, repaid the Turks in their own coin, and sent up heavy guns into the island of Rhamadan. They thus destroyed the shipping in the Lom, a small river which forms a natural harbour to Rustchuk. The Turks did not again venture to bombard until some

THE CAMP, AT SLOBODZIE.

weeks after the commencement of the siege of Silistria, when they again threw shells into the place; the inhabitants, however, had left in considerable numbers, carefully concealing their more valuable effects but leaving furniture in many of their houses. After the abandonment of the town by the Russians, the Turks were afraid to occupy it, and strictly prohibited the entrance of the place to their soldiers; but a band of plunderers, Bashi-bozouks and others, sailed down the Danube, landed below the town, and broke open all the best houses. The Turkish soldiers afterwards entered the place, and did not spare much of the remains. Still some sort of order was maintained, and although much was broken and damaged, comparatively little was carried off by the regular troops. Enough is still left in Giurgevo to render it an acceptable place of residence; and I have abandoned with pleasure the minarets and narrow streets of the Turkish city for the broad and well-paved thoroughfares of the Wallachian town, with its brilliant little churches neatly trimmed and burnished. There is, in truth, something exquisite in the sensation of exchanging the privations of a Turkish town for the luxuries of a European one. In Rustchuk you drink water; in Giurgevo, you may, if you prefer it, drink champagne. Instead of a surly and listless Mussulman population, you fall in with people who are polite and kindly, whatever may be their real feelings towards you. One breathes a purer air too, where the streets are wide and open, and unencumbered with the mud and offal of every house; and besides, it is such a luxury to have one's wants attended to after a fashion unlike that of the Turks. A want in Turkey is not a simple thing. It embraces every detail. A dinner for instance. The meat is not to be had. It must be ordered or obtained by a note from the Governor, then it scarcely is meat in the proper sense of the word; it is a piece of flesh unartistically cut, the remains of an old and overworked ox. Then as to bread—the baker takes you aside and says, "I cannot sell you bread just now, the Governor has charge of all the ovens, and there are soldiers around, but send to me at nightfall." You send at nightfall, and obtain a small ill-baked brown loaf, with more bran and sand in it than flour, and this you are glad to get. The same difficulty is met in every detail of your wants, and when you sit down to dinner, you find that everything is detestable, at the same time that you congratulate yourself on your success in obtaining it. Contrast all this with a European meal, ordered and dispatched within the hour, in a spacious casino, with blinds and curtains, neatly ornamented. Giurvego is better than its neighbour Rustchuk, where leisure is only given to think of necessary requirements for daily existence.

It is only fair to say of the Russians that they did not

INTERIOR OF A WALLACHIAN HUT.

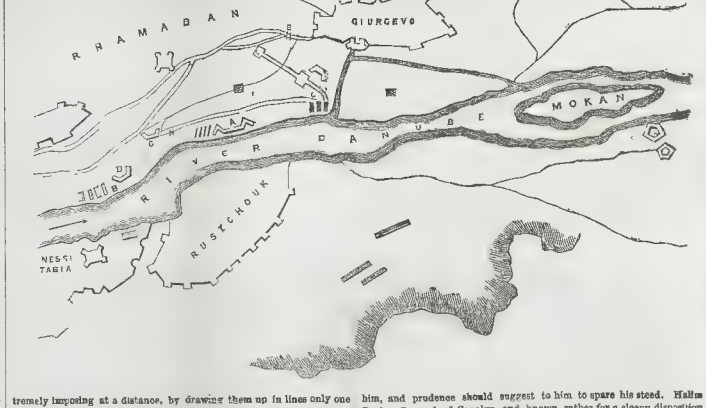
commit any act of plunder as they retired. They are, probably, too politic to do anything of the kind, although they are accused of it daily: but their object is to conciliate, not to make enemies of this population: and it would be unwise on their part to commit depredations. If the Turks do not change their habits in this respect they will add very little to their popularity amongst the Wallachians. They will give a bad example to the English and French troops, which will be probably prone to follow in their footsteps; and none but the severest punishment will be sufficient to put an end to the system. I foresee considerable difficulty in the way however. The Turks, especially the Irregulars, have been guilty of a great deal of plundering and other crimes in their own provinces. They pillaged the Dobrudja as they left it; they threw all the barley on which they could lay their hands into wells, and the grains swelling burst the masonry work. They burnt the villages up to within five miles of Schumla. They plundered the peasantry, and even travellers in the Balkans between Eski Djumma and Adrianople; and it is hardly to be expected that they will have much compunction in doing the same throughout Wallachia, unless a speedy termination is put to their propensities. Omer Pacha is very willing, and doubtless endeavours, to stop or to punish such delinquents as come under his notice; but he has a number of Pachas under him who screen the offenders, and must be supposed, on that account, to have some interest in doing so. They not only do not punish men who have been guilty of breaking every sort of law, but they assist in preventing the facts, when they have become public, from reaching the ears of the Commander-in-Chief. It is, therefore, without astonishment that I learn how seriously displeased is Omer Pacha with most of the Generals under his command. He has given vent to his feelings publicly since his arrival at Rustchuk, and accused his Generals openly of suppressing the truth in many instances, and telling direct untruths in others. He accuses them *en masse* of idleness, and complains, with justice, that Pachas sit at a distance, smoking their chibouques when they ought to be in the field of action. Hassan Pacha was the first to feel the weight of his displeasure. In addition to severe censure for the weakness of his arrangements in the affair of the 7th, he has been reproached with inaction on the day of the battle. It is a poor example for a General of Division to give, to remain at a safe distance from the enemy whilst his soldiers are led to hard fought victory by foreign officers, who have the too great complaisance to volunteer their services, certain as they are to become the first victims of a noted want of generalship. Hassan Pacha's sole occupation on the 7th inst. was to sit on the batteries of Rustchuk, smoking his pipe and now and then taking a shot across the river at a Russian with a Minié rifle. Other officers, against whom the charges were less grave, were grouped in a general accusation, that they gave a bad example to their men, who had been working hard for many days in fortifying their positions, and received no assistance or encouragement from their chiefs; who, so far from visiting or directing their efforts, were more generally inclined to take their ease in their houses at Rustchuk, taking their siestas during the extreme heats of the day. It is truly wonderful indeed that so much has been done by the Turks in the short time which has elapsed since the passage of the Danube. They have built three bridges over the small arm of the Danube, and completed the connection between Slobodjie and Rhamadan, between Giurgevo and the same island, and between Rhamadan and the insulated mound on which once stood the citadel of Giurgevo. They have levelled the batteries of the Russians on the island, and built several redoubts to check a hostile advance, in case of a defeat, either from the heights of Slobodjie or Giurgevo. They have intrenched the heights just mentioned by a series of works, the plan of which was given by our engineers, and the construction of which is so strong, that they form an almost impassable barrier to the enemy's attacks. They have intrenched a large portion of Giurgevo itself, enclosing the principal church, the quarantine and barracks in one continued line; and they had, besides, during the whole of the time they were so occupied, the arduous labour of patrolling the front before a vigilant enemy and holding the main streets of Giurgevo at night against a surprise. The soldiers have done all this with little or no assistance from forced labour of any other kind.

Regular battues have been made throughout Rustchuk and its neighbourhood to obtain labourers; and it required all the cunning of the police to discover the hiding-places of the Bulgarians. In the streets for days there was no male inhabitant to be seen, except such as were either too old or too young to serve the purpose of digging at the trenches or hauling the heavy boats along the Danube. The Bulgarians who do not serve as soldiers were unwilling to stir a hand in assisting the Turks to advance or strengthen themselves. In the house where I lived at Rustchuk, it was ludicrous to see the shifts of the young men to avoid the perpetually recurring visits of the police. The door was barred, and only opened when it was supposed that the hiders were in safe concealment. At last, one day a couple of sapeurs made their way in from behind, seized our two Bulgarians, and took them off in triumph. The result of these proceedings is evident. The Bulgarians once caught are treated roughly, and kept sometimes six days together away from home: the Turks knowing full well the difficulty of catching them once they get away. Forced labour, impressment, or any other rigorous measure of the same kind, are almost necessities in such a country as Bulgaria, the peasant being dissatisfied, and yielding only to force. As for the works which have been made here since the 7th, they are all admirable, although some of them have been somewhat criticised. The batteries on the island seem to be commanded from above, and to be of comparatively little use in the event of a repulse from Slobodjie. Now, their only object in any case is to oppose the advance of an enemy already possessed of those heights. The intrenchment above the cliffs is, however, admirable; but it is remarked of the lines within the town of Giurgevo that they enclose a part of the town only, and though the guns enfilade the streets, the houses have been left standing, and were an enemy once in possession of them, the trenches would be held with great difficulty. Perhaps it was considered that these houses might be thrown down in case of need; but before that could be done, after an alarm, the enemy would probably be in possession. It will not be long, however, before that defect is remedied by more extensive works outside the town. It is proposed to refit the old external defences of the place; and there are French engineers at work with that view. The bridge which connects Giurgevo with the Island of Rhamadan is also a feeble specimen of architecture, which excited the disapprobation of one of the Pachas. He called the builder before him, and after giving him various hard names, gave him a kick, followed by another—the patient or the subject, as medical men would say, receiving the punishment with great equanimity. A similar scene of chastisement had been enacted a few days previously, by Achmet Pacha, who dispersed the cargo of a Pacha of Artillery because he had placed his ammunition waggons under a cliff, about 300 yards from the places where the guns were to be worked. These incidents are examples of what sort of officers there are in the Turkish army, and what style of punishment is considered fit for officers who commit errors of judgment or mistakes of execution.

The materials for the erection of a bridge of boats across the Danube opposite Rustchuk, are progressing. Numerous caïques have arrived from the upper part of the Danube, and droves of oxen are employed in bringing the necessary timber to the shore. The depth of the river was ascertained a few days since by a party of English sailors, who came here from Varna to assist in the erection of the bridge. The result caused considerable astonishment. The greatest depth of the water at Rustchuk is seven fathoms, about forty-two feet. The breadth of the river is between 800 and 900 yards at the narrowest points. Our sailors, who are under command of a Lieutenant, are accompanied by Prince Leiningen, who is in our naval service, and speaks English like a born Briton. They rode into Rustchuk a few days since, accompanied by Captain Bent's company of Sappers, all mounted on pack-saddles, with the Union Jack flying in front of them. The conduct of these men has been good generally, but precautions are necessary to prevent them from indulging too freely in the cheap wine of the country. It is quite amusing to see the sailors patting the Egyptians on the cheek, and saying, "*Inglis bono*"—a sentence which the Arab repeats with great gusto, adding always, "*Moscov no bono.*" The utmost friendliness exists between them; but quarrels sometimes occur, and the sailors frequently enjoy their anger at the summary proceedings of unintelligent sentries, who detain them, and push them about more rudely than they think requisite. Copying as much as possible the habits of the country, our tars often present a ludicrous spectacle. They have abandoned cutty-pipes for chibouques, to which they fasten the largest bowls they can find. They also imitate the Turks in smoking cigarettes; but they make them of letter-paper, and about twice the size of an ordinary cigar. In the dark, when they indulge in the latter pastime, they look like small volcanoes in a state of eruption.

The camp at Slobodzie assumes every day a more permanent and military appearance. It has lost much of its first picturesqueness in consequence. The natural glacis before, and the precipitous ground behind it, form a natural position of the best kind. It was accordingly occupied before the town of Giurgevo. The soldiers having at first but few tents, rigged out all sorts of substitutes. Sticks were planted in the ground and made to support either willow boughs cut in the neighbouring island, or old Turkish carpet of various patterns and devices. Some were larger than others, but many were so slight that they merely covered the head and chest of the soldiers, leaving the rest of their body exposed. So long as the fine weather lasted, however, these temporary tents were sufficient to keep off dews and the sun; but we have had three or four remarkable thunderstorms within the last few days, which made the position of ill-sheltered men extremely unpleasant. The willow boughs and carpets are fast disappearing, and are replaced by tents. The Sketch I send you shows a portion of the camp.

The Russians have not done much to annoy the Turks since they assumed their present position. They made two reconnoissances a few days after the works of Slobodzie were commenced, but their force on this occasion did not exceed one battalion of infantry and two regiments of cavalry. They had the art to make their infantry look extremely imposing at a distance, by drawing them up in lines only one deep, simulating three battalions, where they had but one in reality. This, however, is the least of their arts. On the day of their last reconnoissance, they were followed by a party of Turkish cavalry, and Skender Bey made several dashes at them. They always eluded the pursuit, however, and no harm was done. They retired safely behind their sentries, who seemed to cover a large amount of ground. Skender Bey, who thought he might cut off one of them, charged with four or five men, and was astonished to find them holding their ground at his approach. There they stood, twenty in number, as coolly as if no enemy were in sight. The cause was soon explained; they were sentinels of straw, very ingeniously made, and entirely deceptive. One of them was brought into Giurgevo, as a curiosity, and excited no little surprise. But the Russians must have had considerable merriment watching the operations of Skender Bey, taking precautions against straw sentries as against a real enemy. There were six of these shams still standing near the Fratcschti a few days ago. The Russians are encamped on the hills above that village, and their tents and huts stretch a long way to their left at Doya. Deserters from the Cossacks state that their force at present amounts to sixteen regiments of infantry and six batteries of twelve guns. It does not seem that their cavalry is on the increase, and this seems extraordinary, if there be any truths in the accounts of augmentation of forces. In a reconnoissance made a few days since towards Fratcschti three or four squadrons of cavalry and Cossacks were all that appeared. A wood, which covers the ground in front of Slobodzie was scoured, and found to contain only a few horsemen. It does not appear that the Russians are fortifying their position. This may prove great confidence, or the intention of a future reconnoissance in force. In a reconnoissance made a few days since towards Fratcschti three or four squadrons of cavalry and Cossacks were all that appeared. A wood, which covers the ground in front of Slobodzie was scoured, and found to contain only a few horsemen. It does not appear that the Russians are fortifying their position. This may prove great confidence, or the intention of a future reconnoissance in force. We have had too little marks of the former quality in the Russians to put much faith in its existence now. I cannot help thinking that, even if peace be made at this moment, Russia will have lost, by her slowness and indecision in war a large part of that moral prestige which surrounded her for so many years of this century. The more we consider the causes of her defeats before Silistria and here, the more one becomes convinced that she has ceased to be, or never was, the power which she had the renown of being. A closer inspection of the field of battle of the 7th leads to a better appreciation of her military value than was possible before. Not only was she unable to repulse the landing of 2000 men, crossing the river at long intervals, but she was unable, for four hours after their landing, to do more than drive them from the positions which they had taken up in the interior of the island. The first movements of the Turks will be easily explained by reference to the Map I send you. The first landing, under General Cannon and Bekir Pacha, took place at A, the others at B. Both divisions made their attack on the same point. General Cannon's detachment advanced along the creek from A towards the Russian redoubt C, and was only forced back when in sight of that work. Arnold and his men took possession of the redoubt C for a moment, but were soon driven back to the redoubt D, where they were killed, together with Meynell and his detachment. They had the extreme disadvantage of fighting behind a Russian work, of which the parapets were necessarily sloping upwards towards the enemy. Their only defence was, therefore, with the bayonet. The Russians succeeded in driving out the three detachments, which landed at the upper part of Rhamadan, but they failed completely in destroying that which operated from the lower landing. In the afternoon they made no less than four combined attacks against the Turks at A. They marched their troops from the bridge (E), and whilst they lined the creek (F) with men, they directed detachments to march round and attack the Turks from two sides (G and H). Four times the Russians charged them with the bayonet and were repulsed. The Turks were under the disadvantage already noticed of fighting behind a Russian work, but they had succeded in raising parapets on the wings of the work, which were their salvation. The Russians saw at last that they could not force this point, and they abandoned the island. They had boasted that, as the plains were without fortifications the Turks would be worsted. The Turks, however, under every disadvantage of bad generalship and small numbers, drove the Russians from their redoubt, and forced them to evacuate a strong position. These are facts which cannot be denied, and which are calculated as much to diminish the prestige of Russian military power as to raise the *morale* of the troops which are opposed to it.



GIURGEVO, August 4, 1854.

On the 1st of August five regiments of cavalry, including Sadyk Pacha's Cossacks, started an hour after dawn in the direction of Bucharest. The sun rose in the plain as we issued from the woods which skirt Giurgevo, and lighted up the landscape with the pale yellow and purple hues of an Eastern morning. To the westward lay heavy banks of clouds, which in half an hour invaded the disk of the sun, and gave the promise of a pale grey day. The men were in high spirits, singing the monotonous *fioriwra* of their national airs, and a troop of about 300 Bashi-bozouks, which formed the vanguard under Skender Bey, caracoled in front, performing those familiar evolutions of which the Turk is so fond, even when he knows that a long journey lies before him, and prudence should suggest to him to spare his steed. Hafim Pacha, General of Cavalry, and known rather for a sleepy disposition than for any active qualities, commanded the expedition; while's was accompanied by Captain Symmons, R.E., Lieut.-Colonel Dien, Captains de Rouan and Jumel; Prince Stourdza, now Moolbis Pacha; General Prim, and all his aides-de-camp, including a lady neatly attired in the dress of a *sous-lieutenant*. At six o'clock we passed the village of Fratcschti, where Prince Stourdza had the chagrin of finding that the summer residence of his wife's brother, which occupies a commanding position there, had been entered and plundered by the Turks. Passing the Russian camp on the hills above Fratcschti, we descended into the valley on the other side, crossed a stream which the Russians had dammed to form a lake, and entered the village of Stanestchi. The houses in this place appeared to have been the head-quarters of the Russian staff. There were bowers of oak-branches on the shady side of the semliks; and the ground was strewed around with letters addressed to various general officers; large masses of wood for burning were stacked on the right of the village, and several hundred quarters of barley were discovered on the left, fresh taken from the ear, the remains of a stack standing at no great distance. Everything around appeared to indicate that the Russians had gathered materials around them for a permanent stay, and had made a precipitate retreat. Extensive traces of encampments were found on the hills around. Large kneading sheds, and enormous ovens dug out in the earth, bore marks of recent use, and proved the presence of a larger force upon the ground than could have been supposed from the hasty view obtained on a previous reconnoissance. A halt and slight refection for man and beast were followed by a *medjlis*, at which it was determined to leave Fetrichi—our first destination—on the right, and push along the road to Kalougaren. Advanced detachments were thrown out in front, and to the right and left, and Skender Bey, with his Irregulars, was followed by the Cossacks and the Regulars. The Cossacks were formed in single lines, the Regulars in troops, and in this order we advanced upon a plain, of which the undulating surface was covered with green crops of maize. A few peasants were to be met at considerable intervals, cutting down barley; but the feature of the moment was solitude. Now and then a hare started from under the hoofs of the flanking parties, and, crossing the road, was hunted unsuccessfully by a pack of ours, which had followed us from the village. With these exceptions, there seemed to be no living creature about the country. Presently, however, a couple of arabas, drawn by oxen, were seen before us, crossing the road at no great distance. The drivers had perceived us, and, in mortal fear, were goading

their slow-paced cattle to quicker speed, in order to avoid us. But Skender Bey put spurs to his horse, by a peremptory summons brought them to a stand. "Where are the Russians? What are they doing?" A flood of such questions followed each other, but the answers were tinged by the fears of the speakers, who appeared more ready to be off than to tell the truth. They talked with wonderful volubility, without producing anything worthy of attention or trust. The loquacity of timidity is a piteous thing to witness. I had thought the Wallachian peasant less degraded than the Bulgarian, but the two races are on equal terms as regards intelligence. Long habits of docility to feudal masters have made the Wallach as poor-hearted a fellow as the Bulgarian, under Turkish despotism. The Bulgarian is still sufficiently uncivilised to believe in the Czar: Constantinople, for him, is Czargrad—the City of the Czar. The Wallach is so far advanced as to feel that Russian domination is not a blessing; but I suspect his intelligence does not carry him much further. There is a distinctive mark about the Wallach which makes him bear a striking contrast to the Bulgarian. He allows his hair and beard to grow; and, as he never combs them, but allows them to float wildly round, they give him a savage look, which is enhanced by the white apparel which he usually wears. A calico shirt, and broad trousers of the same materials, a leather thong for a belt, a lamb's-wool cap, sometimes white, sometimes black, are the summer attire which he wears. The Bulgarian shaves his head, leaving a scalp lock similar to that of the Indians and Turks; and sumptuary laws make him wear black fur or black linen turbans; whilst his body is commonly covered with cloth trousers, and supported by broad belts of staffs round the middle. The Wallach is much more animated in expression and manner than the peasant of the other side. His features are purer and nobler, and rarely bear resemblance to the Sclavonian type of his neighbour, who usually appears with broad face, flat nose, and a skull depressed at the crown.

Leaving the Wallachs to proceed with their teams, we resumed our march, and an hour afterwards halted at a group of houses and stables forming a post station at this time, completely abandoned by man and beasts. The Turkish soldiers helped themselves to barley from the lofts, but were deprived of water by the want of ropes to a well about fifty yards deep. A few cart-loads of the necessary fluid had, however, been taken along, in anticipation of such a result, and the men did not lack either drink or food. After leaving this station, the aspect of the country began to change. At first short scrub succeeded to the cultivated fields, and then thick forest covered the ground on both sides of the road. It was an admirable place for an ambuscade, for the flanking parties were necessarily thrown off to the front; but the march was not slackened on this account, and the troops proceeded in very gay humour, the wood assuming a more picturesque appearance from the change of ground, now no longer so flat or so monotonous as before. After three hours' ride through the forest, the advance paused on the brow of a wooded hill, overlooking the river Salcsa. On the right lay the village of Croce de Petra, so called from a commemorative monument of great age, erected by Prince Michael. Before us, lay the river, more like a stagnant marsh than a running stream, and a bridge, partially burnt by the Russians in their retreat. Beyond the river—a second branch of which, once bridged, was impassable from the firing of this structure—lay the village of Kalougaren, composed of neat white houses, which were distinctly visible amongst the trees. Skender Bey, with a few men, dashed across the water below the bridge, galloped along the causeway on the other side, across the second ford into the village, but only caught a momentary sight of three Cossacks, who had already mounted and run. The streets and houses were scoured in vain for more, but no signs of them were found. Beyond Kalougaren the road appeared to wind through the forest at that point to which we had already passed; and it was not thought prudent to proceed much farther in that direction. Skender Bey accordingly returned, and soon reappeared, driving before him the few inhabitants whom he could muster together. A confused examination was made, from which very unsatisfactory intelligence was obtained, and a course was pursued which lawyers so commonly accuse each other of adopting. Instead of skilfully extracting the truth, leading questions were put to the peasants who answered altogether, so that no connected details could be obtained. Many villages, at no great distance from each other, having similar names, were confounded with each other. Budel, near Kalougaren, was ingeniously mistaken, by the questioners, for Buderchti, on the other side of the Dumbovitza, and numbers of the officers present were thereby convinced that the Russians still remain in force between the Salesa and the Argisch; whereas it was likely that the only enemy on this side the latter river were a few Cossacks. Captain Symmons offered to restore the bridges on the Salesa in two hours, which would enable the Turks to feel the ground right and left of Kalougaren; but the fears of the Pasha counterbalanced all such advice; and it was determined to return at once, the position of Croce di Petra being considered unsafe to remain in. The mount was accordingly sounded in a hurry, and after a seven-hours' ride, during which the horses had neither water nor food, the retrograde march commenced. The cavalry encamped the same night in the village of Stanceshti, many of the horses being disabled; the European officers and your Correspondent reaching Giurgevo after sunset, having ridden fifteen Turkish leagues (sixty miles), and spent sixteen hours on horseback.

The monument of Croce di Petra, of which I send you a Sketch, commemorates the victory of Prince Michael of Wallachia over Sultan Mahmoud in 1595. The Sultan sent an army of 140,000 men under the Grand Vizier Sinan Pacha, to reduce the Principality to its old obedience. For some weeks this army was unable to pass the Danube, but it at length succeeded in driving Prince Michael to Kalougaren. There a corps of Hungarians joined the Wallachian army, and raised its effective force to 25,000 fighting men. With these Prince Michael attacked the Turks, who fled across the bridge, carrying with them, in flight, Sinan Pacha, who fell into the water, and was saved only by the courage of one of his followers, a soldier named Hassan. Several other Pashas, less fortunate than their chief, were captured by the Wallachs; and Prince Michael, surrounded by his Boyards, cut off, with his own hand, the head of the chief of them, Karaman Pacha. He pursued the Turks to Giurgevo, where, in the passage of the river, they lost large numbers of men.

The monument of Prince Michael is now falling to ruin, typifying, as it were, the state to which the country has been reduced since the Wallachs lost the spirit of their ancestors.

Numerous inhabitants of Giurgevo, who come in daily from Bucharest, say that the Russians have entirely abandoned the town, and that, on the 2nd inst., the Cossacks were at the distance of two hours on the road towards the Sereth. The public records, engrossed by Messrs. Budberg and Halschinsky, were long since removed to Fokshani, and the former gentleman left Bucharest some time ago. It is only a few days since Mr. Halchinsky took his departure, which he did, I am informed, amidst the hisses of crowds who followed him out of the town. The only Ministers remaining in the Wallachian capital are Messrs Costaki Cantacuzenes, Minister of the Interior and Jean Philipesco, Minister of Finance; the rest have gone away with the Russians, who have left behind them, it is said, a considerable number of sick. The inhabitants, generally, have remained at Bucharest, and it is said that numbers of them came out towards Kalougaren on the 2nd, to meet the Turks, whom they supposed to be on their march forward. The Turks, however, had not stirred from Giurgevo. Slobodzie, which they occupy, has been made into a strong intrenched camp, consisting of 12 or 14 batteries connected by a ditch. The retreat of the Russians had rendered the fortification of Giurgevo itself unnecessary, and for this reason the works which had been commenced were razed to the ground. The bridge of boats to connect Rustchuk with the island of Rhamadan is nearly completed, and will be a splendid means of communication; the service of victualling a large army by carques being one of great fatigue and expense.

The Turks have been deeply flattered by the presentation, a few days since, of a letter to Omer Pacha, in which Queen Victoria compliments the army on its bravery in defending Silistria. The letter was presented by Captain Symmons.

NAVAL AND MILITARY INTELLIGENCE.

THE embarkation of the drafts for the 13th and 57th Regiments waiting for transport at Cork has been countermanded.

THE 21st and 63rd dépôts, now at Buttevant; and the 57th, at Limerick, will form a reserve battalion at Birr.

THE Royal Sappers and Miners have increased the bounty to men under twenty-five joining their corps to £5 15s. 6d.

ORDERS have been sent out to British North America for two companies of Artillery, now in garrison at Montreal and Quebec, to return to head-quarters at Woolwich forthwith. They are to bring with them their horses and full equipments.

THE Admiralty are advertising for tenders to be sent in on the 12th inst., for the conveyance of sundry military stores to Sydney, New South Wales, Melbourne, Jamaica, and Barbadoes.

IN consequence of cholera having broken out amongst the crew of the ship *Glen*, which received on Saturday last detachments from Chatham for conveyance to Madras, the sailing of the vessel has been postponed until further orders; and the embarkation of troops for Bombay on board the *Earl of Balcarras* has been deferred until it is reported to be in a fit state to receive by the medical authorities.

THE screw despatch gun-vessel *Arrow*, 6, Lieutenant Jolliffe, completed the repair of the defects with which she left Sheerness for Portsmouth, and went out of harbour to Spithead on Sunday. She there took her powder and shell on board, and sailed for the Black Sea it being intended, it would appear, to try the range of her Lancaster's guns and shells at the fortifications of Sebastopol rather than in the Baltic, as was at first proposed.

ANOTHER very respectable and serviceable squadron is again nearly ready for sea at Portsmouth. The majority are actually equipped, and the others are rapidly progressing. The following is the list of the ships referred to, exclusive of a number of despatch vessels, stationary ships, and tenders:—*Powerful*, 24, sailing; *Colossus*, 80, screw; *Curaçoa*, 20, screw; *Harrier*, 16, screw; *Hornet*, 16, screw; *Falcon*, 16, screw; *Medusa*, 14, screw; *Swallow*, 8, screw; *Ariel*, 8, screw; *Salamander*, 6, paddle; *Dasher*, 4, paddle; *Scaiark*, 7, sailing-brig. *Rolla*, 6, sailing-brig To the above may be added the *Wrangler* and *Beagle*, of the same class as the *Arrow*.

ROMAN CATHOLIC CHAPLAINS TO THE FORCES IN TURKEY.—Owing to the spread of the cholera among the troops at Varna, and the consequent heavy duties which have devolved upon the two Roman Catholic chaplains with our army in the East (Messrs. Wheble and Sheehan), the Government have just despatched three more Catholic chaplains to the seat of war, to attend upon the sick and dying of that religion. One of these new chaplains is a monastic of the Dominican order; the other two are secular priests. The outfits and passage of one of the three chaplains is to be defrayed by the liberality of the Earl of Shrewsbury.

THE LATE DEATH OF LIEUT. BURKE, ROYAL ENGINEERS, AT VARNA.—The body of this gallant officer was found, after the action in which he lost his life, with no less than thirty-three wounds upon it. The Russians had taken his sword-belt, but his sword was found hidden in one long grass close to the corpse. The ring-finger of both hands were cut off. He was seen by the Sapper who went with him fighting desperately to the last, though surrounded by a horde of Russians. When he first leapt on shore from the boat, six soldiers charged him: two he shot with his revolver, one he cut down with his sword—the rest turned and fled. While he was encouraging the Turks, who were in the stream, to row quietly to the land, and forming them in line as they landed, conspicuous as he was in full uniform, and by his white cap cover, a number of riflemen advanced from behind a ditch and took a deliberate aim at him. Poor Burke charged them with headlong gallantry. As he got into the water he was met by a ball, which broke his jaw-bone, but he rushed on, shot three men dead at close quarters with his revolver, and cleft two men through helmet and all into the brain with his sword. He was then surrounded, and while engaged in cutting his way with heroic courage through the ranks of the enemy, a sabre cut from behind, given by a dragoon as he went by, nearly severed his head from his body, and he fell dead, covered with bayonet wounds, sabre gashes, and marked with lance thrusts and bullet holes. The Sapper who was with him, stood by Mr. Burke till the last, but could not save him. He is now only recovering from his wound, and the effect of his exertions. A private letter, with reference to his death, says—'Poor Burke! he may be said to have prophesied his own end, and the manner of its occasion. Many is the time, with his Adams' revolver, he has in my presence loaded the several barrels, and, as one after another unerring report occurred, he would exclaim, 'There goes one, Russian there goes two, &c., &c., upon one occasion, remarked—'But suppose one of the barrels misses fire?' 'That is not likely,' replied Burke, 'it never did so yet.' 'But suppose you kill a man with each barrel, as you think you can what then?' 'Why, then,' exclaimed the heroic fellow, 'I will take to my sword and die like a man.' This was literally the case, and the advocates of second sight, perhaps, will record this as an instance of its existence."

STATISTICS OF SINGAPORE.—Two years after its establishment the fixed inhabitants of Singapore numbered 12,000; now they have risen to 70,000. In 1826 the whole population of the united Straits' settlements, Penang, Province Wellesley, Singapore, and Malacca, was but 101,500; in less than thirty years they have risen to 251,000 souls. The value of import and export trade of the 3 Straits' settlements in 1826 was four and a quarter million sterling. In 1853 it had risen, including the intermediate trade, to eight and three-quarters millions sterling. Indeed, each succeeding year, from the foundation of Singapore, exhibits a most satisfactory and marked progress. Recently the trade has been augmented at the rate of one million sterling per annum.

AN ARGUMENT FOR THE KILT.—It has been remarked that the Highland regiments now in Turkey have suffered less from the cholera than the other French and British regiments in the East, and that the cases of cholera have been most numerous and fatal in the regiments wearing white trousers. The kilt of the Highlander is reckoned more favourable to health, as the fabric is porous and permits the free escape of the perspiration from the body, although it may become quite wet; but the contrary is the case with white duck trousers or other similar clothing, as when they become wet with perspiration they remain long in that state, and chill the body by their cold unpleasant feel, completely suspending perspiration; and therefore it is found judicious to use flannel belts for the troops.

CAMPHOR PRODUCING INSANITY.—No less than eight persons have been admitted into the Toronto lunatic asylum in a state of insanity, occasioned by consuming quantities of camphor to prevent cholera. Some of them carried it about in their pockets, and kept from time to time eating small quantities of it. Others took it dissolved in brandy. In all cases where mania of it was taken it produced insanity.

EDUCATION IN PRUSSIA.—The total number of children attending the Berlin parochial schools, amounts to 47,000, which, taking the whole population at 400,000 souls, gives an average of one in ten actually receiving public instruction in divers schools, of which there are 185, employing 1530 teachers of both sexes. These do not include schools for the Hebrew community, whose population is somewhat over 13,000 souls

A MISCHIEVOUS WEED.—About two years ago an aquatic weed, previously unknown to the boatmen, began to spring up in a part of the Chesterfield canal, the water some little previous having become of a deep green colour. The weed spread from its starting point with amazing rapidity, and has now reached all the way between Worksop and Retford and unless something is soon done to stop its growth, the consequences to traffic must be serious. The time required to navigate a loaded boat between the two towns just mentioned is nearly double what it was a few years ago; and near to Osberton it frequently requires the assistance of two or three horses to get a boat over the worst portions. Besides being of such rapid growth, the plant, with pressure, rolls up into great heaps the size of hay cocks, so that boats are frequently brought to a complete standstill. As its stem is said to produce an immense quantity of flax like fibres, the "mischievous weed" might be converted into a useful plant.

IMPORTATION OF GERMAN TAILORS.—On Saturday morning a batch of forty-one German tailors arrived in Newcastle by the steam boat from Hamburg. They were engaged by a deputation of the employers from Newcastle, in order to fill up the places of the men now upon strike. The workmen, previous to leaving Hamburg, engaged to abjure the "Union," and very willingly agreed to the terms offered by the employers On their arrival in Newcastle they were divided amongst the different shops; and on Monday morning their English employment commenced. Another lot have engaged to come to Newcastle on the same terms, as soon as the masters require them, and if the strike should continue there will be another immigration of foreign workmen from Hamburg.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

It is said that the Emperor of the French, accompanied by Prince Jerome, will proceed on the 12th to Tourney, where they are to be received by the entire Royal family of Belgium.

Mr. Otway, Secretary to the British Legation at Madrid, has been made a Knight Companion of the Bath, in token of approbation for his conduct during the recent revolution, when he performed the duties of Charge d'Affaires.

M. de Brunnow has taken a large house at Darmstadt, and intends passing the winter at that place. It has been frequently remarked with surprise that neither M. de Brunnow nor M. de Kisseleff has returned to St. Petersburg.

Prince Gortschakoff, the Russian Ambassador at Vienna, has just renewed the lease of his house in that city for the whole of the winter.

The Archbishops of York and Canterbury are about to proceed against Archdeacons Wilberforce and Denison for their Popish doctrines.

The Royal Academy of Sciences of Berlin held an extraordinary public sitting on the 24th ult., to celebrate the fiftieth anniversary of the day when Baron Alexander de Humboldt was elected member of it. A colossal bust in marble of that illustrious man was placed in the hall where the sittings are held, in honour of the occasion.

Mr. Ouvry gave a grand dinner at Vienna on the 29th ult., in honour of Kiamil Effendi, the Turkish Ambassador to the Court of Berlin.

The estate of Ury, the property of the late Captain Barclay, was sold in Stonehaven, last week, to Mr. Baird, ironmaster, Glasgow, for £120,000.

The Servian Government has purchased a suit of diamonds 2900 ducats, to be given as a present to the daughter of the Sultan, who has just been married to the son of Redschid Pacha.

Sir Edwin Landseer is at present visiting the Hon. Mrs. Mackenzie, of Seaforth, at Brahan Castle. On Wednesday week, Sir Edwin, along with several gentlemen, also at Brahan Castle, enjoyed a day's sport among the favourite subjects of his pencil—the high and red deer, when five fine specimens were brought to the ground.

Madame Grisi and Signor Mario arrived in the *Baltic* at New York on the 19th ult. The Musical Fund Society had chartered a steamer to meet them with a select company of ladies and gentlemen, but the early arrival of the *Baltic* took them by surprise.

The young American Bonaparte, the grandson of Prince Jerome, by his marria e with Miss Patterson, is to please with France and his newly-found Imperial relations, that he has accepted left is of naturalization, and a commission as a Lieutenant in the French Army. His resignation as a Lieutenant in the Army of the United States has been sent to Washington and accepted.

Mr. John Carden, of Barnane, now undergoing imprisonment and hard labour in Clonmel Gaol, for an attempt forcibly to carry off Miss Boutbum, with the design of marrying her, has been superseded from the Deputy-Lieutenancy of Tipperary, in which county he holds a large estate.

Major A. D. de Wangenheim, the last of the surviving officers who served under Frederick the Great, died a few days since at Altdam, near Stettin, at the age of ninety-two.

Mr. Finney, a dentist, late of Alexandria, found a stuffed tooth in a mummy, and several teeth in other mummies which bore marks of filing.

The bronze statue of Ebenezer Elliott, by Neville Barnard, was removed from the Carlare'-hall, Sheffield, on Saturday last, and placed upon a granite pedestal at the top of the Market-place

From the official statistics of the Great Dublin Exhibition of last year, recently published, it appears that Mr. Dargan's actual loss has been within a few pounds at £19,000.

So great has been the alarm caused by the ravages of cholera at Munich, that the Exhibition has lately not been visited by more than 600 or 700 persons daily.

The guns and stores taken at Bomarsund are valued at £100,000.

The average weekly cost of a pauper in the Limerick Union Workhouse, including clothing, is 1s. 6d., and it is said that it will soon be reduced to 1s.

The Hôtel des Invalides is now lighted by the new gas extracted from water. Workmen are now engaged in constructing by the side of the gasometer a general calorifere for warming every part of the hotel.

The first stone of a free public library will be laid in Norwich on the 16th instant. The institution will be supported by subscriptions, and an annual grant from the Town-council. The cost of its erection will be £3000.

The Massachusetts Legislature, at its last session, appropriated funds to found a New England Female Medical College, located in Boston, to pay for the tuition of forty students annually for five years.

Killarney was never known to be so full of visitors as it is at present. All the hotels and lodging houses are crowded.

There is now a fine Austrian frigate, about fifty guns, at Greenhithe, where she has been for the last fortnight, having come over to the Thames with the crew of another steam-frigate building in this country for the Austrian Government.

At Turin a drama has been produced, called "L'Assedio di Silistria," in which Turks and Russians perform prodigies of valour. One of the principal episodes is a love-passage between a daughter of Mussa Pacha and a son of the Russian General's—the marriage of the lovers concluding the peace.

The Electric Telegraph Company commenced running out a cable between Holyhead and Dublin on Monday.

The mail for Australia, on Monday, was so heavy—consisting of 500 or 600 boxes and bags—that the *Nubia* was detained two hours beyond her time of starting to take it on board.

The Cornish sailors of Cork have struck for higher wages. They are at present receiving from £3 5s. to £3 10s. per month.

The Russian Government has revoked all the permissions it had granted to Russians or Poles to exhibit their productions at the Paris Universal Exhibition of 1855; and has, at the same time, prohibited all Russian subjects from making any purchases, either directly, or indirectly, at the Exhibition.

The scarcity of labourers in Ireland has become so general that wages have greatly advanced. Even in the south, harvest labourers are receiving 2s. 6d. a day, besides food.

A commission, under the authority of a Master in Chancery, have just commenced, at Aberdeen, a tour of visits to the various towns where subscribers to Mr. O'Connor's Land Scheme, now dissolved, reside, in order to receive claims on the company's assets.

A swarm of bees have taken possession of one of the lions at the entrance of Wynyard park, Durham, having formed their comb in the body of the statue, and gained an entrance by a hole in the ear.

Catherine Hayes has arrived in Melbourne from California.

The imports of specie during the past week amount to the large sum of £700,000; only £140,000 of this was from Australia although several vessels from thence are now overdue, with large amounts of gold on board.

The metropolitan business of most of the Life Assurance Companies and Societies has received much impetus during the last few weeks in consequence of the prevalence of cholera.

The amount of shipping laid on the berth in London for Australian ports consists of eighty-three vessels, measuring 55,773 tons; being an increase in the tonnage of 3000 tons over any of the preceding months this year.

The Empress of the French, on being informed of the ravages of the cholera among the inhabitants of Marseilles, sent 2000 francs to the fund raising for the relief of the sufferers.

In consequence of the high price of bread at Taunton, a handbill was extensively circulated requesting the inhabitants of a Bread Consumers' Company to purchase a loaf each for the future, in order to meet the next day, and suspend the prices. The bill created a panic in the town.

At Rome, the alarm about cholera has increased that thirty or forty thousand of the inhabitants have left the capital for the cooler air of the mountains.

Mr. Hope Scott, who married Miss Lockhart, granddaughter of the late Sir Walter Scott, has purchased the estate of Cregneiare, county Galway, for £90,000.

Large orders for tubs have been sent from Oporto to the Alarves for the distilling of brandy, as a substitute for the produce of the grape; so that the price of figs is likely to be higher than usual.

That portion of the new cemetery at Bradford which has been set apart for the purpose of sepulture according to the rites of the Church of England, was consecrated last week by the Lord Bishop of Ripon.

Gold has been discovered at the crossing of the Colorado (says a Berbie paper), also silver and copper. A tribe of Indians has been met with who use gold bullets for their guns.

The contract for the Mississippi and Pacific Railroad Company has been taken by Messrs. Worthier, King and fifteen other associates, among whom is Mr. Maverick, of San Antonio, one of the largest landholders in the world, and by far the wealthiest citizen of Texas. Fifty miles are to be completed and in running order within eighteen months, and 100 miles of the road every year thereafter, until the whole is completed.

On receipt of a Post-office order, addressed to JOHN JONES, for £4 4s., one will be sent free. Jones's Sketch of Watches, gratis, for 8d.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, Cornhill.—This beautiful metal continues to stand unrivalled amongst all the substitutes for Silver. Its intrinsic excellences, combined with its brilliant appearance, duties all competing, it is upwards of thirteen years since this manufacture was in rudiment in SARL and SONS' then small premises, 17 and 18, Cornhill; and, notwithstanding the many spurious and unprincipled imitations, the present demand exceeds all former precedents; thus giving a convincing proof of its having answered the just perpetual wishes of the public for an article possessing the durability and appearance of solid silver at one-sixth its cost. The magnificent display here recently been furnished with many splendid novelties in dinner, tea, and breakfast services, and never possessed so many articles in stock at the same time. The Spoon and Fork department includes all the various patterns that are made in solid silver A new and enlarged assortment of Dessert Knives with silver and plated handles, and new ready-furnished cases, containing a dozen of each, are also kept in stock, and may be obtained separately by applying to the manufacturers. The public are hereby cautioned that no article is genuine, except purchased at Sarl and Sons. No other parties are authorised to sell it.

SILVER TEA and COFFEE EQUIPAGES A. M. SAVORY and SONS, 14, Cornhill, London, have recently finished several new Designs in Tea and Coffee Services, of very novel and elegant design, and of the highest finish. The following have been selected from

The Prince of Wales Pattern, Fiddle, Thread, and Shell.		The Louis Quatorze Pattern.	
Strong Silver Tea-pot	£13 10 0	Strong Silver Tea-pot	£13 10 0
Ditto Sugar-basin, gilt	7 7 0	Ditto Sugar-basin, gilt	7 7 0
Ditto Cream-ewe, gilt	4 16 0	Ditto Cream-ewer, gilt	4 16 0
Ditto Coffee-pot	11 11 0	Ditto Coffee-pot	11 11 0
	£43 15 0		£43 15 0

The Guide to the extensive stock in the Show-rooms contains the weights and descriptions of Silver Plate of London manufacture, with copious information respecting Shelfield and Roger Cutlery. It is illustrated with engravings It may be had gratis, or will be forwarded, post free, on application.—A. B. SAVORY and SONS, Manufacturing Silversmiths, 14, Cornhill, London, opposite the Bank

100	0 10 0	0 1 6		0 5 0	0 1 0	
200	0 15 0	0 2 6		0 7 6	0 1 6	
1000	4 0 0	0 8 0		2 0 0	0 4 0	

Apply at the chief office, any day between ten and four o'clock, 3 Princes-street, London.

PLATE-GLASS INSURANCE. Assuring Windows, Mirrors, &c., against Breakage. Security is Insurance Company to Clients and others. The TIMES Advertisement Manager, 28, Lombard-street, London.

INSTRUCTION in ART.—The AUTUMN SESSION of the NORMAL TRAINING SCHOOL of ART of the Board of Trade Department of Science and Art, will COMMENCE THURSDAY, 5th OCTOBER, 1854.
Art Superintendent—RICHARD REDGRAVE, R.A.
The principal objects of this School are to communicate a knowledge of the scientific principles involved in art, especially in its relation to the useful purposes of life, with the best methods of training masters for teaching schools of art, and preparing students to enter upon the future occupations of designers in art in manufactories and workshops, either as masters, overseers, or as skilled workmen. At the same time instruction is afforded to all who may desire to pursue scientific study without reference to any particular art or any special branch of industry. Special courses are also arranged to train schoolmasters of parochial and other schools in the principles of drawing as a part of general education concurrently with writing.
For prospectuses, forms of admission, &c., apply at the offices, Marlborough-house, Pall-mall, London.

THE LONDON SCHOOL of PHOTOGRAPHY, 75, Newgate-street. At this Institution the Art of Taking Portraits and Landscapes may be learned in one Lesson, and the necessary apparatus purchased for £5. No charge is made for the Instruction

SMART'S WRITING INSTITUTION, 5, Piccadilly, between the Haymarket and Regent-circus.—Open from the Hi Hist daily. Persons of all ages received (privately) and taught at any time, suiting their own convenience. Lessons one hour each. No mechanical system. Improvements guaranteed in eight or twelve easy lessons. Separate rooms for Ladies, to which department (if preferred) Mrs. Smart will attend. For terms, &c., apply to Mr. Smart, as above.

TO CLERGYMEN.—Wanted, in the family of a Clergyman or a Gentleman conversant with Classics, within 15 minutes' walk west of the Strand, Board and Lodging for a Student at King's College, aged 17. He would require a private sitting-room and bed-room. £3 3s. per week would be paid. For further particulars apply to T. T., 18 Southgate, Halifax.

TO INVALIDS and OTHERS.—A Married Medical Man, with no family, having a large House and Grounds to spare in the neighbourhood of Kensington gardens, would be glad to receive a GENTLEMAN requiring attendance, or otherwise, TO BOARD, &c.; where he could enjoy his separate Apartments, if required, in the comfortable society of the Medical Man and his Family moderate prices. Address, Apply to M. D., Mr. Knowles, 16, Conduit-street, Westbourne-terrace.

LOW RENTS.—PINNER, near Harrow, Middlesex and superior-built houses with every accommodation, 300 yards from the Station, may be had on lease, or purchased, at £40 to £60 per annum. Apply on the Estate, or to Mr. Bedford, surveyor, Pinner, Middlesex, City.

BANK NOTES.—The full value given in cash for DIAMONDS, PEARLS, OLD GOLD and SILVER, and English and foreign COINS, at SELIM, DEAN, and CO., Coventry-street, Haymarket. Irish, Scotch, and foreign Bank notes exchanged. N.B. A large assortment of Jewellery, Plate, and Pated Goods to be sold at reduced prices. Gold Watches, £4 15s.; Silver Ditto, £3 15s.; warranted.

A TOPOGRAPHICAL ANTIQUARIAN CURIOSITY, of singular antiquity, and peculiarly interesting character, is in the market, and connected with the Arts. He is desirous to perpetuate this valuable remnant by publishing it for the benefit of the learned world. It is of universal interest, and, if now neglected, will be a great literary loss. Any nobleman or gentleman at present residing in the country, or in a retiled town, who may be carrying out his views may, hearing the circumstance, enjoy his money in advance. Address A. B., No. 33, Upper Marylebone-street, Portland-place, London.

SHAKSPERE.—The admirers of the immortal Bard will be pleased to learn that W. S. Kerr, Binns, and Co. have obtained permission from Mrs. Fletcher, of Gadshill-place, Rochester, to photograph the Chalet, Gadshill, proved to have been used by the Poet. An interesting pamphlet given with each. The Jug may be seen at the establishment of Messrs. Goslett, at the Mandarin Hall (late Chamberlain's), Royal Porcelain Works, Worcester. Price 7s. 6d. each, or, carriage free, by enclosing a Post-office order.

IF YOU REQUIRE FAMILY ARMS, send Name and County to the HERALD'S OFFICE. Fee, search, and sketch, 5s. 6d., or postage stamps. ARMS painted, impaled, and quartered.—H. SALT, Great Turnstile, Lincoln's-inn-fields.

THE IN-STANT-QUO CHESS-BOARD supplies a want long felt by Chess players, being so contrived that the game may be postponed, and the board folded up and placed in its case without the Chessmen being disturbed. For playing by correspondence and for use on board ship it is invaluable. From with each complete, 30s.; in leather look-case, 35s. 6d.—JAQUES, Hatton, Hatton-garden.

FISHER'S DRESSING-CASES, for Ladies and Gentlemen, in silver or plated, are furnished with the most-ed particulars, and warranted to stand the tropical climates, also travelling-bags, dressing-bags, and writing desks, at one of the largest stocks in London, at prices to suit all purchasers. Catalogues post free.—Fisher, 188, Strand, corner of Arundel-street.

THE HOUSEWIFE'S FRIEND.—CREWS' RINSING LIQUID, for all Bankers, effectually removes and fixes colours which are now destroyed in washing. Twenty drops in the liquid are sufficient to restore the colour of a large basin. Sold in bottles, at 6d. and 9d. each, by all chemists and oilmen in the United Kingdom. Manufactory, Commercia. Wharf, Mile end, London.

CARPETS, CURTAINS, CABINET and UPHOLSTERY FURNITURE. Parsfield Hastings, &c., may be obtained at prices not exceeding those of inferior articles, at HOWITT and COMPANY'S Galleries and Warerooms, 226, 227, 228 229, 230, High Holborn.

CARPETS.—JOHN MAPLE'S FURNISHING ESTABLISHMENT is the largest, cheapest, and best in the world. Good Brussels Carpets, 2s. 9½d. per yard; rich velvet pile Carpets, 3s. 9d. per yard. Patent Linoleums Felt Carpeting, &c. The Vienna Easy Chair, 35s. This chair, studied on the much-approved sanitary principle, is a great luxury, and suitable for any hind of room. The Patagon Couch, in walnut or rosewood, three guineas Drawing-room Chairs, in rich carved walnut-wood and French polish, 14s. and 17s. Tottenham-court-road, and 1 to 7, Tottenham-place, also the names and numbers as the next house, although in the same trade, has no connection.

SECOND-HAND FURNITURE.—J. DENT and CO., Nos. 30, 3., 32, and 33, Crawford-street, Marylebone, beg to announce to the Nobility and Gentry that they have now opened their new Spacious Furniture establishments (late John's Carriage Depository), 32, Upper Montagu-street, Bryanston-square, with the largest Stock of Second-hand Furniture in London, a great portion of which has been manufactured by themselves, Bedsteads, and other articles manufactured by them at wrork will be found to be less than one-half the original cost.

ROUSSILLON, 26s. per Dozen, with fine violet tinge, and rich, racy, and mellow Burgundy flavour; it resembles Port, but is flatter on the palate, and has the merit of not being acidity in those temperaments that are subject to it or really as Port. A better wine I never wish to drink."—(See Evidence of the late G. R. Porter, Esq., before a Committee of the House of Commons on the Wine Duties, 1852.) Dinner Sherry, 8os., 36s.; standard or matured Sherry, 42s.; fine old dry bouquet Port, 42s.; St. Julien, 42s.; fine old Claret, 42s.; Hock, 36s.; Moselle, 42s.; Milk Punch, 36s.; Sparkling Champagne (of the celebrated 1846 vintage), 42s.—OSBORN and HODGE, Manufacturers, Malt-street, Camden-town.—Cash. Carriage free.

SECOND-HAND FURNITURE.—J. DENT and CO., Nos. 30, 31, 32, and 33, Crawford-street, Marylebone, beg to announce to the Nobility and Gentry that they have now opened their new Spacious Furniture establishments (late John's Carriage

THE ILLUSTRATED LONDON NEWS

No. 702.—VOL. XXV.] SATURDAY, SEPTEMBER 16, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE EXPEDITION TO THE CRIMEA.

PUBLIC attention is now earnestly fixed on the great expedition to the Crimea, the departure of which from Varna has been already announced. By common consent it seems to be considered as the last and crowning enterprise of the campaign of 1854, and it is looked forward to with corresponding interest; more particularly as it is seen that the season is rapidly approaching when it is unsafe to leave our fleet in the upper part of the Baltic, and further operations in that quarter can hardly be expected. In fact, the French commander, Marshal Baraguay d'Hilliers has returned; and a part of his troops are on their way home. Sir Charles Napier, too, it is said, is immediately to leave the fleet. The expedition to the Crimea, therefore, now concentrates in itself all the feelings implicated in the great struggle in which the nation is engaged.

It is probably the greatest maritime expedition, taking it all in all—the immense number of ships and troops employed, and the completeness of the outfit—that was ever prepared. The last memorable expedition of this kind which England sent forth, was that to Walcheren, in 1809; but, though more English troops (40,000) were employed on that occasion, it was in all respects inferior to the present combined expedition. The Great Armada, which threatened the existence of England, did not carry—sailors, soldiers, and galley slaves—quite 30,000 men; while of this great expedition, the soldiers alone will be upwards of 70,000 men—making, with the sailors in the fleet, on board the transports, &c., not less than 100,000 persons. They must carry with them artillery, provisions, and supplies of all kinds. The largest force that ever before has been talked of as likely to form an invading expedition, had only a short voyage before it, and was inferior to this. Such an armament would require at any time, and under any circumstances, the greatest care and skill to organise it; and composed as this is, of three different nations who are to operate in a country quite strange to two of them; at a season of the year, also, when storms may be calculated on, the greatest circumspection and forethought are required in the commanders. The delay in setting out, which has excited some animadversion, has not been greater, probably, than was necessary to secure success; and, however desirous we must all have been to see the expedition proceed, it would have been culpable to send it on a day before the commanders were well assured that every needful preparation was made for the arduous and novel undertaking.

At Walcheren—the last occasion, we believe, when an English force had to make good a landing in face of an enemy—the first step was successfully accomplished, and Flushing was captured. That the expedition was afterwards a failure was due to the misconception in which it originated; to disputes and jealousies amongst the commanders; to the want of specific plans and instructions; and to the incapacity of the military man who was placed at its head. None of these elements are to be found in the present expedition. The power of the enemy against whom it is directed is well ascertained The plan is clear and decided; the military and naval chiefs ar men of approved capacity; and, though it would be wrong to say remembering how many incidents may intervene, that success certain, in all human probability it is. A previous expedition to place nearer to the present scene of strife than Walcheren, is o better augury. In all respects the landing of a considerable military force at Aboukir, in 1801, was eminently successful; and though Abercromby fell in the arms of victory, the result proved how much could be achieved by our naval and military men in the face of a powerful foe.

The Russians in the Crimea are certainly not more to be dreaded than were the French in Egypt. The coast about the Katcha where the landing is to be effected, is much more favourable for naval operations than was the coast at Aboukir. There the ship could not approach the shore within gun-shot, and the only force that could effectually cover the landing of the troops consisted of gun-boats and other armed boats. On the coast of the Crimea, we are told there are places appropriate for landing the troops, where the water is fifteen fathoms deep close to the shore. If this be correct, our ships may effectually cover the debarkation, and keep every enemy at a distance till the troops be landed and formed and ready to become the assailants. Our imposing naval force is not only sufficient to perform this service, and keep the enemy in check, it is capable of diverting his attention from the invading troops by attacking Sebastopol. The recent experiments ex

HER MAJESTY'S NEW CASTLE OF BALMORAL, FROM THE NORTH-EAST.—(SEE NEXT PAGE.)

pressly made to test the strength of the Russian forts at Bomarsund have confirmed all the previous statements of their weakness. At the distance of five hundred yards, the *Edinburgh*, in seven broadsides, made a breach in the towers of that fortress; and there is good reason to believe that the forts of Sebastopol are not stronger than those of Bomarsund; while a power immensely superior to that of the *Edinburgh* can be brought to bear against them. We trust, therefore, that it will be easy to effect a successful landing, and not difficult so to harass the enemy as to alarm him, while he is sending out troops against the invaders, for the fate of his own stronghold.

One point is quite clear: while we are masters of the Black Sea, Russia cannot send from the other parts of her empire any material succours to the Crimea: the distance is too great. What may be the exact number of Russian troops in the Crimea we are not aware; but we rely that her Majesty's Generals and Ministers, and her Allies, are well informed on this important point, and that they have taken care to send a force sufficiently large to ensure success. Unless they are morally certain on this point, it would be inexcusable to make the attempt. They have had ample time to prepare for the expedition: no means have been refused them. The Governments of England, France, and Turkey have disposed of the resources of the three empires to any extent they please, and they cannot fail for want of power. The amount of the Russian forces in the Crimea ought to be accurately known to them; and it must be known to a single man and a single gun how much power will be necessary to conquer the Russians. For this purpose, the great expedition is: we believe, all-sufficient; and, day by day, in common, with almost every man in the empire, we hope to hear of the landing of the English, French, and Turkish armies in the Crimea, and the surrender of Sebastopol, after some losses, perhaps, to the Allied arms.

BALMORAL.

THIS year her Majesty's visit to Scotland takes place somewhat later than heretofore; and the stay of the Court at Balmoral will not exceed three weeks. The Queen, the Prince Consort, the Royal children, and suite left Buckingham Palace on Thursday morning, and reached Holyrood Palace in the evening, and was tostart from thence on Friday morning travelling by the Edinburgh and Glasgow and the Scottish Central Railways to Perth, thence by the Scottish Midland to Forfar, by the Aberdeen Railway to Ferryhill junction near Aberdeen, after which by the Deeside line to Banchory. From this latter station, at which railway communication terminates, the Royal travellers were to be postad on to Balmoral, and her Majesty will reach her Highland home about seven p.m.

At Balmoral a new Castle has been some time in progress of building for her Majesty; and the view upon the preceding page shows the new Royal residence as it will appear when finished. The design consists of a massive square tower, about 100 feet in height, flanked on two sides by large squares of building, three stories and upwards in height. One of these squares is now fast approaching completion.

The foundations of one of the connecting wings, and of the main tower have been laid, and are shown in the foreground of the Sketch; but it is not expected that these, or the other wings of buildings, which is mainly intended for the accommodation of the domestics, can be finished for at least two years to come; so that the old Castle, shown in the background of the view, will be required for the accommodation of her Majesty's suite during that interval.

The new buildings are marked by the peculiarities of the old sturdy baronial architecture of Scotland. They are erected wholly of beautiful grey granite found in the immediate neighbourhood of the Castle. The design displays, in many parts, masses of beautifully and carefully-detailed carvings and enriched mouldings, such as are seldom wrought in obdurate, but enduring material like granite.

The illustration represents the new principal front. The south-west front, in which is the grand entrance, will be, when finished, the richest in architectural detail; but it is not in such a state of forwardness as to admit of pictorial illustration.

THE PRIZE ESSAY OF THE ANTI-CORN-LAW-LEAGUE.—A meeting of the Council of the League was held at Newall's-buildings, Manchester, last week, at which a resolution was passed that a thousand copies of the Prize Essay, now published, entitled, "The Charter of the Nations; or, Free-Trade and its Results," shall be handsomely bound, and be presented to the following countries, to be placed in the public libraries:—United States, Mexico, Brazil, France, Belgium, Holland, Denmark, Sweden, Prussia, Russia, Austria, Spain, Portugal, Sardinia, Greece, Saxony, Rome, Bavaria, and Neapolitan States.

THE ENGLISH PRISONERS AT TELSCHEN.—Letters from Telschen, of the 6th, in the *Kreuzzeitung Gazette*, state that the four Englishmen arrested and detained by the Russians, apparently for no other offence than trespassing on their soil, are still kept there. Madame de Viatinpheff and Mdlle Lehn, the professional singers, are not allowed to leave; but, like cage birds, are permitted to sing, and are giving concerts.

GUARANTEE AGAINST THE RESTORATION OF POLAND.—The Vienna *Wanderer* says, that the Prussian Government having expressed a fear that the Western Powers intended, as one of its measures of war against Russia, to revolutionise Poland, all pretext for favouring Russia on the ground has been taken away from the Prussian Government, by the most positive assurances of the Western Powers that the King of Prussia has nothing to fear for his Polish territory from a policy of resistance to the designs of Russia.

THE HOSPODARS OF THE PRINCIPALITIES.—Letters from Paris and Vienna state, that the Austrian Government has taken advantage of the opposition of M. Buchanan to the return of the Russian partisan Stirbey, in the character of Hospodar, to urge the postponement of any restoration or re-appointment to the office until the end of the war. The result of this arrangement would be to leave the Government in the hands of the Austrian Commissioner, supported by the Austrian army.

A NOBLE PORTUGUESE FORTUNE HUNTER.—A great outcry has been caused in Portugal by an attempted abduction. The principal in this case is the Duke of Saldanha, who, possessing nothing but his pay and salaries, having squandered the immense sums received from the country, resolved to mend his fortune by means of a rich marriage for his son. The Conde Saldanha was, therefore, sent to Oporto, in company of some friends, to demand the hand of Mdlle. Ferreira, a child twelve years of age, the possessor of a large fortune, living with her widowed mother. The suit being rejected, it was resolved to storm the quinta of Travasso, on the Douro, to which place Madame Ferreira had retired, and carry off the child. To carry out this plan, the Count and his friends assembled at the Cassas, reinforcing themselves with the notorious Jose dos Cassas and his ruffians, who had for a long time been the terror of the district. At the first night the expedition set out in three carriages and started for Travassos: while young Saldanha, along with a priest, who was forthwith to have married him, remained at Entre Rios awaiting his prey. On arriving at Travasso, the main body being placed in reserve, some of the ringleaders succeeded in penetrating into the house, but, to their dismay, they found their prey had flown. The alarm was meanwhile given, the parish tocsin was sounding, Banbazux were seen, and the peasantry arming; so the disappointed and affrighted ruffians took to their heels, and got on board precipitately. Madame Ferreira, having had timely notice, had left for Regoa, and, under the impression that she might have been followed there, the people of the place armed, and there is no doubt, had the expedition taken that direction, it would have met with a warm reception. However, what is saw at Travassos made the ringleaders lose all taste for further adventure, and they proceeded chopfallen, to Oporto. On the following day the unfortunate lady, flying for herself and child, having procured an escort of the 8th Infantry, proceeded to Lamego, with the view of taking refuge in the nunnery; but, though the Bishop gave orders for her to be received in it, the Abbess refused her admittance through fear of calling down on her convent the vengeance of the Duke and his colleague, the Grand Master of the Masonic societies. Madame Ferreira, unable to find in her own *constitutional* country protection against the persecution of the President of the Council, has decided on emigrating. The names of many persons implicated in the outrage are mentioned, some having gone for the purpose from Lisbon, and others from Oporto. It is said that the principal ringleader was furnished with an order from the Duke enjoining the military to give aid and assistance if required; and that a lad, brother of the young lady, seduced by promises of titles, &c., had become a party in the outrage. Young Saldanha decamped from Oporto, to avoid the honours of a *monster charivari*.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

It is seldom that the bills of mortality have displayed so many remarkable names as they have done this year. We have hitherto kept our readers as *courant* of these losses, and we lament to have to add yet more to the list. A few days since, M. Arnoult, whose literary productions, remarkable for the purity and elegance of their style, had obtained him well-merited and universal celebrity, and a *fauteuil* in the Academy, expired, from a painful disease of the stomach. The General Comte Merlin, the widower of the Comtesse Merlin—whose death three years since caused such a sensation and left such a blank in the highest circles of society and literature here—has also fallen a victim to the fatality that seems this year to attach itself to well-known names. M. Merlin was son to the celebrated Jurisconsult of that name, a highly distinguished officer under the Empire, and personally favored by the Bonaparte family—and *pair de France* in the reign of Louis Philippe. The name of M. Lepoitvin Saint-Alme, though not very celebrated, is worthy of note as being intimately connected with the political and literary press of France during a considerable period. M. Lepoitvin Saint-Alme was the author of a number of remarkably successful pieces at the Cirque Olympique: he was the first *collaborateur* of Balzac, with whom he published as many as fourteen or fifteen novels. During thirty years he was successively principal editor of the *Figaro*, the *Capitole*, the *Globe*, *Satan*, the *Corsaire*, and *La Liberté*; which latter journal, founded by him in 1848, immediately after the Revolution of February, was the first to put forward the candidature of the Prince Louis-Napoleon for the Presidency of the Republic: for this reason the paper was suppressed by General Cavaignac. After the election of the 10th of December an idea was entertained of giving M. Saint-Alme a Préfecture: but, this being opposed by M. Léon Faucher, the old journalist retired disappointed, abandoned all interest or participation in the politics, literature, and events of the day, and died in poverty and obscurity. Besides many names we have already mentioned in former letters, we may cite those of MM. Virmaitre, Horace, Raisson, Emile Souvestre, Van Tenac, Paillet, Auguste Arnould, &c.—all well known as connected with literature and journalism; besides several members of the Academy.

The visit and conduct of Prince Albert at the Camp of Boulogne have produced a most favourable impression in general here. His reception of the officers—more especially of General Schramm and Colonel Selves (now Salman Pacha, soldier of the Empire, who, on the downfall of the dynasty to which he was devoted, entered the Egyptian service, of which he has now become one of the principal chiefs)—was particularly gracious. The Royal yacht was an object of peculiar interest and admiration to the inhabitants and visitors of Boulogne, who were struck by the elegance and comfort displayed in her accommodations.

The attention of Government is being seriously turned to the colonisation of Corsica on a grand scale. A petition is in circulation, bearing the title, "*A Napoleon III. la Corse*," demanding for the island the same advantages that have been accorded to Algeria. The document is signed by 125 000 names.

A decree, dated Boulogne, establishes a commission for the publication of the Correspondence of Napoleon I., selected from the various portions in the public repositories and private collections.

It is whispered that a series of most important changes is to take place in the chief administrations of the semi-official journals here.

The cholera may now be considered as on the point of extinction in Paris; the few cases that have recently occurred have, almost without exception, been easily overcome. A singular fact, and one to which every possible publicity should be given, is the frightful result produced by the abuse of camphor in the epidemic—innumerable cases of insanity having been caused solely by the practice adopted by many of eating small portions of this drug, or drinking it dissolved in brandy, as a preventative. In order, however, not to mislead our readers as to the use of camphor, we ought to state, while signaling its abuse, that about the most effectual remedy yet tested here, has been, on the appearance of the first symptoms of diarrhœa, the administration of a single drop of spirit of camphor on sugar, renewed every ten minutes or quarter of an hour, till an abundant perspiration, aided by warm coverings, was produced; and the symptoms of colic, cramps, &c., gave way—as they generally did in a short time, without the necessity of any further treatment.

The struggle between M. Perrin, manager of the Opéra Comique and Théâtre Lyrique, and his oppenents, has terminated in favour of the former, and he has been requested—after a series of discussions, and some mutual concessions—to withdraw the resignation he had offered. He remains, in consequence, manager of both theatres, and is already engaged in preparing for the winter campaign. The Théâtre Lyrique is rehearsing an opera, by M. Gevaert, for its opening. Last week the Odéon gave a magnificent benefit night, in which appeared Mdlle. Georges, in "Britannicus," supported by the artistes of the Comédie Francaise; Madame Rose Chéri, with some of the élite of the Gymnase; and MM. Coudere and Ste. Foy and Mdlle. Boulart, of the Opéra Comique. The evening finished with "Le Roman d'Une Heure," by the actors of the Odéon. Mdlle. Georges has accepted an engagement at the Porte St. Martin. We doubt if the ravages of time will enable the great tragedian to do justice to the reputation established in her younger days; doubtless, the genius of those days remains, but we dread the physical difficulties that present such obstacles to its expression. Mdlle. Mocker, daughter of one of the most deservedly popular singers of the Opéra Comique, and whose début at the Vaudeville, we noticed a short time since, is obtaining a marked success in the new and popular place with which that theatre re-opens. "A qui mal veut." Mdlle. Mocker is not only a clever and intelligent actress, but the peculiar charm with which she sings the various *couplets* introduced into her *rôles*, display a talent which is too often wanting in the younger artistes of the present day. We ourselves question the taste of this long-established custom; we think that, in the generality of cases, these *couplets*, almost always dragged in *à propos des bottes*, retard the movement, and impair the illusion of the piece. But be that as it may, whatever is worth doing, is worth doing well, and so long as the fashion exists, it should be properly carried out. M. Ragani is sending out his circulars for the ensuing season; his list of singers does not offer a very brilliant programme.

HEALTH OF THE FLEET AT BALTSCHIK BAY.

(From a Correspondent).

24th July, 1854.

I am truly delighted to be able to give you a very much better account of the health of the fleet—neither *Britannia*, *Albion*, *Trafalgar*, nor *Furious* has had a fresh case of cholera for nearly forty-eight hours, I believe; and though there are still many sick, some of whom may not recover, we earnestly hope that the disease is checked and passing away. The men are plucking up their spirits—for many a fine fellow, who would fight like a hero in the day of battle, gets cowed before this terrible silent foe. But this feeling never prevented them from nursing their dying messmates—frequently four nurses to one sick man, each rubbing an arm or a leg. Let us trust that this has all passed away, now that we have had a day or two of cool north winds, and some sharp rain. The vacancies are filled up, and all are ready and eager for any service which the authorities may decide upon.

THE CRIMEA EXPEDITION.

It is now five weeks since the *Times* announced that on a certain day the expedition to take Sebastopol would sail from Varna on the 6th of August, and we are still without positive intelligence of that movement having been made. The *Moniteur*, which ought to be correct, announced on Thursday morning the departure of the French and Turkish divisions of the expedition against the Crimea on the 5th; and added, that the British fleet was to join them at Serpent Isle. On the other hand, the Constantinople correspondent of a morning paper, which is supposed to have some connection with the War-Office, gives the following information:—

CONSTANTINOPLE, Sept. 7.—Yesterday morning, at six o'clock, orders were sent to Baltschik for the departure of the expedition against Sebastopol.

It is stated, however, that at eleven o'clock a counter order was despatched.

The Austrian steamer *Custozza*, which arrived here to-day from Baltschik, states that twenty ships had already left that port. The remainder were still there on the evening of the 6th.

The latest reliable information from Varna, which is only to the 1st inst., speak of the expedition as having embarked, but the order to sail had not been given. The three squadrons were to leave on the 2nd, 3rd, and 4th. Some 500 private sailing-vessels, towed by hired and even purchased steamers, had left Varna. They had munitions of war on board, such as pontoons, siege-guns, large flat-bottomed boats, provisions, canvas for tents, boards for barracks, &c. The army was supposed to consist of 60,000 men—namely, 10,000 French, 20,000 English, 10,000 Turks, 10,000 Egyptians, 5000 Tunisians, and 5000 men of other nationalities. In addition to these, the fleet has 25,000 sailors and 3000 guns. All the troops which were at Gallipoli and Constant nople will share in the expedition, and consequently left earlier than the forces collected at Varna.

The *Journal des Débats*, of Wednesday, says:—

The debarkation will be effected at a point near the mouth of the river Katcha, where there is about fifteen fathoms water. It is the same point that was observed by Admirals Lambert and Brown. As the ships can approach very near the shore, their guns will destroy all the land artillery which can be opposed to the invading force. Once ashore, the troops will immediately begin to intrench themselves, and they will repel with the bayonet all the assaults of the Russian troops. The landing effected, the Russian army must be beaten in the field, and possession taken of the heights which command the forts. The amount of the Russian forces in the Crimea is unknown. It is possible that their plan will be to desolate, ravaging the country as they go through it, in order to deprive reinforcements and provisions from reaching the enemy, while the Russian engineers have constructed formidable works round Sebastopol, surrounding and commanding the city. Russian troops have now the command of the sea; and, however, they cannot [illegible] beyond the circuit of Sebastopol, from which point the [illegible] are available. It appears that the besieged [illegible] the port in a manner that will compel [illegible] to be destroyed, or to go out and [illegible] so that the capture of Fort Constantine, which [illegible] Bomarsund, will promptly terminate the siege. [illegible] her people [illegible] or her rapidly and exactly resulted. [illegible] union is that the [illegible] dition, once commenced, w[illegible] be carried with vigour and with complete success.

A letter from Odessa asserts that at Sebastopol the intention is to resist, to the last, Forts are being built to protect the rear in the entrance of four leagues from Sebastopol. A mass of fire-ships are being prepared to be sent against the vessels of the enemy. In addition to the usual garrison at Sebastopol, there are 80,000 men in the camps established over the town, and reinforcements are constantly arriving. The excitement that prevails at Odessa is also said to be very great. Almost all the corn has been removed to Taraspol, the women and children have been sent away, and the pavement is up. Reinforcements arrive day after day from Roumania, and every effort is made to [illegible] Ackerman and Kilia. The military men at Odessa are inclined to believe that the whole force of the Allies will be directed against Sebastopol, but still the male population of Odessa is drilled every day for several hours. The fortifications of Quarantaine and Khersonese are being strengthened in every [illegible] and the [illegible] conduct the defence of S[illegible] two places. The [illegible] Perekop, inspecting the [illegible] quiring to be told the same thing [illegible] lowing proclamation [illegible]

To the Inhabitants of Ode[illegible]

than ever before, [illegible] well prepar[illegible] generally re[illegible] and house [illegible] over any shells which may be thrown [illegible] must be kept on the roof of the hou[illegible] extinguished. [illegible] as many under protection of his [illegible] having removed the city to [illegible] Wherefore who may remain [illegible]

August 30, 1854. [illegible]

The following is the text of the proclamation which was put on the order of the day of the army of the East by Marshal de St. Arnaud, on the 27th:—

Soldiers,—You have just seen the enemies of [illegible] pass, and energy, in the midst of [illegible] shore [illegible] forgotten. The hour is come to [illegible] and to conquer. [illegible] not built for us on the Danube. His columns, demoralised and [illegible] by disease, are painfully retiring. It is Providence [illegible] that his wished to spare us the trial of these unhealthy [illegible] Providence, also, which leads us into the Crimea—a country [illegible] as our own, and to Sebastopol, the seat of Russian power, in those walls where we go to seek together the pledge of peace, and of our return to our homes. The enterprise is grand and worthy of you. You will realise it by the aid of the most formidable military and naval [illegible] ever been collected. The Allied fleets, with their 3000 cannons and the [illegible] have seasons, your emulators and your companions in arms, will be [illegible] the shores of the Crimea. An English army whose [illegible] your free-[illegible] there learnt to respect, a chosen division of those Ottoman soldiers who have lent prowess themselves on your eyes, and a French army which I have the right and the pride to call the finest army in the world. I see in this more than pledges of success. I see in it success itself. Generals, commanders of all arms, your self-[illegible] and will impart to your soldiers. We shall soon salute the three united flags floating together on the ramparts of Sebastopol with one and the same cry "Vive l'[illegible]

Head-quarters, Varna, Aug. [illegible] 25. [illegible] ARNAUD.

THE WAR IN ASIA

The late defeat of the Turkish armies of Asia, at Bayazid and Kurukdere, and the consequent interception of all communication between Trebizond and Persia, have given a serious blow to all trade, and especially to British trade, with that country. These defeats were said to have caused a loss to British merchants in the course of between two and three millions sterling per annum, but this appears rather an exaggeration. Besides, it is also questioned whether the Russians will be able to obtain any advantage from their present successes in that quarter. Letters from Erzeroum, dated the 17th inst., state that the Russians had abandoned Bayazid, which had been again occupied by the Turks. An English courier who arrived from Tabreez at Erzeroum on the 17th, had encountered on the road between that city and those two cities, and a caravan, consisting of [illegible] was accordingly preparing to leave Erzeroum for Persia. The battle of Kurukdere has, no doubt, induced the Russian troops in possession of Bayazid, to fall back on the army of Gumri, for the losses suffered by the Russians at Kurukdere, must have been very serious if, as Russian deserters have declared at Kars, they had from 10,000 to 11,000 out of 23,000, put *hors de combat*.

Letters from Constantinople ascribe the retreat of the Russians to the alarm caused by the successes of Schamyl, who had come suddenly down from the mountains, at the head of 16,000 horsemen, at a time when the Russians were off their guard, and ravaged 200 villages with fire and sword. The Russians had left behind them, when taken by the Circassians, a number of captives, including forty Russian ladies. [illegible] reports spoke of Schamyl as being within a few leagues of Tiflis.

ARRIVAL OF MARSHAL BARAGUAY D'HILLIERS AT BERLIN.—Marshal Baraguay d'Hilliers, who arrived at Berlin from Dantzic on the 10th inst., received at that city the Marshal's baton from the hands of an Aide-de-Camp to the Emperor. M. Moustier, the French Ambassador, paid a long visit to the Marshal, who was accompanied by Generals Gielgud, Colonels St. Loyal and de Rochebrout, Intendant Petit, and Captain Molin (Aide-de-Camp).

THE ALLIED FLEETS IN THE BALTIC.

(From a Correspondent.)

STOCKHOLM, Sept. 3, 1854.

The recent quarantine regulations—which prohibit any intercourse with Bomarsund or the Allied fleets, except at the expense of a troublesome detention—have rendered the intercourse between this place and the forces very inconvenient. It is difficult, even at great cost, to induce the owners of steamers or smacks to undertake the passage; and all regular intercourse, even for the public service, is suspended. The fleet is, however, pretty much *in statu quo*, have not—except that at all the English force (Marines) has been re-embarked; and that a portion of the French squadron has been performing a reconnoitring cruise amongst the interminable channels and islands which skirt these coasts. The chief part of the French troops have also been re-embarked, not more than 2000 men remaining in the cantonments, and the work of demolition being in full progress

The *Vendame*, 100, and the *Virginie* frigate, had arrived at Waxholm for supplies on the 30th ult; but, finding themselves excluded from intercourse with the people here by the quarantine regulations which had just been promulgated, they weighed again yesterday—intending, as I am informed, to proceed to Copenhagen or Dantzic for stores, whereby the Swedes will lose the advantage of the trade.

The *Asterlitz*, screw, 100 (90 guns actually mounted), is still at Waxholm, receiving her supplies, and attracting crowds of pleasure parties from hence to inspect her magnificent equipments, which are freely and politely exhibited by her officers. After returning to Ledsund this vessel is expected to be ordered to Brest, towards the end of next month, for the winter. There is no English armed vessel here at present, owing, I believe, to the quarantine regulations; as the former arrangement had been that two vessels in company—the one English, and the other French—should visit Waxholm by turns, to obtain provisions, coals, and so forth.

Hitherto the people of Stockholm and its neighbourhood had been reaping a glorious harvest in supplying these ships, charging enormous prices, and getting rid of very inferior stock. Miserable little sheep have been sold at £1 each; and small fleshless animals, by way of bullocks, as high as £4 and £5 each; whilst at Bomarsund the troops have been charged as high as 800 francs for a lean bullock—all prices which are quite out of character where money is so scarce and valuable as it is here. As to the Aland people, they appear to entertain the highest respect for the *cash* of the Allies; and, relieved from the immediate surveillance of Russian commandants, they avail themselves eagerly enough of the glorious market which is offered for their produce. But, as to entertaining any *sentiment* or political predilection in the quarrel, I do not think they dream of such a thing; the truth being that, whether under the dominion of Russian bayonets and cannon, or that of the impoverished, extortionate, grinding Swedish nobles, their condition is much the same. In either case they are mere serfs, in a state of complete dependence. The reason of this is, that the whole of the native or Swedish population of these manifold rocky, fir-covered islands are mere peasants, combining, with that of pasturage and cultivation (on a very small scale), the occupation of fishermen.

As far as the destruction of the few straggling buildings or huts adjacent to the military works of Bomarsund, and called the town, is concerned, its importance may be estimated by judging of the space heretofore covered, by the nature of the remnants, and by the character of the houses which remain. The town, in fact, was a mere hamlet of detached slab huts and sheds. There is now no object of interest about the place; there is positively nothing for the pencil, and the recollections only are attached to the name.

In the more important towns of Sweden, the popular feeling in favour of the Allies runs high; and in all the districts in which the peasantry are more or less in constant intercourse with the manufacturing and trading classes, all alike participate in the anti-Russian enthusiasm. But the Government here is very little affected by the force of popular opinion; and, if there be a disposition in a considerable section of the Executive and its supporters to take an active part in the Turkish question, in its complications, this tendency is checked to a great extent by the bias of that portion of the nobility which is entirely in the Russian interest. It is external policy that the accession of Sweden to the Western Alliance will be due.

The Russian prisoners, and the few connected with the Government at Bomarsund, who managed to make their escape hither across the numerous fiords, or creeks, which separate this from the position about Aland, seem mostly to consist of men of the lowest cast of intelligence The corps of the Guards, which formed part of the Russian garrison of Bomarsund, alone comprises men apparently of superior caste. All alike are very reserved on matters of politics. They affect not to understand any inquiries on the subject of the internal affairs of the Empire, as connected with the present war. But they say almost unanimously that "*the Russians are fully aware of the impossibility of holding out more than another season against the combined movements with which they are threatened in the spring.* Albeit the Emperor is determined to continue the contest, and to trust to intrigue and the chapter of accidents." They also state that "they were paralysed and thunderstruck when they suddenly observed the combined fleet taking up its position from the south side of Bomarsund; inasmuch as it was the prevalent opinion that the place was not accessible from that quarter; but only on the northern side, where, indeed, it was protected by out-works fully prepared for resistance." This, however, is only true in part.

It is understood in the fleet, and amongst the troops, that no further operations, beyond mere excursions of observation, will be undertaken this season.

The prevailing impression seems to be that the Baltic campaign is at an end for the season, although no formal announcement to that effect has been made. As regards the Allied fleets in that quarter the *Moniteur de la Flotte* gives the following contradiction to the statement that the whole of the French Baltic squadron will return to France in October:—

The *Messager de la Manche* announces as positive, the arrival, next month, at Cherbourg, of the entire of our Baltic squadron. The report, if not entirely groundless, is at least premature, as there is nothing official known as yet on the subject England herself is undecided what she will do with her ships. The sailing-vessels are recalled, but the steamers have received no such orders. Probably the latter will only retire by degrees, according as they shall be driven out by the ice, and this happens some seasons earlier than others. Besides, we may be certain that, as long as an English vessel remains in the Baltic, we shall see a French vessel sharing the same fatigues and danger.

Extensive preparations are said to be making in the French war and navy departments, in anticipation of a spring campaign. A newly-invented rocket is said to produce most wonderful effects, is now being tried by a military commission; and siege guns, carrying a distance of upwards of five miles, destined to batter the granite walls of Cronstadt, are being cast in the Imperial foundry of Rueile. They are all to be ready by next March.

DESTRUCTION OF THE FORTIFICATIONS AT ALAND.

The fortresses that stood upon the Aland islands are amongst the things that were. Mines were sprung beneath them on the 30th and 31st August and 2nd September. The fort of Izee, after it had fallen into the hands of the French, was shelled from the Russian mainwork. It took fire, and blew up on the morning of the 15th ult. Presto was fired on the 30th; its destruction was complete. The explosions took place in quick succession; on the third the entire fort seemed to open out and then went upwards amidst a thick volume of smoke. All the hewn granite which formed the outer casing of its walls slipped over the tongue of land upon which it was built into the sea, leaving a heap of bricks and rubble on its site. Nottich was destroyed on the following day. The first explosion was like a clap of the loudest thunder, followed by four or five successive discharges not unlike a salute from heavy guns. Its walls visibly started on the first report, and these shot upwards, enveloped in a cloud of the heaviest and densest smoke, which floated heavily away over the ruins of Prasto. Stones and splinters came down in a shower upon the surrounding rocks, and when the curtain of smoke had with drawn itself from over Sandvörs, two shapeless portions of the circular tower were still standing, like solitary sentinels, over the fallen fort, and served only to render the picture of ruin more striking and impressive. The main work, or semicircular fort, was destroyed on Saturday evening, the 2nd inst. It was riven asunder by several grand explosions. The whole appearance of the place from the ships now presents a melancholy picture of desolation, and has lost all its distinguishing marks. The forts, so lately models of strength and beauty, are effaced from the landscape. The village, which formed so conspicuous an object, has disappeared by fire; and the beautiful trees, now scorched and shorn, stand like dismal spectres, throwing off clouds of soot with every breeze.

A small Russian steamer, to the surprise of the French and English, made her way through the islands, and appeared off Bomarsund in time to see the main fort blown up, on the evening of the 2nd inst. She carried a flag of truce, but this was considered a piece of expediency on her part. Her real object, without doubt, was to see what had been done to the fortresses, &c. She stated that she left Helsingfors with the view of embarking the wives and families of the Russian prisoners, and not having met an English man-of-war in her passage through the Gulf of Finland, she concluded the blockade was raised, and she pushed on for Bomarsund! The Admiral was going to detain her; but, although her conduct was doubtful, he subsequently allowed her to return.

THE RUSSIAN RETREAT.—SPIRITED CONDUCT OF THE WALLACHIAN MILITIA.

The Russian army in the Principalities continues to move homeward, at a rather slow pace, trusting to the friendly presence of the Austrians for protection from the Turkish army.

On the morning of the 5th the Austrian troops entered Bucharest. Omer Pacha received them at the head of a Turkish division and a detachment of the Wallachian Militia, outside the gate of the Padu Mogoschoy; where the Catholic and Greek clergy, the members of the Administration, some of the Boyards, and a dense crowd of citizens, were assembled. Count Coronini, the Commander of the Austrian Corps of Occupation, and the Turkish Sirdar, rode at the head of the troops.

The Russians are terribly enraged at the refusal of the Moldavian militia to take arms under the Czar. On the 26th ult. it was rumoured at Jassy that the experiment tried with the militia in Wallachia was to be renewed in Moldavia, and the officers immediately demanded an explanation of the Commander of the Militia, the Hetman Nicholas Mauroordato. That nobleman explained that he had just received orders from General Osten-Sacken to send the artillery and cavalry to the Russian army. The officers, one and all, declared that they would not go; and Mauroordato in vain attempted to shake their resolution to oppose the will of the Russian Commander. On learning what had occurred, General Osten-Sacken sent for the officers, and threatened to send them to the army by forcible means if they refused to go voluntarily. To this Philipesco, who commands the artillery, replied that they were prepared to lay down their lives in defence of their country, "but would never obey the Russian order, which was opposed to their duty to their country and to their illustrious Suzerain, whose ancestor, Mahmoud II., had restored to them the national flag." The speech greatly displeased Osten-Sacken, who, after having sent the officers back to their barracks, informed General Budberg of what had occurred. The latter went at once to the officers, and did all in his power to induce them to yield. When offers of money, honours, &c., had failed, he tried menaces; but all was in vain. The Governor-General was at last so exasperated at this unexpected firmness that he lost all command over his temper, and indulged in language most unfitting for a gentleman. At last he scolded them to be prepared to march." To this Philipesco returned a reply like that before given to Osten-Sacken. Hardly had he concluded when the Russian General lifted up his hand as if to strike him, and shouted out, "Au corps-de-garde, coquin! au corps-de-garde!" (To the guard-house, rascal! to the guard-house!) The captain laid his hand on his sword, and replied, "Your Excellency will be pleased to remember that I am a soldier as well as yourself, and will allow no one to insult me." But Budberg grew pale, but continued to vociferate, "Au corps-de-garde! au corps-de-garde!" Russian soldiers were ordered to disarm the officers. But they themselves threw their swords on the floor, at the feet of the Russian General. As soon as the "rebels" were secured, Budberg went to the artillerymen, and by his order Mauroordato informed them that there was not one of them who was not more worthy than their commander, Philipesco. The bold reply to this was—"And our commander is more worthy than any foreign General."

THE RUSSIAN REPLY TO AUSTRIA.

The reply of the Czar to the Austrian Note is said to consist of the following three points:—1. He professes to be astonished that Austria should have recommended the acceptance of such conditions as those demanding concessions from the Western Powers. As Russia considered the evacuation of the Principalities a sacrifice, she hoped to find a corresponding humiliation to yield on the part of the Powers. 2. He deems it strange that Austria should join in conditions which are foreign to its interests, if not absolutely contrary to the same. By increasing the strength of the Western Powers at the expense of Russia, the balance of power in Europe would be disturbed, and Austria and Germany would be too weak to maintain their position against the Maritime Powers. 3. The Emperor Nicholas will keep his word, and withdraw his forces to the left bank of the Pruth, but when within his own frontiers he will defend himself to the last against any and every attack.

This, so far as can be ascertained, is the substance of the Russian Reply; and the Emperor of Austria has decided that there is nothing in it which requires him to alter his course. Instead of making him join France and England, the last mission of the Czar has made the Emperor of Austria to come to the conclusion that he ought to wait and see what will happen next. The French Ministerial Journal, the *Pays*, in commenting upon this decision, blames Germany for having caused the present war, by holding back, and predicts that this "waiting for events may prove very bad policy for Germany:"—

From the first day [illegible] Powers had frankly and resolutely [illegible] which France and England had taken [illegible] would not certainly have arrived at the extreme point at which we now are. The Czar would have perceived more promptly his isolation, and would have stopped short on the fatal path on which he has entered. The hesitation of Germany has been the manifest cause of all the complications which have successively arisen, and which have rendered every hope of a peaceful issue impossible. * * *

The duty of statesmen is to leave as little as possible to chance. But the present abstention of Germany, or of a part of the German States, in the great war of the West against Russia would entirely throw up the whole question to the fate of arms, and to its doubtful consequences. We may add, that that would be the annihilation of these States, and that nothing would better justify the humiliating expression of the Czar to Sir H. Seymour, that "there was not any occasion to pay attention to the opinion of Prussia and Austria, and that the affairs of the world would be regulated without them between Russia, France, and England. The truth is that this immense question of modern times is being regulated at present between Russia, England, and France. It is not to the Board of Green Cloth at Vienna [illegible] the eyes of the world are directed, but to the Ball [illegible] ms of Somarsund are still smoking, and to the Black Sea, where our fleets and armies are about to attack Sebastopol. France and England are, therefore, expending their blood and their treasures to preserve Europe from the Muscovite yoke; and if they are allowed to bring [illegible] great enterprises to an end by themselves, will not be so fortunate as to see them, after success, paying less attention than they would do at present to the private interests of the States which they had invited to join in the struggle, and which narrow considerations may still keep away from them.

REMARKABLE PRUSSIAN CIRCULAR.

It would appear, from a circular which the Prussian Government has addressed to all its Envoys at the secondary German Courts, that the latter will shortly be called to come to a resolution respecting the attitude of the Confederation towards Russia. The Prussian Government tells its Envoys that, although for the sake of peace, it supported at St. Petersburg the four points insisted on by the Western Powers, it does not think they are indispensable in a German point of view. The common protectorate, it fancies, would be attended with difficulty, and might bring harm to Germany. The King of Prussia cannot, therefore, recommend his German Allies to accede to the four conditions in such a manner as to incur, on their account expenses and obligations not commanded by the spirit and end of the Austro-Prussian convention. He hopes that the Emperor of Austria will take this view of the case, and adhere to it, as becomes a German prince; and also hopes that the Emperor, seeing his own States are guaranteed against attack from the side of Russia, will abstain from every act of aggression against Russia, and avoid all complication not necessary for the protection of German interests, and to which the convention does not apply

It seems to follow from this that the King of Prussia wishes the Emperor to [illegible] that even the free navigation of the Danube is not "indispensable in a German point of view."

AMERICA.

The mail steam-ship *America*, which left Boston on the 30th ult., arrived at Liverpool on Monday. The most important political news relates to the late proceedings in Central America, which threaten to breed a quarrel. Captain Hollins, of the United States frigate *Cyane*, had been arrested and held to bail by one of the sufferers by the bombardment of Greytown. The damages were laid at a considerable amount. Captain Hollins was bailed in 20,000 dollars. It is said that the President intended to support him through the matter.

The Washington correspondent of the *New York Courier and Enquirer* says:—

I ascertain that an important correspondence has occurred between Secretary Buchanan and the British Secretary of State for Foreign Affairs. Clarendon re-asserts the British territorial claims on Central America, founded on the Mosquito protectorate. Buchanan denies them in two elaborate notes, and demands an unconditional relinquishment of the protectorate. It is understood that our Government has determined to adopt decisive measures to obtain the complete evacuation of Central America, as stipulated by the Clayton and Bulwer Convention

A very great drought is said to have prevailed this season over a great part of the United States and portions of the British provinces. The effects of which may be very serious. In the United States much [illegible] corn and other crops will be nearly an entire failure. Cattle have nearly perished for want of sustenance, and with the failure in corn, the hog stock will of course fall short.

From Lower Canada, there are also accounts of the serious effects of a long-continued drought there. Some of the crops will be very deficient, and there has neither been pasture to keep the cattle in condition during summer, nor will there be fodder to maintain them during winter.

The Savannah papers speak of a great panic prevailing in that city, growing out of the yellow fever. The citizens were rapidly leaving, the disease showing no signs of abatement.

At Charlestown great uneasiness was also manifested, and preparations were making to open a yellow fever hospital, should the disease become epidemic.

THE OVERLAND MAIL.

The Nizam's cavalry have offered their services to act against Russia. They have been declined by the English Government.

Great agitation prevails around Canton. Foreigners have been placed under the protection of the ships at the disposal of the factories.

The Chinese insurgents have taken some places in the neighbourhood, after having killed or put to flight the authorities.

MORE GREEK DISTURBANCES.—It is suspected that King Otho, not sufficiently warned by the severe lesson he received in the summer, is again contriving how to get up troubles in Greece. It has been observed that he ceases to hold any communication with his Minister of the Interior. The French Government keeps a wary eye upon this silly Monarch's proceedings.

QUEEN CHRISTINA IN LISBON.—The brain-fever from which Queen Christina was said to be suffering, turns out to have been a mere telegraphic invention; at least, the accounts received from Lisbon of her arrival there make no reference to it. On the 9th inst. a despatch from Vendas Novas announced that she had started from that town for Lisbon A guard of honour was appointed to attend her, and carriages from the King's stables were dispatched to the arsenal, to be in readiness to receive her on her disembarking from the steamer of-war, *Conde de Tojal*. Orders were issued for the ships of war and forts to fire a Royal salute, if the Queen crossed the river before dusk. Visconde Athongeida, the Minister of Foreign Affairs, went to Aldea Galega to pay his respects to the fugitive Queen, who landed at four o'clock next morning, and proceeded to the house of the Spanish Minister, Senhor Alcain Galliano. Her Majesty, who travels under the name of the Countess Recuenci, was expected to take her departure in the course of a few days, on board the French warsteamer the *Newton*.

THE KING OF SAXONY.

THERE are few things more anomalous in the world of politics than the position of the minor kingdoms and of the petty sovereignties of Germany. Like the Mediatized Princes in Disraeli's "Vivian Grey," their monarchs enjoy an essentially false position, and the more they strive to emerge from it the more ridiculous they become. Among the kingdoms and principalities so placed may be cited Bavaria, in the south, and Saxony, in the north, of Germany: the former a kind of appendix to Austria, the latter, as if to balance its influence, occupying the same position towards Prussia. It is rarely that the Sovereigns of such States can emerge from mediocrity. Forced to play a subaltern part in the affairs of the great German Confederation, they can only escape a species of vassalage to their nearest neighbour, by resisting, or at least by hoping to join in, some union of minor States against the overwhelming preponderance of Austria and Prussia—a species of confederacy of which we have had an instance in the recent conferences at Bamberg. It is not surprising, therefore, that monarchs so situated should usually want the individual vigour and energy of character that would enable them, like the great Frederick, to rise to the first rank among European Sovereigns, or that they should content themselves with steadily regarding the internal administration of their dominions—while devoting themselves to some pursuit, either in art, in science, or in literature, which absorbs the mental activity that would otherwise expend itself in war or intrigue

The little kingdom of Saxony, with its population scarcely larger than that of London, illustrates these remarks; and its late King was a striking instance of the anomalous position of the petty Sovereigns of Germany. During the greater part of his reign, however—whether after the troubles which led to his being associated in the Government with his father, or during the insurrectionary period of 1848-49, or more recently still, in the reaction which followed the suppression of the Democratic party throughout Europe—he was supported by the stronger and more worldly character of his brother, Duke John—a man of great vigour of character, with the despotic instincts of the feudal ages, and, like the Prince of Prussia, animated by a profound antagonism to Democracy in all shapes and forms. Take such a man and contrast him with Robert Blum, who was executed for his share in the late Vienna troubles, and you have the Alpha and Omega of the scale of political opinion in Germany. Both were natives of the same State, Saxony; and each believed that, in so conceiving as he did, he was best serving the interests, not only of the people of that State, but also of all Germany.

As those troubles had long since subsided; the King had been replaced on his throne by the aid of a Prussian army; the rebels of all degrees of intensity had either been crushed or otherwise reduced to silence; and his Majesty was free to resume his favourite botanical studies, the pursuit which we recorded some time since, suddenly put an end to his existence, and called to the throne Duke John, the present King. His life had been passed chiefly in resistance to the encroachments of that revolutionary opinion which, ever since the peace of 1815, has more or less disturbed the peace of Germany. As the heir to the throne (the marriage of his brother, the late King, to the Princess Marie, of Bavaria, aunt of the Austrian Emperor, having produced no issue) he became the object of all the spare hatred of the Socialist party, whenever political excitement worked it up to fever heat. More than once he was obliged to leave the capital, to avoid the consequences of *émeutes*; and every unpopular act of the Government was more or less attributed to the influence of his reactionary spirit, though falsely, inasmuch as he was not the Minister of the country—the favourite of the late King—was all but absolute master in political affairs. In 1843 or 1844 a disturbance took place at Leipsic, on the occasion of some unpopular act of Duke John; in the course of which he was himself in serious danger, and several of the people were killed. The antagonism between him and the people was not confined to purely political causes: religion was also mixed up with it. The bulk of the population of Saxony are Protestant; while the Court professes the Roman Catholic religion. Not content with a negative antagonism to the faith of the people, Duke John always distinguished himself as a violent and even a bigoted, partisan of the ultra-pretensions of the Roman Catholic Church

From this source is apprehended some difficulty in the future politics of Saxony. In the hands of a man of vigour and intelligence, a kingdom even of such small dimensions may be made to play an important part in German politics; more especially at periods when there is any difference of policy or of action between Austria and Prussia. On the

other hand, if he pursues, as King, the same policy as when he was Duke John of Saxony—that is to say, if he gives rein to his ultra-Catholic tendencies, and joins in the effort of the Court of Rome to extend its spiritual dominion, as it has done in Baden and Bavaria—he will, in all probality, perpetuate towards himself, as King, the sentiments of hatred which were so liberally bestowed on him as heir-presumptive. His political opinions partake of the school of Metternich. When, in 1844, a Conference of Delegates of German Princes was held at Vienna, to "pronounce," by the mouth of Metternich, against the Democratic opinions and intrigues which then agitated Germany, his present Majesty was foremost in expressing his entire sympathy with the views then enunciated on the part of the Absolutists. His position with regard to the question which now occupies Europe is that of a warm and decided partisan of Russia; not for the sake of Russian interests, but because he believes that the principle of royalty in Germany rests on the maintenance of Russian supremacy.

The King of Saxony is now fifty years old. He is married to the Princess Amalia, of Bavaria, the twin sister of the King of Prussia. It is a curious coincidence that the wife of the late King was also a twin sister—twin to the Archduchess Sophia, the mother of the Emperor of Austria. His Majesty is more respected for his abilities than loved for his general character or opinions; but, if he avoids outraging the religious feelings of his subjects, it is probable that he will, like the late King of Hanover, find himself more popular, as the King in possession, than when, as heir presumptive, he was the centre of attraction for reactionary malcontents, and therefore an object of irritation to the disciples of Liberal views.

JOHN, KING OF SAXONY.

OPENING OF THE CAPE PARLIAMENT.

THE celebration of this auspicious event, which took place on Saturday, the 1st of July, appears, from the report in the *Cape Town Mail*, to have passed off with a degree of éclat, and under circumstances so favourable, as to afford a happy augury of the success that will attend the fulfilment of its high and important duties. The ceremony took place in the State-room, at Government House, but the idea of its taking place in the Legislative Council Chamber had only been given up so shortly before, that the greatest activity was required to complete in time the arrangements—which, considering the limited space at command, were excellent. The gallery was appropriated to the ladies, and a portion of the body of the room which was railed off was similarly occupied; those gentlemen who had received tickets being also admitted to this space—entering by one of the windows, to which a temporary staircase had been erected from the lawn. At the upper end of the room was placed the most conspicuous object in it—the Throne, which, we are told, "though simple in design, looked uncommonly well, and reflected great credit on the maker." The space between it and the rail was devoted to the members of the Legislative Council, the Judges, and other high officials, and the *corps diplomatique* with their wives. The members of the Legislative Council occupied a prominent position, immediately on the right of the Throne, those of the House of Assembly occupying the opposite side.

At half-past ten the gates facing Government Gardens, in which a large number of ladies and gentlemen had already congregated, were opened. The Guard of Honour, under the command of Captain Renny, 73rd Foot, with the colour of the regiment, and preceded by the band, shortly after made its appearance, and drew up on the lawn, in front of the verandah. The grounds now presented a most animated appearance; and, having been kindly thrown open to all respectably-dressed persons, were soon filled with the hundreds attracted there by the gay scene and the enlivening music; amongst whom were numbers of ladies, who, on account of the small space inside, could not obtain tickets. Long before the appointed hour the visitors had arrived, and perhaps a more varied collection of uniforms and dresses has not been seen before at the Cape. There were the Judges in their purple gowns, the Bishop of Cape Town, and his Clergy in their collegiate dresses; several naval and military, and some Indian officers; and the more conspicuous, both on account of their number and their brilliant uniforms, were the several Foreign Consuls and diplomatic agents—the Turkish Consul with his fez, which, according to custom, he did not remove from his head, attracting much attention. Amongst those present were the several heads of departments, the English and Roman Catholic Bishops, the clergymen of the Dutch Reformed, and other Churches, and Mr. Freere, Senior Robello, Chevalier Dupré, and Mr. Maclay, of the British and Portuguese Mixed Commission.

At a quarter to twelve the Legislative Council, headed by their President, Sir John Wylde, in his robes, arrived and took their seats, when the Castle guns announced the approach of the Lieutenant-Governor. The guard presented arms, the band struck up "God Save the Queen," and exactly at noon, accompanied by the Colonial Secretary and a numerous suite, he entered the room, ascended the throne, and took his seat. The Legislative Council rose to receive him, and were introduced to the Lieut.-Governor by the Colonial Secretary. On resuming their seats, his Honour desired Mr. Boyle, the Clerk of the Executive Council, to proceed to the House of Assembly, and command the immediate attendance of the House. A few minutes after, the members of the Assembly, preceded by the Speaker, Mr. Advocate Brand, sen., in his robes, were conducted by Mr. Boyle into the room, and on the Speaker being introduced, took the place assigned them. The Lieut.-Governor then received from the Colonial Secretary, who stood on his right (the private secretary being on his left), the opening speech, and both Houses standing, his Honour, in a clear and distinct voice, read the interesting document, which occupies about two columns and a half of the *Cape Town Mail*. In this, his maiden speech to the Colonial Parliament, which certainly bore a much stronger resemblance to an American President's Message than it did to a Queen's Speech, the Lieutenant Governor adverted to the war with Russia, rendered necessary by "a desire to save Europe from the preponderance of a Power which has violated the faith of treaties, and defies the opinion of the civilised world." After referring to the enthusiastic resolutions passed by other colonies in support of the course taken by the Mother Country, he said, he felt assured that the aid of her Majesty's loyal subjects of South Africa would not be found wanting in the event of its being needed. He then adverted to a number of the measures which were likely to come under discussion, and expressed a hope that the beneficent wishes of her Majesty in granting free institutions to that community would be fulfilled.

A suppressed but hearty cheer greeted the conclusion of this speech; and the Colonial Secretary, receiving it back, placed a copy in the hands of the President, and another in the hands of the Speaker. His Honour then rose, and making his obeisance severally to the two Houses, accompanied by his staff, withdrew, the guard presenting arms, and the band playing as he crossed along the stoep. Immediately on the departure of the Lieut.-Governor, both Houses withdrew to their respective Chambers, and the visitors dispersed; many of those, however, who were to attend the levee remaing about the stoep and ground, the band being still in attendance. With this the ceremony concluded, the utmost quietness and decorum having been preserved throughout.

At half-past one, the Lieutenant-Governor held a levee in the large drawing-room of Government House, which, in addition to the members of both Houses, the officials, clergy, the Foreign Consuls, and others who had been present at the opening of Parliament, was attended also by an unusually large number of the most respectable inhabitants.

The accompanying Scene is taken from a Drawing executed for the Lieutenant-Governor; it represents the ceremony in the state-room at Government House.

OPENING OF THE FIRST CAPE PARLIAMENT, IN THE STATE-ROOM, CAPE TOWN.

THE DONCASTER RACE PLATE.

THIS superb piece of plate (the "Doncaster Cup") has just been executed at the establishment of Messrs. Garrard, Haymarket, and is an admirable specimen of British art-manufacture. The horses introduced into the group of figures are after models by the well-known artist, Mr. Cotterill; the figures and the accessories are by Mr. Spencer. There are four statuettes—two being equestrian, and two on foot. The principal equestrian figure represents Queen Philippa, wife of Edward III., whilst riding through the ranks of the English army immediately before the commencement of the battle of Neville's-cross, in the county of Durham, on October the 17th, in the year 1347. The battle was contested with great bravery on both sides, and many of the incidents connected with it are chronicled by Froissart in his picturesque manner. There were no less than fifteen, or, according to some writers, twenty thousand Scots slain on the field and in the pursuit. The principal persons who distinguished themselves on the occasion were William la Zouche, Archbishop of York, a fine old specimen of the "church militant;" Gilbert de Umfreyvile, Earl of Angus; Henry Percy, Earl of Northumberland; Ralph Neville, William Dayncourt, and Henry Scrope. The English Queen proved herself a worthy partner of her chivalrous husband, and, by her gallant demeanour, aroused the valour of her subjects to the highest pitch. The Scotch King, David Bruce, who opposed her, showed himself a worthy descendant of his ancestor, Robert Bruce. Though he had two spears hanging in his body, his legs dreadfully wounded, and his sword beat out of his hand, disdaining captivity, he provoked the English by opprobrious language to kill him; and when John Copland, the Governor of Roxburgh Castle, advised him to yield, he struck him on his face so fiercely with his gauntlet that he knocked out two of his teeth. He was, however, conveyed out of the field by Copland, who refused to deliver him up to anybody but the King, who accordingly ordered Copland to come to him at Calais, and created him a Knight Banneret. The Scotch King was afterwards taken to Windsor Castle; and in the Round Tower may be seen the armour he wore in the memorable battle.

In the present group, Queen Philippa is habited in the quaint costume of the fourteenth century, and her head is surmounted by the ancient towering cap or head-dress peculiar to the province of Normandy. A figure in complete armour, hamberk of cham mail, with plated scales and visored helmet, carries the Royal Standard of England; and two other figures represent a man-at-arms and an English archer with six-feet bow and arrows of a cloth yard long. The design is full of chivalrous spirit, and the metal-work is very elaborate; so that this piece of Plate will bear comparison with anything of the sort that has hitherto been produced.

THE DONCASTER RACE PLATE, 1854.—QUEEN PHILIPPA BEFORE THE BATTLE OF NEVILLE'S CROSS.

MAROCHETTI'S STATUE OF THE QUEEN.

THE ceremonial of the erection of the Equestrian Statue of her Majesty in St. Vincent-place, Glasgow, took place on Wednesday week, in the presence of an immense concourse of spectators. The weather was most propitious, and the proceedings passed off in a manner which must have been highly satisfactory to all who had the pleasure of witnessing the inauguration of what is said to be "by far the finest statue of Queen Victoria that has yet been produced." The circumstances which gave origin to the idea of rearing this Statue, and the proceedings which were adopted in order to bring it to a successful issue were as follows:—Her Majesty Queen Victoria, his Royal Highness Prince Albert, and the Royal children, paid a visit to Glasgow, as our readers will remember, on the 14th of August, 1849. The reception was such as it became the Corporation of the mercantile metropolis of Scotland to give; and her Majesty was pleased to express herself in terms of admiration in reference to the whole arrangements. Subsequently a public meeting of the citizens was held, when it was resolved that the Royal visit should be commemorated by a suitable memorial. At a future stage a preliminary committee reported that an Equestrian Statue of the Queen was the most appropriate memorial that could be erected; and on the 29th of August, 1850, a numerous committee was appointed to carry the resolution into effect. After making due inquiry, and after their chairman, Sir James Anderson, had the honour of an interview with his Royal Highness Prince Albert on the subject, the committee unanimously agreed that the Baron Marochetti should be employed as the architect to execute the Statue. A contract was accordingly entered into with the Baron, by which he became bound to design, finish, and erect the Statue for the net proceeds of the subscriptions under the charge of the Committee; the equestrian group and the bas-reliefs to be of the finest monumental bronze; the pedestal to be entirely of the best granite, of the Baron's selection; and the interior of good and substantial mason work, or of granite, as he might prefer.

The Statue arrived in Glasgow by the direct steamer from London on Wednesday, the 30th ult., and the pedestal being then in course of erection, it was resolved that the inauguration should take place on Wednesday, the 6th inst.; and that, in addition to the Committee and the whole of the subscribers to the statue, the following parties should be invited to assist at the ceremonial, viz.:—The Lord Provost, Magistrates, and Town-council, the Sheriffs of the County, the Principal and Professors of the University, the Dean of Guild and Directors of the Merchants' House, the Deacon Convener and Directors of the Trades' House, Colonel Foole, and the Officers of the Garrison in Glasgow.

Early on Wednesday morning, preparations were made for the accommodation of the public to witness the ceremonial, and the streets in the immediate neighbourhood of St. Vincent-place were barricaded. By ten o'clock crowds had begun to assemble, and before twelve every spot from which a glimpse of the Statue could be obtained was densely thronged. The windows around presented a brilliant display of feminine beauty: the house-tops had also their quota of spectators; and flags flaunted from the hotels in George-square and various eminences around.

THE PROCESSION.

According to arrangement, the Lord Provost and Magistrates, and the other parties mentioned above, assembled in the Council-hall at half-past eleven o'clock, and at about twelve proceeded in the following order to St. Vincent-place, by Wilson-street, Glassford-street, Ingram-street, Queen-street, George-street, and Buchanan-street:—

Police. QUEEN'S OWN. Police
1 Inspector. Party of Police. 1 Inspector.
1 Sergeant. Superintendent of Police. 1 Sergeant.
1 Sergeant. Assistant Superintendents. 1 Sergeant.
Town Officers.
THE LORD PROVOST, MAGISTRATES, AND TOWN-COUNCIL,
Three and Three.
Police. THE SHERIFFS OF THE COUNTY. Police.
Dean of Guild
and
Directors of the Merchants' House, three and three.
Deacon Convener and Trades' House, Three and Three.
Principal and Professors of the University of Glasgow, Three and Three.
Police. Architectural Institute of Scotland, Three and Three. Police.
The Officers in Garrison and Strangers, Three and Three.
The Subscribers to the Statue and Baron Marochetti, Three and Three.
Police. Queen's Own. Police.

Among the gentlemen assembled at the County Chambers not connected with the Town-council, were Sir Archibald Alison, Bart., Baron Marochetti, the Very Rev. Principal Macfarlan, the Right Rev. Bishop Trower, Sir James Anderson, M.P., Mr. Hastie, M.P. for the city, Rev. Dr. Buchanan, the Lord Dean of Guild, the Deacon Convener of the Trades' House, Mr. Henderson of Park, Mr. S. R. Brown, Professor Laurie, Mr. W. Murray of Monklands, Mr. Findlay of Easterhill, Mr. Wilson (superintendent of the School of Arts), the French Consul, Mr. W. P. Paton, Mr. King, of Harlet, the Officers of the 82nd Regiment, in full uniform, &c.

Sir James Anderson, M.P., as Chairman of the Committee appointed to superintend the work, after a short sketch of the circumstances which had led to the erection of this memorial of her Majesty's visit to Glasgow, said, he had much pleasure, in the name of the subscribers, in handing over to the magistrates and Town-council this splendid work of art, to be possessed by them in all time coming. The value of such ornamental works in improving taste and elevating the minds of the people was universally felt and acknowledged; and he had no doubt that this contribution to the artistic wealth of their city would be cordially received, carefully preserved, and highly valued by the citizens of Glasgow to the latest generation.

The Lord Provost having delivered a very neat and appropriate speech, in reply, the covering was removed, and the Statue of her Majesty presented to the thousands assembled, who testified their admiration of the noble work of art by loud and reiterated cheers. The band of the Queen's Own and the Veteran Battalion then struck up the National Anthem, which was performed amidst the waving of hats and handkerchiefs. On the motion of the Lord Provost, three cheers were given for Baron Marochetti. The Baron bowed his acknowledgments. After the ceremony, the gentlemen forming the procession left the en-

INAUGURATION OF MAROCHETTI'S STATUE OF HER MAJESTY, AT GLASGOW.

closure by the east end of St. Vincent-place, and the military by the west end, passing in front of the Statue.

The Hon. Mr. Buchanan, the American Minister, and his niece, Miss Lane, were present, with the lady of the Lord Provost, at the inauguration of her Majesty's Statue. After the ceremony, the distinguished party, under the charge of the Lord Provost and his lady, proceeded to visit the Cathedral and other notable sights of the metropolis of the west of Scotland.

In the evening the Lord Provost and magistrates entertained Baron Marochetti and the subscribers to the statue at dinner in the Town-hall. Covers were laid for about 150, and the chair was occupied by the Hon. the Lord Provost; Bailie Gourlay, Senior Magistrate, discharging the duties of croupier. Among the guests were—Alexander Hastie, Esq., M.P.; Sir James Anderson, M.P.; Baron Marochetti, Principal Sculptor; Lindsay, Esq., M.P.; Mr. Buchanan, American Minister; Sir Archibald Alison, Bart.; Rev. Mr. Gleig, Chaplain-General of the Forces; J. Macgregor, Esq., M.P.; Colonel Poole, James Scott, Esq.; Robert Findlay, Esq., of Easterhill; Captain Maxwell, Sir James Campbell, William Lockhart, Esq., M.P.; Captain Merry, of the Queen's Own; A. S. Dalgish, Esq.; John Tennant, Esq.; M. Meadhouse, French Consul; Mr. Heartt, American Consul; Mr. Anderson, Queen's Counsel; the Dean of Faculty, and Drs. Anderson and Fleming.

The following criticism of the Statue is from the *Edinburgh Evening Post*:—

We observe that Sir Archibald Alison has justly claimed for the city of Glasgow the high distinction of being the first town in the empire which has erected a fitting memorial in honour of her Majesty. The Statue just inaugurated there belongs to the greatest class of sculpturesque compositions. It is an equestrian group, finished with much care and elaboration, and executed in the finest bronze. We believe it must have cost a very considerable sum, and is therefore an appropriate expression of loyalty as well as the loyalty of the neighbouring city. For our part, we think the citizens could do no less than embody their sentiments in some splendid material record for we believe that no Royal personage could have shown greater consideration, or more sincere kindness towards any community, than was manifested by her gracious Majesty, on the occasion of her visit to Glasgow. We must confess, at the same time, that we are no admirers of the works of the Baron Marochetti: they are somewhat slipped and affected in their style and expression—more like toys on a large scale than genuine productions of masculine talent. His notions of equine points and proportions have been derived from another soil than ours—elegant in the *salon* perhaps, but far too pinched and meagre for the road, the turf, or the field. A true horseman takes no interest in such feckless-looking creatures. The Baron's Equestrian Statue of the Queen, however, is less objectionable, in an esthetical point of view, than most of his other compositions which have fallen under our notice.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 17.—14th Sunday after Trinity.
MONDAY, 18.—Dr. Johnson born, 1709.
TUESDAY, 19.—Battle of Poictiers, 1356.
WEDNESDAY, 20.—Ember Week. Battle of Newbury, 1643.
THURSDAY, 21.—Sir Walter Scott died, 1832.
FRIDAY, 22.—Flight of Mahomet. 622. New Post-office opened, 1829.
SATURDAY, 23.—Major Cartwright died, 1824.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (6 Vols.), in cloth, £3 12s.; in calf, £5 5s.

Any of the Volumes, in paper or cloth, can be had separately. Price of each Volume in cloth:—Vol. I., 10s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 20s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in paper, 8s. per volume less.

TO CORRESPONDENTS.

T. D. A.—Your coin is a denarius of the Pinaria family, and is of no value.

AN OLD SUBSCRIBER.—Your quarter-guinea, Geo. I., 1718; and half-crown, James II., 1685, are of no value, numismatically speaking.

H. A. T., Reading, is thanked; but we have not room for his letter

J. E. H. A. T.; and A. ENGAM.—Declined.

ESTER.—Murray's English Grammar, last Edition. Longman and Co.

A CORRESPONDENT, Galway. Chanoels is pronounced *sha-nuns* (the first a like a in bat, and the second a like a in bar). Turquoise, *tur-kwoze* (the u like u in but, and the o like o in bar).

A CONSTANT READER, Tiverton.—The old story that there were but three farthings of Queen Anne struck, is now an exploded error. Some hundreds of farthings of Queen Anne were struck, her common and real farthing, which we have in paper, by hinges, among coin-collectors, from 5s. to 15s. each. It is extremely fine in preservation, one guinea. There is but one sort of farthing (with the figure of Britannia on the reverse, and date 1714, in the exergue, the date 1713. There are also six patterns of this sort of farthing, each from which no copies for circulation were made. Each of these six pieces bring from £1 to £5 each; and the reverse has brought £5 at a public auction. In addition to these real and pattern farthings, a number of trumpery brass tokens of Queen Anne, thinner than the real copper farthing their date is generally 1713. They are of no value, but have caused much annoyance to coin-collectors, and, we dare say, to the editors of newspapers; many copies of one of these tokens having imagined himself the owner of a "Queen Anne's farthing," or a fortune *in prospecta*. This information we received from the late Mr. HUTH, the coin-dealer. A fuller account will be found in *Popular Errors Explained and Illustrated*, 1841.

INVISIBLE.—The entrance of the Tower of Traitors at the Tower of London, is the Peverling or Cobham Tower, executed under the direction of Mr. SALVIN, the architect, "who has carried out to its full extent the ground plan of architecture, which was of the military kind, in use in the twelfth and early part of the thirteenth century."—See *Inscriptions and Devices in the Beauchamp Tower*, by W. H. Dick, lately published. The other "traitors' gate" was in the new buildings in the Tower, remains of which are to much of Wyatt and Gothic at Windsor Castle. But everything is in order at the Tower; even the yeomen warders wear plain black trousers with the embroidered tunic, of the reign of Henry VIII.

A CORRESPONDENT.—The new church of St. Matthew, City-road, consecrated April 11, 1848, is engraved in No. 312 of the ILLUSTRATED LONDON NEWS.

A QUIET MAN.—We in nowise advocate the mode in which the proceedings of the General Committee, at Windsor, were conducted; neither do we arrogate to ourselves the option of condemning or acquitting Mr. Ferry of all blame. That duty devolved on the court before which he was tried, and the finding and verdict met the Sovereign's approval. If "a quiet man" does not consider the fact of an officer being pulled out of bed, made to go through the sword exercise with an umbrella, and finally have the dirty end of the umbrella put into the barrack square, an act of "despicable tyranny," we are at a loss to find a designation whereby to express the unprovoked aggression characterising such ungentlemanly outrage.

Next Week will appear in the ILLUSTRATED LONDON NEWS, characteristic Illustrations of THE RUSSIAN PRISONERS AT SHEERNESS—GUN BOATS FOR THE BALTIC—ST. GEORGE'S HALL, LIVERPOOL—and the MEETING OF THE BRITISH ASSOCIATION, &c.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPT. 16, 1854.

WHATEVER may be the result of the present contest, it is already decided that the Prussian Government must suffer degradation. It is possible that its subjects in the East, carrying on much of the customary trade of Riga, Revel, and St. Petersburg, may be enriched by the war. In fact, the blockade instituted by our ships, has had the effect of driving the Russian trade with Western Europe, through Prussia; and Prussia will gain much that Russia loses, and much that the Western States—including England will have to pay in the increase of price of Russian products for the difficulty of procuring them. But this gain will be a poor compensation for the loss of character which the Prussian Government has already incurred. When she extended her frontier to the Rhine, and acquired there the extensive territories she now holds, she ceased to be a strictly northern German Power, and became a sharer in the enlightenment and feelings of the western part of that great country. A large portion of her subjects are now closely allied with the more advanced Powers of Europe and her Government has forfeited their respect as well as the good opinion of all the enlightened people of Germany, by covertly supporting the pretensions of Russia. More immediately dangerous to Germany than to either France or England, the advance of Russia is looked on, in Germany, with greater apprehension than even here; and the German Monarch who has favoured Russia, when an opportunity offered successfully to oppose it, has sacrificed the good opinion of all patriotic Germans. Independently of the conduct of Prussia having been erroneous in principle, it has been vacillating, feeble, and unreliable. In a circular note recently addressed to its foreign Ministers, regret is expressed that Russia has rejected the conditions which would have put an end to the war; but it is satisfied with the assurances of Russia that it will "evacuate the Principalities," and "will remain henceforth on the defensive." Like Austria, therefore, Prussia finds, after her prolonged negotiations with the Western Powers, that she has no *casus belli* against Russia; and she therefore denies—contrary, we believe, to the general opinion of Germany—that there is any necessity to interfere by arms, and so bring the contest—which, if it be continued, may desolate all Europe—to a speedy conclusion. The Court of Prussia would gladly save Russia from humiliation, were that possible; and would weaken its old opponent, Austria, as much as possible, to which the Prussian Court, but not the people, are more decidedly opposed, than to abating the power of Russia. In fact, Prussia finds the success of Austria, in getting a footing in the Principalities, more annoying than the growth of Russia. "She cannot realise," says the Circular, "the project of a common protectorate over the Principalities; and believes that that protectorate might even lead to a state of things but little in conformity with German interests." The occupation of the Principalities by Austrian troops is extremely galling to Prussia; it extends the power of Austria on both sides of the Danube; and it is one of the remarkable incidents of the present remarkable contest, that the acts of the Allies, in introducing the Austrians into the Principalities, has given umbrage to Prussia, and gone far to dissolve the feeble alliance which she has lately formed with Austria. Her people may dread the Russians—her Court dread and hate the Austrian—a great deal more. Thus the marked success of Austria in getting possession of the Principalities, and the important position she occupies, being powerful to mediate between Russia and the Western Powers, are extremely grating to the Government of Prussia, which seems willing to sacrifice the good opinion of all enlightened Germany and of the inhabitants of Western Europe to gratify its old hereditary enmity for the House of Hapsburgh. Austria and Prussia, the two greatest Powers in Germany, can never act long in concert. On this the Emperor of Russia relies; and the consent of the Allies to the occupation of the Principalities by Austria has had the effect of alienating more than ever the Court of Prussia from the Western Powers. Hence, in the Note already quoted, it avows itself adverse to the Protectorate, and quite adverse to taking any active measures against Russia.

THE Bread riots, which we noticed last week, have had no successors. The worst took place at Nottingham, and was chiefly a mere mob of boys. Nowhere have the working-classes—who are now far too intelligent to be guilty of such acts—been concerned in them; though some strong writing against the bakers, describing them as withholding from the consumers what justly belongs to them, has not been wanting. On Friday, the price of wheat rose from 1s. to 2s. in the market; and, on Monday, it again rose from 2s. to 3s more. This was the consequence of very short supplies of wheat and flour having arrived in London in the last three weeks, and particularly in the last week. The millers were short of wheat to grind, and were obliged to purchase. At the same time a demand for wheat came from Holland, and for flour from France, so that upwards of 5000 quarters of wheat, and upwards of 900 sacks of flour were exported. In Mark-lane, in consequence, and in nearly all the provincial markets, wheat is now 5s. per quarter dearer than in the early part of last week. The price of flour, however, fell, on Monday, 5s. in the London market; and the singular circumstance occurred of wheat rising and flour falling in price on the same day. These facts are memorable. They show how quickly the market responds to real wants, or real abundances; and how much those are in error who would forcibly interfere with it. Up to the close of last week, the great abundance of our harvest caused the price of wheat to fall rapidly; and, at that point, numerous purchasers from Holland and France appearing in our market, the price of wheat got up. Of course, the price of flour, which always follows that of wheat at some distance, did not fall immediately with the price of wheat; but it fell afterwards, on Monday, when the price of wheat had again begun to rise. At the time, however, when the top price of flour was lowered, flour was exported, showing that anything like monopoly is out of the question. The holders of flour and the millers deferred to the wants of the market, and lowered the price, when the export might have served as a pretext for continuing the high price. At present wheat and flour can be sent unrestrictedly from any one part of the kingdom to another; and almost every part is now so interested by railways, that for either millers or bakers to establish any kind of local monopoly is impossible. Wheat and flour, too, except the registration duty of 1s. per quarter, can be freely imported and exported. It is equally impossible, therefore, to establish a general as distinguished from a local monopoly. Time is always required to adjust prices. Stocks in hand must be disposed of; stocks, too, must be brought to market; and hasty changes in price, from ignoring such circumstances, are followed by contrary changes, producing uncertainty in trade, and great hindrance to fairly apportioning the expenditure of a narrow income. We recommend our readers, therefore, not to be too hasty in demanding reductions; let them settle the matter in the capacity of buyers and sellers, carefully dealing with those who serve them cheapest and best; and they may be assured that the price of bread, like other things, will be more fairly settled by the haggling of the market, than by the instrumentality of any other persons, or any other power. A most abundant harvest has now been safely gathered in. Prices have already fallen from 20s. to 30s. per quarter from the top price. But it must be stated that the stocks of wheat from the previous harvest are very generally exhausted, and it must be remembered that the abundance of this year may be required to compensate the dearth of next year; as the very defective harvest of 1853 was, to a great extent, compensated by the large harvest of 1852. We shall best show our knowledge, therefore, of the course of Providence, and our appreciation of His gifts, by allowing those who are best acquainted with the actual amount of the harvest and with the actual number of the community, peacefully and undisturbedly to settle with the consumers the price at which corn and flour and bread are to be sold. The settlement of the prices in the market is as much a part of the natural course of events as are the labour which prepares the ground and the sunshine which ripens the harvest; and we shall all derive the greatest benefit from the abundance, by each man doing effectually his own share in the task of production, and not only leaving every other man fully at liberty to perform his share, but guarding and protecting his freedom.

THE COURT.

The Queen and Royal Family have proceeded on their autumnal trip to the Highlands of Scotland.

The Friday of last week—whilst the Prince Consort was witnessing the grand military spectacle in the neighbourhood of Boulogne—was employed by the Queen in visiting the Southampton Docks, and inspecting the magnificent steam-yacht belonging to the late Pasha of Egypt. Lord Hardinge, eldest son of the Premier, goes in the vessel to Egypt, in the hope of recruiting his delicate health.

On Saturday morning Prince Albert arrived at Osborne, from Boulogne. The Prince, who was in the yacht *Victoria and Albert*, was met off the coast by her Majesty in the *Fairy*. H.R. Highness went on board the *Fairy*, and, with the Queen, received the farewell salutes of the King of Portugal and the Duke of Oporto, who were also returning to Portugal.

Sunday, Monday, and Tuesday, were passed, with slight variation by the Royal Family in the usual quiet and unostentatious routine of their life, at Osborne. Amongst the incidents was the presentation, on Monday, of the baron de Gerstorff, Envoy from the present King of Saxony, whose business was to convey to her Majesty a letter announcing the Order of the Garter, worn by that Sovereign. The Baron, after the performance of this important duty of etiquette, had the honour of dining with her Majesty. On the following day, Senor Gonzales, the new Minister of Spain at our Court, was presented for the purpose of "delivering his credentials."

On Wednesday, at two p.m., the Queen and Prince Consort, the Royal children, and Knights Osborne house for London, preliminary to their Scottish visit. They embarked at East Cowes on board the *Fairy*. In a drizzling, penetrating rain, and a strong "west" breeze, rendering a thoroughly disagreeable day, the Royal family reached Gosport at five. The Queen and train were to convey them to London. On arriving at the same Lines station, the Royal family and suite proceeded in five carriages, escorted by a detachment of Carbineers to Buckingham Palace. In the evening the Queen held a Privy-council, which was attended by Prince Albert and four of the Cabinet Ministers.

On Thursday morning, at a quarter to eight o'clock, the Queen and Prince Albert, accompanied by their youthful family, and attended by a somewhat numerous suite, consisting chiefly of ladies and gentlemen of the household, left Buckingham Palace for the King's-cross station of the Great Northern Railway, *en route* to Scotland. The occasion has been so generally a characteristic of the days on which the Queen makes her "progresses," that the phrase "a Queen's day," has grown quite into a proverb, as indicative of a *fine* day.

The present occasion has been an exception. Wednesday and Thursday were the wettest and dullest days that have been experienced for some time.

DEPARTURE OF PRINCE ALBERT FROM BOULOGNE.

From the hour of nine on Friday evening, the Grande Imperiale kept clear from intrusion a large quadrangular space in front of that part of the quay to which the *Victoria and Albert* was moored. It was nearly eleven, however, before she floated, and it had passed that hour before the Prince arrived. In the meantime the Custom-house, and nearly all the houses on the quay, were brilliantly illuminated, and garlands formed of many-coloured lamplons were festooned across the roadway. The letters V. N. A. formed a large design in variegated lamps, and on a smaller and more unpretending one the initial of the Empress was also introduced. The effect of the whole was exceedingly fine, the warm tone of the lamplons contrasting artistically with the silver moonlight. The whole town was out upon the quay immediately, and the Imperial cortége was impatiently waited for. The carriage was soon seen rattling across the new bridge, preceded by Picquets carrying flambeaux; and the meeting gradually becoming louder, denoted that the Emperor and Prince were at hand. On their reaching the quay, fireworks were let off, to the evident discomfiture of the horses of the Picquets and Cent Gardes, one or two of which became unmanageable, and bolted clean through the ranks of the Grenadiers. The cheering now became tremendous, for just as the Emperor and Prince stepped on board, an immense blue-light was ignited close to where they stood, so that their persons and features became distinctly visible from the remotest corners of the quay. Many bows were exchanged between host and guest, the Emperor landed, and, the moorings having been cast off, the boat pushed slowly away. When she reached the middle of the stream the port-holes were opened from stem to stern, and the whole of the interior might be seen brilliantly illuminated with wax lights. Prince Albert remained on deck, bowing in response to the shouts from the shore; and just as she passed the jetty the first shot of a salute of 21 guns reverberated from the cliffs. The steamer, once clear of the jetty, steamed rapidly away, and took farewell of her French friends in a brilliant display of blue-lights, which formed the last public act of the Royal visit to France. At eight o'clock on Saturday morning the Royal yacht, with the *Vivid* and *Black Eagle* yachts in close attendance, and followed by the armed ships *Malacca*, 17; *Hornet*, 16; and *Salamander*, 6, arrived at Osborne from Boulogne. It was her Majesty's intention to have gone some way out into the Channel in the *Fairy* to meet his Royal Highness, but his return was earlier than was expected. Having disembarked the Prince the three yachts went into harbour, and the armed ships up to Spithead, where they anchored.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Prebendary:* The Rev. Sir H. Thompson, Bart., to Thorney, in the Cathedral Church of Chichester. *Honorary Canonries:* The Rev. G. Beresford, to Peterborough Cathedral; Rev. S. T. Bloomfield, to Peterborough Cathedral; Rev. G. C. Davies, M.A., to the Cathedral Church of Gloucester; Rev. W. F. Powell, M.A., to the Cathedral Church of Bristol. *Rectories:* The Rev. R. N. Shutte, to St. Mary Steps, in the county of Exeter; Rev. H. S. Yeoman, M.A., to Markholm, Northamptonshire; Rev. H. Browne, to Pevensey, Sussex; Rev. L. H. Bonticombe, M.A., to Rose Ash, near South Molton; Rev. C. I. Gibbon, M.A., to Lutton, with Wadenhoe annexed, Northampton. *Vicarages:* The Rev. W. B. Hopkins, to St. Peter's, Walsoken; Rev. H. Jackson, to St. Mary's, Wisbeach. *Incumbencies:* The Rev. E. J. A. Feray, to Thorney Abbey, Cambridgeshire; Rev. H. Watson, to Pepworth, St. Agnes, near St. Ives; Rev. W. Barber, M.A., to St. John's, Leicester; Rev. J. P. Gell, M.A., to St. John's Church, Notting-hill; Rev. J. Hartley, to St. Leonard's, Wigginton; Rev. T. F. Holdich, M.A., to St. James's, Norland, Notting-hill; Rev. J. H. Penruddocke, M.A., to Berwick Bassett, near Swindon.

THE Rev. C. G. Hodgkinson, M.A., Principal of the York and Ripon Diocesan Training School, has been appointed Head Master of the Louth Grammar-school.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, SEPTEMBER 14.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Dry Bulb.	Thermometer. Wet Bulb.	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The correct reading of the barometer decreased from 30.20 inches at the beginning of the week to 30.12 inches by the afternoon of the 8th; increased to 30.15 inches by the morning of the 9th, and decreased to 30.10 inches by the afternoon; increased to 30.16 inches by the morning of the 10th, and decreased to 30.12 inches by the afternoon; increased to 30.16 inches by the 11th; decreased to 29.64 inches by the 14th; and increased to 29.74 inches by the end of the week. The mean for the week at the height of 29 feet above the sea was 29.905 inches.

The mean temperature of the week was 59.8°, being 2.3° above the average of the corresponding week during 38 years.

The mean of temperature during the week was 58.2°, being the difference between the highest and lowest readings of the thermometer on the 12th.

The mean daily range of temperature during the week was 27.8°. The greatest was 43.7° on the 12th; and the least 16° on the 14th.

Rain fell during the week to the depth of ⅛ an inch nearly, on Tuesday, Wednesday, and Thursday.

The weather was fine till Tuesday. On this day the wind shifted to the S., and the weather changed generally. A little rain fell on Tuesday, being the first which has fallen since August 24. The electricity has been positive all the week. A little ozone was detected on Wednesday, being the first which has been indicated for some time.

Lewisham, September 15, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending September 9, the births of 810 boys and of 796 girls were registered within the metropolitan districts; in all 1606 children. The average numbers in the same week of the preceding nine years are 766 boys and 695 girls. The number of deaths within the same week was the very large number of 2413—a number greater than any in the same week of the year in the preceding ten years. In the week in which the epidemic of cholera was then prevalent, 3183 deaths occurred, which is the nearest approach to the mortality of last week of any within the period. Of the deaths, 1634 were males, and 1778 were females, distributed over the different periods of life as follows:—Under 15 years of age, 1285; above 60 years, 238; and 1502 between those ages. Cholera has caused the deaths of 2050 persons: of these, 1066 were males, 986 females: 614 were children under 15 years of age; 1128 men and women of 15 and under 60; and 287 at ages exceeding sixty years. The deaths from cholera in the last nine weeks have been 36, 54, 96, 269, 644, 726, 567, 1257, 2050. The sum of those numbers is 6120: and, thus, cholera has already destroyed 6120 lives. The deaths have been distributed over the metropolis as follows:—In London proper, whose population in 1851 was 56,727, in eight weeks, ending September 2, there were 764 deaths, last week there were 216. In the North district, population in 1851 was 490,267, there were 1228 deaths up to September 2, and the number was increased last week by 534. In the Central district, population in 1851 was 393,676; the deaths up to September 2 were 195; and last week totalled 117 deaths. In the East district, population in 1851 was 468,502 deaths up to Sept. 2 were 541, and last week 208; and in the South districts, population in 1851 was 758,236: the number of deaths up to Sept. 2 was 1247; this large number was increased last week by 476. Active measures have been adopted by the Board of Health for combating the present epidemic, and for obtaining, by all the agents and instruments that science has now at command, such a thorough knowledge of the conditions that lend power to this enemy, as will enable us to oppose it with advantages that were not before possessed. The decline of the temperature, the analogy of the epidemics of 1832 and 1849, as well as the remedial measures that are now brought into operation, justify us in anticipating that the epidemic will, ere long, gradually subside. In the meantime the zeal and watchfulness neither of the local authorities, of the heads of manufactories, nor of the heads of families, should be slackened for a moment.

THE National Gallery, Trafalgar-square, is closed for the annual vacation. It will be re-opened to the public on Monday, the 25th of October next. The Vernon Collection of Paintings, at Marlborough-house, Pall-mall, is closed for the same period. During the recess, the paintings at the National Gallery will be re-arranged.

CONVERSION OF A CHURCH ENTRANCE INTO SHOPS.—The beautiful approach to Archbishop Tenison's Chapel, in Regent-street, has been destroyed, and the space formerly occupied by it is in course of conversion into shops. The entrance to the Chapel will henceforth be in King-street.

THE MORMONS IN LONDON.—The Middlesex Court of Sessions were unexpectedly turned into an arena for the discussion of Mormonism, on Wednesday—the occasion being a charge against Andrew Hepburn, a Protestant lecturer, for disturbing, by a question to the preacher, a religious service of the Latter-day Saints, at Brondiparre, on Sunday. It appeared that the course of annoyance pursued by Mr. Hepburn, had continued since last November, and the defendant pursued every congregation of Mormons that he could. The Jury having returned a verdict of "Guilty," the defendant, in answer to the question if he had anything to say to the Court, said, "What I have done has been for the glory of God, and the good of the whole human family. I am a Scotchman. I had no education, but the Almighty God has given me the abilities to prove to the whole world that these doctrines are inconsistent and contrary to his Holy Word." Mr. Bodkin wished to know if he intended to annoy these persons again? The defendant said, he should never enter their place again, if that was what was required; but he should lecture as usual. Mr. Bodkin said he could no doubt, go on lecturing, if he pleased. He had the same right to do that as these ladies to follow their own worship. He must enter into a recognizance of £100, with two sureties of £50 each, to come up for judgment, if called upon; and he would not be troubled, if he confined himself to showing by argument what he considered their errors. The sureties were given, and the defendant discharged.

THE CROSSING-SWEEPERS OF BELGRAVIA.—The authorities of the Grosvenor district, which possesses a jurisdiction of its own, and comprises the localities of Grosvenor-place, Belgrave, Eaton, and Lowndes-squares, and Chesham-place, have just taken the initiative in organising the crossing-sweepers who occupy the many crossings in that district. For some time past no one has been permitted to hold a "commission," or "carry broome" in that neighbourhood, without the assent of the trustees; but on Wednesday each man was properly enrolled, and furnished with a blue cloth badge to be fastened round the left arm, upon which were worked the letters "G. P. D." (Grosvenor-place district), and a corresponding number to one which is registered at the secretary's office against the wearer's name. Most of these men are old soldiers, and, being of an active disposition, are very useful in carrying messages or posting letters during the "season," so the servants of their fashionable employers will be busy to do it themselves. On account of this they have at last come to be an "institution" of this strictly fashionable and aristocratic quarter, and it is hardly necessary to add that when a crossing-sweeper has been known to run an errand some tattered stranger has opened shop under false colours, and the false assumption of being "connected" with the regular man, or "it's the same sweeper," and having obtained something to carry, have carried it away altogether. To remedy evils of this character the present organisation has been undertaken, and the vacancies will henceforth be filled up by candidates of "established reputation."

BANK OF ENGLAND.—HALF-YEARLY MEETING.—The half-yearly general court of proprietors of the Bank of England was held on Thursday; G. G. Hubbard, Esq., the Governor, in the chair, who said he had to inform the court that the net profits of the half-year were £628,226 6s. 1d., making the amount of rest on the 31st of August, £3,654,452 1s. 1d. After the dividend now proposed of 4½ per cent for the half-year, free of Income-tax, the rest would be £3,000,227 8s. 1d. The dividend was agreed to unanimously.

CHRIST'S HOSPITAL.—On Thursday next, the 21st inst., being St. Matthew's day, the Lord Mayor, Aldermen, Sheriffs, and the Governors of the several Royal hospitals, will attend Divine Service at Christ's church, Newgate-street, where a sermon will be preached by the Rev. G. A. Jacob, D.D., late Fellow and Tutor of Worcester College, Oxford. After which they will repair to the Great-hall in Christ's Hospital, where four orations, on the benefits of the Royal Hospitals, will be delivered by four of the senior scholars, according to annual custom—in Latin, by J. C. Barker; in English, by H. J. Armfield; in Greek, by J. W. Furrell; and in French, by C. W. F. Watts. After which there will be recited translations from Shakespeare and Longfellow, by Messrs Foster and Tebbutt; and an English poem, by J. W. Furrell, on "Constantinople." Also, the Richards' prize poem on the "Don Cossacks," which has not yet been adjudged, will be recited.

IMMENSE DAMAGE has been caused in Prussia by recent inundations. In the provinces of Silesia alone it is estimated at 16,000,000 or 27,000,000 thalers (£4,000,000).

OBITUARY OF EMINENT PERSONS.

THE REV. SIR JOHN ASHBURNHAM, BART., OF BROMHAM.

SIR JOHN ASHBURNHAM, Bart., B.D., Chancellor and Prebendary of Chichester Cathedral, Rector of Guestling, and Vicar of Pevensey, county Essex, died at Guestling Rectory, near Hastings, on the 1st inst., aged 84. He was the seventh inheritor of the title, and the tenth in lineal descent from the marriage of Richard Ashburnham (younger brother of the ancestor of the Earls Ashburnham), with the daughter and heiress of Sir John Stoneling, Knight, of Bromham. Sir John was born in 1770, and married twice: by his first wife, Fanny, fourth daughter of William Foster, Esq., of Hollington, he leaves a son, now Sir Archibel Ashburnham, eighth Baronet, and other issue. Sir William, the fourth Baronet (Sir John's grandfather), was consecrated Bishop of Chichester in 1754.

SIR HENRY BOYNTON, BART.

The death of this Baronet, at the age of seventy-six, occurred at his seat, Burton-Agnes, county York, on the 29th ult. He represented a very ancient Yorkshire family, which is stated to derive its descent from Bartholomew de Boynton, Lord of Boynton A.D. 1007. The fine seat and estate of Burton-Agnes, near Bridlington, was acquired by Sir Matthew Boynton, the first Baronet, a staunch Parliamentarian, in marriage with Frances, his first wife, sister and sole heir of Sir Henry Griffith, Bart. Sir Henry married, 1st January, 1810, Mary, daughter of Captain Gray, and niece of Captain William Watson, R.N., of Dover, by whom he had four sons and seven daughters. Of the former, the eldest, Sir Henry, is now tenth Baronet of Barmston. He married, first, 2nd Nov., 1832, Louisa, daughter of Walter Strickland, Esq., of Cokethorp Park; and, secondly, 7th Feb., 1843, Harriet, daughter of Thomas Lightfoot, Esq.

PHILIP BARKER WEBB, ESQ.

THIS gentleman died of cholera, on the 31st ult., at his residence, 18, Avenue Marbœuf, Champs Elysées, Paris. He was never married. He long held a distinguished place among the most eminent botanists of the age, and was well known as the author of several valuable botanical works. His magnificent Herbarium, collected with great care, he has left by will to his "dear friend the Grand Duke of Tuscany." Mr. Webb always resided abroad, and at the foreign Courts he visited, the reigning Sovereigns presented him with high orders, in testimony of their estimation of his talents. The Webbs of Milford House are an ancient Surrey family. One of the late Mr. Webb's ancestors—his great-grandfather, Philip Carteret Webb, Esq., was a celebrated antiquary. He died at Busbridge. An estate then in the family, in 1770, and the subsequent sale of the books and manuscripts occupied seventeen days. They were brought to auction by direction of his second wife and widow, to whom he bequeathed them. The present inheritor of the Webb estates is Colonel Webb, brother of the distinguished botanist whose death we record.

FRANCIS HUTCHINSON SYNGE, ESQ., J.P.

The death of this lamented gentleman, which occurred at his residence, Weston Lodge, on the 24th ult., has cast a gloom over the whole town of Weston-super-Mare, where he resided for upwards of twenty years, and laboured, with untiring energy, for the advancement and improvement of the place. Two years ago, his fellow-townsmen presented him with a massive silver candelabrum in grateful remembrance of his public services. Mr. Synge was a member of an ancient and highly-respected Irish family, and among his ancestors were five Irish prelates of the name of Synge, and two of the name of Hutchinson. He was born 30th April, 1788, the second son of the late Sir Robert Synge, Bart., by Margaret, his wife, daughter of Theobald Wolfe, Esq., uncle of Arthur, Lord Kilwarden. He married, in 1819, Mary-Anne, daughter of John Paget, Esq., of Cranmore Hall, county Somerset; and leaves that lady his widow.

WILLS AND BEQUESTS.—Edward Balton, Esq., of Charlemont Dorset, has left £300 to each of his servants, and to each of his labourers a suit of mourning and a sovereign; to the Dorset County Hospital and Asylum, £100; to the Parochial School at Brondiparre, each £100.—Edward Tothill, Esq., of Philadelphia, U.S., formerly of Bristol, who with his wife was lost on board the *City of Glasgow*, left all his property to his wife, if she survived; but in case of her death without a will, then to his sisters, equally.—The late Mr. William Fontaine, who, in a very few years, established, and successfully conducted, no fewer than fifteen separate places of business in London, as a soap-maker, tallow-chandler, and oilman, has died worth £16,000 personality, which he has bequeathed to his widow.—The effects of Edward Little, commander of the *Terror*, have been administered under £4000.

TESTIMONIAL TO MR. W. ROBINSON, OF TAMWORTH.—On Wednesday week, at a public dinner in the Town-hall, Tamworth, a superb group of plate was presented to Mr. W. Robinson, of that town, by a large party of his friends and admirers. Mr. R. D. Webster presided, and among the guests were Sir Robert Peel, Bart., M.P.; R. J. Peel, Esq.; and Captain W. Peel. Mr. Robinson has for fifty years practised as a veterinary surgeon in the neighbourhood of Tamworth. The testimonial consists of a superb silver tea and coffee service, and an épergne, manufactured by Elkington and Mason, at a cost of about 200 guineas.

RUSSIAN COMMERCE.—The last advices from St. Petersburg bring a fresh statement of the exports of tallow this year as compared with last, whence it appears that the amount sent away up to the present time is estimated to have been 36,389 casks, against 42,808 to the same period of 1853. Taking an average of ten years, the exports of 1854 would exhibit an excess; and, as the English consumption is said by the Englishmen and Frenchmen generally, on account of their interfering to put down the buccaneering Greek incursions into the Turkish provinces, is not known. It is very well known that many of the invaders were either professional brigands or *palicars*—irregular Greek soldiers, who are little, if any, better. When driven out of Thessaly by the Turkish troops, many of these are known to have taken refuge in the island of Negroponte; and it is said that Mr. Leeves, in a letter written only a few days before his death, had expressed some uneasiness on account of the number of these desperate ruffians who were known to be in his neighbourhood.

PRICES OF WHEAT, FLOUR, AND BREAD, IN LONDON AND PARIS.—The highest quotation of wheat in the Paris market is 50f. per hectolitre, which is equal to nearly 65s. 7d. per quarter; and the highest price of white wheat of the first quality in London being 62s. per quarter, it follows that wheat is nearly 3s. per quarter cheaper than in London. The highest quotation of flour of the first quality in Paris is 55f. 40c. the 100 kilogrammes, which is equal to 55s. 9d. per sack of 280lb. English; and, the highest quotation of flour in the London market being 50s. per sack, it follows that flour is nearly 12½ per cent dearer in Paris than in London. The price of bread of the first quality in Paris is 40c per kilogramme, which is equal to nearly 7d. per 4lb. loaf, English weight; and, the price of bread in London at the full-priced shops being 9d. the 4lb. loaf, it follows that bread is nearly 29½ per cent dearer in London than in Paris. The second quality of bread in Paris is quoted at 32c. per kilogramme, which is equivalent to rather more than 5½d. the 4lb. loaf.

LATEST INTELLIGENCE.

THE CRIMEA EXPEDITION.

The announcement in the *Moniteur* of Thursday morning that the French and Turkish divisions of the expedition left Varna on the 5th inst. has been confirmed by the following despatch from Constantinople of the 7th:—

CONSTANTINOPLE, Sept. 7.

The storm which had raged for some days in the Black Sea has ceased. On the 4th all the troops had embarked. The whole fleet consists of 600 sail. On the 4th the first division of the fleet sailed in the direction of Sebastopol. The strength of the army is 90,000 men. On the 4th Marshal St. Arnaud sailed on board the *Charlemagne*.

The French and Turkish divisions were to be joined by the English at the Island of Serpents. It would seem from this that the expedition has not taken a direct line, but has followed the coast; and it is therefore inferred that the disembarkation cannot have taken place before the 8th or 9th. Should it not have been later than that, we may expect news of the landing of the Allied army by the 16th (to day), or the 17th at latest.

The Isle of Serpents—where the expeditionary fleet was to rendezvous—called, in Turkish, Hane Adassi; in Greek, Fidonisi; in Russian, Zmeinoi Ostrow—is a small rocky island, situated at a short distance from the coast of Bessarabia, opposite the mouths of the Danube. It is about a mile and a half in circumference. A lighthouse has been erected upon it.

DEFEAT OF THE RUSSIAN ARMY IN ASIA.

The telegraphic despatch from Constantinople brings important news from the seat of war in Asia. Schamyl is said to have gained a great victory over the Russians at Tiflis. The Russians lost many men, seven guns, 3000 tents, and all their baggage, with many horses and waggons. All the provisions and ammunition of the Russians fell into the hands of the victors. The Russians, under Prince Bebutoff, were retreating in forced marches from Kutais and Kars to Tiflis. On the 23rd August the Turkish Minister retired from Teheran to Erzeroum, in consequence of a rupture between the Porte and Persia.

NAVAL AND MILITARY INTELLIGENCE.

AN order has been issued at Sheerness, regulating the time of persons visiting the *Royal Albert* and Dutch Guard, in order to meet the arrival of passengers by the steam-packets from London via the Thames and Medway. They are in future to assemble at the yard gate at 8.30 a.m. and at 2 p.m., when they will be escorted through the yard (with permission to visit the *Royal Albert*) by the police. Every facility is given to visitors by arrangements made by the Captain-Superintendent. The number of visitors daily is immense.

THE detachments from the 92nd Highlanders are under orders to move from the Tower, as also those of the 38th, 39th, 23rd, and other regiments, to strengthen the garrison at Windsor on the departure of the 60th Rifles for the East.

SEVERAL hundred beds and blankets were taken on shore from the *St. Vincent* on Monday, and burnt on Rat's Island. The same order has been given on board her Majesty's sloop *Sphinx*, where the prevailing epidemic has been raging.

THE Lords Commissioners of the Admiralty have taken up steamers of from 700 to 800 tons' burden to convey victualling stores for the use of the army invading the Crimea and the fleet in the Black Sea; also for the conveyance of 800 tons of heavy shot and shell to Malta, forty tons of ordnance stores to Sydney, and nine tons to Melbourne and Port Philip for the defence of those colonies.

LAST week we stated that the Royal Sappers and Miners had increased the bounty to men, under twenty-five, joining their corps, to £5 12s. 6d., whereas the amount of the bounty at the present time is £5 16s. 6d. for men of all ages, and has been so for some time past.

THE 30th Regiment is under orders for the East, but the period for their embarkation is not yet fixed. No other corps at home are, at present, held in readiness for the same destination

THE Somerset Militia is the corps selected to garrison Cork.

THE HORSE GUARDS.—The Military Secretary had a levee on Tuesday last, which was numerously attended. He holds his levees every Tuesday. The Adjutant-General holds his on Thursday. Every officer is now obliged, according to the late regulations, to put down in writing the precise nature of his application (a considerable difference between this present system and that of Lord Hill).

THE *Conqueror* line-of-battle ship, pierced for 120 guns, building at Devonport, and the *Edgar*, at Woolwich, are both so far advanced that they will be ready for launching early in the spring.

IN compliment to France, and in testimony of the firm alliance existing between the two countries, the Admiralty has resolved to name one of the line-of-battle ships about to be launched *La Fravera*.

NEARLY the whole of the seamen who entered for special service in the Baltic fleet, with the right to claim their discharge at the end of the present year, have volunteered for continuous service.

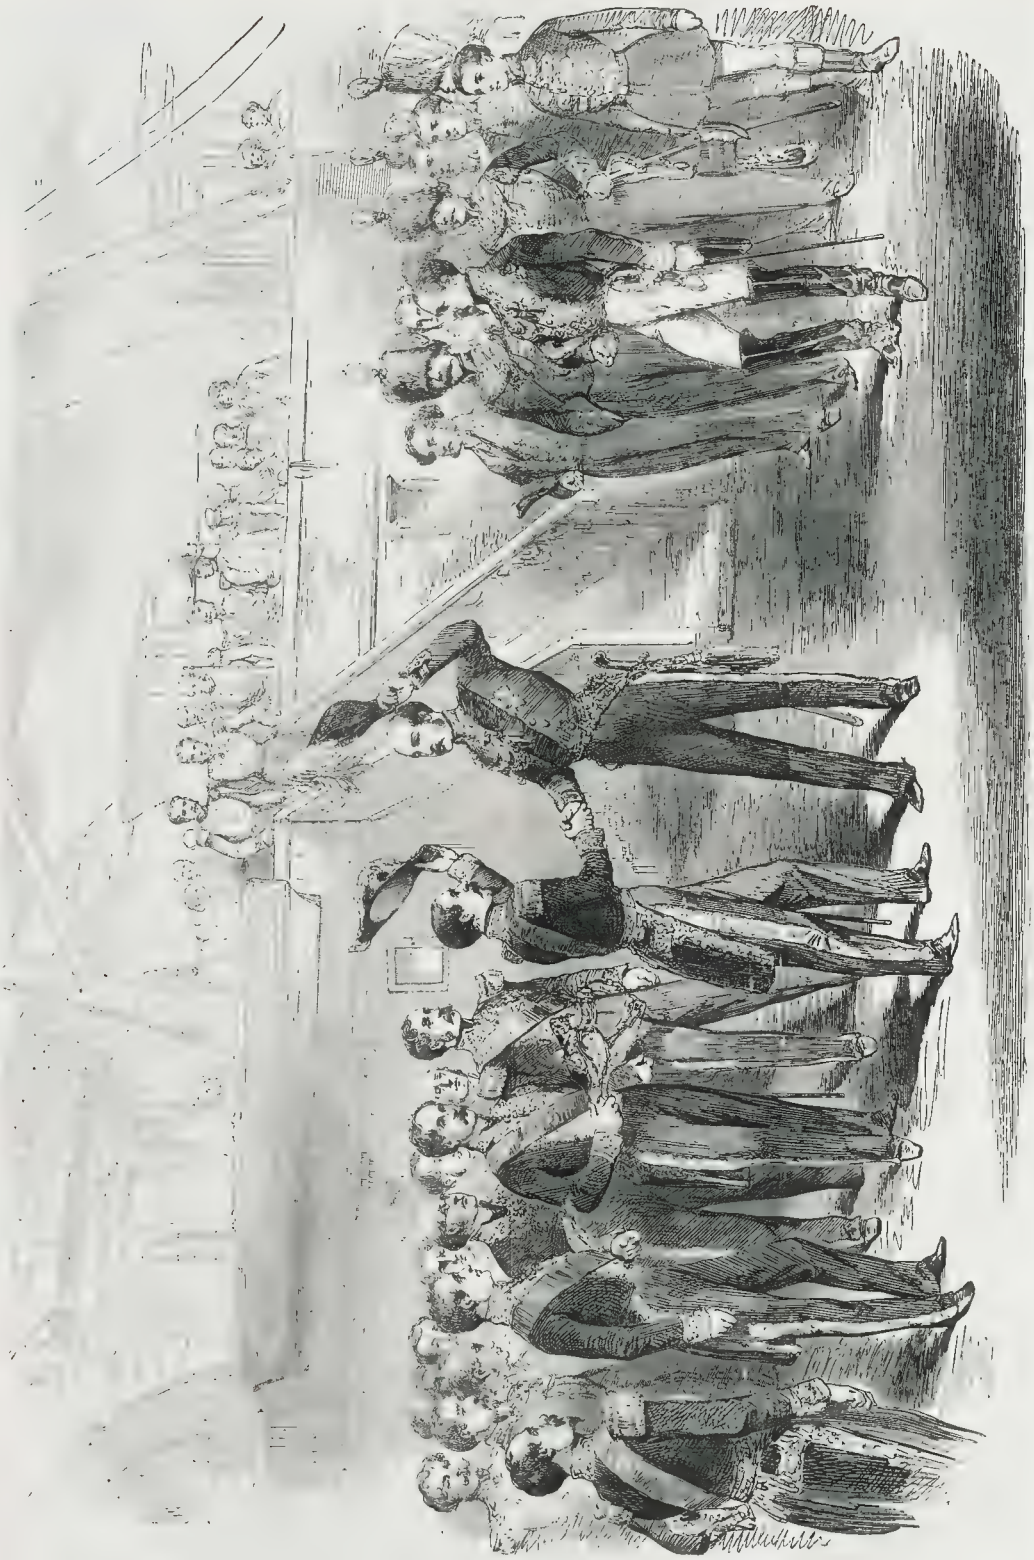
THE following ships are now being manned, and have entered either the number of men required or have nearly filled up their complement:—The *Royal Albert*, 121, Captain Alexander Little, fitting at Sheerness; the *Curacoa*, 30, Captain the Hon. G. F. Hastings, fitting at Portsmouth; the *Cossack*, 30, Captain Fanshawe, fitting at Chatham; the *Harrier*, 16, Captain Storey, fitting at Portsmouth; as also the *Snake*, 5, Captain Crauford; and the *Curieu*, Captain Lambert, fitting at Chatham.

THE DESPATCH GUN-BOATS.—Three of the screw steam despatch gun-boats are intended for service in the Black Sea—the *Arrow*, the *Beagle*, and the *Lynx*. The only screw steam despatch gun-boat sent to the Baltic up to the present time is the *Wrangler*. The *Viper* is in dock at Woolwich preparing for sea, and the *Snake* is having her engines put on board. As it will take some time to complete the two latter despatch gun boats for sea, and the advanced period of the season would not allow of their services being available for any length of time in the Baltic this year, it is consequently expected that they will also proceed, when ready, to the Black Sea; and that the six new light draught of water gun-boats will be sent with the fleet early in the ensuing spring to the Baltic.

SPANISH ROBBERS.—Madrid papers mention various outrages by bands of robbers on the road from Madrid to Saragossa, and in the provinces of Granada. In the neighbourhood of Guadix, in the last-mentioned district, the Civil Guards came upon a band of outlaws just as they had robbed a church, and killed two, but the others escaped. On the Saragossa road, at a league from Almunia, in Arragon, a band of fourteen or fifteen men attacked the keeper of a house of refreshment, and beat at his door, ill-treated him, and threatened to kill him, until he gave them 20 ounces of gold—all that he possessed. A diligence passed by at the time, but the robbers shot the postilion dead, and despoiled the passengers. Two Civil Guards, who were in the vehicle, knowing that two other diligences were coming up in a quarter of an hour, jumped out, and ran to warn them. The robbers sent a volley after them, and wounded one, but the other succeeded in his object. A day or two afterwards, the same band was seen on the road, quietly awaiting the arrival of diligences passed in safety.

THE CHOLERA IN THE VATICAN.—The cholera, although by no means severe in Rome, has recently invaded the sacred precincts of the Vatican, and thrown the inhabitants of the palace into the utmost consternation. The sculptor Pistrucci, a relation of the engraver of that name employed in London, at the Royal Mint, who was occupied in some ornamental mouldings in the palace last week, was the first victim of the disease there; and his death, on the 26th ult., has been followed by those of two or three others of the Papal household. In consequence of this manifestation, precautions are now adopted to purge from infection the persons of all visitors to the palace, and no one is admitted to the presence of the Pope, Cardinal Antonelli, or any other of the principal dignitaries, without previously having undergone a good fumigation. Indeed, it is impossible to get in without passing the chlorine ordeal, as the lower gates of the palace are closed leading to the courtyards, and the only access is now up to the Scala Regia, and across the Great Hall to a long corridor, at the end of which the fumigating apparatus is placed, through which the visitor is inducted by an officiating gendarme. Cardinal Antonelli, at whose suggestion this sanitary cordon has been established, is said to be much alarmed at the cholera; and rooms of the other prelates resident in the Vatican have so far yielded to their fears as to abandon their apartments in the palace altogether.—*Letter from Rome.*

PROVINCIAL MEDICAL AND SURGICAL ASSOCIATION.—The twenty-second anniversary of this association commenced on Wednesday, at Manchester. Sir John Forbes read the report of the benevolent fund, which reported 67 cases relieved at a cost of £556. The number of annuitants is now ten, at a cost of £147 per annum. In the evening the local members of the association held a *conversazione* in the Picture Gallery of the Royal Institution.



MEETING OF PRINCE ALBERT AND THE EMPEROR OF THE FRENCH, AT BOULOGNE.—(SEE PAGE 245)

PRINCE ALBERT, THE EMPEROR OF THE FRENCH, AND STAFF, AT THE REVIEW AT MARQUISE.—(SEE PAGE 255)

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

We have news this week of moment about two of our fine English cathedrals—Gloucester and Peterborough. The former was on fire—the fire destroying the Bishop's throne. Surely there has been great culpability somewhere: a searching inquiry should be made at once, for future safety. We can ill afford to lose so noble a structure as Gloucester Cathedral. The other news is of a far different kind. It is cheering news. Peterborough Cathedral, it appears, was thrown open to the public, free of fees of every kind, on the 8th of February last; and between that period and the 17th of the month just past nearly six thousand persons have visited it without doing—on the unison's report rare to the Dean—"two shillings worth" of damage to the structure. The good Dean of Peterborough, to whom the public are indebted for this wise act of proper confidence, complains that some of the public will insist on paying the vergers, and suggests that the money thus bestowed might take a different channel—not a building fund—not a Dean and Chapter fund—but a fund for the sick and destitute inhabitants living under the shadow of the noble old cathedral.

The lovers of English water-colour art (now a wide and increasing circle) will learn with regret that one of the best-known of the members of the Old Water-Colour Society is no longer among us. Mr. Charles Bentley (newly removed by death from pursuing the art he loved and understood so well) was always a large and important contributor to that choice collection in Pall mall East, which Mr. Copley Fielding's entering never fails to make one of the attractive sights of London, from April to June in every year. Mr. Bentley was under fifty years of age when he died. In 1834 he became an Associate of the Old Water-colour Society; and, in 1844, a full member. When he joined that little phalanx of able artists, Prout and Dewint, Varley, Barret, and Mackenzie were then of the body and in the body. Death, indeed, has made sad havoc among them. Bentley delighted in painting the coast scenes of England and France, and there are few places of pictorial attraction, either at home or abroad, within his range, that he was not well acquainted with. His class of subject will be best recalled by the drawings he exhibited in the year in which he was made a member of the Old Water-Colour Society, and he was seldom seen to greater advantage than in that year. They were these:—1, "Spithead—a Seventy-four Firing a Salute on Leaving Port;" 2, "Dutch Boats off the Coast of Holland;" 3, "On the Thames, an Indiaman being Towed up—Early Morning;" 4, "Town and Castle of Dieppe from the Sea;" 5, "Mont St. Michel, Coast of Normandy—Early Morning;" 6, "Port Madoc, North Wales—Storm Clearing Off;" 7, "Dieppe Pier—Fishing Boats Going Out;" 8, "Making Signal for a Pilot off St. Malo;" 9, "Fishing Boats Running into Harbour;" 10, "Near Burgh, Fens of Lincolnshire." Mr. Bentley was a prolific and ready artist. He looked on nature for himself, and had the rare merit of always selecting the best point of view of every place he undertook to recall by pencil and colour. His fault was a certain coldness of manner, from which no charm of general conception, or beauty of aërial perspective, could entirely withdraw the eye of the spectator. His works are to be seen in the portfolios and on the walls of the best collectors; and any young artist may well be proud to have it said of him that what he has done is a happy following out of what Mr. Bentley had done before him.

We are glad to learn that Mr. Maclise's fine picture (of the present year), the "Marriage of Strongbow to Eva," is not to be confined to a distant gallery and the caprice of any private collector. He is to paint the same striking subject in fresco (with such alterations as the requirements of fresco demand), for the Painted Chamber of the Houses of Parliament. We congratulate the Fine-Arts Commissioners on this fresh instance of their good judgment, and the country on the acquisition it is about to obtain.

The Glasgow people have been giving a banquet to Baron Marochetti, the sculptor, on the completion of his statue of the Queen. Sir Archibald Alison, who is rather dictatorial in his tastes, as he is over-confident in his history, was the getter-up of the affair. The Baron (an able man) was an importation of Sir Archibald's, and was pitted (successfully, too), by the Baronet, against Sir Francis Chantrey for the execution of the Glasgow equestrian statue of Wellington. Public banquets to sculptors (however well deserved) have been rare occurrences in this country. We can hardly fancy Flaxman figuring at such an entertainment; but, in common with others, we congratulate the Baron on what the Baronet has done for him, and more cordially on what he has done for himself.

Mr. Bentley announces the "Life and Correspondence of the Countess of Blessington." Are the standing orders of the House of Lords likely to be infringed by such a publication? Mr. Madden is to compile the work. We trust we shall have no laboured eulogium on Gore-house, like that passed by Mr. Macaulay on Holland-house, or that by Justice Talfourd on Charles Lamb's little and late suppers.

The District Surveyors of London are in arms against a recent paragraph in our column of "Talk." We called attention (some of our readers will remember) to the new house now in course of erection in Cheapside; and, after pointing it out as a sort of wretched rival to one of Wren's great masterpieces, we did, regretfully, say that our district surveyors have, we fear, no power to prohibit such unwelcome additions to our streets; "and, if they had, are generally too much interested in a large expenditure of stone and brick, to restrict height, and too barren of taste to forbid excrescences." This, our able contemporary (the *Builder*) calls a gratuitous and unfounded sneer, as "a newspaper's notion of district surveyors." "It is true (we are told) that the district surveyors have no power to restrict the height to which this house is being carried; and, in this free land, it would be a monstrous stretch of power if they had. If, then, they are powerless, under the Act, to prevent the evil complained of, why need the writer travel out of his way to impute improper motives, and attribute a want of taste? The expenditure on the 'stone and brick' in no way affects the fee which the Act of Parliament authorises the district surveyor to receive: he has, therefore, no interest in adding to the cost of the house."

Now, this is all very well, as far as it goes, one monstrous proposition excepted—that of allowing any man to disfigure a city just as he likes. But the case is not truly stated. An improper motive we would not attribute to any district surveyor. But architects, unintentionally perhaps, favour fellow architects; and, though the surveyor of the great house in Cheapside has, in money, nothing more than the Act allows him, his fee being unaffected by the outlay on brick and stone, yet he has, we repeat, an unconscious interest in winking at new work, however faulty in taste, inasmuch as the architect, *he is surveying* in Cheapside, has next day to *survey him* in Clapham or at Kensington. We are not in love with Committees of Taste, but we should like to see some control exercised over the building freaks of shopkeepers and warehousemen. Why should a wholesale mercer be suffered to disfigure Cheapside, or a Manchester warehouseman to erect a monstrous and unsightly structure under the very wing of St. Paul's Cathedral? If things useful are alone to be erected, down with the graceful column near London-bridge—

> If things of use were valued, there had been
> Some workhouse where the Monument is seen.

If district surveyors, as a body, are the men of taste the *Builder* thinks them, we should like to see them armed with some controlling power, so that the street architecture of London may not show Batty Langley on one side and some vintner turned Vitruvius on the other side of a leading thoroughfare—yes, and that thoroughfare one which men of real taste are obliged to frequent and see twice a day, at least—architectural disfigurements of a kind now unhappily too common in London.

MUSIC.

NORWICH MUSICAL FESTIVAL.

The eleventh anniversary of the Norfolk and Norwich Musical Festival commenced on Tuesday, in St. Andrew's-hall. This is a triennial meeting; but the last took place in 1852 instead of 1851, Mr. Benedict, the conductor, having gone to America with Jenny Lind; and the committee, out of respect to Mr. Benedict, or fearful that the charities would suffer—having postponed the meeting for a twelvemonth.

Among the principal vocal performers engaged were Mesdames Angelina Bozio, Clara Novello, Amalia Castellan, Weiss, and Dolby; and Messrs. Sims Reeves, Gardoni, Reichardt, Belletti, Weiss, and Lablache. The orchestra consisted of nearly the entire band of the Royal Italian Opera, with additions from various sources; and the choral force—80 trebles, 60 altos, 60 tenors, and 70 bas-es—was selected from the Norwich Choral and Ladies' Choral Societies, assisted by the chorus of the Royal Italian Opera and Exeter-hall.

The experiment of a Tuesday morning rehearsal, tickets 21s. each, which was well attended, had the effect of thinning the attendance in the evening. The first part of the concert included Handel's delightful serenata, "Acis and Galatea." All the vocalists sang their parts with an apparent pleasing rivalry, each in turn eliciting loud applause. *Acis* was represented by Mr. Sims Reeves; *Galatea*, by Madame Clara Novello; *Damon*, by Gardoni; and *Polyphemus*, by Belletti. Part third included a selection of a dozen pieces, selected from Beethoven, Auber, Vieuxtemps, Mozart, Meyerbeer, Verdi, Rossini, Donizetti, H. Leslie, and Benedict. The committee did not seem to have taken into account the strong disposition of a Norwich audience to encore pieces that are pretty well sung. These encores prolonged the concert till after twelve o'clock. The finale was very effective, but before it was finished most of the audience had left the hall.

On Wednesday morning St. Andrew's Hall was crowded, in galleries and aisles; and a better assemblage of the rank, fashion, and beauty of the county has seldom been seen. The performances commenced with Beethoven's service in C, and the solos were sung by Madame Clara Novello, Miss Dolby, Herr Reichardt, and Mr. Weiss. Full justice was done to the music, both by the vocalists and chorus. At twelve o'clock the performance of Spohr's "Last Judgment" commenced. The general opinion was, that, from the beginning to the end, its performance was all that could be desired. Madame Clara Novello sang the air "With Verdure Clad" so beautifully, that, by request, it was repeated. The concluding chorus of the first part, "The Heavens are Telling," was most effective, and the whole audience rose during the performance.

On Thursday morning a very fine performance of Mendelssohn's "Elijah" took place. Mr. Benedict's reading of the great work was admirable. The choruses were, for the most part, splendidly sung, and the band was irreproachable. The principal solo vocalists, Madame Clara Novello, Madame Castellan, Miss Dolby, Mr. Sims Reeves, Signor Gardoni, and Signor Belletti, exerted themselves to the utmost. The following pieces were repeated by general desire:—"Hear ye, Israel" (Madame Novello), "Lift thine eyes" (Madame Novello, Miss Dolby, and Mrs. Weiss, who sang it exquisitely), "O rest in the Lord" (beautifully rendered by Miss Dolby), "For the mountains" (Signor Belletti), and "Then shall the righteous shine" magnificently sung by Mr. Sims Reeves.

HARP ENTERTAINMENT IN BEAUMARIS CASTLE.—On the 11th inst., by permission of Sir R. B. Williams Bulkeley, a large concourse of the residents and visitors at Beaumaris, were assembled to enjoy, in the fine old ruins of the Castle, some very good harp-playing by Mr. T. D. Morris. The scene was truly picturesque, and the entertainment good. Mr. Morris's variations on "Ar Hyd Nos" were both well played. Mr. Morris had some slight vocal assistance to vary his performances; but, as he used a pedal harp, he can scarcely be considered to have enlightened his hearers much on the subject of Welsh playing; nevertheless, satisfied with what they heard, and considerably struck by the singularity and beauty of the scene, his audience were in no humour to find any fault with the artist on that account.

ITALIAN OPERAS IN DUBLIN.—The first of a series of Italian operas was performed on Monday night, in the Theatre Royal. The company embraces the following distinguished artistes, viz.:—Misses. Sophia Cruvelli, Marai, and Albini; Madame Albini; and Pamberlick, Tagliabue, Fortini, Polonini, Lucchesi, &c. The opera produced was "Norma." The house was well filled with a brilliant audience, and the speculation promises to be a highly-successful one.

ST. COLUMB CHOIR.—In connection with a beautiful church, now building at Nottingham, by the Rev. Dr. Walker, Rector of St. Columb Major, Cornwall, as a memorial to his father and mother, a college of choristers of the above name for the foundation of sixteen or twenty boys for the purpose of performing full cathedral service daily.

THE THEATRES.

MRS. FITZWILLIAM.

We have this week to record the painful circumstance of the death of Mrs. Fitzwilliam, on Monday evening, from cholera. So sudden was the attack, that she had attended rehearsal at the Haymarket in the morning, and died in a few hours. She was the daughter of Mr. Robert Copeland, the manager of the Dover Theatre; and was born in 1802, and two years afterwards is said to have appeared on the stage, as one of the children in the "Stranger," and the boy in "Pizarro." Charles Incledon heard her sing at ten years of age, "Savourneen Deelish;" and at thirteen we find her performing in "The Poor Soldier" at the Dover Theatre. At the age of fourteen she was placed under Mrs. Bland, and much thereby improved her powers as a ballad-singer. Afterwards engaged at the Haymarket, then under the management of Messrs. Morris and Winston, she made her début as *Lucy* in the "Review;" and afterwards as the *Page*, in "The Follies of a Day." In the country she had taken higher rôles; and then Mr. Thomas Dibdin, having seen her *Bianca*, in "Fazio," that gentleman engaged her for the Surrey Theatre, where she acted the heroine in Sir Walter Scott's "Heart of Mid-Lothian." She also acquired great popularity as a Scotch ballad-singer in the Manager's "Harlequin Hoax." Her reputation now took her to Drury-Lane, under Mr. Elliston's management, and there she appeared in the farce of "Maid or Wife;" afterwards called "The Maid and the Bachelor." On Mr. Elliston's unfortunately taking the conduct of the Haymarket she returned to that theatre, and continued to be attractive on its boards until she went to America; after which she returned to it. While at Drury, our heroine married to Mr. Fitzwilliam, then an actor of a popular sotor of Irish characters, but whose reputation declining, his mode of life became uncertain; and Mrs. Fitzwilliam seems to have been left to carve out her own fortune, irrespective of her husband's. Her later history is to be found in the chronicles of the Haymarket Theatre, of which, when Mr. Buckstone became manager, Mrs. Fitzwilliam was the principal ornament. The natural characteristics of her style made her universally popular; in fact, she was one of the liveliest and most genuine actresses that ever trod the boards. In private life she was much beloved on account of her exceedingly amiable character; and the sudden termination of her most prosperous career will be generally regretted.

DRURY-LANE THEATRE has been reopened for a short operatic season. Mr. Wallace's favourite opera of "Maritana" was played on Monday, and it was supported by a company derived from various sources. Madame Rudersdorff was the prima donna; Mr. Elliot Galer represented *Don Cæsar*; a gentleman named Dusck impersonated the *King*, and *Don José* was played by Mr. Corrie.

CREMORNE GARDENS.—A novel aëronautic display took place at this popular resort on Monday evening; consisting of three balloons differing much in form and size, but unitedly symbolising the efforts which France and England are conjointly making to preserve the balance of power in Europe. The principal balloon, of the usual shape; the two supporters or attendants, are colossal emblematic representations of England and France, in a rearing attitude, as Justice and Plenty; the car, which is calculated to hold six persons, was placed in the centre. The ascent was very fine; and so calm was the evening, that for three-quarters of an hour the machine could be distinctly seen by the very numerous company, who complimented M. Hillard by their presence at the Gardens.

HOW TO STOP A TRAIN.—Some experiments were made on Tuesday, by Captain Tyler, on the Brighton line, to ascertain how soon a train could be stopped. The last and decisive experiment was with a Brighton train and Brighton men, and by arrangement every available means was employed to stop it, on being signalled, namely, reversing the engine, shutting off the steam, applying the breaks, and making the engine to scatter sand along the rails. The effect of all this was, that the train, while travelling at the rate of a mile in 63 seconds, was pulled up in a minute and a half after the signal, and in the distance of 1389 yards.

THE AGES OF THE PEOPLE.

The duration of life with the past and the present rates of mortality in England, as ascertained by the Census, are some of the most instructive and important parts of the interesting Report, lately published. Thus, dividing what has been called the century of life into five periods, or 20, 40, 60, 80, 100 years, it is found, at the present rate of mortality, that, of 100,000 persons, 86,061 enter the second period, or 81,329 die before they are 20; 68,824 enter the third period, or 46,176 die before they are 40; 37,998 enter the fourth period, or 69,002 die before they are sixty; 9862 enter the fifth period, or 90,618 die before they are 80; and 99,988 never see the last year of the possible natural life of man. Actually, 111 men, and 308 women, from 100 to 119 years of age were in existence in Great Britain in 1851. Several of those in England are natives of parishes in Scotland or Ireland. A considerable proportion of them are dependent on alms, are paupers or inmates; and the evidence, therefore, of their great age is in many cases considered doubtful; but there is no doubt whatever that some hundreds of the persons alive in 1851 had lived more than a century. One hundred years, therefore, is the possible duration of life; it was recorded in ancient Italy, and is thus the "limit of life is regulated by a great physical law which has varied little, during the lapse of 2000 years, in the climate and race of Italy and England."

Though the extreme limit of life cannot be surpassed within it, the lives of individuals, and the average duration of life in communities, are susceptible of prolongation. The mean lifetime in England is rather more than forty years, or "the children of the healthiest nation of any magnitude in the world" live only 4-10th of the possible life of man. In Surrey the mean lifetime is 45 years; in Liverpool and Manchester, 25. The mortality was not much less in all England formerly than it now is in Manchester. There is no good reason why lifetime in Manchester should be less than in Surrey, and by making Manchester only as healthy as Surrey, the lifetime of the whole population would be considerably lengthened. But already the mean lifetime of the community has been lengthened, from 25 years, its present duration in Manchester, to 40, or within five years of what it is in Surrey, and there is no good reason why the lifetime of the whole people should not be prolonged, at least equal to, if not beyond, the present mean lifetime in Surrey. The Commissioners accordingly look for a further prolongation, and say, to prolong life, "must become an essential part of family, municipal, and national policy." It must be by the prolongation of town life, which becomes every year more and more the national fate. Even the efforts to prolong life contribute to it, for in proportion as they are successful, the number of the people alive at any time after a cessation of births, will be increased, and they will be all inhabitants of towns. For the health, recreation, enjoyment, and duration of town life, now to be provided for, the polloy suited to a rural life is not adapted. The boisterous sports which are the delight of a rustic population must make way for the calmer intellectual recreations and more placid enjoyments which are suitable to a sedentary people. If the former require room for the chase, for the latter parks and gardens are requisite.

Not till the Census of 1851 was each person required to state his precise age; and from the difficulty of procuring such information, in no European country is it obtained. Some ladies and gentlemen have an unspeakable aversion to speak the truth on the subject, or they are not acquainted with it; and it is recorded of a statistician of eminence, that he failed to ascertain, though he tried, the ages of his wife and his cook. In the Census of 1841, 1,003,119 girls were returned between the ages of 10-15; in 1851, these should have become women of the ages of 20-25, less the number who died in the interval; but the number of women of this latter age, instead of being less than 1,003,119, was 1,030,456, whence it is inferred that in 1841 and 1851, several thousand ladies of higher ages were returned as 20-25. On the other hand, doubts may be thrown on the ages of females; but, making allowance for possible errors, it appears that till the age of 20 the number of males is in excess of females; that between 20-40 the females exceed the males, and the excess increases as the ages above 40 are included. Between 20-40 the excess of females was 138,654 above 8,198,495 males; including all ages above 20, the excess was 405,342. The excess of females above 20 is considerably greater in Scotland than in England. In our Colonies and United States, the proportions are reversed; and in them, particularly the former, the men of the age 20-40 exceeded the females in number. We gave in our Census Number an account of the relative numbers of males and females in the different places of the country. The present publication gives the numbers at different ages; and shows, between 60-80, the greater longevity of females, who exceed the males in several counties by 22 per cent: in Somerset, 25; in Cornwall, 30; and in London, 21 per cent. The proportion of women above 80 living in "unhealthy" London is 197 to 100 men, and exceeds the proportion in any English county. In some parts of Scotland the proportion of elderly females is still greater than in London, and is in general greater in Scotland than in England.

These are some only of the many curious facts recorded of our population. It is an obvious deduction from what is just stated of females, that in proportion as society is composed of greater numbers of them, or in proportion as the males emigrate, its mean lifetime increases. It is obvious, too, that mean life, now greater than in the last century, is prolonged as population increases, and every generation amongst us, consisting of an increasing number of persons of all ages, has in it both more youthful vigour, and more mature wisdom, than its predecessor.

COUNTRY NEWS.

CHEAP BREAD.—On Tuesday last, Mr. Gardiner, one of the principal bakers of Bradford, took 600 loaves of bread to the town of Buckingham, which were all sold in the market-place within forty minutes, at 6d. and 5d. the 4 lb. loaf; he promised to go again on Saturday with a larger supply, but expressed himself ready to retire when bread was sold at a fair and a reasonable price. A great competition has been going on at Waddesdon among the bakers, and, consequently, bread is very much reduced in price. A good loaf is selling there at 4½d.

THE 46TH IN WINDSOR.—Popular feeling in Windsor is greatly excited against the officers of the 46th. They are saluted with *Non est recordo*, and "I don't recollect," at every turning. As they go to drill, the women congregate at the corners of the little streets and lanes, and receive their advance absolutely with a groan, or a sneer. No wonder, then, that the officers, many of whom were not at all mixed up with the affair, are extremely anxious to turn their backs on the Royal borough. An afternoon or two balled workers arrived from London with a plentiful supply of papers, printed in the old Seven Dials style, entitled the "Court-martial at Windsor." With stentorian lungs, they commenced singing the doggrel verses in Park-street, and were speedily surrounded by a crowd of customers. When the singers arrived near the Town hall, they were set upon by a party of soldiers, and only escaped a good thrashing by being taken under the protection of the police. They were subsequently ordered to desist from either singing or selling so offensive and irritating a production. It is greatly to be feared that, if the regiment be not speedily removed, serious disturbances will take place between the soldiers and the civilians, as the former now consider any disrespectful mention of the 46th reflects upon themselves as well as their officers. The other day a party of Eton tradesmen, boating upon the Thames, near Swandridge, called after some officers similarly engaged. The officers resented the insult, and ran their boat alongside that of the Etonians. A smart contest at splashing with oars then ensued, and for a time the officers had the advantage; but the leader of the tradesmen, chancing to get hold of the bottom of his boat, completely damped the courage of the 46th, that they were compelled to beat a precipitate retreat.——On Saturday, as Major Maxwell and Adjutant M'Alester were walking up High-street, Windsor, a boy, named Simms, said to one of his companions, "Don't you remember?" The other boy replied, "I have no recollection whatever." The dialogue was overheard by Major Maxwell, who forthwith ordered a soldier to take the lad into custody, and lodge him in the police-station. On Monday the lad was brought before the Mayor, when Major Maxwell said, "I would rather see the youth discharged. I merely wish to put a stop to insults the officers have been subjected to when walking in the streets, which is very disagreeable." The Mayor was anxious to put a stop to any annoyances to the regiment; and, in discharging the boy, cautioned him against a repetition of conduct which might lead to disturbance in the town.

THE LATE JOHNSON JEX.—The following inscription is from a tablet recently put up in Letheringsett churchyard, to the memory of Johnson Jex, the village blacksmith:—"Born in obscurity, he passed his days at Letheringsett, as a village blacksmith. By the force of an original and inventive genius, combined with indomitable perseverance, he mastered some of the greatest difficulties of science: advancing from the forge to the crucible, and from the horseshoe to the chronometer; acquiring by mutual labour and philosophic research, a vast and varied amount of mechanical skill and general knowledge. He was a man of scrupulous integrity and moral worth; but, regardless of wealth, and insensible to the voice of fame, he lived and died a scientific anchorite.—There is a spirit in man, and the inspiration of the Almighty giveth him understanding."

THE CAMP AT BOULOGNE.

On Saturday the Emperor went on foot to visit the Hospital of St. Louis, followed only by a few Generals, and was loudly cheered in his progress. On Sunday morning he left Boulogne for the Camp at Honvault, followed by a numerous and brilliant staff, to be present at high mass.

The visit of the Emperor to the Camp at Equihen on Monday was not attended by any large military manœuvres, it being merely a visit of inspection—the troops being drawn up in line in front of their small tents, and the Emperor riding along the lines. The small sack-tents were inspected with minuteness, and several of them struck and pitched again in an incredibly short space of time. The troops at the Camps of Honvault and Wimereux were busily occupied during the afternoon in their ordinary field exercise, and they expended an immense quantity of powder in skirmishing and in volley and file firing.

At noon on Tuesday, the Emperor went to Ambleteuse, where the 16,000 men in camp defiled before him, as on the two preceding days at Equihen and Honvault. With his suite he travelled by carriage to the small village of Wimeille, which lies a short distance inland from the Camp of Wimereux. There they all mounted on horseback, and, with a large body-guard of Guides and *gendarmerie à cheval* in attendance, formed a magnificent cavalcade.

On Wednesday morning, at eight o'clock, the Emperor left Boulogne for the Camp at Helfaut, in order to make the necessary dispositions for a series of military manœuvres on a grand scale; which was expected, if the weather proved favourable, to commence on Thursday, at an early hour, at a village called Ecreuilles. An invading army will be supposed to advance from St. Omer with the view of attacking Boulogne. They will be met by a large force stationed between Ecreuilles and Desvres; and a series of military evolutions will commence, which will end in the retirement of the invading force upon Boulogne. The troops were to encamp upon the field on Thursday night, and on Friday the feigned engagement was to be resumed until the fate of the city of Boulogne will be supposed to depend upon the issue of a pitched battle.

These evolutions will terminate for the present the campaign of the Army of the North. The Emperor was expected to leave Boulogne for Paris on Saturday, and to return to the Camp in about a week. The journey to the Belgian frontier is postponed until his return.

The *Gironde*, of Bordeaux, gives the following, on what it states to be undoubted authority:—"The Emperor, preserving the strictest incognito, will leave Paris on the 18th, and arrive the same day at Bordeaux, where he will sleep; and on the following day will proceed to join the Empress at Biarritz. Two days after, their Majesties will quit their residence and return to Dax, where a fête will be given on the occasion of the inauguration of the part of the railway between Dax and Bordeaux, at which their Majesties will be present. From Dax the Emperor and Empress will proceed without further stoppage to this place, where they will arrive in the afternoon."

AN AMERICAN OFFICIAL.—Bill Johnson, the American smuggler, whose exploits on both sides of the St. Lawrence, and in the interiores of the Thousand Islands, made him famous during the rebellion in Canada, some seventeen years ago; and who, as a consequence of his active services, suffered a long imprisonment in the jail at Albany, was till lately the post of lighthouse-keeper on Rock Island—one of the above-named group—a short distance below French Creek. The island is what its name imports—a stump of rocks almost destitute of natural soil; but Johnson has quite a productive garden thereon, his vegetables deriving their sustenance from earth which he had transported from the main land in his boat. The salary of his office is small—either 350 or 400 dollars—but he lives frugally, and by picking up something outside of his regular business, by means of fishing and kindred pursuits, he manages to save a considerable portion of the amount every year. He is contented and happy, and fond of seeing visitors, to whom he recounts the romantic incidents of his varied career, and magnifies the achievements which have given him so much notoriety. He gives an amusing account of the manner in which he obtained his office, through the instrumentality of Governor Marcy. He went to Washington, without recommendations or credentials of any kind, depending solely upon his personal character. Obtaining an interview with the Governor, he disclosed his wishes, without ceremony or circumlocution. "I'm Bill Johnson," said he; "you know me by reputation, as I do you, if you don't know me by sight. I want the place of lighthouse-keeper on Rock Island, in St. Lawrence. If you can give it to me I shall be thankful; if not, I must try and do without it." "I've heard all about you, Bill, and know you perfectly well, you shall have the place." And a line from the Governor to Mr. Secretary Guthrie did the business at once.

PARKS IN LONDON.—Since the year 1830, four new parks have been added to the list in the course of formation, throughout the metropolitan districts. Finsbury-park, containing sixty acres, was opened in 1852, Battersea-park, containing eighteen acres, is now completed, and nearly finished. Victoria park, containing no less than two hundred and sixty-five acres, was completed in 1845. Hyde-park, containing three hundred and nineteen acres, is now in the course of formation. The sums expended upon these various places of resort are, in the aggregate, in round numbers, to £380,000.

PRINCE ALBERT'S VISIT TO BOULOGNE.

(From our own Correspondent.)

BOULOGNE, Sept. 11, 1854.

FIFTY years since, the great plateau which stretches above the town of Boulogne to Honvault and Wimereux, towards Calais, was alive with all the bustle and din of war. Tents were pitched, drums were beating, and trumpets sounding. In the distance the white cliffs of England shone, as they did last evening, brightly and distinctly to the naked eye; and, though fifty years have elapsed, the plateau is again covered with tents, drums are beating and trumpets sounding, and, as far as the eye can reach, the emblems of war meet the view. If a veteran of the Vieille Garde were to emerge from his tomb, he might fancy that the great army assembled had for object the conquest of the opposite shores.

What a happy change has since then taken place! The chivalrous sons of France now stand side by side with our gallant countrymen, fighting against despotism; their united flags forming, as happily expressed by the Emperor Napoleon III. at the recent banquet given to the Royal consort of our Queen, "a rainbow of liberty" against despotism. The general effect produced by the visit of his Royal Highness Prince Albert to France, has convinced every one that the *entente* between France and England is only *cordiale*, and there exists at the present moment a friendly feeling between the two nations—and I include every class of the population—which promises well for the future peace of the world.

The announcement that Prince Albert was to visit Boulogne created a considerable stir in this quiet population, and every incident connected with the visit became a matter of paramount importance. When the Folkestone steamer arrived on Saturday, the 2nd inst., the quays were crowded with curious spectators, to witness the arrival of the Guards. The steamer, however, steamed quietly to her moorings, no Guards being on board. A few hours later the smoke of another steamer became visible on the line of the horizon, and the crowds on the quays assembled denser than before. There was no disappointment this time. A loud cheer from the crowd welcomed the arrival of a small detachment of the Guards to French soil—an event which had not taken place since the celebrated meeting on the Field of the Cloth of Gold. Then the Horse Guards came twenty fine horses belonging to his Royal Highness Prince Albert. They were all landed without accident. The small detachment of Guards consisted of five Life-Guardsmen and two Blues. As soon as their steeds were landed, they saddled them with the greatest nonchalance, seemingly paying but little attention to the curious gaze of the crowd. An incident occurred between the time of their landing and of their mounting that will illustrate better than anything else the good feeling which prevails in France towards our army. Among the crowd were a number of the Guides, which, until the formation of the Cent Gardes, were regarded as the crack regiment of the French army—fine fellows, handsomely dressed, and picked men. As soon as the first Life Guardsman was ready to mount, two of the Guides went up to him and cordially shook him by the hand. A little boy, who did not reach quite up to the knee of the Guardsman, but who spoke the two languages, and acted as interpreter, intimated that they wished to drink a glass of wine with him. No sooner offered than accepted; and, on the open square in front of the *douane*, the Guardsman touched glasses, and quaffed a bumper to their mutual prosperity. The men and horses elicited universal admiration, and as they rode off in a body to the lodgings provided for them they were loudly cheered. "En voilà de beaux gaillards," said an Englishman, somewhat proud of his countrymen, to a pretty little grisette, standing in the square, who did not seem quite satisfied that the Guides appeared short near the stalwart Britons. "Vous croyez, Monsieur," she replied, "que nous n'avons pas des comme ça ici? Eh, bien! vous vous trompez!" And with an indignant "Est-il bête cet Anglais!" she walked off.

The dress and martial appearance of our Life Guardsmen will bear comparison with any body of men. The Cent Gardes of Louis Napoleon are, doubtless, a splendid body, and, when in full costume, with helmet and cuirass, have a fine appearance. Their undress partakes too much of the theatrical—a sky-blue frock-coat, with gold lace; red trousers, with gold stripe; a cocked hat, very tight waist, and straight sword. They are splendidly mounted, and are picked men. Their pay is more than double that of any other regiment. They form a devoted bodyguard round the person of the Emperor.—(One of the Illustrations represents a very spirited scene of Fraternization between our Guards and the Cent Gardes.)

Although your readers are *au courant* of all the events of the week preceding the arrival of H.R.H. Prince Albert, a short retrospective summary may not prove uninteresting. On Sunday the 3rd inst. him, Leopold of the Belgians and the Duke of Brabant paid a visit here. They left on the same evening at six o'clock. The Emperor accompanied his guests to the mole, and in a steamer which took them away. Their Majesties were loudly cheered by the crowds assembled to witness the departure. Shortly after the arrival of the royal party on Tuesday, the young king of Portugal, accompanied by his brother the Duke of Oporto the Duke of Terceira, Baron de Castello, and Baron de Pereira, Portuguese Minister at Paris, arrived. The city amidst the roar of cannon. A detachment of Guides escorted the Portuguese Monarch to the Imperial residence at the Hôtel Brighton. At two p.m. the Emperor drove out in a carriage and four, with his illustrious guests. The Emperor wore the grand cordon of Portugal, and the King the grand cordon of the Legion of Honour. Accompanied by a staff, they proceeded to the Camp at Honvault, where they passed in review the 42nd, 41st and 58th regiments of the line, and the 8th battalion of Chasseurs-à-pied. At half-past six the King of Portugal took leave of the Emperor.

Various reasons have been given for the very short visits of their Majesties of Belgium and of Portugal. The resignation *en masse* of the Belgian Ministry may have necessitated the immediate return of King Leopold, and the King of Portugal may have had important engagements elsewhere; but the visits of Kings are not like those of other men. Rules of courtly etiquette are laid down, which cannot be evaded; and it was a visit of the Emperor to devote himself exclusively to welcome the Consort of his ally Queen Victoria, and devote his time to him during his stay. The visit of Prince Albert is a fact of great political importance, and the cheers that greeted his arrival have doubtless echoed in St. Petersburg.

The sun shone brightly on the morning of Tuesday, the 5th of September; the sky was blue and cloudless; and a fresh breeze blew from the sea. At an early hour all Boulogne was on foot. The pier from seven o'clock to nine became gradually crowded with elegantly-dressed ladies and eager spectators. Telescopes were in great requisition to get a first glimpse of the squadron. Every preparation had meantime been made in the town for the reception of his Royal Highness. From the Hôtel Brighton, round the railway station, over the bridge and along the quay to the landing-place, poles had been erected, with flags flying, forming a pleasing and brilliant coup-d'œil. Shortly after nine o'clock the gaily-dressed boats of the *Victoria and Albert* became visible through the glass, and the greatest excitement prevailed along the pier. The Captain of the port, in his gig, pulled by twelve sailors, with a pilot, now pulled outside the port to await the squadron. The hulls of the Royal Squadron, the *Victoria and Albert*, and the *Wasp*, soon became distinct to the naked eye. Onwards they came at full speed, the united flags of England and France floating in amicable folds from the mast of the Royal yacht. The guns from the batteries announced that the Emperor had left Hôtel Brighton to welcome his illustrious visitor. The first official courtesy was a compliment paid to the consort of the Queen of England. His Excellency Lord Cowley, the British Ambassador to the Court of France, M. Drouyn de Lhuys, the French Minister of Foreign Affairs, and the Minister of War, were seated in the Emperor's carriage. Two other carriages contained the Emperor's staff. A detachment of the Cent Gardes preceded and followed the carriages, and a number of the Imperial Guard and troops of the line formed a continuous line from the Hôtel Brighton to the landing-place. The Emperor was in full uniform, with the broad red ribbon of the Legion across his breast, and various stars and orders. He was surrounded by a brilliant staff and all the civil authorities of the good city of Boulogne.

Having succeeded in obtaining an excellent position for observing all that passed, I am able to give you a faithful account of the meeting between the Emperor and Prince Albert. The Emperor was nearly five minutes at the landing-place before the Royal yacht came up. He was looking remarkably well, and conversed and laughed with the distinguished officers near him. The *Victoria and Albert*—amidst the enthusiastic cheers of thousands of liege subjects of our beloved monarch, and the no less enthusiastic shouts of the assembled French—glided in the harbour, and along the quay. The Prince, in a Field-Marshal's uniform, was standing on deck; by his side were the Duke of Newcastle, Lord Seaton, and other officers. It was about twenty minutes past ten when the yacht was moored alongside. The Emperor and the Prince raised their hats as soon as they perceived each other. The Prince, on stepping ashore, again raised his hat; the Emperor then put out his hand, and a most cordial shake was exchanged. The coup-d'œil at this moment was magnificent—all the vessels in the harbour gaily dressed with flags; brilliant uniforms in every direction; ladies' dresses of every hue. The batteries fired a salute of nineteen guns; and the military bands played "God Save the Queen." The cheering never ceased till the Imperial carriages had entered the Imperial residence.

After partaking of déjeûner with the Emperor, his Royal Highness left the Hôtel Brighton at four o'clock, with his Majesty, to visit the Camp at Honvault. The troops were drawn up in line to receive them. They were loudly cheered as they passed along the line, the troops presenting arms. The seven Life Guards and Blues escorted the Prince on horseback. In the evening the streets of Boulogne were brilliantly illuminated, and fireworks were let off from the heights above Capécure.

Wednesday passed over quietly enough at Boulogne. At seven in the morning the Emperor and the Prince left Boulogne to visit the Camp at Helfaut, and inspect the troops at St. Omer. They did not return till the evening. Crowds were assembled all day on the quay near the Royal yacht, which was visited by thousands. The *Hornet*, 17 (screw), the *Volcano*, 4 (screw), and *Salamander*, 6 (paddle), forming the escort of the Royal squadron, anchored in the roads at an early hour in the morning, and fired a Royal salute. They also came in for their share of visitors.

Not having been present at the review of St. Omer, I cannot pretend to give you an account of what took place there. The camps commence at Honvault, on the plateau above Boulogne. This is a permanent Camp—no tents are visible. The men are quartered in clay huts. Each hut holds twelve men. In fact, Honvault is an immense village of many hundred clay huts, with stone kitchens down the main street. High mass is performed here on Sundays. There is also an excellent *café*, with billiard-room. Weather permitting, dancing takes place every Sunday evening. Beyond Honvault the white tents of the camps at Wimereux and Ambleteuse are visible. They stretch along the coast to a distance of five or six miles. There is another Camp in the direction of Montreuil. These Camps form the basis of a triangle of which St. Omer is the apex. There is another Camp at the Capécure side. "France, at the present moment, is an armed camp of soldiers," observed a French officer to me, yesterday as I was sitting with him in his hut, at Honvault—"we could provide a million of men, if wanted; and believe me," he added, "if Prussia does not decide, next spring we cross the Rhine." This officer had served many years in Africa, and is the colour of mahogany. He [illegible] perfect cordiality and good feeling existed [illegible] as regards England; and expressed his conviction that the whole world could not do anything against the two allies. This is not an individual opinion, but is shared by all men here.

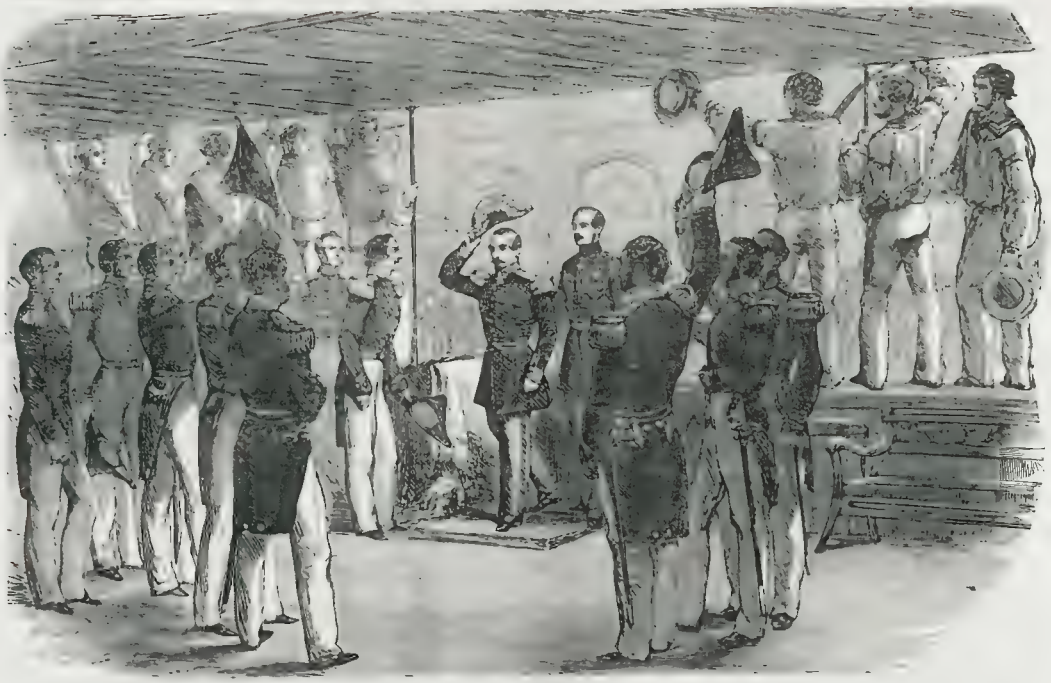
Of the grand banquet given by the Emperor to Prince Albert, at the Hôtel Brighton, I am able to give you some details. The Prince sat on the right hand of the Emperor; the French Ministers of Foreign Affairs and of War, the Duke of Newcastle, Lord Seaton, General Grey, Lord Cowley, the Hon. Captain Denman, and other officers of the Royal Navy and of the Imperial Staff, took their appropriate places. After dinner, the doors were closed. The Emperor proposed the health of her most gracious Majesty in nearly the following words: "J'ai l'honneur de proposer un toast à l'honneur de notre allié intime Sa Gracieuse Majesté la Reine d'Angleterre." The Emperor then alluded to the pleasure the visit of Prince Albert had given him, and finished with a sentiment of a political character, which was received by a burst of applause from all present. He said that the united flags of France and England formed a rainbow of liberty which would annihilate the yoke of despotism ("forment un arcen-ciel de liberté qui ane antira le joug de despotisme").

His Royal Highness Prince Albert replied in French, in a most appropriate speech. He expressed the gratification he experienced at his visit. He felt confident that his reception by the Emperor would be a cordial one, but the reception he had met with from the French people had touched him deeply. He expressed a hope that the Emperor would visit England, and felt confident that his reception by the English people would be as warm and friendly as that he had met with at Boulogne.

On Thursday the Emperor paid a visit to the Royal yacht; the weather was intensely hot, but it did not prevent crowds of elegantly-dressed ladies from waiting hours to witness the procession. The depth of the port of Boulogne allows vessels of heavy tonnage to anchor alongside the quay. It was about four o'clock when the Emperor arrived; he was attended by his staff and the usual body-guard. Prince Albert accompanied him. They were both loudly cheered as they stepped on board. The officers of the Royal yacht, assembled in a body, were introduced by the Prince to the Emperor, who conversed with each of them. They then went down stairs to the state cabin to partake of refreshment. The crew of the *Victoria and Albert* stood in rows along the deck. (There being no yards to man), and cheered lustily—a hearty British cheer—which rang through the air; and a finer set of tars cannot easily be found; they, in fact, with the Life Guards, came in for their share of admiration from the fair Boulonnaises. The Emperor only remained a short time on board the yacht, and then proceeded to his residence in the same order he had come.

In the evening a grand ball in the open place called the Tintelleries, was held; the place was lit up à la Vauxhall. A slight shower prevented many persons going. "God Save the Queen" and "Partant pour la Syrie" were played once or twice during the evening, and each time loudly cheered. Tri-coloured "ties" adorned the necks of many of the English guests. During the day the band of the "Guides" reported to be the best band in the French army, played a variety of opera airs and popular dances in the garden before the Etablissement. The Etablissement is to Boulogne what the Pavilion is to Brighton; it is the resort of the visitors. There is a reading-room, and balls are held three times a week.

The great event of the week was the grand military parade on Friday. It had been announced some days previous, and every vehicle and horse in Boulogne was pressed into requisition. Carriages were hired for donkey-carts, and on Thursday a horse was not to be had for love or money. Being a pedestrian, I secured a horse, and started to stand-by—or the Tendre. The spot selected for the military manœuvres was the village of Marquise, about seven miles from Boulogne, on the Calais road. The troops from the various Camps had on the previous days been concentrated near Marquise. The manœuvres were the conclusion of a regular sham battle; the enemy to be commanded by General Schramm, the Imperial troops by the Emperor in person. Everything was planned and conducted according to the rules of war. At half-past five [illegible] I mounted my steed—which, if no Arabian, nevertheless carried me well through the heat, and dust, and smoke of the day; and, having once been a trumpeter's horse, happily was not alarmed at 12-pounders going off at each side of him, and showed the utmost contempt at a whole battalion firing point-blank at him. The road was already alive with good folk hurrying to the scene of operations. Sturdy pedestrians, carriages with [illegible] and [illegible] in uniform, were scattered over the road, jogging on at about three miles an hour. About half-way to Marquise, an Imperial [illegible] passed me at the [illegible] at the head of [illegible]



VISIT OF THE EMPEROR OF THE FRENCH TO THE ROYAL YACHT, AT BOULOGNE.

squares to resist the charges of the cavalry. The enemy was beaten, and General Schramm retired on Wissant—the spot still designated as Cesar's Camp, where he embarked to invade England.

This terminated the fighting for the day. The Royal party found an ample cold repast in an elegant pavilion erected near the Château d'Alenthum. All among the road small pic nics were established: Hampers were unpacked, champagne corks flew about, and universal edification commenced. The road to Epsom is dusty enough, but I will back the Boulogne road against any in Christendom in that respect. Horses and carriages, guns, baggage carts, vivandières (by no means so elegant as Jenny Lind in "La Figlia!") general officers, detachments of cavalry—all in one great moving mass, moved on, some fast, some slow, in the homeward direction. The whole country soon had the appearance of one vast camp. Each soldier carried a tent stick, and in an incredible short time tents were pitched, fires lit, and *pots-au-feu* cooking.

Taken all together, the sight was magnificent. I do not like to hazard the amount of military on the field. It was given at between 80,000 and 100,000 according to different versions.

During the manœuvring, Prince Albert expressed a wish to go over and see General Schramm's division. The Emperor immediately ordered young Ney one of his Aides de Camp, to accompany and explain the manœuvres to his Royal Highness. With the exception of the fall already mentioned, I do not believe that a single accident occurred.

In the evening his Royal Highness took his departure for England. From the Hôtel Brighton to the Royal yacht, the road was brilliantly illuminated. The initials V. A. N. E., in variegated lamps, adorned the façade of the Custom-house. The sea was as calm as a lake, and a fine clear, bright moon was in the heavens. The whole population of Boulogne turned out to give a parting cheer to the illustrious visitor.

Shortly before eleven o'clock the Imperial escort, with outriders bearing torches, arrived on the quay. Sitting on the right hand of the Emperor, in an open calèche, Prince Albert evidently seemed touched at the enthusiasm of the people, and the preparations to do him honour The crews of the Royal yacht, *Black Eagle*, and *Vivid* held blue lights which had a curious and brilliant effect upon the surrounding buildings, shipping, and crowd. The Prince having taken leave of the Emperor, Generals, &c., entered the Royal yacht, which, on weighing, sent up a shower of brilliant rockets, amidst the cheers of the crew. The whole scene was one of fairyland, and will long be remembered at Boulogne. When outside the harbour, the *Victoria and Albert* sent up another splendid bouquet of rockets as a last greeting.

Thus ended this memorable visit. England and France are now joined, instead of separated, by the narrow Channel which runs between them. The national feeling between the two nations is now one of love and sympathy. The united flags of France and England "form a rainbow of liberty to destroy the yoke of despotism."

FRATERNISATION OF THE BRITISH HORSE GUARDS AND THE FRENCH CENT GARDES, AT BOULOGNE.—DRINKING HER MAJESTY'S HEALTH.

THE MONUMENT OF LORENZO DE MEDICI.

He meditates, his head upon his hand.
What frown beneath his helm-like bonnet scowls?
Is it a face, or but an eyeless scull?
The lost in shade, yet, like the basilisk,
It fascinates, and is intolerable.
ROGERS.

ONE of the most judicious resolves of the Artists engaged in the superintendence of the Crystal Palace at Sydenham has been, to assemble within its crystal walls, in Courts of corresponding artistic character, the principal works of ancient sculpture, as Mr. Ruskin felicitously phrases it, "on a scale which permits the exhibition of monuments of art in unbroken symmetry."

One of the noblest examples occupies the centre of one of the arcades of the Italian Court: it is the celebrated Monument of Lorenzo de Medici, by Michael Angelo, from the famous Capella dei Medici, attached to the Church of San Lorenzo, at Florence. It was executed by the order of Leo X., who died in 1521; but was not completed (together with that of Giuliano, on the opposite side of the Court), till the time of Pope Clement VII., also a Medici. By aid of Mr. Delamotte, as photographer and draughtsman, we have engraved the first-named monument, which is thus described in the "Handbook to the Italian Court," by Mr. Digby Wyatt and Mr. J. B. Waring:—

Lorenzo de Medici, the nephew of Leo X., to whom this monument was raised, was only noted for his vices, inherited by his daughter, the notorious Catherine de Medici. He died in the year 1519. A man of Lorenzo's character could never be respected by such a man as Michael Angelo, to whose stern and noble soul the vices of the former must have been peculiarly repellent. We need not expect, then, a monument in honour of that Prince; and should regard it rather as the chef-d'œuvre of those purely ideal subjects, which no man before or since Michael Angelo's time has so thoroughly rendered.

Thus the statue of Lorenzo himself has received from the Italians ever quick at comprehending the artist's meaning—the name of "Il Pensiero," *Thought*. And much better does it present an idea of some stern and terrible being, watching with unswerving gaze the course of Lorenzo's life an armed Fate awaiting his disembodied soul—rather than a representation of Lorenzo himself.

We think that in order justly to appreciate this monument and its companion, they should be regarded only as expressions of sentiment or embodiments of some thought; and as such they rank certainly among the most remarkable productions of the kind which the great author of them has produced.

The reclining statues on the pediment are called Twilight and Dawn. Nothing can well be conceived more grandly mysterious than the unfinished head of the figure by which Twilight is allegorised; the Aurora or Dawn is represented by a female figure of great power, whose relation to the subject named is, however, not quite clear. They are especially fine examples of the style of composition advocated and practised by Michael Angelo, which we have already alluded to; but to him alone was it given to unite exaggeration to truth without offending. His followers copied his faults, for they are the most easily detected, the spirit was wanting which, like charity, covers a multitude of sins; and it is Michael Angelo alone who could successfully venture to do what Michael Angelo has done.

THE MONUMENT OF LORENZO DE MEDICI, BY MICHAEL ANGELO, IN THE ITALIAN COURT, AT THE CRYSTAL PALACE.

Forsyth highly commends the chasteness of the design of the Chapel de Medici, "though its architect was a prince, and its walls were destined to receive the richest crust of ornament that ever was lavished on so large a surface." The figures of Twilight and Dawn, on the pediment of the Monument, are unfinished; "but," says Forsyth, "so sacred is the terror of Michael's genius, that these statues remain untouched and inviolate, in the midst of restorers who are daily trifling with the sculpture of antiquity."

THE LIEBIG TESTIMONIAL.

THIS magnificent group of Plate is now attracting the highest admiration at the Industrial Exhibition at Munich; and, as a fine specimen of British artistic design and working in metals, it merits that distinction. It has been purchased for presentation to Baron Liebig, the eminent chemist, out of a subscription of upwards of one thousand pounds (£1069 8s. 6d.), from about 360 subscribers; among the names of which are eminent statesmen, and men of celebrity in almost every branch of science.

After paying the expenses of collection, &c., the net balance amounts to £930—one-half of which was expended in the purchase of five pieces of Plate, manufactured by Messrs. Hunt and Roskell; Baron Liebeg having expressed a wish that the gift should consist of the above number of pieces, in order that each of his five children may inherit a portion of the plate—consisting of the Warwick Vase, two Candelabra, two Claret or Beer-jugs. The remaining £460 was expended in the purchase of a bill in favour of Baron Liebig.

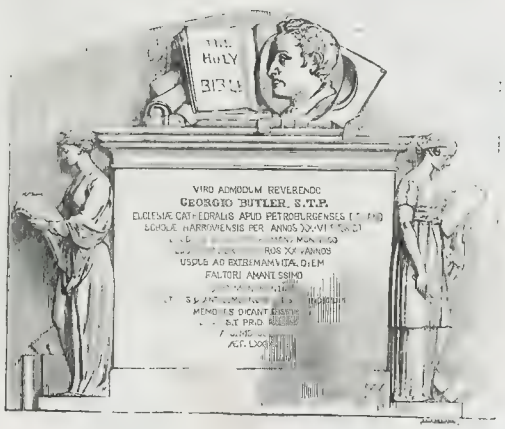
Dr. Hofman, Professor of Chemistry at the School of Mining (Jermyn-street), is charged with the presentation of the Plate, and an address emblazoned on vellum.

MONUMENT TO DR. BUTLER, IN HARROW CHURCH.

THIS very interesting tribute to the distinguished worth of the late Dean of Peterborough, Dr. Butler, has recently been erected in Harrow Church, by the contributions of those old Harrovians who were under his care, and who appreciated his invariable kindness to them.

The Monument—executed in marble, by Mr. Richard Westmacott, R.A.—is placed within a moulded recess of Caen stone, in character with

THE LIEBIG TESTIMONIAL.



MONUMENT TO THE LATE REV. DR. BUTLER, IN HARROW CHURCH.

the windows, on the east side of the south transept. On either side of the table bearing the inscription is a small statue One represents a female reading an unfolded MS., and having at her feet the *scrinium*, filled with rolls of MSS., and who may be considered to impersonate Classical Literature. The other, also a female figure, is represented as in deep thought, and regarding a tablet supported by the left hand, while in the other she holds a pair of compasses. She may be held to designate Mathematical Science. The upper part of the Monument exhibits a medallion portrait of Dr. Butler resting against an open Book-Roll, with the Words "Sermones" and "Dissertationes" on it. The inscription, written by Dr Valpy, is as follows:—

The Monument is placed almost immediately under that of Dr Sumner, who died Head-master of the School in 1774.

NATIONAL SPORTS.

From twice one hundred thousand throats, rushes the Yorkish cheer
And the name of the winner proudly flies a league from the course more
—EDMUND DOYLE

We give below such a full account elsewhere of the absorbing national festival at Doncaster, which has, with the exception of a quartet of very minor affairs, occupied the past week, that little else need be said on it. The Pontefract people have again wisely made their fixture for Monday and Tuesday next, so as to avoid Doncaster horses; and they have ten races, with an average of £40 10s. added to each. Bedford occupies Tuesday and Wednesday; Leicester, Wednesday and Thursday; and Manchester Autumn, Thursday and Friday. Newport and Lanark are also fixed for the end of the week: so that the turfite will long more than ever for the peculiar talent of Sir Boyle Roche's ubiquitous little bird. Yatching and its cool delights are not very rife during the week. On Monday the Medway Regatta comes off, with a profusion of sailing and rowing prizes; and, on the same day, Ledger is to row Thompson from Putney to Hammersmith-bridge, for £10 a side. Cricketing wanes to a close. The Highbury Vale and West Hagley Amateurs play their return match at Highbury on, Monday; and the Bungerford Park Club and West Hants pay each other that compliment at Appleshaw, on the same day; while the North London and Oxford Hill return match is also fixed for Tuesday. The members of the Everley Cricketing Club open their season on the following Wednesday week, with a club dinner at Amesbury; which will be succeeded by two days' sport, under the judicial eye of Mr. MacGeorge, who seems to be as popular as ever in the south.

DONCASTER RACES.

THE Corporation racing festival which has just passed by, was in point of quantity of sport, the very finest ever held at Doncaster. Still, the absence of the military, and the sad [illegible] during the present autumn, operated a check; and the receipts on the first day were (though not far short of £2000), nearly £200 less than last year. Owing to the continued drought, the course was never harder, but Doncaster critics considered that they had seen no herbage browner. Water-carts seemed powerless against the dust, which, we need to say, only one horse broke down on the first day, and [illegible] saw only one or two others show any symptoms of heaviness. The [illegible] was by no means full, but the Earl of Scarbrough entertained a large party, including Lord Zetland, at Sandbeck. Earl Derby, [illegible] in the course of Monday, and appeared on the Town [illegible] evening with Scott's string, which he accompanied, on the [illegible] walk round the St. Leger course, as is his annual wont. [illegible] Cardinal third, fourth, and fifth among the ten out. Boiardo [illegible] he stopped in his stride, put his head down, threw up his heels, and flung Job Marson off. Luckily, he fell very lightly, and, jumping on again, ran off back towards the winning-post, just in time to meet his runaway winning [illegible] to be led in. [illegible] got another of his [illegible] style in which the Reiver kept up [illegible] then jumped the rails as a finish, created great merriment [illegible] made up for his ill-luck by winning mount [illegible] Cardinal, very beautiful, and firm in his coat, and won very [illegible] preferred to keep his colt quiet for [illegible] engagement; and thus the meeting of the scions of the [illegible] consorts of old — to wit, Van Tromp and Chanticleer — [illegible] Derby Day. A dead heat, which the friends of [illegible] refused to compromise, carried off the Revival [illegible] Plate. We have seldom seen two prettier races, and the [illegible] Ellerslie (who gave 12 lbs.) a mare for no mean [illegible] recovered at York.

Nothing could be more beautiful than the St. Leger Day; but, although [illegible] was as great and as earnest on its favourites as ever, there was little betting off inside the enclosure, which is nothing more than the fate of nearly every great meeting this year. The ladies in the morning were well attended, and among other high prices, a chestnut [illegible] of Mr. Cookson's fetched 1020 guineas. Sir Tatton Sykes, who [illegible] held his time-honoured place on the [illegible] Pattenden's rostrum, and at the course-gate of the enclosure. As the morning advanced, The Trapper began to be [illegible] with Ivan and Calamus, were in some little demand. Twenty-two started, and left the [illegible] eighteen appeared. The parade was more neatly managed, and more imposing than we have seen it for many a year. Lord Derby's three appeared, as the second bell rang, from the Rubbing-house his Lordship and Scott walking [illegible] Derwish (who began to be fidgetty) down the [illegible] we way on the scrutiny. [illegible] much liked as Acrobat, [illegible] style at going [illegible] s could challenge very [illegible] Ivan [illegible] Calamus, [illegible] a [illegible] horse, and it [illegible] Ivan [illegible] £600, refused a £1800 bit [illegible] Ivan [illegible] a month since. Knight of [illegible] horse, with so much [illegible] is fairly obliged to [illegible] though the stable [illegible] capable of, they had [illegible] other than he was [illegible] The whole eighteen [illegible] Catch [illegible] breathless silence, [illegible] Derby [illegible] turn a tour more [illegible] Judge [illegible] they reached [illegible] thing can easily [illegible] a yellow jacket on [illegible] looked for [illegible] Scott, [illegible] of all Lord Derby's horses [illegible] bought [illegible] [illegible] have been rather dull. In prices, however, [illegible]

[illegible] been very flat throughout the day. They opened [illegible] ¼. The Unfunded [illegible] has varied but little [illegible] Railway Shares have been dull.

wanted them no more; and, like the Tarpeian Maid of old, Mr. Morris was almost crushed with the compliments, hand-grapsings, and pattings on the back, which he had to undergo, before he could reach his horse's head. Arthur Wellesley was third, but not near enough to be placed; Scythian fourth, Acrobat fifth, and Bolardo sixth. Derwish "nowhere." Private trials and public running were alike at fault. Acrobat has beaten Arthur Wellesley twice, in a canter, and Ivan with equal ease; and here he had no chance with them. Again, John Scott's St. Leger trial was Bolardo first, Acrobat third, and Scythian fourth; and last. Mr. Padwick was dissatisfied, and removed his horse to John Day, in consequence; and here Scythian finishes first, Acrobat second, and Bolardo third. Calamus must have been very good, or if he had been a dead heat, he would have been put up to ride the deciding one, in the place of Ashmall, who, though he rode as well as had could do, was obliged to carry more than 21 lbs. of dead weight, to draw the last 2 lbs. Mr. Morris had backed his horse very heavily, and certainly the St. Leger will be remembered to the end of time as one of the most extraordinary ever known. The only solution of it can be, that Scott's horses are accustomed to such very soft, firm, tan gallops, that they do not feel as home on the hard ground. Knight of St. George ran as fast as anything in the Derby to Tattenham-corner, but showed temper. His subsequent running has been good, both at Worcester, and Newcastle, and Goodwood; but his two-year-old ones in Ireland were very uncertain. Nothing could explain the Steadiness with which Basham rode him, but the result has caused very bitter disappointment to the Yorkshiremen, many of whom were loyal to Ivan to the last. He is the first of the Van Tromp foals, and he did not disgrace his sire.

Lord Derby's luck revived in the Municipal Stakes, which introduced his Derby colt, De Clare, to public notice. It had been freely stated, in the morning, that Scott considered him better than Bonnie Morn, but no one expected to see [illegible] in hopeless difficulties at the distance. Gretna waited till close on the post, and then went up and secured the second money. The winner is not unlike Boiardo, his half brother, and is a very well-grown animal; but perhaps rather high on the leg. And [illegible] added the great St. Leger Dog of 1854, which has entirely destroyed all belief in "dead certainties." The Doncaster Cup is engraved at page 249. The following is the return of the running:—

TUESDAY

1 Ilzwilliam Handicap Stakes.—Of 10 o. 1. Corin, 2.
Filly Stakes.—The Disquiet, 1. Lady Grecian, 2.
Match, £200.—Cimiche, 1. Evangeline, 2.
Stand Plate.—Early Bird, 1. The Deformed, 2.

Town Plate.—Sir Rowland, 1. Knight of Trumps, 2.
Leconfield Cup.—Virago, 1. Impetuous, 2.
Nursery Stakes.—Amy, 1. Capsicum, 2.

MONETARY TRANSACTIONS OF THE WEEK

(From our City Correspondent.)

Although money has become more in demand, and is somewhat dearer in Lombard-street, very few first-class bills being done under per cent, and, although there has been the usual monthly settlement, the Consols market has been firm this week, and the quotations have had an upward tendency. No doubt, the unusually favourable accounts which have reached us from nearly all parts of the country in reference to the immense growth of wheat and other grain, have had considerable influence upon the jobbers. Well-informed persons estimate the produce of the wheat crop at nearly, or quite, 8,000,000 quarters in excess of 1853. Should this statement prove correct—and we have every reason to believe that it is very near the truth—the country will experience for the next eight months to pay for foreign corn will be comparatively small.

We still continue to receive large remittances from New York, upwards of £200,000 having come to hand. In addition to the supply, there has arrived £70,000 from Brazils, and about £200,000 from Australia. From that colony, large supplies of gold are known to be on passage, and close at hand. The shipments of bullion have been about £1,00,000, chiefly to France and Belgium.

On Monday Consols were steady. The Three per Cents were done at 93¾ 94, and Consols for Account, 94¼ ⅝. The market for Exchequer-bonds has been firm, and a steady advance has taken place in the premium. They were done at 98s. 8s. Exchequer-bonds marked 99¾ 100. There was some animation in the Market on the following day. The Three per Cents, for Money, were ⅝ ¾, and for the Account, 94¾ ⅞. The New Two-and-a-Half per Cents realised 81¾; Exchequer-bills, 98s. 8s. prem.; Exchequer-bills, 99¾ to 100. On Wednesday, the Three per Cent Consols were done at 94¾ ⅝ Long Annuities, 1860, 4¼; India Stock was 92¾. India Bonds, 6s.; Exchequer-bills, 8s. 9s. prem.; Exchequer-bonds, 1859, 100¼. As there was rather a large delivery of Stock on Thursday, Consols showed signs of weakness. The Three per Cents marked 94⅝ ¾, 95⅛ ¼ to ⅜. Time bargains were done at 95⅛ ¼. Exchequer-bills were 6s to 9s.; and India Bonds, 8s. prem. Exchequer-bonds, both of 1858 and 1859, were done at par. Last night was the half-yearly meeting of the Bank proprietary was held at the Mansion-house. The profits of the year were £625,926 6s. 1d., making an amount of rest on the 31st of August, £3,364,312 8s. 1d. After the payment of the usual dividend—4½ per cent for the half-year, free of income-tax—the rest would be £3,0[illegible]

The Foreign House has been tolerably steady. Mexican Three per Cents have realised 24¾; Sardinian Five per Cents, 88¾; Spanish Three per Cents, 22¾; Ditto, New Three per Cents, 18¾; Ditto. Passive, 4¼; Brazilian Five per Cents, 102; Turkish Scrip, 5¾; Dutch Two-and-a-Half per Cents, 62; Dutch Four per Cents, 94⅜.

There has been rather a firm market for Joint-Stock Bank Shares, and prices have been well supported:—Australasia have marked 85; London and Westminster, 41¾; Oriental, 44; Provincial of Ireland, New, 20; South Australia, 40¾; Union of Australia, 45¾. Miscellaneous Securities have been tolerably firm: Australian Agricultural, 6¾; Berlin Waterworks, 1; Canada Government Six per Cent Bonds, 1 £5, 28; Ditto, New Annuities of £57, 25; Vauxhall, 21. Canal Shares have been tolerably firm:—Coventry have marked 203; Derby, 80; Grand Surry, 48; Leicester, 86; Loughborough, 87½. Navigation, 90; Grand Junction, 96; Regent's, 16, Rochdale, 66; Stafford and Worcester, 107; Stourbridge, 5-8; Worcester and Birmingham, 32. Kent Waterwork Shares have been done at 80; East London, New, 2¾ prem.; Grand Junction Water, 85; Lambeth, 97; New River Annuities (expiring 2082), 55; Southwark and Vauxhall, 89¼; West Middlesex, New, 12. Gas Light and Coke Companies' Shares have been dull, and, until now, have been well maintained:—Brighton, 15; Equitable, 26; Great Central, 12; Imperial, 83¾ ex div. and ex new; Phœnix, 26¾ ex div.; Ratcliff, 7; United General, 5; Westminster Chartered, 9; Western, 9½. Fire Insurance Companies have been very inactive:—Atlas, 18 ex div.; City of London, 2¾; County, 125; Crown, 18; General, 5¾; Globe, 128½; Hope, 5; Imperial Fire, 5¾; Imperial Life, 3; Kent, 3; Lancashire, 5¾; Law Life, 85¾; London, 29½; Pelican, 45; Phœnix, 18; Rock Life, 7¾; Sun Fire, 202; United Kingdom, 4¾ ex div.

The settlement in the Railway Share-market has passed off tolerably well. On the whole, the mart has been firm, and prices have been well supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction 4¾; Eastern Counties, 12½; Great Northern, 89¾; Great Western, 74¾; Lancashire and Yorkshire, 76¾; London and North-Western, 104; Ditto, £10 Shares, 12¾; Manchester, Sheffield, and Lincolnshire, 16; Midland, 72; North-Eastern (Berwick), 79; Ditto, York, 56¾; South-Eastern and Dover, 21¾.

RENTALS.—London, Tilbury, and Southend, 11⅜.

PREFERENCE SHARES.—Great Northern, 4½ per Cent, 100; North-Western, Berwick, 5 per Cent, 95¾.

FOREIGN.—Great Luxembourg, Obligations, 3; Paris and Rouen, 9¾.

Railway Bonds have been rather dull. In prices, however, [illegible]

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's arrival of English wheat, constwise has been but moderate. Fresh up to-day, the receipts by land carriage were limited, and the show of samples was small. For most kinds we had a steady demand, and fine qualities realised an advance of 1s. per quarter. Old wheats were quite as dear as on Monday. We were by no means well supplied with wheat from the imperial continental millings. Almost an average business was transacted, and in some instances, the quotations were in favour of the sellers. Floating cargoes were tolerably steady. The demand was moderate inquiry for grinding barley, at very full prices; but [illegible] for malt was dull. We had a steady sale for oats at an advance of 1s. per quarter. Beans and peas met a dull sale, but fine were firm. The top price of English was 35s. per 8cl bs.

ARRIVALS.—English: wheat, 1720; barley, 120; malt, 8730; oats, 50; flour, 320. Irish: oats, 200. Foreign: wheat, [illegible]; barley, [illegible]; oats, [illegible]; flour, [illegible].

English.—Wheat: Essex and Kent, [illegible] to 60s. ditto, white, 52s. to 59s.; Yorkshire and Suffolk, red, 48s. to 54s.; ditto, white, [illegible] per quarter. Barley, [illegible] to 36s.; distilling, [illegible] to 34s.; grinding, [illegible] to 32s. Malt, [illegible] to 72s.; Ale and Suffolk, [illegible] to 72s. Beans, [illegible] to 36s.; pigeon, [illegible] to 38s. Peas, [illegible] to 36s.; maple, [illegible] to 36s. Oats, [illegible] to 24s.; potato, [illegible] to 25s.; Scotch and Irish, [illegible] to [illegible]. Flour, [illegible] per sack. Linseed cake, [illegible] per ton. Rapeseed, [illegible] to 15l. per last. Canary, 40s. to 46s. per quarter. English clover seed, white, [illegible]; ditto, red, [illegible].

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9d.; of household ditto, 7d. to 8d. per 4 lbs. loaf.

Seeds.—We have to report a dull [illegible] of [illegible] cake, 37s. 6d.; rape, 36s. 9d.; brown, 40s. 0d.; poppy, 58s. 0d.

The Hay Market was [illegible] with a [illegible] and [illegible] quantity. Rape cakes are [illegible].

Liverpool.—Inquiry, steadying, 6d. to [illegible]; Italian, crushing, 58s. to 60s.; Mediterranean and Odessa, 45s. to 52s.; hempseed, 40s. to 44s. per quarter. Coriander, 8s. 6d. to 9s. per cwt. Rapeseed, unrefined, [illegible] per ton; refined ditto, 72s. to 73s. 6d., and tares, 44s. to 45s. per bushel. English rape-seed, £36 10s. to £39 per last of ten quarters. Linseed cakes [illegible] to £6 10s. to £7 5s.; ditto, Baltic, £7 10s. to £8 10s. per ton. Rapeseed cakes, [illegible] to £5 15s. per ton. Canary, 40s. to 46s. per quarter. English clover seed, white, [illegible]; ditto, red, [illegible].

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9d.; of household ditto, 7d. to 8d. per 4 lbs. loaf.

Seeds.—We have to report a dull [illegible] of [illegible] cake, 37s. 6d.; rape, 36s. 9d.; brown, 40s. 0d.; poppy, 58s. 0d.

The Hay Market was [illegible] with a [illegible] and [illegible] quantity. Rape cakes are [illegible].

Liverpool.—Inquiry, steadying, 6d. to [illegible]; Italian, crushing, 58s. to 60s.; Mediterranean and Odessa, 45s. to 52s.; hempseed, 40s. to 44s. per quarter. Coriander, [illegible] to [illegible]

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—Last Nights of the SPANISH DANCERS. Monday, and during the Week, Mr Buckstone, the Irish Assistant, Mr Tyrone Power, and Mr Compton, will appear in their original characters. Persons [illegible] Assistant [illegible] Servants [illegible] Governesses [illegible] Clerks, [illegible] Agents, [illegible] Couriers, [illegible] Travelling Companions, [illegible] Valets, [illegible] Footmen, [illegible] Grooms, [illegible] Cooks, [illegible] Housemaids, [illegible] Nurses, [illegible] Nursery-maids, [illegible] Governesses, [illegible] Schools, [illegible] Tutors,

SURRENDER OF THE TOWER OF PRASTO, BOMARSUND.

THE SURRENDER OF PRASTO.

(From a Correspondent.)

The Tower of Prasto, one of three forming the outworks to the great fortress of Bomarsund, stood on the north-east angle of the island of that name. It mounted twenty guns—in two tiers of casemates; and six *en barbette*, on the roof—covering with its fire the approach from the northward to the main channel, through which ships must pass in going to the southward of the Aland group On the 15th ult. it was invested by a combined force of French and English Marines, with some field-guns; and on the morning of the 16th it was bombarded at long range, for nearly three hours, by a squadron of English and French steamers, under Rear-Admiral Plumridge, without receiving any material damage. On the surrender of the large fort becoming known, this fort ceased firing; and at 5.30 p.m. a white flag was hoisted on the tower, the gate thrown open, and the garrison marched out, fully equipped, and formed on the plateau in front. Some companies of the investing force were immediately brought down, and the commandant, advancing to meet them, surrendered at discretion to the French and English Commanders, Lieut.-Colonel De Vassoigné, and Captain Lowder, R.M., of H.M.S. *Arrogant*. The garrison, consisting of 140 men and three officers, was very shortly afterwards embarked in a French steamer for conveyance to Bomarsund. The damage done to the tower by the fire of the steamers was almost entirely confined to the roof and guns *en barbette*, two of these were disabled, and the framing of the roof considerably shattered by shot and shell; neither the solidity of the masonry nor the security of the bomb-proof defences was in any way affected. Two men were found killed, and three wounded, by the fire of the steamers, in the morning.

The accompanying Sketch, taken on the spot, represents the surrender of the Commandant of the fort to the French and English forces. On the left of the plateau are two companies of French infantry, with their colours and two field-pieces; a third field-piece in the gateway. The garrison is drawn up in front of the tower; they wore helmets and long grey coats, black cross belts, and carried long bright-barrelled muskets. In the centre, the French Commandant is in the act of receiving the sword of the Russian Colonel.

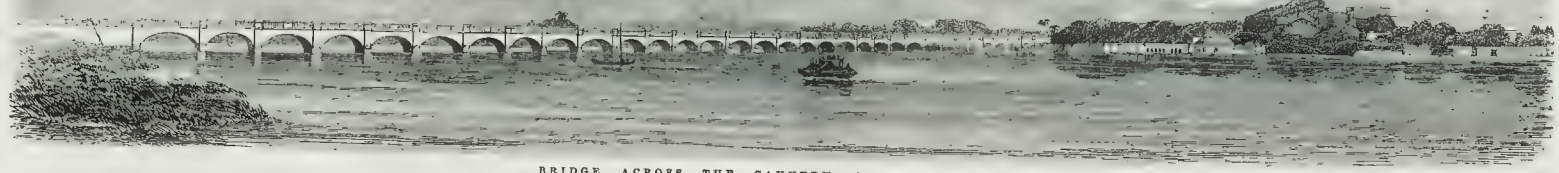
THE KULELIEH BARRACKS.

In these handsome Barracks were quartered the Scots Greys, on leaving the *Himalaya*. On the day on which the accompanying Sketch was taken, a battalion of the Royal Artillery was disembarking from the *Jason* screw-propeller. The carriages and powder-waggons were discharged first. Next were drawn out the gun-carriages; next, a couple of flat boats with decks (as the vessel could not come close up), and then the barrels were let down into their places. On the balcony of the Barracks, directly in front of the vessel, was a Turkish band playing for the gratification of their brethren in arms. The English and French soldiers cannot understand why the Turks should claim any superiority, and they have no idea of being a whit lower than any one; consequently, the Turks begin to get knocked about in a way they never dreamed of till now. When the troops first arrived, an English soldier, who was walking alone in the streets of a Turkish quarter, met a harem, accompanied by a eunuch, as usual. The eunuch ordered him aside; but the Englishman thought he had as good a right as anybody to be where he pleased, and would not budge. The eunuch came up and tried to push him aside, but soon found himself floundering in the dust. He rose in a violent passion, and was about to revenge himself upon the soldier, but for the interference of some Turks, wiser than himself, who told him it was no use, nobody could do anything with these "Inglis."

The Sketch faces up the Bosphorus, in a north-westerly direction.

These Barracks lie on the Bosphorus, about a mile above the Sultan's summer palace.

THE KULELIEH BARRACKS, CONSTANTINOPLE.—THE ROYAL ARTILLERY DISEMBARKING FROM "THE JASON."



BRIDGE ACROSS THE CAUVERY, AT TRICHINOPOLY.

BRIDGE ACROSS THE CAUVERY, AT TRICHINOPOLY.

TRICHINOPOLY, once the stronghold of British power in Southern India, and rendered famous by the deeds of Clive, Lawrence, Dalton, and other heroes, includes within its walls and suburbs a population of 70,000 persons, whose daily supplies of provisions and other necessaries are, in great measure, derived from the fertile lands on the opposite banks of the rivers Cauvery and Coleroon; the former being 600, and the latter, at a mile and a half distance, 800 yards wide.

Until recently no bridge crossed either stream; the passage being effected by two public ferry rafts, formed of double canoes, or by numerous circular basket boats owned by private persons; and the delay and sometimes danger during high floods and violent winds were considerable. In 1837 the Court of Directors granted a sum of 40,000 rupees for building a bridge over the Cauvery; but, this being found inadequate, the project was laid aside until 1845, when the measure was again urged by the collector, Mr Onslow, and sanction was given by the Marquis of Tweeddale, then Governor, to an estimate of 71,000 rupees.

The work was commenced in 1846; but in April, 1847, operations were interrupted, and the unfinished works seriously injured, by a violent and unseasonable storm, which ravaged all Southern India, so that the Bridge was not completed and opened till June, 1849, after an outlay, including all damages, of one lac of rupees, or £10,000.

The Bridge is built entirely of brick, and covered with white Chunam plaster. The foundations are of wells sunk nine feet in the sandy bed of the river, and are secured by a retaining wall between the piers. The arches are elliptic, 40 feet in span, and rising 12 feet from the springs. The piers are 7 feet thick, and 8½ feet high. The roadway is 25 feet wide within the parapets; and the total length of the Bridge from wing to wing is 1895 feet, or rather more than a third of a mile. The Bridge was designed and built by Major Edward Lewford, of the Madras Engineers.

The accompanying Sketch has been taken a short distance above the Bridge, on the western, or up-stream side of the northern approach, on the island of Seringam, and gives a view of the Trichinopoly Rock, from the summit of which waved the British standard during an investment by the French of four years, in the course of which were fought many desperate engagements, some of which were close to this spot. It will be remembered that more than 300 persons perished by suffocation in 1849, in their descent by a covered passage from this rock on the occasion of a Hindoo festival. The scene of this catastrophe has been engraved in the ILLUSTRATED LONDON NEWS.

HONG-KONG AND SHANGHAE.—RECEIVING THE NEWS OF THE WAR ON BOARD H.M.S "WINCHESTER."

(From a Correspondent.)

WHEN war has been once declared, and that war a most mighty struggle, the movements of every commissioned ship of war acquire peculiar interest; and the flag ship, bearing the Commander-in-Chief of a station, bounded by both Polar circles, and extending round one-third of the earth's circumference, charged with the protection of our interests on Indian shores, and in the China seas, will, it is reasonable to expect, be interesting to home readers. H.M.S. *Winchester* was quietly anchored in the harbour of Hong-Kong on the 24th of May, 1854—the anniversary of the birthday of our gracious Queen, which was right loyally observed in that her distant colony, by a very creditable display of bunting, and a very absurd waste of gunpowder, proving, beyond doubt, to the eyes and ears of Terrestrials and Celestials, the brilliancy and the power of those loyal sentiments which animate true British hearts in every clime, on every day, especially on the 24th of May.

The mail-steamer from England arrived on the 25th, and great excitement prevailed when, the gun and flag of the Harbour Master's office having announced her approach, she was seen rounding the point, spreading to the breeze the signal "War is declared!" In three hours after, the *Winchester*, *Spartan*, and *Barracouta* were gliding from their anchorages, as if they felt that signal had given them some work to do, and that the sooner they went to do it, the better. The wind was adverse and very strong. The *Spartan*, having sprung her main-yard, was sent back to Hong-Kong; while the steamer taking the frigate in tow, a course was shaped northerly to Shanghae. As soon as the operation of clearing out of the harbour was done, the whole of the officers and ship's company were sent for, and when they were assembled on the quarter-deck, the Captain read to them the Declaration of War contained in the Queen's Proclamation. He then piped down; not another word was spoken—not a sound heard. There was a calm satisfaction apparent that uncertainty was at an end, that work was to be done, and a deep determination to do it thoroughly was observable on the weather-beaten faces of the people. The next thing to do was to "hammer the Roossians." But where were the Russian ships? At Chusan? To Chusan, then, we first went; but no Russians were there. Between Chusan and the mouth of the River Yang-tse-Kiang is a small round island, called Gutzlaff. Here we took a pilot, and, proceeding up the entrance, the *Winchester* stuck for some hours on a bank of soft mud. Next day the *Styx* was sent up to Shanghae, with the Governor and suite, who had arrived in the *Winchester*. The *North China Herald*, of 10th June, records:—"His Excellency Sir John Bowring arrived here in H.M.S. *Styx* yesterday (9th), and landed at half-past twelve (noon), under the salute due to his rank, accompanied by his secretary, W. H. Medhurst, Esq., and suite, consisting of the Hon. W. T. Mercer, Colonial Secretary, and Wm. Lay, Esq." Sir John has plenty of work on his hands. He wants to be at Nankin, to develop or comprehend the policy of the great Tae-ping-wang. It won't do to allow Sir George Bonham, and then M. Bourboulon, and more recently Mr. M'Cleme, to plead, with varied success, the cause of their respective countries, and not to come up to their mark, or haply go beyond it. Where the *Hermes*, *Cassim*, and *Sneyuehana* have steamed with these magnates, the *Encounter* or *Rattler* must yet steam with Sir John Bowring. Never was it more important to feel the pulse of this populous nation; never was wisdom more needed to guide the councils of those who will have to mould and shape the new treaty. But Sir John is fully alive to all that is going on. The prosperity of Shanghae is a favourite idea with him. Its fine climate, fertile soil, commanding position, rising wealth and commerce, would indicate to a mind less active, sagacious, and practical than his capabilities which must place Shanghae at the head of English ports in China. But war has paralysed trade. The warehouses are full of the manufactured goods which, in peaceful times, would have been bought by the Chinamen, and dollars could be got for them; but now the merchants are drawing on England, at 6s. 8d. to 7s. the dollar. The people at Shanghae will not take any dollars except those of Carolus III. and IV.: these they call the new dollars, all others are foreign, and despised accordingly. Large numbers of new old dollars are being made, and Mexican are received at Canton, as well as Spanish: two facts which will open the eyes of the Chinamen at Shanghae, in due time, to the superior value of the Mexican dollar. Besides Nankin and Shanghae, Sir John wants to visit Japan. The Russians have been there, and it is reported that they have succeeded in making some sort of treaty with them. Their settlement at Corea is near, and it is of great importance to them to establish amicable relations with Japan. Now that war is declared, we must drive them out of that locality; and our Admiral says we are on the way thither. The Americans have induced the Japanese to relax somewhat in their exclusive anti-social customs. They went to work on right principles there. They were politely received. They brought with them a complete railway; engines, carriages, and all the necessary fixings. It was

SHANGHAE, FROM AN ORIGINAL SKETCH.

a mile in length: they were permitted to lay it down on the shore, and there set an electric telegraph to work on the line. These phenomena astounded the natives, who crowded in thousands to see them. The Yankees instructed some of the most intelligent in the manner of working the engines and telegraphs; and the delighted Japanese continued to work them day and night, for more than a week, without any intermission, like children who seem as though they would never tire of a new toy. The Americans deserve great credit for the tact and energy they have called into play; and they merit, and will probably reap, great commercial profit from the trade; but they must not be suffered to enjoy a monopoly of it, nor do they expect it; but they have the start, and are ready to compete with any or all.

A very superior quality of bituminous coal was found at Chin-kiang-foo, as mentioned in Journal No. 3. The mountain is said to have been far from the latter are said to contain coal in great abundance. It is most important that this vast mineral wealth should be developed, as an auxiliary to the steam navigation of the river; and not only that, but for our own use. We have now four war-steamers here at this moment, and no coals; and when a cargo does come, it costs £10 or £12 the ton. The *Susquehana* was under steam fifty-one hours and twenty minutes, ascending from Woosung to Wa-hu, and thirty-one descending the river from Wa-hu to Shanghae. The mission is said to have been a complete and mortifying failure. Americans were told they must approach low in the dust, bringing tribute, if they were to be heard; and that they might as well ask to see God himself as Tae Ping Wang. They learned that the rebels, having left the central districts, were going through the tea provinces; that they had sent an army of 40 000 men towards Pekin, and that they dissolaim all connection with the Shanghae rebels, because they smoke opium and tobacco and commit other impurities.

The United States corvette *Vandalia* has just arrived from Japan. Commodore Perry was there. The treaty was progressing tolerably. One port had been opened, and the other was to be open in eighteen months. Some disappointment seems to attend a better acquaintance. The treaty recognises the old Hong system. The natives either do not possess, or will not bring forward, much to trade in. The Commodore wanted to advance to Yeddo, the capital, and got his steamers in motion; whereupon the Princes handed him their sharp swords, entreating that he would stab them, to save them the trouble of doing it themselves, and to avert disgrace and death from all their families. The steamers were recalled, and the Princes remain unstabbed. The Japanese coins are remarkable for their beauty; one fine copper coin, worth 100 cash, passes at the rate of 48 cash going for a dollar. The Commodore fixed the rate at 1200 cash for the dollar—its value at Hong-Kong. (We have engraved one of these coins, actual size: it is of very fine copper, as thick as a penny; the rim is thicker, and the workmanship very beautiful.)

JAPANESE COPPER COIN.

On the 16th, Samqua, ex-Taoutae of Shanghae, came in to the Consulate to hold a conference with the Admiral and Sir John Bowring. It lasted from noon until four o'clock. He was directed to state to the English that the Emperor absolved them from blame on account of their late attack on his camp. The Emperor argued, "he deemed it very improbable that two or three hundred men would dare attack fifteen thousand, unless their cause was clear and strong." Samqua had vapoured a good deal about his own dignity; stating that he was competent to treat about high matters. It was suggested that it might be desirable to have the Emperor's decision given in writing. Whereupon Samqua drew in his horns; said he could not do so—it was not his business, he was only a simple collector of customs, &c. The Admiral expressed his regret that some of our people had suffered in the affray. Samqua replied, that if the Admiral had an idea how much more considerable the loss had been on the other side, he would not even think on his own. He said, "We should soon retake the city if you would only just let your ships help us." "Probably," was the quiet reply.

The Viceroy of the province resides at Soochow, sixty miles distant. Sir John Bowring and he are anxious to meet each other, to settle the affair, and the question of the duties. But neither will first propose the interview. The opium-receiving ships have been ordered to leave Shanghae, and have dropped down to Woosung. The merchants are afraid the Russians will cut off their vessels; one has offered 30,000 dollars for the *Foxtock*. The French steamer, *Colbert*, furnishes a guard, like the English ships; but the Yankees won't even carry a bag of bread for us or our ships. We can get no tidings of the Russians. The last thing seen of them was by the *Styx*. She was lying at anchor one hazy morning in May, when the little steamer *Fostock* came close before she was aware. The hase rose upwards, and at eight o'clock the steam-sloop crossed top-gallant and royal yards. The little Russian found herself close to a British man-of-war ten times her size; she flew for her liberty; war was not yet known to have been declared; the *Styx* followed to observe her course; but, after doublings and dodges innumerable, the *Fostock* escaped in a fog. A little before this, several Russian officers were passing the evening at an hotel in Shanghae. The mail was due, and they were uneasy and anxious. An English officer of the *Spartan*, whom they knew, rushed in with a newspaper in hand proclaiming peace, he was seized and hugged with such vigour and glee, that he says he will be cautious during the rest of his life, even hearing the olive branch among the Russians; and he declares that he never yet saw a set of men emancipated from such a state of unhappiness as these Russians before.

The accompanying View of Shanghae is from an original Sketch by a Correspondent. Shanghae is now a very important settlement, composed of about twenty firms of English, American, French, and German merchants. The houses which they have erected, and the factories or warehouses for the reception of the tea, are on an extensive scale; and the English town presents a very front remarkable for architectural elegance. The gardens adjoining the merchant houses are planted with every kind of tree, native and foreign, suited to the climate, which may, in many respects, be compared to that of Marseilles. English apples, pears, peaches, apricots, grapes, and green-gages flourish luxuriantly by the side of Chinese peaches, apricots, oranges, lemons, and many fruits unknown in Europe. The country round Shanghae is very flat; the tide, which in the Thames Ran seven feet, overflows parts of the distant grounds of the English merchants for their houses and factories. Small temporary wooden houses, in most cases, constitute the ground settlement of the river. The Chinese town is distant from the English settlement about a mile and a half; it contains above one hundred thousand inhabitants. Many of the native merchants are very rich, from transactions with the English and American firms among whom they have millions of dollars. These city is protected by high walls and ramparts, which extend about three miles in circumference, thus closely hemming in a vast population. The river opposite to the town presents a most animated appearance: it is about the width of the Thames at Westminster. A forest of masts greets the eye, showing the great amount of native trade carried on in numerous junks, arriving and departing. Shanghae is considered by many as the key to the Chinese empire. The vast plain in which it is situated, and through which the celebrated river Yang-tse-Kiang runs, is opened up to Shanghae by many smaller rivers and canals, thus bringing a vast amount of produce in tea and silk, at a cheap rate of transit to this great and increasing mart.

At Homburg the dividend on shares of 500 florins paid up in the gambling concern there was 138 florins for the six months ending March, 1854, after paying a large rent to Government, and defraying the expenses of costly establishments.

NOTES OF A RAMBLER.—No. IV.

ABERDEEN—STAGE COACHES

So far as our experience has extended, the hotels in Scotland demand our unqualified approbation. The charges are moderate; the supply of provisions abundant and well cooked. The chambers are clean; and possess, without crowding, every convenience and comfort that the most fastidious traveller could desire. The fussy civility of the waiters—which first amuses, then annoys, and at last disgusts a stranger, on first residing at an hotel in London—is altogether absent in Scotland. Instead of the piping parrot-note of the eternal "Yes, sir," you are waited upon by persons—whether male or female—whose quiet demeanour, orderly habits, and staid respect, cannot fail to win your approbation. Every meal is supplied in profusion, with every appropriate delicacy; while there is no stint or stinginess, there is no wasteful extravagance. Marmalade, honey, and preserves of various kinds of fruit, are seldom absent from the breakfast or tea-table; while, judging from the supply so ungrudgingly and abundantly offered, it would almost appear as if the Scotch cows gave nothing but cream. The stranger in Scotland will be amused to find, for the first time, placed before him instead of the ordinary shallow plate used for tarts, puddings, &c., in England, a diminutive soup-plate. Why it is there, or how it is to be used, and what for? are questions he will involuntarily ask himself. The introduction of cream, however, soon solves the difficulty, and in a few days the soup-plate takes its place as a prime necessity in all well-appointed entertainments.

Leaving London at the end of summer or early autumn, and travelling northward, is a wise arrangement. The fruits and vegetables peculiar to June and July in the south of England, are only perfected in the north of Scotland in August and the early part of September. The hour at which the sun sets varies very little from that of Surrey, but the longer, grey, delicious twilight is very agreeable. If the temperature is not as high during the day, it is quite so during the night, so that the contrast is not experienced disagreeably. To be able to read or write until half-past ten o'clock in Aberdeen, when, before leaving London, we had been obliged to introduce candles before nine o'clock in the evening, impressed us deeply; and we longed to pursue our wanderings so far north as to be able to see the sun renew his upward course without disappearing from the sight, and vowed to accomplish our desire at the first convenient period.

After a long ride, a bath, and comfortable dinner at the hotel, a walk in the cool of the evening was exceedingly refreshing. The streets swarmed with people. We soon ascertained that it was not only market-day, but also the usual harvest fair; so that great numbers were present, either for the purpose of hiring or being hired; and, doubtless, many assignations previously arranged made not a few hearts throb with satisfaction. The streets were thronged with carts, carriages, gigs, and every imaginable vehicle; shepherds from the hills, with dogs at their heels, slowly sauntered about; crowds of porters, with ropes twined round the body, under the right and over the left arm, lingered round the door of the hotel. The business of the market was over; country people fled the streets, on foot or in their several conveyances, whose names are unpronounceable. But why wait the porters here? The shrill piercing shriek of the coach-horn sounding in the distance, and coming ringing through the streets, breathed new life into the motley group, and explained the mystery. It came upon us like the memory of an old delicious dream. Well we remember when we first heard it, as the first coach wound its way round the base of a huge rock and rattled along the dreary street of our native village, exciting alike our rapture and wonder. Many years have passed since then, and ten or more have gone since last we listened to the music of the pealing horn, in which, although no melody or tune was formed by it, there was, nevertheless, a rounded swelling cadence that never failed to gratify the listeners, as it told of a world beyond. It sounded now in our ears like an echo from the past, as if the blast blown in the fair south, had gradually found its way to the rugged north, and became jubilant. And who knows, but that, the next time we stand on Craigton Union bridge, the joyous peal may have been banished from the streets of Aberdeen, and only be occasionally heard by the solitary wanderer, as it sounds along the bleak shores of the Shetland Isles! What a ferment of feverish commotion is excited, as the coach dashes along the street, and, with a crash and sudden pause, pulls up at the door of the hotel—whose landlord announces, in all the glory of golden letters, that he supplies posting horses to her most gracious Majesty the Queen. Two gentlemen in black suits rush to the coach door to ascertain what "insides" are likely to aid the exchequer by engaging private rooms and extra wax lights during the evening. A slight, very slight cloud passes over the face There are only two a lady and gentleman, somewhat ancient, rather lame, and not likely to be extravagant: they are ushered up the stairs, and pass out of sight; and, so far as we are concerned, perhaps for ever. While this little scene in the drama is passing, considerable excitement prevails among the few fast-going men who seem to have occupied the front of the coach, and become familiar with the driver—who is exceedingly attentive. Good cigars and occasional drams of whisky have the best possible effect on your genuine coachman, who is an excellent judge of character. How he "my-lords" the young gentleman with the tiniest sprouting moustache and the prettiest bud of an imperial, who lisping receives the often-torn note with the greatest apparent condescension, which is cheerfully pocketed with the extra half-crown. Mark the coachman, with a wink, show the guard, so soon as the genteel passenger has turned his back. The passengers who are complained to are by the guard are esteemed more lightly. The reason for the difference we have never satisfactorily settled. Perhaps, the bolder spirits, who love to witness the noble prancings of the gallant steeds, best show their daring courage by occupying the front seat and facing danger, while the more timid modestly nestle behind, where they have the guard, ever watchful, excepting when he sleeps, ready to protect them. How happy must they be, that your genuine guard manages so cleverly to sleep half the night, and yet have ever one eye open in case of need? A sleepy carter takes the wrong side—the tail gate keeper is dead done—the break has to be screwed up;—be the necessity what it may, before you have time to speak, the guard has done what his duty demanded.

After some little higgling and considerable dissatisfaction, the numerous passengers are permitted to escape from the never to be-quite satisfied coachman and guard—all save one, and there he sits in the coach with a look of wonder, apparently afraid to descend. Hitherto he had sat unnoticed. The porters, who seem instinctively to pick out those who will pay them best, took no notice of the lonely lad. Now he is in the hands of the guard, who, with a few words of direction, dismisses him; and off he trudges, bearing the dingy-worded small brown chest on his green young shoulders. We felt interested in his fate, and followed him. His story was one familiar to this part of the country. His father was a fisherman; his mother died young. An elder brother driven cattle to the South, and in time became assistant to the steward of an English nobleman. Steady, modest, and persevering, he mastered all the difficulties of his position, and was prepared to accept whatever promotion offered, and always able to perform its duties with intelligence. His letters home were read to neighbours, who began to speak proudly of him as a native of their parish. As he attended the principal market in the county every week, a shrewd cattle-breeder consigned to his care for sale his stock of marketable beasts, for which he obtained satisfactory prices. Others followed the same course; and in a few years, he was transacting a considerable amount of business on his own account. By the exercise of great economy and self-denial, he had saved some money, and taken a farm near London. This was his younger brother, on his way to join him, and we hope, to pursue a similarly fortunate and honourable career. After the death of his mother, his father had married again, and the step-mother's unkindness had induced the elder brother to offer to remove his brother and two sisters from her under-care to that of a relative, where he would provide for their various necessities, as well as for their education. The proposal was too good to be refused, and the children were removed accordingly. The father was lost in the squally weather, so disastrous on the eastern coast last year; and the entire family are now dependent on the absent son.

The moon being near the full we extended our walk to the Old Bridge of Balgownie, whose fine old arch over the whirling depths of the tawny Don, and the new bridge glittering in the distance, was most impressive. The traditional prophecy as to its downfal—

Brig o' Balgownie,
Though wight be your wa',
Wi' a wife's ae son,
And a mare's ae foal,
Doun ye shall fa'—

is not likely to be accomplished soon. Passing by the awkwardness of its approaches—which, like many old structures of this character, form an acute angle on either side of the river, so that to cross it cleverly with a coach and four requires no little skill and dexterity—its strength seems such as to endure for ages. That Lord Byron and the late Lord Aberdeen should have been superstitiously afraid to cross it, is hardly to be credited.

During our short absence what a change had taken place. An hour ago all was bustle and confusion; now we are almost alone, and the only sound heard is the regular tramp of an occasional policeman.

RAMBLER.

CHESS.

TO CORRESPONDENTS.

B. T. S. Emphatically, *No!* The young recruit that you are so diffident "may not pass muster," is a gentleman unmitigated professor of some four centuries standing! In our Chess nomenclature we have a lively remembrance of among him do duty in a collection of modern antiques (from whence we obtained him). After these, we trace him through Cusio, Lolli, Stamma, Ponziani, Carrera, up even to Damiano and Lucena: when we look to be the end, or rather the beginning, of his career, when your friendly him again to mind prompted us to look for him in the MSS just brought to light, and lo! he is even there!

SUSSEXIENSIS.—There is an excellent Chess-club on the Pier Esplanade, at Brighton—the members meeting every day, from twelve to six. President, Paul Pelnet, Esq.: Honorary Secretary, Dr. Turner.

B. A.—Our opinion of the relative powers of La Bourdonnais and Des Chappelles is well known. We think the former unquestionably the better player. It is worse than useless to speculate now upon what Des Chappelles *might* have done with the same intensives to exertion as his rival.

"What had been, is unknown; what is, appears."

CANADIAN.—We are glad to find Chess is making such progress at Toronto. The club, under the auspices of two such able and enthusiastic amateurs as Messrs. Caldbrop and Cherriman, must succeed, and we have good hope that the introduction of chess papers in the "Anglo-American Magazine" will prove equally beneficial to the cause.

R. R.—The blank diagrams for Chess Problems, &c., published by Messrs. Kent, 29, Paternoster Row, are far superior to all others we have seen. They are much larger, on stronger paper, and, from the square of the rechoquer not being shaded or coloured, are much better adapted for inscription. When to these advantages is added the important one of their being about half the cost of the others, enough has been said to induce every amateur to lay in a stock forthwith.

DERBYON.—You should take nothing of the kind for granted, but patiently wait another week, to see if *then* your communication is solved. There is not always time, and there is never space to answer all inquiries the same week they are made.

AGED.—They shall have attent on

SCRUTIN, G. D.—We views you are in error. Look again.

J. E. R., of Stuttgardt. Always acceptable. It shall be reported on next week. Your Solution of Problem is the true one.

BEATRICE, Catterick.—Your Solution of Enigma No. 886, in three moves, appears to be a true hit!

J. P.—It's dull, perhaps; but intolerably potatoes and dull.

MARJER.—There is but one "St. George's Chess-club" in London—that at 53, St. James's-street. Of this club, Lord Zetland is President.

F. J.—Can a Pawn pass a piece?"—A question not to be asked. Buy some elementary book on the game, and learn the first principles of play.

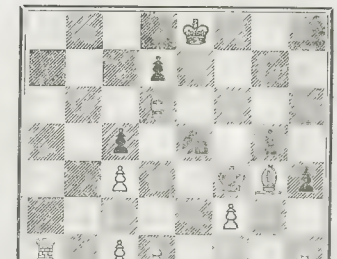
R. F., Wadwick. The key moves of Enigmas 883, are K to Q B 3rd, and R to Q B 2nd. Your suggested Solution of No. 881, in four moves, shall be examined

T. M., Chatham.—Pay your subscription in advance, to the Publisher, Mr. W. Little

PROBLEM No. 552.

By C. M. INGLEBY, M.A., Birmingham.

BLACK.



WHITE

White to play, and mate in four moves.

UNPUBLISHED GAMES OF GIUOCO.

We resume our Selections from the Florentine MS of Greco's Treatise.

(King's Gambit.)

[This opening Greco describes as "Il giuoco di molto ingegno e pericoloso per l'uno e l'altra parti, dotto grandmente perchè si vede, and aprire e sbare col re in grandissimo pericolo."]

WHITE.	BLACK.	WHITE.	BLACK.
1 P to K 4th	P to K 4th	11. Kt to Q 3rd	Castles K to Kt sq and Kt to K sq
2 P to K B 4th	P takes P	12. K Kt to K B 4th	K Kt to K B 4th (ch)
3. Kt to K B 3rd	P to K Kt 4th	13 K to Q 3rd	Q to K B 7th
4. K B to Q B 4th	P to K Kt 5th	14. P to Q B 3rd	B takes K P (c)
5. Kt to K 5th	Q to K R 5th (ch)	15 K takes B	P to Q 4th (ch)
6. R to K B sq	K Kt to K R 3rd	16 B takes P (d)	K Kt to Q 3rd (e)
7. P to Q 4th	P to K B 6th	17. K to Q 2rd	Q B to K B 4th
8. P to K Kt 3rd (a)	Q to K R 6 h (ch)	Checkmate	
9. K to his B 2nd	Q to K Kt 7th (ch)		
10. K to his 3rd	K B to K Kt 2nd (b)		

(a) "If White take the Pawn he will evidently be game and fight for Ki with his Q Bishop, he will not do well." This is quite true, as the following Variations prove

In the first place—			
8 P takes P	P to Q 3rd	9 Kt takes B	Q takes Kt (ch)
9 K Kt to Q 2nd	P takes P	10. K to B 2nd	Q to K Kt 7th (ch)
10. K Kt to K B 3rd	B to K Kt 5th (ch)	11. K to K 3rd	Kt to his 5th (ch)
		And Black must win.	
In the second place—			
8 Q B takes Kt	P takes P (ch)	9. Kt takes K B P	R to K B sq
9 K takes P	B takes B	And again Black should win	

(b) We don't find this move in the modern books, perhaps because it is less effective with our restricted mode of Castling than with the Italian method. The move now adopted by the best players is P to K B 4th

(c) Very ingenious.

(d) Greco gives the two following Variations on this move:—

FIRST.			
16. K takes P		P to Q B 3rd (ch)	
17 K to his 4th		Q to K 5th (ch)	
(If 17. K to Q B 5th, then follows 17. B to K B sq—Black.)

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Duchess of Cambridge and the Princess Mary, who are still remaining at Kew Cottage, are expected to leave that Royal villa at the close of the month, on a tour of visits.

The *Cassel Gazette* contradicts the report mentioned in some of the German papers, that the King of Prussia had been invited to an interview by the Emperor of Russia.

On the 5th the Empress of the French visited the *embouchure* of the Adour in the steamer *Ville-de-Dax*. The weather was magnificent, and the beauty of the landscape on either side of the river excited the admiration of her Majesty, and the persons in the Imperial suite.

Prince Albert, before leaving Boulogne, presented the Captain of the yacht a valuable gold watch and chain, for his services on the arrival and departure of the Royal yacht.

It is said that the Emperor intends quitting Boulogne for five or six days, for the purpose of going to Biarritz for the Empress. His intention is also to conduct her to Compiègne, and then to return to the Army of the North, to resume the great military manœuvres.

Besides the persons decorated at Boulogne by the King of the Belgians, his Majesty has named M. le Comte du Hamel, Préfet of the Pas-de-Calais, Commander, and M. Manche de Loisne, Sous-Préfet of Boulogne, Chevalier of his Order.

The confiscation of the property belonging to Queen Christina has fairly begun. The Governor of Oviedo has seized the coal mines, which formed part of her property.

In deference to the desire of Queen Victoria, artists have made drawings of the Hôtel Brighton, and of the apartments in it occupied by the Emperor and the Prince.

A shawl has just been manufactured at Lyons for the Empress of the French. It cost forty thousand francs, and contains the arms of England and France most ingeniously woven in the lace, and the emblematic lilies and roses running round the border.

Mr. Soulé, the American Minister, demanded his passports, and took leave of Marshal Espartero on the evening of the 30th ult. Mr. Soulé intends, it is said, to reside temporarily in one of the French Departments adjoining the Pyrenées.

Lord John Russell having consented to preside at the approaching inauguration of the newly-erected Bristol Athenæum, it has been determined to invite his Lordship to a grand corporate entertainment.

The Marquis d'Albada, ex-President of the Union Club, and who took such a leading part in the late revolution, has left Spain for a foreign country.

The Lord-Lieutenant of Ireland, who is about to leave Dublin for England, is not likely, according to the report in that city, to return thither in his official capacity.

It is said that the King-Regent of Portugal is desirous to yield up the reins of Government to his son as soon as public convenience will permit. He postpones the decision of any matters to which he objects until the time when the young King shall be able to determine.

Lord Brougham is expected to take his departure for his château in the south of France early in the ensuing month.

A letter from Florence states that the Tuscan Government has caused Guerrazzi's new novel, entitled "Beatrice Cenci," to be seized.

The Aberdeen Town council has unanimously voted a sum of fifty guineas as a commencement of a subscription to procure a portrait of the Prince Consort, to be placed in the Town-hall

The season of the Italian Opera, at Paris, which is announced to commence on the 3rd of next month, will be inaugurated by Rossini's "Semiramide."

The *Nation* says that positive information has been received of the arrest of Mr. Smith O'Brien in Belgium.

On the 1st inst. the summit of Monte Rosa was attained by three brothers, E., J. G., and C. Smyth, from Louth, in Lincolnshire, Zumstein, Vincent, and others succeeded in reaching other peaks, but this is the first successful attempt on record of the highest peak of the highest mountain in Europe, except Mont Blanc.

The latest reports from Berlin say that the King of Prussia has not derived the desired benefit from the sea air and baths, and that he still suffers much inconvenience from his injured leg.

The steam-yacht *Mirdello*, with the King of Portugal and Duke of Oporto on board, attended by the Viscount Carreri, Count Sarmento, left Cowes Roads on Saturday, as four p.m., for Portugal.

Count Buol gave a grand dinner at Vienna, on the 6th, in honour of Baron de Meyendorf. Prince Gortschakoff and all the Russian Legation were invited.

Queen Maria Amélie, the Duke de Nemours, the Count d'Eu, the Duke d'Alençon, the Princess Margaret, the Countess Molitien, with other members of the Royal suite, have within the last few days returned to their temporary residence at Torquay, Devon, in the full enjoyment of health. Her Majesty attended the ceremony in commemoration of the death of Louis Philippe.

Their Royal Highnesses the Duke and Duchess de Brabant, the Count de Flandres, and the Princess Charlotte, arrived at Coutray, at one p.m., on the 10th inst., where they were received with great enthusiasm. In the evening there was a grand ball in honour of their visit. The King of the Belgians was represented from attending by indisposition.

Archbishop Cullen has received £350 from the Rev. Dr. Donnelly, the delegate of the University Committee in the United States, being a further contribution from America in aid of the Roman Catholic University of Ireland.

A design for a monument to Visconti, the architect, has been agreed upon. It is to be a statue erected on a rectangular pedestal, on which will be represented the plan of the Louvre—Visconti's greatest work. The monument is to be placed in the cemetery of Père la Chaise.

M. Alois Biernacki, one of the oldest of the Polish refugees in Paris, died on Friday week, at the age of 76. He was formerly Nuncio at the Polish diet, and at one time Minister of Finance.

It was estimated that the amount of property destroyed by fire in the United States during the month of August would be upwards of 4,000,000 dollars.

The *Indian Queen*, from Melbourne for Liverpool, with upwards of a quarter of a million sterling on freight, had put into Pernambuco, and re-sailed for Liverpool on the 10th inst.

The Governor of Cuba has issued a proclamation respecting the revolutionary movements, and threatening with capital punishment attempt at rising in the colony, at the same time taking measures to put down the Slave-trade.

The Council of the Royal Agricultural Society of Ireland has decided that the cattle show of the society for 1855 shall be held in Carlow.

On the 27th ult. a terrific tornado passed over the city of Louisville, blowing down the Presbyterian church, and causing the death of twenty-seven persons. A large number were wounded. Fully one hundred buildings were uncovered.

A conference of members of Parliament, clergymen, and others, interested in the settlement of the tenant question, is to be held in Dublin on the 26th inst.

Official notice has been sent to Washington that American vessels will have the freedom of the St. Lawrence during the deliberations of Parliament upon the Reciprocity Treaty.

There is at present lying in the Galway docks a vessel chartered to carry a cargo of peat from Achill Sound to London. This is certainly a new feature in the export of Irish manufactures.

The Swedish Journals contain the advertisement of the "Bomarsund Galoppe," as the newest composition.

It is usual for all the Governments of Europe to present to the directors at Lloyd's copies of all charts of seas, estuaries, and rivers, made in their dominions, or under their authority. In the year 1845 application was made to Russia to furnish charts made by her surveyors, and the application was refused.

At Naples, in a dreadful filthy street, called Vico del San Sepolcro, 142 out of 146 inhabitants have been carried off one after the other by cholera. The authorities caused the three survivors to be removed, and placed sentinels at the entrance of the street to prevent persons from visiting it. This place of death has been since appropriately designated the Tombe del San Sepolcro.

On Friday last week, there were but 201 paupers in the Downpatrick Union Workhouse, which was originally built to contain 1000 inmates.

The exports of specie from New York this year, including that brought by the *Arctic* on Wednesday last, amount to £3,357,480 sterling.

Lisbon accounts are still very alarming respecting the prevailing vine disease, and probably not one-fourth of the average quantity of wine will be made this year. Already enormous prices are being given for new wines, and in some places not so much as a single pipe has been or can be made.

In consequence of the great fall in the price of wheat, many of the farmers in Berkshire are reducing their labourers' wages. The reduction will be to the extent of 2s. per week, viz., from 11s. to 9s.

The value of the imports at St. John's, New Brunswick, from Great Britain, for the first six months of the present year, was £681,766, being £366,134 sterling in excess of the corresponding period of 1853.

Upwards of 100 persons, chiefly miners, have left Penzance, Cornwall, during the last three days, for Plymouth and Liverpool, en route for the gold regions of Australia.

LITERATURE.

MEMOIRS AND CORRESPONDENCE OF MAJOR-GENERAL SIR WILLIAM NOTT, G.C.B. By J. H. STOCQUELER, Esq. London: Hurst and Blackett.

Since the glorious days of Lord Clive, our Indian empire has nurtured a race of heroes who have elevated the military prowess of Britain to the highest pitch of glory. The rise and progress of a trading company of merchant adventurers, beginning with a small warehouse or factory, and ultimately becoming Lords Paramount over the whole of Hindostan, is one of the most remarkable facts recorded in history; and the retention of such a conquest is as wonderful as its achievement. The transmarine possessions of Spain, Portugal, and France, have emancipated themselves from the hardly yoke to which they were subjected, and the existence of the United States as an independent nation is proof that the power of England was not irresistible; but British India remains, and the permanency of the connection is evidence that what valour acquired, wisdom has preserved. It would be a gross exaggeration to bestow unqualified blame or praise on our Indian Administration, though party spirit has frequently run into both extremes; but one substantial fact remains, that, while other European kingdoms have lost their colonies, we still rule from Cape Comorin to the Himalayas; and the fair presumption is that, whenever emergencies or dangers have arisen, the civil and military authorities have been equal to the task of crushing either domestic or foreign enemies. The volumes before us are designed to illustrate one of those memorable events, in which the safety of our Indian Empire was imperilled by incompetency and blind confidence; and saved by firmness, valour, and judgment. We allude to our fatal war in Afghanistan, where 17,000 of our soldiers, officers, and followers were massacred—only one man, Dr. Bryden, surviving to narrate the awful tragedy. This calamity was avenged, and our shaken superiority completely re-established, by the armies of General Nott and General Pollock.

The subject of these memoirs, born in Herefordshire, was descended from a respectable ancestry of British yeomen. His father was eminent in his day as an agriculturist; and, in his boyhood, the future warrior held the plough. The early education of young Nott was neglected, but constant exercise in the open air invigorated a naturally fine constitution. His military ardour was awakened at the age of fifteen, in consequence of 1400 Frenchmen landing at Fisgard, in 1797, who surrendered to Lord Cawdor, at the head of some Welsh regiments of Militia and Fencibles. The father of our hero had established himself in the town of Carmarthen, in 1794, where he resided at the time of the invasion; and in 1798, young Nott entered as a volunteer into the Carmarthenshire Militia. His ambition was inflamed, and he sighed for a pair of colours. Through the influence of a Mr. Twining, he obtained a commission in the service of the East India Company, and embarked for Bengal in the year 1800. The vessel was captured by a French privateer, after a gallant resistance, in which young Nott was severely wounded by a boarding pike. The Frenchman put his prisoners on board of an Arab vessel, excessively crowded, and, after enduring the miseries of a long voyage in such a craft, they reached Calcutta.

Mr. Nott was immediately appointed an Ensign, his commission dating from the 28th August, 1800; and in February, 1801, he obtained a Lieutenancy. "In 1804, Lieutenant Nott was selected to command a detachment of volunteers then ordered to form part of an expedition under Captain Hayes, of the Bombay Marine (now called the Indian Navy) against the tribes on the west coast of Sumatra, a Dutch settlement, who had seconded the French in their privateering attempts upon the commerce of the Eastern Seas." In this affair honourable mention was made of him by his commanding officer; but he had given offence to Captain Lambert, of the *Lord Castlereagh*, who placed him under arrest. When the returning vessel had nearly reached Calcutta his release was ordered, which he refused to accept, and, on landing, demanded a court martial, by which he was honorably acquitted; while his prosecutor "was admonished to use more caution in the course of his future service." At that time Lieutenant Nott was only nineteen years of age, but displayed that resistance to injustice, and manly firmness of character, which distinguished his whole career.

As he grew older and obtained higher rank he was irritated by the invidious preference given to officers of the Royal army over the officers of the Company's army. Thus Lieutenant-Colonels in the Royal army took local rank as full Colonels when serving in India; and thus the officers of the Company's army were actually superseded in a country where peculiarly their own is a military sense. On one occasion mentioned, the Company's regiment of the 67th, Bengal, 49th Regiment, had been promoted, superseding thirty-one Lieutenant-Colonels. Nott was indignant at this favouritism, and loudly condemned "the perniciously absurd system of patronage and supersession," insisting that "if the long-tried and experienced Company's officers is to be superseded and commanded by the silly and weak scions of aristocracy, or by the men of interest, whom the whim or the caprice of the Horse Guards may send across the ocean, it will not be necessary that a man should be a prophet to foretel the sad result." In another place he says—"To fill the measure of injustice, I have to blush with indignation while my pen writes the fact, that for forty years no Company's officer has been appointed by the Court or by the King, to the command of the Indian army. True, they originally conquered the country, but the command has been given to Parliamentary influence, and to the connections of an overgrown and grasping aristocracy." He has placed on record his conviction, his decided conviction, "that a Queen's officer, be he ever so talented, is totally unfit to command the Company's army. When General Fane reviewed the army of the Indus, 15,000 strong, he exclaimed, 'Oh! how I wished, spite of my misery, to have done in half an hour what they all bungled at from six till ten o'clock.'" There is, without doubt, much force and truth in the distinctions here pointed out: for field-officers, inured through a long life to the habits of the Sepoys, and generally well acquainted with the country, may be presumed to be better fitted for command than officers who have never served in the country; but Nott's language shows that he was very touchy, not to say peevish. In one of his complaints, he goes the length of affirming, "that there are those in this army who, could they have possibly got to seen such sots, would rather have given their services and lives to most of the petty chieftains between the Sutlej and the Caspian Sea, than have entered this army, and have subjected themselves, after the banishment and toil of upwards of the third of a century, to such cruel supersession and injustice."

When Lieutenant-General Sir John Keane took the command, a bitter quarrel took place between him and Major-General Nott, and the latter was superseded in his command by Major-General Willshire, C.B., a local Major General; and this, indeed, was the cause of the quarrel, which is fully narrated in an account of the interview which took place between Keane and Nott—the latter remarking, at the end of a long conversation, "I see the whole affair, I am to be sacrificed because I happen to be senior to the Queen's officers." Nott addressed an appeal to the Governor-General in Council, protesting against his supersession, but, on second thoughts, did not forward it, simply transmitting the letter through Sir John Keane, who answered that he had never received it when called upon for a reply. Then Nott sent a duplicate, and afterwards a triplicate, but he never got a line of acknowledgment. He finishes the part of his grievances by stating, "Now I shall have to break through the rules of our service, by sending a copy direct to Government; but it will be, of course, much too late to do me any good, and Sir John has gained his end."

The administrative system of India recognises a polity technically known as "Political Agency." This happens when campaigns are made in hostile states, and the Agent may be a military man or a civilian. The Marquis Wellesley recognised this system; and it appears from the Indian correspondence of the Duke of Wellington, that he also sanctioned it even to the extent of allowing the Political Agent to exercise authority over the military; though he changed his views in Spain, where he perceived the practical evils resulting from the clashing between two independent authorities. The editor of these volumes very properly remarks that "the examples of the Aulic Councils of Austria and the Dutch Commissioners, should have read a lesson to the Indian Government." General Nott found it necessary to punish two servants of the Shah Zadah Timour for notorious acts of plunder, but, as they were protested by the Political Agent, he again got into trouble, but fully justified his conduct; and this annoyance was frequently repeated while he commanded at Candahar. At length Major-General Elphinstone arrived to command in Afghanistan; and his first communication to Nott was "to *go privately* to work;" to investigate a charge against one of his officers—the charge being that "a staff officer, at Candahar, had appeared in public with a Musselman woman, who had eloped from the house of a man of rank." Nott was very indignant, and declared that no Government would ever make him "mean enough to go prying into the private life of an officer." Then follows an estimate of the weakness and incompetency of Sir William Mecnaghten, and of the military talents of General Elphinstone, under whose united leadership our dominion over India was placed in the most extreme peril.

Lord Ellenborough succeeded Lord Auckland as the Governor-General, and General Nott now resumed the command. But Lord Ellenborough at first contemplated the withdrawal of our troops, on which Nott vents his indignation in the following glowing terms:—"The keen wind blowing over the bleached bones of our comrades now in Bengal on the rugged Afghan mountains will whistle the imbecility and infamy of some high functionaries over Asia and the thousand petty States that *did* tremble even at the noble Lion's breathing, will in future crow in derision if he attempts to roar. And now, just like Rehoboam, the cry is 'Sepoys cannot stand Afghans.' Not stand Afghans, indeed! 1000 Sepoys, properly managed, will always beat 10,000 Afghans. I saw them do this on the 29th of last month." The sanguinary Chief, Mahomed Akbar Khan, held possession of Cabul, exulted in his triumph, insulted the captive English, and derided the once invincibility of Britain. Every man in the armies of Nott and Pollock burned with indignation, but that was succeeded by despondency when the irresolution of the Government was contemplated. At length Lord Ellenborough was decided: the signal was given, and the armies swept through Afghanistan as a whirlwind. It fell to General Nott to capture the gates of the Temple of Somnath, to which Lord Ellenborough attached an immense, but ridiculous importance, and to recover the fortress of Ghuznee; when he pushed on to Cabul, towards which General Pollock was also advancing. The campaign is too well known in all its details to require any extended narrative from us. It was decisive, and effectually confirmed British supremacy. One little incident, however, we cannot omit, as it is unique in its kind. Major Eldred Pottinger desiring to give Generals Nott and Pollock exact news of the direction in which the chiefs who had the charge of the English prisoners had fled, resorted to a hieroglyphic mode of communication, the most ingenious and, as we believe, original. He hit upon the expedient of phonetics, spelling English words with Greek letters, and yet excluding every Greek word. This will be found at page 139 of the second volume.

We can only add that General Nott received the Great Cross of the Order of the Bath and the votes of both Houses of Parliament, with the flattering appointment of President at the Court of Lucknow. On his return to England, in 1844, he received the freedom of the City of London. He took up his residence at Carmarthen, where he died, in 1845, of disease of the heart. He was truly great and good; and, to use the language of his biographer, "in British military annals he will live for ever as one of the best and finest specimens ever produced of the Company's Officer.

JULIAN, OR THE CLOSE OF AN ERA. By L. F. BUNGENER, Author of the "History of the Council of Trent," &c. Two vols. Hall, Virtue, and Co.

Mr. Macaulay objects, in one of his essays, to a practice which he remarks has become prevalent among historical writers, both in this country and on the Continent. He says that they have professedly made a partition among them of certain literary duties which ought not to have been thus disconnected; for they should be all discharged by the same functionary. Good histories, in the proper sense of the word, we have not. But we have good historical romances, and good historical essays. The romance, to give Mr. Macaulay's allegation in brief, makes us see our ancestors; it transports us among them as they lived in their day. The essay, on the other hand, extracts from the records of the past the philosophy of history, directs our judgment of events and men, traces the connection between causes and effects, and furnishes us with lessons of moral and political wisdom.

After a very beautiful illustration, in which Mr. Macaulay compares the essayist in question to magic, and the romancer to painted landscapes, he proceeds to show to what a whimsical length the practice has been carried in France. M. Sismondi first publishes a grave history of the Merovingian Kings; and then he sends forth, as a companion to it, a romance in which the pastors, warriors, and manners of the same epoch. Mr. Macaulay blames this plan. As usual, there is much show of weight and strength in the style in which, on this point, Mr. Macaulay presents his arguments. But it is all a waste of words. If he clearly indicates the qualities, the want of which every-where in our historical works, whether romances or essays, compels him to deny to any of these the name of a history in the proper sense of that word. The example of Sismondi is in point. Now, suppose Sismondi had amalgamated the two works into one, what would such a book have been? There is another case. Mr. Macaulay says:—"We manage these things better in England. Sir Walter Scott gives us a novel; Mr. Hallam a critical and argumentative history." But this last, according to Mr. Macaulay, is no more what a history ought to be than Sir Walter's book is what a history ought to be. They are both good; but they are severally only a part of an unrealised ideal. We are left to conclude that a history ought to be both such works in one. Here, we will make a distinction. It is possible that the author of a perfect history ought to possess whatever gifts and endowments Sir Walter might have evinced in the composition of the romance, combined with various other talents, some of which are but slightly displayed in Mr. Hallam's history, though not needed or elicited in the fiction. But that either the one or the other of these works would be improved by fusing them together, or that the third production which might be thus created would be any thing but a literary monstrosity, is an untenable and a wild idea. We will content ourselves for the present, in order to avoid a digression which would carry us too far, with expressing complete dissent from Mr. Macaulay's tenets respecting this assumed division of history into two kinds of composition. The best ideal history would not, and could not, put an end to romances, but might even stimulate the production of them. For, not to learn the manners of a generation, but, perhaps for the fiftieth time, to contemplate those manners, is the motive which makes people read a romance; just as we look at the picture of a Claude, not so often to ascertain, but rather to view and to ponder on, the effects of his sunsets. And with this motive is combined another, still more beyond reach of removal, even when an ideal history shall have appeared; that motive is interest in the fate of characters such as ourselves, figuring in a thousand special situations, which are imagined by the novelist, because they might occur, though omitted by the historian, because they did not. We may say, then, in sum, that we have no prejudice whatever to a historical fiction as such. It is a work of a good sort in itself; it is a work which, if well executed, is sure to fix the attention of a cultivated mind; and if we had to choose an author for such a work, no far even from thinking with Mr. Macaulay that the man who had written a good history of an era was disqualified from making that era the basis of a romance, we should pronounce him, supposing that he possessed other suitable talents, the very fittest person in the whole world for the task.

L. F. Bungener, a translation of whose work lies before us, endeavours in "Julian; or, the Close of an Era," to give an animated representation of the state of French society in the latter part of the eighteenth century, and a vivid view of the dark, confused, and calamitous reign of Louis XVI. M. Bungener, however, is not eminently or peculiarly qualified for the accomplishment of such a historic picture in black and white: beyond a minute acquaintance with his theme, he is deficient in the finished style and his undertaking requires. But, at least, he is thoroughly master of the subject. It has been his especial study; and he has already presented to Europe, in the book entitled "Voltaire and his Times," an elaborate historical survey, feeble and discursive in method, though philosophic in spirit, of the whole age of that arch-blasphemer of organised mischief. Voltaire's was the conscription of the champions of disorder; his was the new discipline of irreverence and depravity—his the marshalling of all the strong spirits of malice—his the diffusion of destroying doctrines, and the kindling of those strange and dreary flames, in which there seemed to be fire without light. With the death of Voltaire, in 1778, opens the less serious work of "Julian," which proceeds through events and scenes destined soon afterwards to arrest the attention of all mankind. The work is not exactly a novel: at least, it is a novel on a very new plan. It is a literary series of dissolving views of the famous characters bury in their footsteps as they lived; views in which all that is remarkable and memorable in the age is exhibited, with little power and inadequate effect, to the mind's eye. There is, indeed, no fatigue to the reading, for there is prodigious variety. The interest of the topic besides is still, and will ever be, unparalleled. We recommend "Julian" to our readers.

The Grand Trunk Railway Company of Canada open an additional section of 100 miles of their line to Quebec, on the 2nd of October. Arrangements are made for running an express train between Boston and Quebec, via Portland, in one day, so that passengers leaving New York in the evening will reach Quebec next evening.

A newspaper has been started at Los Angeles, California, with the avowed purpose of advocating the dissolution of the state.

A LONG-VACATION VIGIL.

BY CUTHBERT BEDE, B.A.

AUTHOR OF "VERDANT GREEN," ETC.

THE Commemoration was just over. My mother and sister Nelly, who had never seen its glories, had been spending the week in Oxford, and were thoroughly fatigued with their severe round of sight-seeing and lionising. Like a dutiful son and brother, I had shown them everthing that was worth looking at: had given them select breakfasts and luncheons in my rooms at Brazenface—promenaded with them in the Broad Walk on the Sunday—got them good places in the Theatre, where, indeed, Nelly had to blush in the front row, as one of "the ladies in pink"—procured them tickets for the Amateur Concert—taken them on to our college barge to see the Procession of Boats—gone with them to Worcester College to see the Horticultural Show and the Fireworks—introduced them at the Ball in the Town-hall; and, in short, had generally acted as a walking catalogue to all the sights and notabilities of my Alma Mater. These were fatiguing pleasures to all; and I was not sorry when they had come comfortably to their end, and the spires and domes of Oxford had been left far behind us.

I had been anxiously looking forward to the Long Vacation, for the end of it would see me going in for my degree. What with boating, cricketing, and other summer idlenesses, I had put off reading so long, that at last I had come to the conclusion it would be better to lay aside books altogether till Term was over; and that in the quiet of the Long I should have abundance of time for my reading. So I had laid this flattering unction to my soul, and, having thoroughly enjoyed the Term, I thought I could as thoroughly and easily settle down to work now that the Long had commenced. Big with this resolve, I went so

far as to unpack my books and lay them upon my study-table; but the exertion seemed to exercise a weakening effect upon me, and I deemed it best to brace myself up for work by a few dips in the sea, and to spend a few days at the quiet little watering-place of Westcliffe, whither my mother and sister had gone with all the juveniles. Finally, I resolved that I should be in the best trim for reading while enjoying the quiet and the sea-breeze; so I packed up some books, and determined to stay at Westcliffe some few weeks.

The next week, armed with my classical weapons, I made a descent on my family, who had taken up comfortable quarters at the Royal Motel. Like many hotels in similar places, it was so constructed that it had private entrances for those families who might take a suite of rooms; and my mother had preferred this to the usual lodgings. The hotel was on the outside of the little town, fronting to the sea. For the first few days I got on very well; and I had just come to that point when I thought how jolly it would be, when I began work next Monday, to lie on the cliff, with a weed in my mouth, and get up Aristotle, and watch the sea-gulls skimming about, and the ships sinking in the distant west, when an event occurred, which, for a time put all my logic to flight.

One afternoon, when Nelly and I were returning to the hotel to dinner, from a long ramble over the cliffs, a travelling carriage and four dashed by us. Who could it be? Westcliffe was a very quiet little place, and a carriage and four was not an every-day arrival. "And how strange," said my sister, "there is neither maid nor footman in the rumble; and, as it went by us, I looked for the coat of arms (Nelly is great in heraldry), and they had evidently been painted out. Whom can the carriage belong to?"

"Most probably to that grey-haired old gentleman, who is just getting out of it." I replied; for the carriage had drawn up at the door of the hotel. By the time that the gentleman had assisted a middle-aged lady to descend, we had approached them, (for our private door was next to the public entrance) and I had a full view of the third occupant of the carriage. She was a young lady of not more than twenty years of age, with a pale face of rare beauty, to which an air of deep melancholy gave a peculiar charm. As she stepped from the carriage a book dropped from her hand and fell under the wheel. I picked it up and returned it to her. With the old gentleman I interchanged a salutation of hats, with the young lady I interchanged a mere glance. But what will not a glance effect when one is yet a child in the eyes of the law, and when the thermometer is at 90 in the shade? From that moment, I was that young lady's slave.

With another glance, and we had passed side by side into our respective doorways, and I had only the lovely vision of her features to console me. Eating dinner under such circumstances was a mockery and a jest; I went through the ceremony merely as a solemn duty which I owed to custom and to my family. I was glad when I was able to get away on to the beach, and meditate by moonlight on the fair unknown. How her features were impressed on my mind, though I had seen her but for a few seconds! But there are some faces to be met with once or twice in a life-time, which can never be forgotten, but which will rise in all their freshness and beauty before the charmed spell of memory, without any effort or will of your own to call up the several features. And so it was with the lady of my tale. I can see her before me now—"in my mind's eye, Horatio"—as distinctly as I could in my lover's fancy when I walked that night on the sea-beach at Westcliffe, and, according to my wont under great excitement, talked to my Skye-terrier Trap, on the subject that engrossed my thoughts. Trap was my college dog and constant companion—the recipient of all my secrets. If all depositors of secrets made a similarly wise selection in their confidantes, the Mrs. Candours of the world would find a greater part of their occupation gone!

The beach lay shining before me; the sea came dashing and rolling in with its grand, everlasting music; and I—like Demosthenes shouting his orations to the waves—paced up and down the beach, and, amid the roar of the waters, told all my fancies to Trap. "Wasn't it a face to haunt you in blissful dreams—eh, Trap? Did you ever see such an expression, Trap?—not one of those senseless wax-doll faces, but a calm, pensive look, with a winning gentleness and soft melancholy that reaches your heart at once—doesn't it, Trap? It is the sort of melancholy air which leads you to suspect 'that she has never told her love, but let concealment——' you know the rest, Trap. But, when I picked up the book, did you see the sweet smile that played around her mouth, and lighted up her face with a sunbeam of beauty—did you see that, Trap? And then her eyes! did you ever see such eyes, Trap? such deeply, darkly, beautifully, blue eyes, Trap? Swimming in their own liquid fascinations, Trap!" (I was getting rather out of my depth there; but Trap wagged his tail as though he perfectly understood me, so I pursued the metaphor.) "A blue, blue sea from which the Queen of Love comes forth to dower you with all her charms, Trap? What sea-nymph ever had such cerulean eyes, Trap? What Nereid, what dweller in the coral caves beneath this wide-resounding sea"——My soliloquy is disturbed by a gentleman, who suddenly, and to my vast surprise, emerges from the very midst of the waves, and announces himself to be—not Neptune, or even a Nereid—but a shrimper! In the most unromantic and offensive way, he suggests that shrimps and prawns form an excellent appendage to a well-regulated breakfast-table; and further hints that he—he, the disturber of my solitude, and soliloquy—by name, Tom Barr, but familiarly known as Old Barnacles, will feel it a honour to wait upon a party as smokes such good tobaccer. Of course, I give him a cigar, and an order for the family breakfast; by which time, as my weed is nearly out, and my chain of ideas has been rudely snapt, I return, in a ghostlike, dreamy way, back to the hotel. To-morrow I shall see her, I thought.

I ought to have dreamed of her, and should probably have done so, had not the low murmur of the waves lulled me into too sound a sleep for a visit to Dream-land; but I devoted my thoughts to her during the whole time I was shaving, and, as that included the risk of a razor-cut, I began to think that I was decidedly, and madly, in love. I, of course, took the first opportunity to have a gossip with Mrs. Rummell (our landlady), and quickly led the conversation into the arrival of yesterday.

"The gentleman's name is Spencer," Mrs. Rummell said, "the gentleman told me so himself, and said that all letters directed here in that name, were to be brought to him; and he said that, sir, just as though they was'nt to be given to either of the two ladies. The oldest lady is his wife, because he called her 'my dear' (Mrs. Rummel's logic was conclusive); and the young lady is his daughter, because, when I offered to assist her in taking off her travelling-dress, the other lady said 'Thank you, but my daughter needs no assistance:' and I heard her call her, Amy. (Amy! what a sweet name!) They have very grand manners, and are grand people, I'm sure sir; but I think there's something rather queer with them. It isn't often that gentlefolk of their quality, especially where there are ladies,—travel without their servants; but that's nothing to do with *me*, if they want to save expense. And they don't let the waiter be in the room at meal-time, no more than is necessary to change plates, and put the things on the table; but *that's* nothing to do with me, if they wish to be private. And, last night, when the chamber-maid went to unfasten the ladies (such was Mrs. Rummell's expression; as though ladies were taken to pieces at night), she was only allowed to unfasten Mrs. Spencer, and did not even see the young lady; and it was 'just the same this morning when she went to

fasten them. It almost looks as if the young lady had been doing something wrong, and they were keeping her under lock and key; for, when they came, Mrs. Spencer said to me, 'We shall require two bed-rooms, and they must communicate with each other.' I happened to have such rooms as she required, with an inner door opening from the one room into the other, and an outer door to each room opening on the landing. So I showed the lady these, and she said they would do very well; and then she examined the lock of the outer door of the young lady's room, and she locked it, and told me that she would keep the key as long as they remained here. Of course, sir, I could make no objection to this; but it almost looks as if the poor young lady was a sort of prisoner."

The landlady's tale roused my curiosity, and added (if possible) to the interest I already felt in the fair stranger. Poor Amy; since Amy, it seems, was her name, what could she have been doing to require such strict guardianship? It was a mystery but it accounted, doubtless, for that sweet melancholy which gave such a charming character to her beauty.

When my sister and I went out for our morning's walk, Nelly was very curious to know who the arrival of the previous day might be, so I confided to her all that Mrs. Rummell had told me about Amy. Yes! *Amy*; for I could not call her Miss Spencer; no! when a man is really in love (and I felt that I was) it is the lady's christian name that always leaps to the lips, and hangs lovingly upon the tongue. And even while we were speaking we met her with her mother. They were coming up from the sands, and Amy had evidently been bathing, for her long, damp, dishevelled hair was streaming from under her plain cottage bonnet, and was lost in all its luxuriant richness under the folds of her shawl. She glanced towards us, and looked confused (at least, I thought so) as she met my earnest gaze. She sees that I love her, I whispered to myself. I was in hopes that, for the slight courtesy I had shown them on the previous day, the lady-mother might vouchsafe to recognise my existence, but she passed on to the hotel, and

"made no sign." Later in the day, we were out, far away on the cliffs, and, at an angle in the narrow path we suddenly came on Amy, with her father and mother. She saw us, and smiled—(yes, by Jove, she did!—but the paternities put on the similitude of dragons guarding a priceless treasure, and they hustled her past us, and got out of sight as rapidly as possible.

Three days passed in this (to me) most unsatisfactory manner. Amy bathed in the mornings, and walked out in the afternoons, but was always under strict surveillance. And the same mysterious dragonship was maintained over her in-doors—so Mrs. Rummell informed me: none, except her parents, had interchanged a word with her since she had been in the house. But her's were eyes which had a dumb language of their own, far more expressive than even the words of some people's lips; and, when we met her in our walks, those pleading eyes seemed to say to us, "I am persecuted and helpless; oh! be my friends! And her sad, touching look of melancholy would so work on my excited feelings that I many times asked Trap if I should be justified in laying violent hands upon the dragons, and delivering the unfortunate Amy from their thraldom. But my sage attendant would not commit himself to an opinion on this delicate subject.

Of course, while my mind was in this excited state, it was impossible to settle down to hard reading. I tried to do so one morning, and opened my Thucydides; but I could see nothing in the Greek characters but "Amy, Amy;" and her calm face and deep blue eyes swam between me and the page. I must cram at the last, I said, and make a shot for my degree. I was a bachelor, in danger, not only of losing my heart, but my B.A. also.

The fourth day came. I had inspected Mr. Spencer's carriage, in the coach-house; but the coat of arms had been so completely painted over that I was unable to make out anything. The carriage was nearly new—why should the arms have been obliterated? I rubbed off some of the paint with my thumb, and I discovered that the arms were surmounted by an Earl's coronet. Stranger still! Was Mr. Spencer travelling under false colours? or, was he a *parvenu* who had bought the carriage at a sale, and therefore painted out the heraldry? But the appearance of the whole party was against this supposition. There was an air about the dragons which showed them to be dragons of gentle blood; while, as for Amy, she was every inch a lady! What with the heat of the weather, and the fervency of my passion, I should have been completely prostrated with the oppression of this mystery, if the burden had much longer remained upon my mind; but, that same afternoon it was destined to be removed in a very unexpected manner.

Nelly and I had got to a part of the cliff down whose steep side there wound a narrow pathway to the beach. We were nearly half way down, when we saw Amy and her father and mother coming up. The dragons looked as though they would have turned when they saw us; but, if that was their first resolve, they changed it, and came on towards us. As they slowly approached, toiling up the steep path, we both noticed the unusually bright look of joy which lighted up Amy's face. She was leaning on her father's arm, while her mother walked at her side, but slightly behind, the path being narrow.

"Look, Nelly!" I whispered, "she is evidently showing us a letter!" and my heart throbbed quick, like the bell of an electric telegraph machine—for I thought the letter might be for me.

"She is, indeed!" whispered Nell; "and see, she conceals it under her shawl, that her father and mother may not see it. And look how earnestly she is gazing at me!" ("and at me!") "And she puts her finger on her lip—that means secrecy. She must mean the letter for me:" ("or for me;") "But how will she convey it to us?"

There was no time to speculate on this point, for we had reached the trio. I pressed Nell's arm as a signal, and we drew on the one side of the narrow path, so as to allow the others to pass us. We each looked earnestly at Amy, while Nell (so she tells me) threw into her face as great an amount of sympathy as she could express. Amy also looked at her (for it was at *her*—there was no mistake about it!), with a look of almost tearful supplication; and, as she passed, evidently trembling, there fell from underneath her long trailing shawl, a letter. Her father seemed to hear the slight rustle of the paper, and quickly turned; but I was too quick for him. The letter had no sooner reached the ground than it was covered by my foot, and the dragon saw me earnestly engaged in pointing out to Nelly an interesting steamer which was trailing its smoke in the far distance. I suppose he was satisfied, for they continued to ascend the cliff. I secured the letter, and, watching my opportunity, as Amy slightly turned her head towards us, I gave the document, with stage effect, into Nell's hands, while Nell waved her handkerchief as a friendly signal of "All's right."

Then we went down to a sequestered part of the beach, and, sitting upon a fragment of rock, Nelly read the letter to me. It was addressed "To Miss ——," and was written in pencil, in a neat, elegant hand. It ran thus:—

"Pardon this, my friend—for oh! let me call you friend, though I know not even your name; but, something tells me that I have not read your kind face in vain, and that you will indeed be a friend to me. I steal the minutes to write this; and, as I write, I know not how I may convey it to you; but, I must trust to the God of the helpless to aid me, and I pray that this day, on which hangs my fate, may not pass away without these lines being in your hands. I must burden you with my sad tale, in order to explain the request which I shall have to make to you; but I will be very brief.

"My father is called the Earl of Glenarvon; I am his only child; he has great estates which, if I outlived him, would be mine. They are joined by the estates of Lord Gurdon; and my father's cherished plan has been to unite the Gurdon with the Glenarvon estates. For that purpose, an arrangement was made which betrothed me to Lord Gurden's eldest son. I had known Philip Gurdon from a boy; but I could not love him. I never did love him. Ah! my friend, they cannot order the affections—they cannot say to them 'Go there,' or 'Stay here.' No! They are like the waves that are now murmuring in my ears, and no sovereign power, except the Great Supreme, can rule the mighty tide of love.

"My heart was not my own to give. I had entrusted its keeping to another. But, when my cousin, Captain Alvanley, proposed for my hand, my father would not listen to him; he had set his heart on marrying me to Philip Gurdon, and he would hear of nothing else. He is a kind father, and loves me; but he is cold and stern; and when I wept upon his bosom, he told me that I *must* marry as he wished me, and must forget my cousin. I pleaded, strongly and with tears; but in vain. Henry, also, had one more interview with my father, but was dismissed—even with insults. I was in despair—I had no one to counsel me, or speak words of hope; and in my wild grief, and deep, deep love, I consented to fly that night from my father's house, and be married to Captain Alvanley at Gretna. He was to bring a carriage to a private door in the park wall, and I and my maid (for I had confided my secret to her, and she had promised to go with me) were to meet him there. I made my preparations, and counted the minutes until I should be with Henry; but my maid played me false, and, at midnight, as I was preparing to leave the house, my father met me on the stairs. He upbraided me with my disobedience, and I fell fainting into my mother's arms. It was a terrible scene.

"My father still feared that I should fly with my cousin, and he determined to remove me to some spot unknown to Captain Alvanley. Travelling privately, and under feigned names, they have, therefore, brought me to this place; and they keep a constant watch over me to prevent my communicating with Henry. But 'Love is strong as Death,' says the Holy Book—'many waters cannot quench it, neither can the floods drown it.' My father intended his purpose to be kept secret from me; but, before we left home, I by chance heard a conversation between him and my mother, and learnt the name of our destination. I discovered a trustworthy messenger, and immediately wrote to my cousin; and it was arranged that he should bring a carriage *this very evening* at midnight, to the environs of Westcliffe. As I knew not where we should be, I promised to send some one (on whose secrecy I could depend) to meet him. My mother, I was sure, would take measures to keep me to my room, and I knew that I should have to escape by the window. Henry was to bring a rope-ladder for the purpose.

"But whom can I send to meet him? In whom can I confide? I am alone, and among strangers—watched and guarded. I throw myself, then, upon the generous kindness of yourself, and the gentleman whom I suppose to be your brother. My deep love emboldens me to break down the barriers of form, and to ask assistance at the hands of strangers. Oh! if you would secure the happiness of another, and save her from sinking into misery, forgive the freedom of her appeal, and aid her in what she asks. It is this: that the gentleman (your brother?) would this evening, at midnight, meet Captain Alvanley where the Avenue-road by the hotel joins the Northern-road, and would inform him where I am to be found. My room is at the side of the hotel towards the Avenue-road. I shall be at my window, dressed, and in readiness; but the greatest silence must be observed, as a door only divides my room from my mother's. Of the outer door she has the key; but this we had expected. The ladder will be of silk, and I can secure it without noise.

"I know not how to apologise for the boldness of my request; but I ask of your brother, as a man of honour, not to betray the confidence of this communication, but to aid me in changing my present misery into joy, for the sake of him who is dearer to me than life itself. And that God may bless and reward you, and smile upon the love that is dearer and nearer than love of father, or love of brother, is the sincere prayer of

"AMY FRANCES DARNELL."

It was not without many interruptions and comments that Nelly read the letter to me. "Poor thing!" she sighed, "what is to be done?"

"Done!" I cried; "why, what she wants, of course. 'Lives there a man with soul so dead who never to himself has said'—it's my duty to help a female in distress? What's to be done! Why, of course,

I shall go to meet Captain Alvanley, and shall help them all I can That is what is to be done, Nelly." I said this with quite a Spartan firmness; for, as Amy was really another's, I had only to make a virtue of necessity, and nip my love in the bud with the best grace I might.

"Poor thing!" again sighed my sister; "no wonder she looked sad; and, when she *might* be so happy, it seems hard to refuse to help her. But would it be acting right towards her parents?" I think that Nelly in her secret heart was rejoiced at the very prospect of assisting in an elopement; but I supposed she considered it proper morality to make an objection.

"Her parents!" I answered hotly (and I don't wish to defend what I said; I only record it because I said it); "her parents, indeed! Have *they* acted right towards *her*? Did that dragon father of hers care more about uniting *her*, or the estates? Hasn't he set title-deeds and dowries in the place of love and affection? Hasn't he proudly placed his own family aggrandisement as superior to his child's happiness? Doesn't he look upon her wedding-ring merely as the symbol of a ring-fence? Doesn't he want to make the holy estate of matrimony an estate of broad acres, and to sink love in the land-tax? Is marriage only a matter for lawyers? Can you write on hearts like parchment and endorse them like bills, to be made payable at sight to any one you please, changing 'I love you' into an I O U? Must poor Amy be a 'puppet to a father's threat'? as Tennyson says."

"Dear me," said Nelly, whose breath was almost taken away by my impetuosity; "you treat me to quite a little homily."

"Why, suppose," I continued, "that *you* were placed in a similar position with regard to Fred (my sister was engaged to Fred Temple, so I knew that this was an *argumentum ad hominem*, which all her filial logic would not be able to resist); and suppose *you* threw yourself on the confidence of a young girl of your own age, what should you think of *her* if she refused to assist you; and what would Fred think of that young lady's brother if he followed his sister's example? Fred would call him out at once. So, as I don't want to go out with Captain Alvanley, I shall meet him with pacific intentions at the cross-roads

at twelve o'clock to-night." Nelly did not require more persuasion, so we both agreed to help poor Amy all we could, and not to mention the subject to my mother, for fear she should side with the parents, and disclose the projected elopement to Lady Glenarvon.

"Captain Alvanley," mused my sister, as we wandered back to the hotel, "I cannot but help thinking that I have heard his name, and that he is a friend of Frederick's, and in the same regiment." Now that my sister mentioned it, I had some dim recollection of the same thing; and though we could neither of us fully determine it as a fact, the mere supposition of its truth, made us, if possible, more earnest in Amy's cause. We had no "Army List" to refer to, to settle the point; but when we got back to our rooms, Nelly turned up Lord Glenarvon's name in the "Peerage" (my mother never travelled without the "Peerage," and "Johnson's Dictionary"), and, sure enough, we there found the name of his "sole child and heiress, the Lady Amy Frances Darnell, heir-presumptive to the Barony of Darnell, born——' (Amy was barely twenty). And it further stated that the "heir-presumptive to the Earldom and Barony of Aryon," was "his Lordship's eldest brother," whose son, the Hon. Henry Algernon Alvanley, was "Captain in the —th Light Dragoons" (Fred's regiment).

Both Nelly and I remained in a great state of excitement all the evening, longing for midnight to arrive. "It will be impossible for me to go to sleep," said Nell, "So I shall take a book to my room, and sit up till you can come and tell me the result of the night's adventure."

To Mrs. Rummell, I said "that I was going out, and should not be back till late: would she give me a latch-key, and that would prevent any of the servants sitting up for me."

"Oh, certainly, sir, with the greatest of pleasure; it wasn't every gentleman that had so much thought for servants."

All being prepared, as the hour of midnight drew nigh, I sallied out with Trap, and commenced my vigil. The hotel was situate on the outside of the little town. It's front (where was our suite of rooms) looked over the cliffs towards the sea; it's north side (where Amy had told me was her bed-room) was bounded by the Avenue-road, a road overhung by lime-trees, which led towards the inland, and which, at the distance of between three and four hundred feet, met at right angles, the North-road. It was at this point that I was to meet Captain Alvanley.

It is a midsummer night of rare beauty. The dew lies heavy upon the grass telling of the morrow's heat. The broad moon is at the full, making a light almost equal to that of day. The air, which has been so sultry, is now cool and refreshing, and comes floating through the lime-tree boughs with the most delicious perfume. The quivering leaves of the overhanging trees are stirred by its rich breath, and throb as though with rapture Through the dewy screen of leaves and interlacing boughs, the wandering moonbeams pass, dancing and leaping, and making bright floating circles on the shaded floor of the road beneath. In the hedgerows honeysuckles hang their links of sweetness, and mingle their odours with the scent of the newly-mown hay: the ripening corn gently sways in the soft night breeze; sea-gulls are settling down into their rocky nests; and the querulous note of a quail reaches me from a distant meadow. A little wayside brook comes babbling on toward the sea with a light musical song of ferns, and foxgloves, and flowering heather; while the sonorous roll of the ocean, breaking on the beach below, fills up, with its deep diapason, the summer-hymn of Nature. I look down through the vista of chequered light and shade, and I see the great cliffs, and over them the wide expanse of sea, and the blue-paved heaven thick inlaid with its "patines of bright gold;" and, though the dense foliage over-head shuts out the moon from view, I see her beams reflected in the waters in a long line of streaming light, that insensibly takes my thoughts back to one, who, in the days of Earth's youth, laid him down to sleep in the lonely desert, and, in a vision, saw a ladder of light that reached to heaven, and the angels ascending and descending the shining stairs of glory.

Midnight is proclaimed from the old church tower. The reverberations of the last stroke become fainter and fainter; and I listen attentively for the sound of carriage-wheels. I hear nothing but the babbling brook and the distant breakers. I light a cigar, and ask Trap to favour me with his opinion of Lord Glenarvon. There is no danger of our being interfered with, and told to "Move on!" by the police. Westcliffe can't boast a guardian of the night; we have the Queen's highway all to ourselves. The North-road lies bare and white in the moonlight; and I could see a carriage at three miles' distance—could hear it, at more. Captain Alvanley is decidedly not a punctual man! I think that if *I* had a girl like Amy waiting to fly off with me, and be my wife, I should be rather before my time than after it. I am not at all cold; on the contrary, out-of-doors is more refreshing than in, this hot weather; but I dance a polka, merely for a little amusement and change. Trap sits in the middle of the road, and gravely watches me from under his shaggy eyebrows, as I polk round him. "What! can't you make it out, old doggie? He evidently takes me for a lunatic; but I explain the matter to him, and he rubs his cold nose in my hand, to show that his confidence in me is restored. I pause from my exertions, and sit on the mile stone, smoking my weed; while Trap turns out an unfortunate field-mouse, and amuses himself to his great satisfaction.

One o'clock! No carriage, no sound of wheels. Captain Alvanley, sir! what are you thinking about, to keep a gentleman and lady waiting in this way! I will walk down the Avenue-road, to see if Amy is on the watch. Softly! there she is! bonneted and shawled, sitting at her open window. How the moonlight falls full upon her face! Captain Alvanley, if you could now see that face, and its intense expression of anxious expectation, you would give your post-boys any fabulous fee to whirl you the sooner to your Amy's side. She sees me at once as I emerge from the avenue, and I come softly under her window. She points within, as though towards her mother's room, and lays her finger on her lips. No talking allowed! I take the hint, and am speechless. She looks full upon me with those deep-blue eyes, and she lays her hand upon her heart, and bends towards me. She is thanking me for my vigil. Then she folds her hands together, and looks inquiringly. I shake my head in reply, and point towards the North-road. Then we go through a little ballet of action, and I am almost inclined to pirouette on one toe, as I signify to her that I will return to my post, and keep on the watch. And so I turn away while she dumbly expresses her thanks.

I walk back to my mile-stone, and light another weed. Trap don't understand it at all, and sits in the road, and yawns; so I throw stones to divert him. But even this lively pastime fails on too great repetition. Still no carriage! I watch the scented smoke curling lightly from my lips, and I begin to think of "Locksley Hall:"—

> Then her cheek was pale and thinner than should be for one so young,
> And her eyes on all my motions with a mute observance hung.
> And I said, "My cousin Amy, speak, and speak the truth to me,
> Trust me, cousin, all the current of my being sets to thee.

If Captain Alvanley thinks so, why doesn't he come? "O, my cousin, shallow-hearted!" Tennyson must decidedly alter his verses, and make the gentleman the one who is "falser than all fancy fathoms."

Two o'clock strikes, and no sight or sound of carriage. I pace again down the Avenue-road. There is faithful Amy, still at her window—still on the watch. She looks as though she had been weeping, and I try, by friendly signs and nods, to comfort her. "She speaks, and yet she says nothing. What of that? Her eye discourses." As I look up at her, I wish that "I were a glove upon that hand, that I might touch that cheek;" and, of course, I think of "Romeo and Juliet," and the Balcony Scene. But where is her Romeo? Are his "love's light wings" impeded by a yellow post-chaise? Once more, I silently go back to my mile-stone.

I hum operatic snatches, and go through the chief part of my vocal performances; but Trap has a delicate ear for music, and he howls down my attempts. Another hour slowly passes, and still no Captain Alvanley.

I steal under the shadow of the trees, and I see poor Amy looking so sad, that I have scarcely the heart to approach her without good tidings. I go back, therefore, to my mile-stone; and my comforting cigar-case is being rapidly diminished. Only one weed is left, for I did not calculate on such a lengthened vigil—so I husband it; but, at last, it is smoked out, and I am cigar-less. And still there is no carriage—no Captain Alvanley!

Something must have surely occurred to prevent his coming. Perhaps he cannot obtain leave of absence from his regiment. If this is the case, I can fancy what his state of mind must be just about the present time.

Four o'clock strikes. Once more I go to Amy's window. She is still there, and, being ready dressed for her departure, I feel almost inclined to propose an elopement on my own account, and provide a substitute for the Captain; but my mirth is checked as soon as I have seen her sad, sad features. She weeps outright this time—bursts into a silent agony of tears, that I can well understand. My heart is touched with pity, and I scribble on a piece of paper—"He may not be able to get leave of absence. He will probably come to-morrow night, and I will watch and meet him. Be of good cheer." I toss this up to her, and as the morning is breaking, there is sufficient light for her to read it. She cheers up directly, and smiles and waves her hand to me. I signify to her that I shall continue on my watch till five o'clock, and then I go back to my mile stone.

But, when the hour has passed, no Captain Alvanley has arrived; and I see that to prolong my vigil would be useless, for it is broad day now, and people are beginning to move about to their boats and their work: so, much to Trap's satisfaction, I turn my steps towards the hotel. Amy is still at her window. She thanks me as much as any one could thank me without speaking. She again reads my scrap of a note, and looks towards me with a cheerful face, as though she depended upon the fulfilment of my promise; and then she noiselessly lets down her window and blind. Having seen this, I quietly make use of my latch-key, and pass up-stairs to my sister's room. She has not gone to bed, but has fallen asleep in her chair, from sheer exhaustion. I tell her the result of my night's vigil, and am presently in my own room, and a sound sleep.

The next day passes wearily. In the morning we see Amy go to bathe, as usual; and, in the afternoon, we pass them on the cliffs, Amy looks pale and anxious; and her eyes seem heavy with weeping and watching. When we are close to them, I pretend to be talking in a loud tone of voice to my sister; and I say—meeting Amy's eyes as I say it—"he will be quite certain to arrive, and I shall be there to meet him." I think this a Machiavellian stroke of policy, and I am delighted with myself at my ready wit.

As evening advances the sky becomes overcast! and, as I let myself out of the hotel, at half-past eleven o'clock, big drops of rain beat, against my face. I send Trap in-doors again; it is evidently going to be a night not fit to turn out a dog in, and Amy will have but rough weather for her departure, though the noise of the wind and rain will favour her escape. I put on a rough boating coat, light a weed, and sally forth to my vigil.

The thunder comes growling up from the west, and, presently, bursts into peals like the discharge of heavy artillery. The lightning gleams vividly through the lime-trees overhead; and, for a moment, lights up the tumbling waves, that are white with foam. Soon the rain comes down in a perfect sheet, and even penetrates the dense mass of foliage above me. It is, indeed, a rough night for a vigil. But, hark! the carriage-wheels! I run out into the North-road, and meet—the blinding, hissing rain. I listen again: there is no sound of carriage; it was but the rattling rumble of the thunder.

It must be some time after midnight; but the violence of the storm overpowers the sound of the church clock. I keep under the half-shelter of the dripping trees, and, twice or thrice, I run forth, as before to meet the carriage; but with no better success; the wind and the rain together always deceive me.

At length the storm subsides, and the thunder dies away in distant peals. I shake the wet off me like a Newfoundland dog coming out of the water. There is a grateful sense of coolness all around; the thirsty earth has drunk in the refreshing moisture; the July storm is over. Soon the moon shines out, ghastly and pale, through the dark driving clouds; and only the rain-drops patter from the leaves. I light a fresh cigar, and wait till two o'clock strikes. No Captain Alvanley! So I walk down the avenue, towards the hotel. Faithful Amy! there she is at her open window, on the watch, just as she was last night. She still looks very pale and sad, and she is evidently listening intently for the sound of the carriage wheels. As soon as she sees me she bends and greets me as an old friend. I have provided myself with a sheet of paper, and I scribble on it in large letters, "The violence of the storm must have delayed him. No horses could face such a tempest. By this time he is on his road." I throw this up to her, and she catches it as nimbly as a cricketer. It seems to console her; so again I return to my post, or, to speak correctly, to my mile-stone; for I take my seat thereon, and smoke placidly. I rather miss Trap, for he was a companion; but I know that Amy is sharing my vigil; so what more can I desire?

Three o'clock, and still no Captain Alvanley. This is getting strange. Can he have played her false? I will go and take a quiet look at Amy. She is still at the window—still gazing out anxiously towards the North-road, with a sad, sad face. I have not the heart to go towards her; for what can I say?

Another hour passes slowly and wearily, and no sight or sound of carriage. Surely Amy could not have made any mistake as to the night? It is not probable; but I will go and ask her. She is at her open window; but clouds have floated before the moon, and it would be impossible for her to read anything that I may write. I, therefore, essay to speak to her. She leans forward out of the window, and we converse in whispers. "Are you quite sure that he fixed last night?" I ask.

"Quite sure," she answers; "he mentioned the night and the hour. I could not be mistaken."

"Perhaps he has not been able to leave his regiment; perhaps it has been called out by some sudden riot; there may be a hundred reasons why he cannot come (*I* could not think of them); and, of course, he could not write to you. But do cheer up and take courage (for her tears were beginning to fall); I will watch again to-morrow night—and"

And our *tête-à-tête* is suddenly brought to an end by the appearance of Lady Glenarvon, attired, *Lady Macbeth*-like, in her *robe-de-chambre* and *bonnet de nuit*.

Amy gave a scream as she turned and saw her mother standing at her elbow. Lady Glenarvon advanced to the window—stood there for a moment (regardless of her costume), while she mentally took my portrait in very stern colours, and then, without saying a word, drew down the window and the blind. I waited to see if more would come of this; but, as there did not, I returned to my mile-stone to ponder over the *contretemps*, and inform Captain Alvanley, should he arrive, of the state of the case. But he did not arrive; and, wearied and somewhat sick at heart, I went back to the hotel, and to bed.

I was so tired out by my two nights' vigil, that the sun had been up several hours when I awoke, and it was late when I got down stairs. "Good morning, sir!" said Mrs. Rummell, who was the first person I met. "Mr. Spencer, sir, has left this note for you. He asked me your name, and he directed it here, in the bar, sir."

"Mr. Spencer! And pray who is Mr. Spencer?"

"Why, the strange-mannered gentleman, sir, as come with the two ladies in a carriage and four."

"Good heavens!" I cried—for I had forgotten Lord Glenarvon's incognito—"you don't mean to say that she—that they are *gone?*"

"Yes, sir," said Mrs. Rummell; "they went quite sudden, just after eight this morning; and I'd barely time to make their bill out. I suppose, sir, they must have heard of the death of some relative."

"Very like, very like!" I muttered in a dream-like way, as *Hamlet* does, when they tell him of the *Ghost*; and, tearing open the note, I read this:—

"Sir,—When you again assist a young lady to break through her ties of filial duty and obedience, I should advise you to first ascertain if the young lady is a free agent. Yours truly, J. SPENCER."

"A free agent, indeed! Well! that *is* cool of the old dragon, when he knows what a tight prisoner he's kept her." Nelly and I could make nothing of it; and, to add to our mystification, Nelly had got from Fred a letter written on the morning of the day when the elopement ought to have taken place, in which he said (referring to some people my sister knew) "the J.'s have got a pic-nic in hand for to-morrow, in which I expect some of ours will be ingloriously taken captive. Bessie J. is to bring all her battery of charms to bear upon poor Alvanley, whom we have forcibly compelled to accept the invite. He has been "all in the downs," lately; and we thought that a dose of Bessie's flirtation would do him good. So, perhaps, you may hear of *your* friend being engaged to *my* friend; but I trust she will not deprive herself of the pleasure of being your bridesmaid."

And so it seemed, that while I was keeping my vigil, and pacing my lonely round, and while Amy was on the watch for her lover, Captain Alvanley was either snoring between the sheets, or dreaming of flirtations with Bessie J. Nelly and I were altogether mystified. Had Amy been imposing upon us, and was the dragon really a Mr. Spencer, and not an Earl? Had Amy been really expecting some one to elope with her, to whom she had given a name out of the Peerage? or was the whole affair a practical joke on her part, to relieve the tedium of a dull watering-place? But this could not be. To solve the mystery, we determined to write at once to Fred, and submit it to his tact to find out if there was any connection between the Captain Alvanley of his regiment, and our mysterious beautiful Amy.

It was some time before the matter was perfectly cleared up. Captain Alvanley himself wrote to me a very long and sad letter, which put us in possession of all the particulars relative to his engagement with his cousin Amy. All that she had written in her letter to my sister was quite true, up to the point of the discovery of the projected elopement; beyond that, it was the mere invention of a disordered brain.

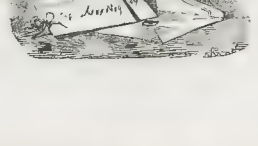
After Amy had fallen fainting into her mother's arms, she had been seized with delirium and fever. This, together with the wild excitement through which she had gone, partially unsettled her intellect. As in many other similarly sad cases, the chief feature of her disease was a settled melancholy, and a derangement only on the one point that had brought on her illness; she was under the belief that her cousin had planned another night for the elopement, and her mind dwelt upon this, as though it were a fact. Hence her letter to my sister; and hence her plans of escape. It is needless now to explain the watchful care of her father and mother; they were too well aware of the peculiar phase which their daughter's aberration of intellect had assumed, not to fear lest she should escape in the night to the imaginary assignation. Change of scene and strict retirement had been advised as the most effectual way to prevent the increase of the malady, and it was by the doctor's counsel that Lord Glenarvon had maintained an incognito when he had brought his daughter to Westcliffe, in order that she might derive all the benefit that could be gained from seabathing and the fresh sea-breeze.

The effects of my vigil, and her unfortunate acquaintance with us had added to her disorder; and her father (as Captain Alvanley afterwards discovered) had removed her from Westcliffe to the south of France, and from thence to Italy. There, under judicious treatment, her mind gradually recovered its healthy tone; and, though the shock upon her nervous system had been so great, she returned to England, after a little more than a year's absence, in perfect health and strength—the same Amy as she had been when she won her cousin's love.

During this time many important events had occurred. In the first place, the Long Vacation had ended; and, despite the interruptions to my reading, I had got my degree. In the second place, Lord Glenarvon had been taught a lesson on forced marriages, which he was not likely to forget; and, in the third place, Philip Gurdon, when he learnt the cause of Amy's illness, had transferred his affections to another lady, and married her. As the possibility, therefore, of joining the Gurdon to the Glenarvon estates was now at an end, the Earl did what he easily might have done in the first instance, gave his consent to his daughter's union with her cousin, Captain Alvanley.

They were married about a month since. If any one is curious to see how the bride was dressed—what was the worth of her *trousseau*—how many bridesmaids she had—and what notabilities figured at her wedding, he has only to refer to the *Morning Post*, which devoted nearly half a column to these women-absorbing topics. You will not find *my* name there, as I was unable to get back from my Swiss tour in time; but you will see Nelly's and her husband's names—"Captain and Mrs. Temple."

Amy's wedding-cards are lying on the table as I write this. I have not yet seen her; but, as they are expected to be at Glenarvon Castle in a fortnight's time, and as I am invited to meet them, I shall soon have an opportunity of judging whether, as Lady Alvanley, Amy looks as sad and melancholy as she did on the nights of my Long Vacation Vigil.



SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER V.—GRADUAL CHANGE OF THE CHATURANGA INTO THE SHATRANJ, OR MEDIÆVAL GAME.

I WOULD now beg leave to hazard a few conjectures respecting the mode in which the ancient Chaturanga became gradually changed into the Shatranj or mediæval game. We have seen that, in playing the former, it was an object of importance with each of the four players to gain possession of his ally's throne—a step which thenceforth secured to him the undivided command of the allied forces. It must, therefore, have often happened that, after some twenty or thirty moves, the contest remained to be concluded between two players only; and this circumstance of itself was sufficient to have given rise to the mediæval game. But this is not all; it is evident that the Chaturanga might have been, and frequently was, played by only one person to each side, and that, too, from beginning to end. Of this fact we have a noted instance in the case of Yudhishthira (as stated in Chapter II.), who lost the whole of his possessions in a premature encounter with Shakuni at this very game. Nay, further, it is extremely probable—for reasons immediately to be assigned—that the game of Chaturanga was generally played either by four or two persons, without admitting the use of the dice at all, exceptmerely for the purpose of determining which party should have the first move. If we examine into the principles of the game, and, so far as we have the means, into its practical working, we shall find that the dice do not in any way constitute an essential element. On the contrary, it is evident that, after having determined who is to have the first move, the dice may be wholly laid aside, and the struggle becomes a mere matter of wary tactics and strategic skill.

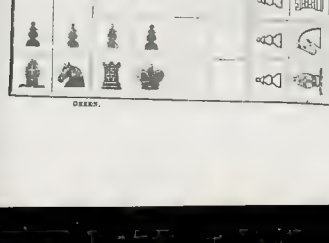
Now we have excellent reasons for believing that at a very early age the use of the dice must have been altogether discontinued, otherwise, the game could not have been played at all except in secret among regular gamesters. In order to understand the validity of these reasons, let us examine into the state of the old and most rigid of the Hindu laws, such as those of Manu, &c. The law and religion of the ancient Hindus strictly prohibited two species of gaming—1st, that species called "Dyuta," which is equivalent to our games of chance or hazard, including pure dice, or dice combined with skill, as in the ancient game of Chaupar and Chaturanga. The other class of gaming, as defined by Manu, was called "Samahwaya," and included all matches between male animals, such as cock-fighting, ram fighting, &c. Amost both these classes Manu is clear and explicit. For instance, in his 9th Book, he says—"Let the King punish corporally, at discretion, both the gamester and the keeper of a gaming-house, whether they play with inanimate (Dyuta) or animate things (Samahwaya).

The law and religion of the Hindus being thus clear and positive against the game of Chaturanga, as played by Yudhishthira, what was to be done by the contemplative and sedentary Brahmans? The answer is obvious; dismiss the dice from the game, and it no longer falls under the category of "Dyuta," or game of chance. Besides, in the purer era of the Hindu religion, the Brahmans really had no interest in gambling, for an excellent reason—they had no property to lose, and no temptation to win worldly wealth. Hence we have every reason to conclude that the game of Chaturanga was generally played among the strictly religious and orthodox Hindus, by two or four persons, as the case might be, without the aid of dice, and that in the course of time this game was changed in order to allow a more intellectual contest of Shatranj, or the mediæval game at the same time, however, that the severe and rigid laws of Manu in latter times became considerably relaxed, and that both sorts of games [illegible] from the magistrate—on convenient [illegible] had to pay over to the worthy magistrate aforesaid (to be applied, of course, like the gains of more modern indulgences, to pious purposes), and the remaining half to go into the pocket of the winner (vide "Code of Gentoo Laws," two edition, London, 1781, page 254). This merely shows that mankind have ever been, and ever will be the same, whether they dwell on the banks of the Ganges or on the Rhine, for in either locality we find that the rigour of the laws against gambling might be somewhat relaxed on certain occasions, [illegible]

[illegible] Arabians and Persians are unanimous on the following points, viz., that the game known in the middle ages was in [illegible] and that it was brought from India into Persia during the reign of Nushirwan, [illegible] Annals of the Byzantine Historians and Western Chronicles, as we have shown, however, that the game existed in India [illegible] years previously, and that it was [illegible] the invasion of Cyrus, [illegible] by the Arabs and Persians, similar names [illegible] at that time known in Persia by the name of Shatranj, [illegible] Persian [illegible] the game, on account of its origin and modification of a more ancient game, previously introduced into India from Greece, by Alexander the Great. This theory is unique, and shall be thoroughly examined [illegible] at present it is enough to say that the anonymous writer, by [illegible] undoubtedly meant the [illegible] had never heard. The [illegible] the enlightened Akbar, [illegible] ...rs, in the strictest [illegible]

[illegible] AM IN THE ANCIENT [illegible] OF SS BOARD.

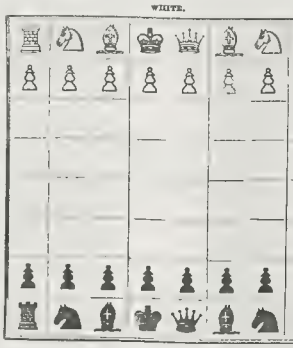
[illegible] of Chaturanga,



GREEN.

THE MEDIÆVAL GAME OF SHATRANJ.
(The arrangement of the pieces being the same as that of our modern game)

WHITE.



BLACK.

Let us now for a moment examine, for example, the Green army, as arranged in the Chaturanga. We see the Elephant (i.e. our Rook) stand next the King; and the Ship (i.e. the mediæval Bishop), placed in the corner of the board. The first alteration effected, then, is to make the Rook and Bishop change places—a step which gives the Bishop more freedom, as he will then be able immediately to command two squares of the board; whereas, when placed in the corner, he could only attack one square. The next step is to call over the Black allies, and array them in like manner on the right of the Green—the Rook and Bishop of course having changed places. Now, one of the allied Kings—it matters not which—is reduced to a subordinate situation, called in the Sanskrit, "Mantri" and in the Persian, "Farzin"—both of which mean precisely the same thing, viz., "Monitor" or "Counsellor." Thus, we shall suppose the Black King, on taking his station beside the Green Monitor, becomes a Farzin, above of half the power he possessed when free and independent. Thus, by a very slight alteration in *form*, but none whatever in *principle*, we have the men drawn upon the side of the first and next to us, the same as we at this day arrange our Black men. In like manner let the Red and Yellow forces unite on the further side of the board, so that King may be opposite to King, and Farzin to Farzin, &c., and we have what we now call the Whites. This is the precise state in which the game was introduced into Persia, the powers of the pieces being the same as in the Chaturanga; and thus the game continued to be played in Asia and Europe for nearly a thousand years afterwards.

In this translation of the Chaturanga into the Shatranj, we see a curious instance of the tenacity with which the ancient names are still retained, although two of the pieces have changed places. Thus, the piece next the King is still called in Sanskrit, "Hasti," and in the Persian, "Fil, or "Pil," which, amongst the Western nations, received various denominations, such as "Bishop" "Fool," "Lesper," Alphin," &c. Again, the piece, still retaining the power of the original Elephant when stationed in the corner, rejoices in the ancient name of the "Ship," or "Chari," in Sanskrit, "Roka," or "Ratha," and, in Persian, "Rukh" The latter term, as well as our own Rook, are evidently derived from the Sanskrit Roka; although neither the Persians nor ourselves, in all probability, have ever known or thought of its original meaning. Sir William Jones derives the Persian Rukh from the Sanskrit "Rathea," a chariot, pronounce of Roth in Bengal. This derivation is objectionable for two reasons; in the first place it is too far-fetched; and, secondly, the word Ratha is never mentioned in the ancient account of the Chaturanga; add to this, that there is no proof that the Bengali dialect existed for centuries after Nushirwan. I shall hereforth, for the sake of distinctness, continue to use the term Chaturanga for the ancient game of the Puranas, and Shatranj for the mediæval game, but the reader will be pleased to bear in mind that in reality both of these, as well as our modern game, are like name in principle. When the Chaturanga was modified into the Shatranj, the powers of the pieces remained unchanged, it was merely a change of form. At the end of a thousand years, when the Shatranj was [illegible] into the modern game, the form of everything was changed, but the powers of certain pieces were greatly extended. Hence, in the game of Shatranj, the [illegible] are called in Sanskrit, "Mantri," and in Persian, "Farzin," and being [illegible] and powerful, the [illegible] are called "Pyadas" are the same numerically, though changed in their names, to "Pawns," [illegible] the Hindus. The [illegible] were changed into the Wazir [illegible] Chariot or Rook, and [illegible] same importance with the Rook on the board. On receiving [illegible] from the Persian [illegible] the word [illegible] Rook, [illegible] other languages, [illegible] "Tower" also, [illegible] [illegible] and [illegible] shall show in our next [illegible] Arabians and Persians [illegible] to Persia of the poet Firdausi. From the Persians the game passed on to the Arabs; and, in the language of the latter, the word Rukh has but one meaning, viz., that of the celebrated fabulous bird so called. This bird, according to the best accounts of all who have not seen it, is furnished with two heads, and he could with ease carry to his nest four full-grown elephants at a time—viz., one in each of his two beaks, and one in each claw. I think this belief in the two-headed bird among the Arabs, gave rise to the older form of the piece, on its introduction into [illegible] shown by Sir W[illegible]

[illegible] found in [illegible]

[illegible] ed said to [illegible] points on which I [illegible] unable to gi[illegible]. But to conclude, I think [illegible] all the evidence [illegible]ler, I may safely say, that the g[illegible] from the time of Pandu and [illegible] ive sons, [illegible] to the reign of our gracious Sovereign Queen Victoria [illegible] two row rules over those same East-in realms)—that is, for a period [illegible] 000 ye[illegible]s, in the sacred language [illegible] or the [illegible] space of time, retained its origin[illegible]

[illegible] exact era at which the [illegible] other words, at what period [illegible] invented the latter [illegible] ree on the point—so [illegible] Great, and others as [illegible] Nausheerwan. Even the poet Firdausi, the very best [illegible] among them, though he devotes a very long and a very romantic episode to the occasion of the invention of the Shatranj, is quite silent as to the exact period; all that he lets us know on that point is that it took place in the reign of a certain Prince who ruled over northern India, and whose name was Gaw, the son of Jumbûr. The Brahmans are silent on the subject, partly because the change was a matter of no importance in their eyes, or most probably because it took place after the Sanskrit had become a dead language; consequently we need not feel any surprise at what Sir William Jones states when alluding to the Shatranj, which, by the way, he fancies to be the same as the game played by Philidor. In his discourse already cited, he says—"Yet, of this simple game, so exquisitely contrived, and so certainly invented in India, I cannot find any account in the classical writings of the Brâhmans." Now, the reason for Sir William's disappointment is obvious enough; "the classical writings of the Brâhmans" had been composed many centuries before the separate existence of the mediæval game. Sir William then states—"At present I can only exhibit a description of a very ancient game of the same kind (the Chaturanga); but more complex, and, in my opinion, more modern than the simple Chess of the Persians." Here we see an instance of a great mind's falling into an inconsistency from having hastily adopted a paradoxical opinion at the outset. We are told that the Chaturanga is "a very ancient game," and yet "more complex and more modern than (the Shatranj) the simple Chess of the Persians;" and this was stated by Sir William when he had before him written authority in favour of the remote antiquity of the former, and none whatever respecting the latter.

The change of the original word Chaturanga into the Arabic, Persian, and Turkish term, "Shatranj," has been satisfactorily explained by Sir William in the same discourse, where he states "By a natural corruption of the pure Sanskrit word, it was changed by the old Persians into Chatturang; but the Arabs, who soon after took possession of their country, had neither the initial nor final letters of that word in their alphabet, and consequently they altered it further into Shatranj, which found its way presently into the modern Persian, and at length into the dialects of India, where the true derivation of the name is known only to the learned." I cannot agree, however, with Sir William in his next sentence, where he states:—"Thus has a very significant word in the sacred language of the Brâhmans been transformed by successive changes into *axedrez, scacchi, echecs, chess*; and, by a whimsical concurrence of circumstances, given birth to the English word 'check,' and even a name to the 'Exchequer' of Great Britain." Now, I maintain that it is not the Sanskrit word Chaturanga from which *scacchi, echecs, chess*, &c., are derived; but the Persian word, "Shah" (King), which we find in use to this day among the Arabs and Persians, in the same sense as our word "check." In fact, we ourselves frequently use the literal translation of "Shâh" in actual play, when, instead of "check," we say "the King," or simply "King." So the French often say, "Au Roi;" and the Germans beat us all in exactness, for they really possess the identical word, "Schach." As to the derivation of our word "Exchequer," it will, I have no doubt, be soundly and satisfactorily discussed hereafter, by the learned gentlemen who have promised us an account of the progress of Chess in Europe during the dark and middle ages.

THE EXHIBITION OF 1855.—The Imperial Commission of the Exhibition has published a notice to French and foreign artists, of which the following are the principal points. The Exhibition will comprise the works of all French and foreign artists who were living on the 22nd of June, 1854, the date when the decree for the Exhibition was published. Works which have been before exhibited will be received. The works will be composed of paintings, drawings in water-colours, pastels, miniatures, [illegible] and publications [illegible] engraving, [illegible] and lithographic prints. Paintings on glass, the character of which is purely decorative, will form part of the Exhibition. Pictures and other objects unframed, sculptures in clay unbaked; anonymous works, and copies, will not be admitted. The works of foreign artists must be previously decided on by the national commissioners formed for that purpose. No work of a foreign artist will be admitted unless [illegible] the other persons [illegible] [illegible] Exhibition are requested to [illegible] [illegible] make known [illegible] [illegible] their works [illegible] of their [illegible] and to send [illegible] possible. Foreign artists are requested to [illegible] [illegible] from [illegible] attend to exhibit. All the works of French artists residing in the departments, or abroad, must be addressed to a French [illegible] at Paris. [illegible] [illegible] in France must [illegible] to a French [illegible] [illegible] in the Department will be conveyed to [illegible] [illegible] at the expense of the artists. Those of French [illegible] [illegible] as well as those of foreign [illegible] [illegible] brought to Paris [illegible] [illegible] of the State. Unless [illegible] from the former, and the [illegible] conditions. The packages [illegible] [illegible] [illegible] [illegible] of the charge of Affaires of France at [illegible] countries [illegible] [illegible] artists will be represented by the delegates [illegible] [illegible] [illegible] will forward to the Directors of the Exhibition, on depositing the works, a notice signed by each artist describing the works sent; the name of the artist, the place and date of his birth, the names of [illegible] masters, and the number of works he has sent. [illegible] French artists when the jury shall have been formed. The Commission of the Exhibition has also published a notice announcing reports which had been current, that the exhibitors would be obliged to pay for the place occupied by their productions, and [illegible] that the Exhibition would be put off to 1856.

A PEEP INTO SEBASTOPOL.—The captain of the Turkish merchant-ship, captured lately by the *Vindictive*, [illegible] and conveyed to [illegible] Admiral [illegible] [illegible] [illegible] [illegible] returned to return to Constantinople. On his arrival [illegible] [illegible] French Chargé d'Affaires, and [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] altogether devoid of interest. During his confinement in the stronghold, he states that a sum of 6 paras [illegible] [illegible] [illegible] [illegible] allowed to keep him in good cash, and [illegible] [illegible] [illegible] [illegible] Hall, according to his account, he was the only [illegible] [illegible] garrison, whose food consisted more [illegible] [illegible] [illegible] [illegible] of some description. He had, moreover, the honour of a visit from the Muscovite Captain Pacha Menschikoff, he presumes; who, in the first place, inquired after his health, and whether his wants had been duly provided for, and then proceeded to cross question him in reference to the amount of the allied forces. The [illegible] [illegible] [illegible] [illegible] them at a [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] much irritated, and once [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

NEW BOOKS, &c.

Just published, 12mo, 5s., cloth,

ALTARS, HEARTHS, and GRAVES.

By JOHN MOULTRIE.

London: HAMILTON, ADAMS, and Co. Rugby: Crossley and Billington.

THE PIANISTA.—After fourteen years' struggle with the Manufacturers (who wished to prevent the public from having Cheap Music), the Pianista has at length broken down the barrier. The Chancellor has resolved all the injunctions against the work, and EVERY NUMBER may be had.—Sonnambula, Rigoletto, Lieder—all may be had.

Pianista Offices, 5 Conduit-street, Regent-street; and 67, Paternoster-row.

MUSIC 6d. per Sheet.—EWER and CO. have resolved, in consequence of the continual complaints of the high price of Music, and the calls for discount or abatement therefrom, and in order, in a measure, to supersede the incorrect reprints of some of their publications, to publish and sell all their Music, both copyright and non-copyright, English or Foreign print, at 6d. per sheet; and they, therefore, beg to call the attention of the musical public to the fact, that henceforth all Music from their Establishment will only be charged at 6d. per sheet. From which price no abatement will be made. At the same time they beg to state that they will continue, as heretofore, to bring out their publications in the best possible manner, as regards correctness, engraving, printing and paper; and that there shall be no lack of exertion on their part to improve as they proceed.—360, Oxford-street.

CANDLES FOR EXPORTATION.

PATENT BELMONT SPERM, and Patent Stearine Sperm for tropical climates Patent Australian Lights, Patent Unrivalled Sperm and Composite Candles for the Asiatic, and Cape wineries, and temperate climates. Prime's Patent Export Night Lights.—PRICE'S PATENT CANDLE COMPANY, Belmont, Vauxhall, London.

PRICE'S PATENT CANDLE COMPANY have recently been compelled to proceed in Chancery against two London Shopkeepers, whom they had detected in habitually selling the Candles of other manufacturers as those of the Company, and their attention has been called by respectable dealers as well as by numerous consumers to the supposed commission of similar frauds in many other instances. The responsibilities incurred by Persons guilty of such practices must be generally known. In the cases above referred to, although special circumstances induced the Company strongly to press for the payment of small items in a bill only, the costs of the Company paid by the Defendants, in addition to their own costs, amounted to upwards of £70. And upwards of £80 in No. 2. In a previous case, in which the law was allowed to take its course, the Defendant was mulcted in the sum of £100 for both for all the profits of his fraudulent sales, extending over a period of some years, and paid £130 damages, and £30 for costs. A similar fraud committed against Messrs. Allsopp, of Burton, was recently punished criminally by Lord Campbell, with the infliction of imprisonment and hard labour. The Company hope that this intimation will relieve them from the necessity of hereafter resorting to either mode of proceeding.—Belmont, Vauxhall.

THE BEST FOOD FOR CHILDREN AND INVALIDS.

ROBINSON'S PATENT BARLEY, for making superior barley-water in fifteen minutes, has not only obtained the patronage of her Majesty and the Royal Family, but has been proved by the analysis to be of more than double the quantity of nourishment ordered to stand unrivalled as an eminently pure, nutritious, and light food for infants, children, and invalids; much superior for making a delicious custard-pudding; and excellent for thickening broths or soups.

ROBINSON'S PATENT GROATS form another diet universally approved of, and which a superior gruel is fifteen minutes, has not only obtained the patronage of her Majesty and the Royal Family, but has been proved by the analysis to be of more than double the quantity of nourishment ordered to stand unrivalled as an eminently pure, nutritious, and light food for infants, children, and invalids; much superior for making a delicious custard-pudding; and excellent for thickening broths or soups.

ROBINSON'S PATENT GROATS form another diet universally approved of, and which a superior gruel is fifteen minutes, has not only obtained the patronage of her Majesty and the Royal Family, but has been proved by the analysis to be of more than double the quantity of nourishment ordered to stand unrivalled as an eminently pure, nutritious, and light food for infants, children, and invalids; much superior for making a delicious custard-pudding; and excellent for thickening broths or soups.

Prepared only by the patentees, ROBINSON, BELVILLE, and Co., purveyors to the Queen, 64, Red Lion-street, Holborn, London.

HER MAJESTY'S ROYAL LETTERS PATENT (Messrs. S. and B SOLOMONS, Opticians, 39, Albemarle-street, Piccadilly, have just completed, for the Royal Family, valuable and extraordinary improvements in the most powerful and useful TELESCOPES, MICROSCOPES, OPERA-GLASSES, PERSPECTIVE, KNIGHT-GOUNDS, and OPERA-GLASSES, to know the distances of objects viewed through them, and the magnifying power. Also, a Telescope, fitted and engraved with Munich German Glass. These Telescopes possess such extraordinary power, that the moon, with total some 3½ inches, will enter eye-piece, will show distinctly Jupiter's Moons, Saturn's Ring, and the Double Stars, which, with any other glass can be seen a person's countenance 15 miles Estimi, and an object from 16 to 20 miles; for the watch-maker, jeweller, and all others, with increasing power accordingly. The Royal Exhibition, 1851, valuable, have been awarded many small, powerful, waistcoat-pocket glass—the size of a watch—by which a person can see distinctly at a mile and a half distant. They answer every purpose—on the race-course, at the opera-house, country scenery, or at sea; most invaluable at sea; can be carried in the pocket. They are invaluable for shooting, deer-stalking, yachting—to sportsmen, gentlemen, gamekeepers, and tourists. Opera, camp, race-course, and perspective glasses, with wonderful powers; an object can be clearly seen from 16 to 20 miles. Invaluable as-by-lenses for long-sighted and race lenses, of the greatest transparent power. The valuable advantages observed from this invention is that lenses becoming impaired is preserved and strengthened; and very aged persons are enabled to employ their sight at the most minute occupation—can see with these lenses of a much less magnifying power—and they do not require the constant change to the dangerous effects of further powerful assistance

DEAFNESS.—NEW DISCOVERY.—The ORGANIC VIBRATOR, an extraordinarily powerful, small, newly-invented instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or can be produced. Being of the same colour as the skin, it is not perceptible; it enables deaf persons to hear distinctly in church and at public assemblies; the unpleasant sensation of singing noises in the ears is entirely removed; and it affords all the assistance that could possibly be desired.—39, Albemarle-street, Piccadilly. Observe, opposite the York Hotel.

CAUTION.—For above thirty years S. MORDAN and CO. have been compelled to caution the Public against the fraudulent imitations of their Black Lead PULVERISED PENCIL-CASES.

The confidence which this article obtained when the letters patent were first granted has steadily and uninterruptedly increased, since the expiration of the term, and numerous letters directed to put it to a re-duction.

In common with every invention of good reputation, the merit has been that numerous imitations have been produced, and the vendors enabled, by the cheapness of the article, to realise a larger immediate profit.

Under these circumstances, S. Mordan and Co. are induced to issue this notification, and to request the public, when desirous of purchasing their Pencil-cases, to observe that they only guarantee those on which the words "S. Mordan and Co." are stamped

As in every case in which respectable houses are found who have a stock of S. Mordan and Co.'s goods, no difficulty need be experienced in the total discontinuance into effect.

Perhaps the above caution is even more strictly necessary when Cumberland Leads are purchased for refilling the pencil-cases. Unless these have been most accurately gauged to the exact size of the pencil-case, they will be found utterly useless.

Each box of genuine lead pencils is stamped "Warranted. S. Mordan and Co."

CEDAR PENCILS made from the Cumberland Lead, purified by Mr. Brockedon's Patent Process. S. Mordan and Co. have no hesitation in saying that they are the smoothest pencils ever sold to be obtained from the Black Lead from no Borrodale Mines. In consequence of the Cumberland Company having disposed of the whole of their stock of crude black lead to the patentee, S. Mordan and Co. are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that their superiority will be duly appreciated. Being the only pencils which can be agreed sometimes have been manufactured on those Pencils by painters, engravers, architects, engineers, and draughtsmen, and a general assurance in their favour, and all others whose tastes aim a have determined to adopt them. The following names are selected:

Charles Barry, Esq., R.A.	Copley Fielding, Esq., F.W.C.S.
C. L. Eastlake, Esq., P.R.A.	J. W. Wyon, Esq., R.A.
L. R. Brunel, Esq., F.R.S.	David Roberts, Esq., R.A.
Clarkson Stanfield, Esq., R.A.	J. F. Willis, Esq., R.A.
E. M. Barry, Esq., R.A.	H. C. Wilson, Esq., Director, Government School of Design.
S. Prout, Esq., F.S.A.	
Philip Hardwick, Esq., R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London."

THE ILLUSTRATED LONDON NEWS

No. 703. —VOL. XXV.] SATURDAY, SEPTEMBER 23, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE LANDING IN THE CRIMEA.

THE whole nation—even the whole civilised world—continues to fix its attention on the expedition to the Crimea. An account of the arrangements made for the speedy and safe debarkation of the troops, which has been made public, is a guarantee that no human precaution has been neglected which can secure success. The embarkation of the troops was effected in good order—we have heard of only one accident of importance; and the fleet justifying the proverb, that a good beginning is half the work accomplished, proceeded to sea under the most favourable circumstances. Only some unforeseen tempest, with which modern art is able to contend and generally to conquer, could have prevented the ships from reaching in perfect safety the coast of the Crimea. The Russian fleet, indeed, which has shown itself not wanting in cunning, and a certain kind of audacity—though it confine itself to reconnoitring and chasing small vessels—may sally forth and make a bold attempt by attacking the transports, to impede the success of the expedition, though at the expense of sacrificing the fleet; but the regulations issued show that Admiral Dundas has made provision for such a contingency, and that the appearance of the Russian fleet on any side of the vast expeditionary force will ensure its destruction without the opportunity being afforded it of molesting the transports. We know of the safe departure of the expedition, and we fancy it arrived in perfect safety, off the coast of the Crimea. Then begins the real difficulty, which will, we trust, be easily surmounted.

One peculiarity of the Crimea must not be forgotten. It was only lately, as it were, acquired by Russia, and its original inhabitants, Tartars and Greeks, have not been well treated, and are not attached to the Russian Government. They cannot be armed to resist the invaders. No patriotism will there make every man a volunteer. The Russians will receive no aid from the population, and must depend exclusively on their military resources. Including the crews of their fleet, and a small corps of artillerymen levied in the country, the whole Russian force in the Crimea is estimated at not more than 60,000 men, nearly the half of which must be left in Sebastopol. On this point, however, our Government must, we presume, be well informed, and the resistance like to be met has been ascertained. Accessible as the peninsula is from many places, and ill-disposed as the inhabitants are to the Russian Government, we cannot agree with those who have asserted that our expedition will have to encounter all the difficulties of a country little known. The coast has been examined, and, with our naval superiority, there can be no excuse for our being ignorant of any part of it. We assume, therefore, that a favourable spot has been selected for the debarkation—that on this spot our ships have arrived in safety; and then begins the arduous work of landing the troops.

The fleet will be all arranged in order as it arrives off the coast—each vessel in its appointed place: the men-of-war defending the transports; the steamers at either end and close in shore keeping the beach clear of the enemy, and, with their great superiority of mechanical power, ensuring perfect freedom for the operations of the boats. Then collecting on the off-shore side of the transports and of the ships having troops on board, all the boats of the fleet will, each in its turn, receive its cargo of well-appointed soldiers. Previously drawn up on board the vessels, they are to enter the boats in the order in which they stand in the ranks, and are to sit or stand in them as they may be directed. They are to be perfectly still and silent. They are to take their knapsacks with them, but not put them on. They are to take with them three days' salt meat and three days' bread; their canteens are to be well filled with water; before leaving the ship, they are to take a hearty meal. Officers and men will go together thus provided in the boats. With a large and sufficient supply of these, it should not take many minutes after the signal is given before the bulk of the soldiers are placed in them. Then the boats forming in a line abreast, and keeping at a distance of twenty feet from the oars of each other, will advance steadily and silently towards the shore, keeping strictly in line. The First Division, consisting of all launches and Turkish pinnaces from the sailing ships of the fleet, commencing with the *Britannia's* boats on the extreme right, is to form the right. The Second Division, consisting of all paddle-box boats of the war steamers towed by their own cutters, commencing with the *Furious* on the right of the Division, and terminating with the *Fury* on the left, will form the left of the line. The Third Division, consisting of all boats of the transport service, commencing with the boats of the *Emperor* on the right of the Division, and ending with the *Gertrude* on the left, will form the centre of the line. In this order the whole will advance—extending, probably, two miles—to the shore, and whether they are to make good their landing under the fire of opponents, or on a beach perfectly clear, we cannot say. The great event has, before now, taken place, and while we write the strand is we trust occupied by our victorious troops. The Light Division is to take the lead on landing, and the foremost of them will be four companies of the 2nd Battalion Rifle Brigade. The First Division will follow them. They are all to form in contiguous columns on landing at quarter distance, and they are not to load their muskets till they have landed, or are ordered to load them.

With all these fair and proper precautions, and protected as the boats will be by steamers (a means of protection which on any former disembarkations were wholly unknown), we cannot forsee any great difficulties in landing all the troops, however numerous they may be. In the regulations nothing is said of our allies. This is very natural. They will be in their own places; and the Admirals and Generals having amongst them allotted to each nation its duty, the regulations for each do not refer to the other. Now we wait with even more anxiety than last week to receive from the Crimea the intelligence that the well-devised plan has been properly and successfully carried out.

The Prussian Note, to which we referred last week, and the proceedings of Austria, which, like Prussia, finds no *casus belli* in the Russian outrages against international law, which is satisfied that the Russian armies have retreated across the Pruth, and left

EMBARKATION OF BRITISH TROOPS (LIGHT DIVISION), AT VARNA, FOR THE CRIMEA.—(SEE NEXT PAGE.)

her in the possession of the Principalities, have dissipated all doubts as to these Powers, and have told France and England plainly that they must, by themselves, and by the help of the Turks, bring Russia to her senses, and bring the war to an end. We may, therefore, desire most earnestly, the complete success of our forces in the Crimea. Should that be attained, the great object of the war, that of effectually humbling the Czar, and preventing him in future from disturbing the general peace, will be fully accomplished. What form diplomacy may give the result we cannot say. But, apart from the news which every post brings us of the sufferings of the Russians by the interruption of their trade—of their being completely disheartened by the blockade of all their ports, the capture and destruction of Bomarsund, and the success of the Turks—their defeat, too, in Georgia, and their retreat from that part of Asia;—apart from all these material diasters, there is evidence in the last Russian Circular Note, published this week, dated as long ago as August 14th (26th), and directed by Count Nesselrode to Prince Gortschakoff at Vienna, that the Court of Russia has become sensible that it cannot brave the hostile feelings of all Europe. At the outbreak of the dispute, and before the war was commenced, the Russian diplomatic papers were remarkable for arrogance, falsehood, and fanatical appeals to the people and the Almighty. They affronted every free man, and scandalised every religious man. Now, Count Nesselrode—though he cannot leave his habits of deceit, and pretends that the Russians have evacuated the Principalities in the interests of Austria and Germany, while he admits that they have been forced to evacuate them by strategetic necessities—writes quite submissively, humbly, and reasonably. The Czar is ready to adhere to the principles of the protocol of April—ready to make sacrifices; but France and England, he says, have resolved to humiliate and enfeeble Russia. They will have nothing less than the abrogation of all anterior treaties, and the destruction of all the maritime establishments of Russia, which are a perpetual menace against the Ottoman Empire, and will restrict Russian power in the Black Sea. To such terms Russia cannot submit; but she retires within her own frontier, withdraws behind the Pruth, and leaves the chances of war to determine the definitive basis of the negotiation; but waits, while standing on the defensive, for equitable overtures to perm her to concur in the establishment of peace. Language at all approximating to this used in April, would have prevented the war. In using it now, Count Nesselrode tacitly admits that one great object of the war is already obtained. Russia is humiliated and, if the Crimea be wrested from her, she will be virtually conquered, and must accept the terms which the conquerors—who are as generous as they are powerful, and wish only a lasting peace and security—will be ready to offer her.

Our anticipations of success are now amply realised. On the 14th instant the whole of the army, except the reserve, for which the transports returned, was landed at Eupatoria, to the north of Sebastopol, without meeting the least opposition. The greatest naval and military feat combined, of modern times, has now been successfully accomplished, though croakers and theorists denied the possibility; and we now wait anxiously, but not impatiently—for we feel certain of the result—for the news of the fall of Sebastopol; and, with that, of our possession of the Crimea. We congratulate our readers that the landing in the Crimea has been completely successful.

EMBARKATION OF TROOPS AT VARNA, FOR THE CRIMEA.

THE details of this spirited scene are given at page 267 of the present Number. The Engraving upon the preceding page, from a Sketch by Lieut. E. G. Bredin, represents the Embarkation of the Light Division on the south side of Varna Bay.

THE NEW SPANISH CIVIL LIST.—The Madrid *Economista* proposes a large reduction in the Civil List of the Royal Family. The following are, in round numbers, the alterations it suggests, exchanged from reals to pounds sterling:—

The Queen, who at present has	..	£340,000	is to have	£140,000
The King	..	84,000	,,	10,000
The Princess of Asturias	..	84,000	,,	10,000
The Infantes of Montpensier	..	30,000	,,	10,000
The Queen-Mother	..	30,000	,,	
Don Francisco de Paula and his Family		35,000	,,	15,000
		£473,500		£185,000

The difference between these two amounts is £288,500, an enormous sum in Spain; and even the half of it would be well worth saving to the nation, supposing the *Economista's* reduction to be deemed too large. It is both absurd and shameful to see the Royal Family paid at such a rate in so poor a country. Bearing in mind the difference in wealth, resources, and inevitable expenses between Spain and England, it is curious to compare the allowances made in the two countries to persons of corresponding rank and position, and to find the Civil List of Queen Isabel larger than that of Queen Victoria—the infant Princess of the Asturias already receiving her £24,000 per annum; the Queen's uncle receiving nearly double as much as the Royal Dukes in England.

THE Porte has presented to the French Embassy a letter of the Grand Vizier, ordering the Pacha of Jerusalem, by virtue of a special decree of the Sultan, to deliver gratuitously the ground required for the construction of the Latin Church of Beit-Djala.

AT a Council of War held at St. Petersburg on the 3rd, at which the Emperor Nicholas presided, it was determined that the Russian army in the Caucasus should act strictly on the defensive.

A LETTER from Bucharest, in the *Moniteur*, states that the Russians, on quitting Ibrail, laid hands on all the stores of corn belonging to the town and to private individuals. The Austrian merchants have been very severe sufferers.

AN Imperial decree, calling into active service the recruits upon the contingent of 1853, has been signed by the Emperor of the French. The distribution of this additional force is confided to the Minister of War.

PRINCESS LIEVEN passed through Cologne on the 13th, on her return to Brussels, where the Russian outside diplomacy has established its head-quarters. Being close at hand to London and Paris, it is thus enabled to maintain immediate communication by courier and telegraph (the latter in cipher), through the Muscovite Legation at Brussels, with Warsaw and St. Petersburg.

THE *Moniteur* contains a decree, nominating to the grade of Knight in the Legion of Honour, or promoting to a higher rank, 32 persons who have distinguished themselves in the affair of Bomarsund; also, another decree, conferring the military medal on 46 persons for their conduct in the same affair; as well as on 32 persons who showed great devotedness during the visitation of cholera in the East.

THE GRAIN TRADE OF RUSSIA.—Letters from Odessa of the 8th inst. state a great disappointment to have been occasioned by an announcement that the prohibition of the exportation of grain was to be continued till further orders. The penalty thus paid by the Russian people for the wickedness of the Czar is enormous. Last year the wheat exported from the Black Sea and the Sea of Azof was about 4,000,000 quarters, at an average price, probably, of about 40s. per quarter. This year they have had a harvest of unparalleled abundance, and there is no possibility of selling it, even at 10s. per quarter. In linseed, also, the difference to the growers is equally disastrous.

KOSSUTH'S PROPOSED VISIT TO NEWCASTLE.—The committee appointed to make arrangements for the visit of M. Kossuth to Newcastle have just received a letter from him, stating that, in the present crisis of the Eastern war, it is, in his opinion, most advisable to wait the issue of the expedition to Sebastopol before addressing the inhabitants of that district.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

As may be supposed, the general feeling here is one of the most anxious expectation respecting the news from Sebastopol. The Emperor, whose intention was to have left Paris on the 19th to rejoin the Empress at Bordeaux, has deferred his departure, in order to receive here the earliest information of the events now taking place in the Crimea—accounts of which are daily looked for. Their Majesties have declined accepting the ball which was to have been offered them by the city of Bordeaux; from whence they propose returning immediately, probably to pass a portion of the autumn at Fontainebleau. The *séjour* of the Empress at Biarritz has produced the most favourable influence possible on her health and spirits: the former is said to be perfectly restored, and the latter, consequently, much improved. The disappearance of cholera from Paris, of which malady her Majesty entertained great dread, relieves her of all alarm in returning.

Considerable attention has been attracted here to extracts from a *brochure* entitled "La Prusse et la Russie," published in those journals known as being wholly devoted to the Government, evidently according to directions emanating from thence. It is not alone the interest of the passages cited that produces this feeling, but the existence of a report, pretty generally ascribed, and finding a certain amount of credence, that the pamphlet in question is written by a hand now wielding an instrument emblematic of more temporal and material power than the pen. There is, we believe, no foundation whatever for this rumour. Another—which, without bearing evidence of being perfectly well grounded, yet presents more appearance of probability—attributes the work to a certain celebrated magistrate, who is supposed to have already written more than one of a similar character.

A most singular and interesting discovery has lately been made in the courtyard of a house in the Rue d'Antin. Some labourers, employed in digging on this ground, came upon the hilt of a large sword, on which was legible the word, or rather frag ment of the word, *emours*. History records that about this spot took place the celebrated duel between the the Dukes of Beaufort and Nemours, each accompanied by four followers, in July, 1652, in which the latter lost his life; little doubt therefore, seems to exist that the hilt in question belonged to the sword which the Duc de Nemours carried on the occasion. After the Duc's death, two of his seconds, Villars and Userches, killed two of the seconds of the Duke of Beaufort, d'Hericourt and de Ris, and the remaining two wounded each other slightly.

The three daughters of Maria Christina, on their return from England, passed a few days in strict incognito in Paris: they have not returned to Spain.

The political directorship of the semi-official journals, the *Pays* and the *Constitutionnel*, has devolved from M. de la Guéronnière to M. Cucheval-Clarigny. An idea, which will be seriously taken into consideration this month, exists, of establishing a fusion between the two papers. It is thought that M. de la Guéronnière will enter the Council of State.

Here is a fact for our horticultural readers. It has been discovered that, for the generality of flowers, and more especially for pelargoniums, and the most delicate specimens of the lily tribe, common glue, diluted with a sufficient portion of water, forms a richer manure than guano, or any other yet discovered; plants placed in sand, or the worst soils, displaying more beauty and vigour, when watered with this composition, than those grown in the richest mould, and only sprinkled with water.

The removal of the suspension-bridge in Paris, entitled indiscriminately Pont des Invalides and Pont d'Antin, has led to examinations on the subject of this kind of bridge, the result of which proves its utter unfitness in capitals or passages where much circulation exists. Though not more than three-and-twenty years in existence, and displaying no faults of construction beyond the radical one peculiar to its kind, its inefficiency was proved by the fact that, when any fête or great *solemnité* called large crowds to the Champs de Mars, the passage of this bridge had, as a measure of public safety, to be interdicted. The utmost exertions are being made to prepare the new bridge which is to replace it, for the 1st of May, in order to be ready for the Exhibition.

La Presse has commenced in its *feuilleton* the publication of a tale entitled "Une Conversion," which presents a threefold interest—in its own merit, in the name of its author, and in the crisis which, at this moment, his melancholy fate produces. The work is from the pen of the noble adventurer, the Comte de Raousset Boulbon, the stirring drama of whose life has just been terminated by the rifles of the Mexican Government. "Une Conversion" displays no ordinary amount of talent, originality, and interest; and, as far as it has yet appeared, bears no evidence of the incompleteness and defects of construction generally visible in the works of those little accustomed to literary efforts. The characters are well drawn; the style particularly good; the tone of sentiment and the reflections introduced replete with fine feeling, a just appreciation, and an unusual degree of observation of men and things, with an evidence of a highly cultivated mind and refined intellect. But two *feuilletons* of the work have yet appeared, but we look to its continuation, which extends until the publication of Madame George Sand's "Mémoires," with much interest.

The theatrical world is rejoicing in the return to the stage of one of its prime favourites, Bouffé, who has accepted an engagement at the Porte St. Martin. This seems to be the season of dramatic resurrections; with Madame Stoltz at the Opéra (*garre à* Mdlle. Cruvelli!), Mdlle. Georges and Bouffé at the Porte St. Martin; and Mdlle. Rachel—in whose demise, however, every one foresaw a speedy resuscitation—at the Comédie Française. Mdlle. Rachel has brought with her, from her *tombeau provisoire*, the rôles of *Radopune*, *Ariane*, and *Tancrède*; in which pieces she proposes to gather fresh laurels to deck her new "temporary retirement." We must confess, these caprices on the part of stage celebrities appear to us to be much too indulgently treated by the public. If Mdlle. Rachel or Mdlle. Any-one-else chooses to retire, for reasons best known to herself, by all means let her go. We lived before Mdlle. Rachel appeared; and we trust, therefore, we can find means to exist when her star has left the firmament of the Théâtre Français; and we really think that we should intimate this fact to her, instead of lamenting over her eternal last appearances, and gratefully rejoicing over her as eternal returns; knowing as we ought to know that the system is a comedy in which the great tragedian indulges by way of a distraction.

GREECE.

It is said that the Greek Government has dispatched to Constantinople M. Barozzi, late Greek Consul at Adrianople, furnished with letters to Redschid Pacha and to the Representatives of the foreign Powers. The Greek Government acknowledges its many offences against the Sultan, and appeals to his generosity. It proposes to sign a treaty of commerce with the Porte as an indemnity for the debt which Greece contracted with Turkey by the late insurrection. A treaty to the same effect was prepared some years since, and approved by the two Governments, but King Otho refused his signature. This treaty of commerce defines the boundaries of the two States, and will, consequently, force King Otho to acknowledge the existing limits of Turkey in a more formal manner than he has hitherto done by existing treaties.

The *Aeyeleny Gazette* says the insurrectionary party in Lower Albania and Thessaly is again lifting its head. Between the 12th and 15th of August, the robber chief Skalyoanni was at Radovital, in Epirus (where the revolution commenced), with 500 men: Grivas is with 1500, and Katarathis, with 600 men, in Thessaly.

LANDING OF THE EXPEDITION.

Advices from Constantinople, of the 16th inst., by electric telegraph, set all doubts at rest as to the landing of the expedition. They state that 25,000 French, 25,000 English, and 8000 Turks landed safely at Eupatoria, on the 14th, without meeting with any resistance; that they immediately commenced marching on Sebastopol; and that the transports had returned to Varna for the reserve, which amounts to about 20,000 men. Eupatoria is a town of considerable trade, containing 12,000 inhabitants, and the possession of such a port is, in many respects, preferable to that of a hastily-fortified camp on an uninhabited point of the coast. Facilities must also have been found for landing heavy stores at a mercantile seaport, which could not have been counted upon at other places which have been supposed favourable for disembarkation. From the Katcha River to Fort Constantine, for example, the distance is less than ten miles, while from Eupatoria to the latter point is more than fifty; but it may have been considered next to impossible to transport heavy artillery and ammunition from the former position into a practicable road, whereas one of the principal roads of the Crimea connects Eupatoria with Simferopol, near which an army of 40,000 Russians is said to be encamped, and another road joins the last-named town with Sebastopol. Following the sea lines of communication, the distance from the place where the Allied army has landed to its ultimate destination cannot be less than 100 miles; but, unless a conveniently practicable route exists in the neighbourhood of the coast, a march of even this length may have been deemed, on the whole, the easiest and the most expeditious. It is probable, also, that the adoption of this course will secure the troops against their most formidable difficulty—the want of water. For about the first twenty miles, the line of march appears to run along the banks of salt lakes, without any vestige of a running stream; but, further on, there are everywhere rivers at no great distance, and, beyond Simferopol, the road passes successively near the sources of the Alma, the Katcha, and the Belbek.

"The attack on Sebastopol," says the Vienna *Lloyd*, "is a bold but not a rash enterprise, and, if it succeeds, the war in the East will assume a totally different character." "Russia fights at Sebastopol, not for the Crimea alone, but for Bessarabia, all the possessions in the Black Sea, and, indirectly, for Finland." The above mentioned paper has the following interesting letter relating to the expedition:—

ODESSA, Sept. 7.—I deliver this letter into the hands of a friend who, with many other inhabitants of the town, has sought refuge at Tiraspol, the position of the hostile fleet being a threatening one. Half the population of this city has already hastened into the interior of Russia, in order to escape the terrible cannonade which has more than once wounded our ears. Since yesterday several ships have been collecting in front of our city. To-day some of them got into order of battle, and began to fire for practice. At first the commander, Count Annenkoff, thought the enemy was about to attack us, and the garrison was kept ready for action, but the real state of things soon became evident. They enemy has not yet attacked us, but we are in hourly expectation he will do so. A great many ships are saving in a western direction. The enemy will certainly menace all the places on the coast of the Black Sea at one and the same time in order to keep our army fully occupied. Akermann, Odessa, Ozzakoff, Kinburn, Perekop, Eupatoria, Schastopol, and, indeed, all the places up to Anapa, will become targets for the enemy's artillery.

Prince Menschikoff has exhausted all means of defence in order to render Sebastopol impregnable, as well from the land as from the sea side. Between Sebastopol and Balaklava, there are five strong detached forts, which are garrisoned by a sufficient number of troops. The road from Balaklava to Yalta is rendered impassable and partly mined. The coast between Sebastopol and Eupatoria is defended at unequal distances by batteries consisting of six howitzers. There are three forts at Eupatoria, one on the north, a second on the east, and a third on the west side. That place is garrisoned by 15,000 men. The heights in front of Sebastopol, which are encircled by redoubts and trenches, are armed with eighteen batteries and defended by 20 000 men. The garrison of Sebastopol is only 10,000 strong, but, it we add to this number the crew of the fleet, the fortress is defended by 25 000 men. Prince Menschikoff issued a proclamation on the 3rd, in which he prepared the people for a resistance to the very last. I am unable to give you the proclamation literally, but I can give you the sense of it as it was communicated to me by a friend. The Prince first enumerates all the victories gained by the Russians in the course of this century, and then calls on his soldiers to show themselves equal to their predecessors in bravery and power of endurance. If the enemy, as a consequence of the inscrutable will of Heaven, should obtain a victory, then let the whole store of powder go with him into the air. The conclusion of the proclamation is "Rather let us die than surrender to the enemy."

Our army is very much cast down. The news of the fall of Bomarsund has much depressed military men, as well high as low. From the interior of Russia, especially from the neighbourhood of Novogorod, reinforcements have arrived within the last few days, but they do not remain here, as their destination is Ozzakow and Kherson. Troops have also arrived from the Danubian army.

(From our own Correspondent.)

CONSTANTINOPLE, Sept. 10th.

No news of importance. The fleet left Baltschik on the 7th, at daylight. The English left two companies of each division, and heavy cavalry, under General Scarlett. The French left some 25,000 men their cavalry were at Bourgas for facility of forage. The Russians had their cavalry were at Bourgas for facility of forage. The Russians had abandoned Ibrails, Matchin, Tultcha, burning or carrying off large stores of grain, part of the present harvest. The Turks had 4000 men at Bucharest, 7000 at Turiukai, 30,000 under Achmet Pacha at Kalarasch. Lord Stratford de Redcliffe was indisposed when the packet left. A Russian steamer had visited Varna and Baltschik, so report says, and finally transported troops from Odessa to Sebastopol. On the 8th, 9th, and 10th, the fleet had a fair westerly wind. A Greek captain reported at Constantinople that he had seen the fleet, on the 9th, steering for Odessa. Cholera was spreading amongst the Turks, and those at Varna were suffering dreadfully.

RUMOUR OF AN ARMISTICE.

The Constantinople Correspondent of the *Times*, in a letter of the 10th inst., contains the following statement regarding an alleged proposal for an armistice:—

Recent, and as yet unconfirmed, news unsettles the minds of those who had considered that for a time political discussions were to cease, and that the struggle for supremacy between Russia and the Allies was to be carried on in the trenches of Sebastopol. Before the vast armament of the Western Powers could leave the harbour of Baltschik, it began to be whispered that the Czar had, at the last moment, yielded, and that an armistice would be the consequence of his acceptance of the four propositions which the Western Powers put forth, and which Austria endorsed. On the morning of the 7th the Porte and the Austrian Internuncio received telegraphic despatches to the effect that the Russian Monarch had accepted, or at least was disposed to discuss the conditions of peace which had been declared the basis of all future negotiations. The same day a steamer was sent off to the combined fleets, ostensibly to learn and report the progress which the troops had made; but there can be little doubt that the Generals and Admirals were made acquainted with the important news, and are at this time in expectation of the countermand instead of the order for a few days the contemplated descent. On the 8th, a small steamer, called the *Danube*, one of the boats formerly employed in the passenger traffic of that river, sailed for the fleet, which it was expected would be met with in the neighbourhood of Serpents Island. This vessel, no doubt, carried more decided advice or directions. But, as the craft is extremely small, never constructed for the sea, and the strong north wind began to blow with a fair wind, and

which, should it extend to the Black Sea, will no doubt greatly retard the expedition. It is not only coal, but it may at times be too strong to allow of towing, which it is proved cannot be performed on a large scale, except in very moderate weather. Should therefore any telegraphic communications be received within a day or two, it is probable that the invading force may never reach the shores of the Crimea; and the political struggle will commence anew in the form of notes and protocols.

PRECIPITATE RETREAT OF THE RUSSIANS IN ASIA.

The victories gained by the Russian General in Anatolia do not seem to have been attended with any very serious consequences to the defeated army. So far from considering himself beaten, the Turkish Commander sent an aide-de-camp to the Russian camp, on the 17th ult., with a message to Bebutoff, which was neither more nor less than a challenge, namely, that if he (Bebutoff) considered the affair of Kurakdéré as anything more than a drawn battle, the Turks were ready to meet him again in the open field, and convince him of his error. To show that this proposal was not mere braggadocio, Vely Pachs and Mustapha Pasha followed the aide-de-camp with eight regiments of cavalry; but, before either he or they could reach the Russian camp, they saw huge volumes of smoke rising up from its midst, as if the whole were on fire. On their getting to the place this strange sight was explained by the discovery of several smouldering heaps of barley and horse fodder, which were being rapidly consumed; but the tents were uninjured, and the Russians had not a soul was to be seen, it was evident that the evacuation had been very recent. Many of the tents were completely furnished, others of them partially so besides a large number of baggage-waggons and mules, some ammunition, and ten spiked cannon. The Muslim extended the reconnoissance as far as within half a cannon-shot of the citadel of Alexandropol; and it was soon ascertained that the Russians had entered, about 4000 strong, into the citadel, that they had encamped 4000 more around the town, and that the rest of the Russian army was directed by forced marches upon Tiflis.

The ordinary Tatar, who arrived from Erzeroum on the 25th, brought despatches explaining the cause of that sudden retreat. It appears that on the 16th, the intrepid Schamyl, at the head of 15,000 mounted Lesghees, invaded Khakhetia, took possession of upwards of eighty villages, and that detachments of his cavalry had shown themselves within eight hours of Tiflis. On receiving this information, General Count Read, Civil and Military Governor of Tiflis, sent orders to a portion of the Russian corps of army operating near Alexandropol and Kutais, to advance by forced marches upon Tiflis. The Turkish General does not seem to have followed up his advantage against the Russians. Dissensions prevailed among the officers; and a memorial had been signed by a number of Poles, denouncing General Guyon, and demanding his dismissal.

The last accounts from Trebizond, of the 30th ult., mention the capture by the Russians of a Persian caravan. Since then 3000 Russians, with two pieces of artillery, have been stationed in the Pass of Dalar, for the purpose of intercepting the communications between Turkey and Persia in that direction. This is the only passage accessible to horses, and it lies between two high perpendicular rocks, forming the northern extremity of the chain of mountains, extending between the Turko-Persian frontier and Bayazid. It requires about half an hour to cross the chain on that point; and 300 men posted in the defile would suffice to arrest a whole army.

THE SULTAN'S REFORM DECREE.

On September 7th, all the civil and military authorities, the chiefs of the Christian and other communities, were invited to rendezvous at the Porte, to be present at the reading of an Imperial hatti-humayoun. About 400 persons were admitted to the Grand Hall, where the Minister for Foreign Affairs solemnly and distinctly read the Sultan's order, in which, after stating that the reforms made in the administration of affairs had not been effectually carried out, he says:—

To obviate this, it is necessary to establish a new code, such as cannot be modified according to the will of individual persons, which will completely destroy the past ill system of admin.stration. This must be brought on regularly, and with due regard to the principles of justice. 2nd. The articles of the projected code must be strictly enforced, so as to give power and increase the authority of local governors. 3rd. Internal prosperity and the security of the property of our subjects must be looked into. 4th. Justice and equity must be enforced. 5th. Our financial resources must be concentrated and cared for. 6th. The amelioration of the political and social state of all our subjects, no matter what creed they belong to, must be effected.

These reforms are most necessary, and the greatest attention must be most scrupulously paid, in order that no fault should exist. In order to come to such a solution, a new council, composed of five or six members of such a class of individuals as enjoy a reputation for talent, rectitude and worthiness, is to be formed.

RETURN OF THE BALTIC FLEET.

(From a Correspondent.)

Ledsund, Sept. 12, 1854.

We expect to be in England some time about the middle of October and on our arrival home, will either be paid-off, or turned over to some other screw-ships and some paddle-vessels cruise in the Gulf of Finland and off Gothska Sande, making Faro Sound their head-quarters. Cholera made fearful havoc among the French troops; 800 died during the short time they were encamped ashore. The Alanders, too, have suffered severely, for three deaths having taken place in nearly every family on the main island. The unfortunate people are in great dread of the Emperor's wrath after the departure of the French and English ships. They say one way he will punish them, for their good feeling towards us, will be by taking all the young men for soldiers, as soon as ever we leave; so the greater part intend leaving for Sweden, as soon as possible.

We have had a succession of heavy gales here, for the last fortnight, a slight foretaste of what we may expect at the fall of the year; and the weather, from being what we call white trousers weather, has suddenly changed, and become quite cold and raw.

THE REVOLUTION IN SPAIN.

Letters from Spain give somewhat conflicting accounts of the state of things at Madrid. It seems to be certain that much uneasiness has lately prevailed in the public mind, owing to an expectation that a raising of some kind was imminent. According to some accounts, the alarm was entirely attributable to malicious reports spread by the enemies of Liberal government; while other letters say that, but for the precautions taken, there would certainly have been an *emeute*, and that several arrests were made. It is difficult to say from what known political party an insurrectionary movement could have proceeded. As to Republicans, it is stated on credible authority that there were never more than two or three hundred in Madrid; and most of them are now in prison, awaiting a half-promised amnesty of the events of August 28th. Although the Government has various classes of enemies, including recent friends, dissatisfied because they cannot dictate to Ministers, the probability is that the imminence of a resort to physical force was greatly exaggerated. The following is understood to be the programme of the Liberal Electoral Committees:—

1. The complete and solemn recognition of the revolution of July, accomplished by the army and people, of the sovereignty of the future constituent assembly.

2. The legitimacy of the constitutional Throne of Isabella II., whether it may be thought to be based upon historical facts, or upon the circumstance that the revolution thoughfit to respect it.

3. The maintenance of a National Guard and a standing army as the defence and buckler of liberty and the independence of the country.

4. Political conciliation, which is national unity, and administrative decentralisation which is the life of the people, and the fruitful basis of the traditional liberties of the nation.

5. The supreme necessity of a severe and moral law regulating promotion in every department of the State as being the only means to avoid the dissolution of society and the dishonour of the revolution.

6. The liberty of the press, the liberty of the tribune, the irremovability of the Judges, and Ministerial responsibility for the past, the present, and the future.

7. Individual liberty and the inviolability of every man's house—the first and most worthy conquest of a free people.

The views of the Committee have met with the almost entire adhesion of the Madrid press, and even of many opposed to under it some opinion that the Liberals will have a very large majority in the new Cortes, or rather Constituent Assembly.

HOLLAND.—OPENING OF THE STATES-GENERAL.

The States-General was opened at the Hague on Monday by the King, when his Majesty delivered a speech, of which the following is the most important passage:—"I continue to receive from all foreign Powers marks of amity and friendship. This fact, considering the present political position of Europe, is extremely satisfactory to me. The neutrality which we adopted has been strictly maintained; and, as we have scrupulously observed our obligations towards foreign States, we may on our side expect to see our rights respected. I have reason to be satisfied with the Army and Navy, both services having distinguished themselves by great zeal and discipline in the fulfilment of their duties. The resistance to our authority which we have experienced from the Chinese in the Island of Borneo has, I am happy to say, been overcome by the valour of our troops. I trust this victory may have durable and beneficial results. The harvest in our colonies promises to be abundant, and, according to reports received up to this time from the transatlantic provinces, the crops in our own country promise to be equally favourable."

AMERICA.

The steam-ship *Asia*, which left New York on the 5th inst., arrived at Liverpool on Sunday.

Political parties have not yet begun the campaign, but it appears the contests of this year will be more mixed up with local and temporary issues than usual. In most of the northern States the Nebraska Bill, the Maine Liquor Law, and Know-Nothingism over-ride the old party distinctions, and it is not easy to say where either the Administration or the Opposition will be found when the elections are over. The Maine Liquor Law, in particular, is a troublesome thing to noisy politicians. The Nebraska Bill, also, is not easily dealt with at the north. Mr. Douglas, the author of that ill-advised measure, was refused a hearing at Chicago, where a public meeting was assembled to enable him to defend himself.

A report was current that General Alvarez was at New York *incog.*, fitting out an armed expedition against the present Mexican Government. He is said to have chartered the steam-ship *Benjamin Franklin*, and a ship and a brig, with which he intends to await and capture a small steam-frigate called the *Santa Anna*, which was completing at New York for the Mexican Government.

The celebration by the American Protestant Association of the first sitting of Congress had led to a riot at Newark, in which several persons were wounded, but no lives lost.

A Jamaica paper states that the United States frigate *Columbia*, with a Commodore's flag, attended by two other American vessels, a corvette and steamer, have arrived at the port of San Domingo, and have formally demanded the cession to the United States of the port of Samana, with certain adjacent territory. A General Officer, with one or more officers of Engineers, are also reported to be on board the *Columbia*. On the demand having been made on the Government of the Dominican Republic, the English and French Consuls immediately dispatched express messengers to Port-au-Prince.

Advices from Canada give assurance that the Reciprocal Treaty between Great Britain and the United States will be ratified during the month of September. The new Parliament met at Montreal on the 5th inst., and the attendance there was very large. Mr. Hincks, Inspector-General of Canada, it is thought, will be knighted, for the prominent part taken by him in the execution of the treaty.

LATEST INTELLIGENCE.

THE CRIMEA EXPEDITION.

After having effected a safe landing at Eupatoria, the first intention of the commanders was to throw up intrenchments sufficiently strong to secure the place; but, having met with no resistance, the troops marched at once towards the open country. In this march they would proceed along a narrow slip of land for about ten miles, having the salt lake Sasik on their left, and the sea on their right. It is stated that the coast is unfavourable for constructing a place of arms; and that one would be sought nearer Sebastopol. Arrived at the end of the defile, three roads offer themselves to the choice of the commanders. Two roads—one a main, the other a post road—lead across the open steppe to Simferopol, the capital of the Crimea. The lower, or post-road, is the shorter of the two, and has the advantage of being nearer to the rivers that rise in the highlands of the Crimea, and flow westward to the Black Sea. The three disadvantages of this route would be the want of water, and the flat character of the ground, which would offer facilities to the Russian cavalry, supposing that they dispute the advance of the Allies. The third difficulty would be that the army would quit its close communication with the fleet; and be dependent for supplies on what it could carry and obtain by the way. The third route to be adopted is that by the coast. In the most recent maps a road is traced from Eupatoria to Sebastopol—but it is, doubtless, a Crimean road. The country is open steppe nearly the whole of the route, but it is traversed by three rivers; it promises both forage and meat, and is protected on the right by the sea. A defences erected along the coast would be taken in flank and rear, on the line of march; and by occupying the coast, the siege guns need not be landed until the army had secured the mouth of the Katcha or Belbek for that purpose.

According to the most recent statements respecting the disposition of the Russian forces in the Crimea, Bagtcheserai would seem to be their obvious point of concentration. Troops posted at Karasu-Bazar, or Simferopol, could easily effect a junction at Bagtcheserai; and the ground is adapted for a battle-field, from its extent and the strength on the whole of the Crimea, available for field operation, is less than that of the Allies, exclusive of the reserve left at Varna and Baltschik. Between Eupatoria and Sebastopol, by the coast route, the only positions defensible for one moment are the small rivers, wh ch will intersect the advance of our troops, until they reach the right bank of the Belbek, where the spurs of the mountains run down toward the sea.

Arrived on the left bank of the Belbek, the first obstacles to be encountered would be the outworks recently constructed by the Russians on that side of Sebastopol, and a tolerably large, but an old and weakly made star fort. Having surmounted these obstacles, the Allies would find themselves in possession of the high ground commanding the rear of the defences on the northern shore of the inlet; and no authority that we have seen considers that they can make a long resistance to a strong attack.

The two small steamers *Indus* and *Egyptus* went from Varna direct to Constantinople immediately after the departure of the expedition. Th.y will be continually employed in supplying the fleets with fresh water. The *Fury* and *Terrible* returned on the 7th instant from reconnoitring the coast near Sebastopol, and dropped anchor at the English station, Sulineh.

RUSSIAN REINFORCEMENTS FOR THE ARMY OF THE SOUTH.

St. Petersburg, Sept. 14.—The whole second division of the Guards, the second brigade of artillery of the Guards, and the Hussar regiment of the Guards, have been inspected by the Emperor, and marched to share in the campaign of the South.

THE BALTIC FLEET.

Dantzic, Thursday.—On the receipt of despatches all the admirals met on board the *Duke of Wellington*. Sveaborg and Constadt are not to be attacked. The French admirals and French fleet sailed for France on Tuesday. The *Amerikis* got ashore, threw forty-one guns overboard, and got off without damage. The *Bulldog* has arrived.

Speeches to a Jury.—On the 24th of October an alteration will be made with respect to speeches to a jury in the superior courts. The party who begins, or his counsel, is to be allowed in the event of his opponent not announcing at the close of the case of the party who begins his intention to adduce evidence—to address the jury a second time at the close of such case, for the purpose of summing up the evidence; and the party on the other side, or counsel, is to be allowed to open the case, and also to sum up the evidence, if any; and the right of reply is to be the same as at present.

A new steam-yacht which is to convey the Emperor and Empress of Austria in their trips up and down the Danube, was "consecrated" the other day, by the prelate of the convent at Klosterneuburg. A great number of general officers were present at what the *Wiener Zeitung* calls the "military ceremony."

Baron Chas. von Hochschild, Swedish Envoy Extraordinary and Minister Plenipotentiary at Berlin, has been appointed Swedish representative at the Court of St. James's, in the place of Admiral Virgin, who retires in order to re-enter the naval service of his country. The Baron is brother-in-law to the present Danish Minister in London, and father-in-law to the Danish Envoy at Vienna.

The French Emperor left Boulogne on Saturday at noon, and arrived at Paris at five o'clock. In the evening his Majesty repaired to the Théâtre Français, and witnessed the representation of the drama of "Adrienne Lecouvreur," in which Mademoiselle Rachel performed the part of that celebrated tragic actress. Letters from Bayonne, of the 16th, announce that on the morning of the 19th the Empress was to quit Biarritz for Dax, whence she is to proceed by railway to Bordeaux, where her Majesty was to be met by the Emperor.

THE NEW CASTLE OF BALMORAL.

The new residence at present in course of erection at Balmoral attracted the early notice of the Queen and Prince Albert after their arrival yesterday week. Of the building (engraved in the Illustrated London News of last week), which has advanced very rapidly during the summer, we add a few particulars from the *Morning Chronicle*:—"The last portion of the main building, which is from 110 to 120 feet square, with a court inside, is now ready for being roofed. On the ground-floor of the west and north sides are the public rooms, and over them are the principal bed rooms and other accommodation for the Royal family. The other two sides are three stories in height, and will be reserved chiefly for the accommodation of the suite. On the east side, a wing is being built seventy feet in length, and in connection with a very prominent part of the edifice, viz., a tower forty feet square, which will be about eighty feet high, with a circular staircase on one angle, making the height 100 feet. It will be surmounted with a flag staff. Behind this, on the lower level, towards the river Dee, the foundations are preparing for the kitchen, offices, and servants' accommodation. The house is in the baronial or old English style of architecture. The south and west fronts especially are very handsome, there being some very fine carving and moulding in the details. There are very fine oriel windows for the principal rooms—Queen's sitting-room, bed-room, dressing-room, &c.—with turrets on the angles. The whole is to be fireproof, according to Barrett's patent. There is in the plan a ball room, to supersede the present iron one. The new erection stands about 100 yards nearer the river than the old one; and the contractors are under obligation to have the whole finished by the autumn of 1856. "The architect is Mr. William Smith, Aberdeen; with the assistance of Dr. Robertson, Prince Albert's Commissioner for Balmoral, superintends the mason work. The other contractors are—carpenter's work, Mr. Robert Watson; blacksmith, Messrs. Bowman and Co.; plumber's work, Messrs. Blaikie and Sons; slater, Mr. Innes; bell-hanger, Mr. McGrady—all of Aberdeen; and Mr. Cubitt, of London, the hot and cold baths."

The French steamer *Newton* arrived in the Garonne on the 17th, with Queen Christina on board. It is rumoured that Seamount Lodge, formerly the residence of Lord Ashbrook, has been taken for the Dowager Queen of Spain, as the future residence of herself and youthful family, by her second husband, the Duke de Rianzares. Several truck-loads of furniture, and other valuables, arrived by the South-Western Railway, at Datchet, on Monday, and were immediately forwarded to Beaumont Lodge, which is now being placed in thorough repair. Beaumont Lodge is about three miles from Windsor Castle, and was recently sold to a London solicitor, who is said to have been employed by the Spanish Royal Family to make the purchase.

The Paris Exhibition.—The French papers stated a long time ago that the annexes to the Palace of Industry in the Champs Elysées were begun. This was incorrect; the contract with Messrs. York and Co. for the building of these annexes was signed only on Saturday. They will form a gallery with an iron roof, supported by piers of stone. The gallery will be ninety feet in width, and 2900 feet in length, or twice the length of the Crystal Palace in Hyde park. Messrs. York and Co. have engaged to complete it by the end of January, a period of only four months; for it will require a fortnight to prepare the foundations, and four months at this season of the year are not equal to three months in the summer. When we consider this, and the great difficulty there is in getting iron manufactured in France to a large extent, the undertaking of Messrs. York and Co. will appear extraordinary. The contractors tried hard to be permitted to import the iron-work from England duty free, by which at least one month would have been saved in time, and some hundreds of thousands in money; but the Government could not venture such a concession, so powerful is the influence of the French iron-masters

THE GRAND OPERA OF PARIS.

(L'Academie imperiale de musique.)

Our good neighbours, and allies the French, in common with many of the Continental nations, have now for many centuries past made the support and cultivation of the arts an affair of State. Whether for the mere purpose of amusement, or as an important accessory in the mental and moral education of the people. Music and its professors have always been held in the highest estimation. It was under the house of Valois, under the Bourbons, even during the horrors of the first Revolution, and signally while the first Napoleon was in power. Very recently, the Emperor Napoleon III. has afforded a new example of this inherited disposition of his Government by taking the French Opera under the especial control of some of the chief officers of his household, and of a commission composed of distinguished public men.

The aspect of the Salle on first entering strikes principally from its extreme gorgeousness and brilliancy. It seems one gigantic mass of gold, except when you look up to the ceiling, which is transparent, with a blue as clear and as pure as the sky of one of Claude's masterpieces. The subject of the design which decorates this roof is mythological, and it is executed in a bold and flowing style, suited to the scene. In the centre, and around the opening for the chandelier, is a circle glittering like stars, as if that vast mass of sparkling light had but descended from its sphere. Supporting the roof on each side of the proscenium, and at the bend of the theatre on each side, are massive and gigantic columns, glittering with mirrors and gold, and over the whole are suspended two colossal imperial eagles, whose golden wings glow in the light. The open spaces between the graceful lines formed by the front of the boxes are filled with all kinds of ornaments, garlands, wreaths, bas-reliefs, arabesques—all enclosing carved representations of various musical instruments. As all these are in gold, the whole front of the house, when fully lit, flames with the brilliant metal; yet the effect is not so strong as to cast into the shade the interior of the boxes, or dim the beauty or the toilets of the ladies. The impression is altogether very chaste.

We have referred to the new organisation of the Opera. The resolution to alter the system of management emanated from the Emperor. A Commission was appointed to study the subject. The result of its labours is to recognise the impossibility of carrying on the Opera on the principle of private speculation, even when associated with that of a subvention. The Commission, therefore, boldly propose that the management of the Opera shall be undertaken by the Government—that is to say, by the Maison de l'Empereur. All past debts that have been authenticated beyond dispute will be discharged, being regarded as debts of the establishment; and, by a liberal expenditure in future, it is hoped so to conduct the theatre as that, at all events, any loss may not exceed the amount of subvention that has for some years past been accorded, that is to say, about 800,000 francs per season.

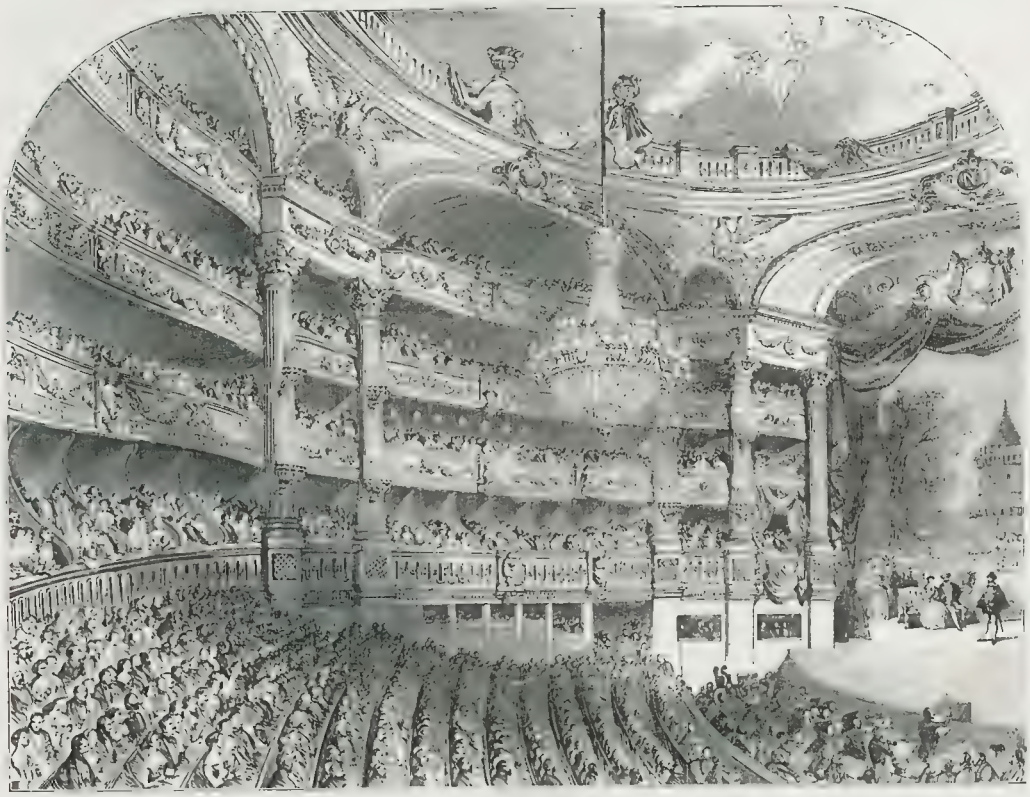
By a decree of the 29th of June last, the Emperor accepted the report of the Commission, and ordered that it should be acted upon. By the following week two other decrees were signed. The first named the Commission appointed permanently to superintend the affairs of the Opera. It is composed of the following personages:—Mons. Troplong, President of the Senate and Member of the Institute; Mons. Baroche, President of the Council of State; Count Baciocchi, First Chamberlain, Superintendant of Court Spectacles, and of the Music of the Imperial Chapel; Mons. Rouher, Vice-President of the Council of State; Count de Morny, he who figured so conspicuously in the *coup d'état*; Mons. Chaix d'Est Ange, the well-known advocate; and Mons. Gautier, Secretary General "de la Maison de l'Empereur," a sort of French Colonel Phipps. This last-named gentleman fulfils the functions of Secretary to the Commission.

The other decree, of the same date, named M. Roqueplan the Director of the Opera—a post he has filled for some years on his own account.

It is under these auspices that the Grand French Opera has just opened for the season. The experiment about to be tried is one of great interest to all lovers of art. Will this kind of double management succeed? Will the Commission agree on questions of taste? Will the interests of art *alone* prevail in the making of engagements? Will M. Roqueplan enjoy enough power to enable him to act beneficially for the undertaking? Or will the *real* management be confided to some one behind the curtain? These are questions which time alone can solve.

The Opera opened for the present season with the "Favorita," Madame Stoltz performing the part of the heroine. During the recess all the decorations had been retouched, so as to give the Salle the same brilliant air it had after the work of M. Visconti had been achieved.

The old Salle had been designed and decorated by Mons. Rohault de Fleury. The architect, to whose lot it fell to execute the re-embellishment, was Mons. Visconti, whose early death has been so much lamented. He, however, followed the lines of his predecessor. M. Rohault had been crippled in his work by the want of a sufficiently munificent allowance of money. The Emperor, however, is not the man to commit this kind of mistake, and Mons. Visconti was able to scatter gold liberally. Hence the magnificence of this *salle de spectacle*. It should be added that M. Rohault was the right hand of M. Visconti throughout the task of re-embellishment.



INTERIOR OF THE GRAND OPERA-HOUSE, AT PARIS.—(SEE PRECEDING PAGE.)

THE HOTEL BRIGHTON, BOULOGNE.

The Hôtel Brighton, recently engaged by the Emperor of the French, is, properly speaking, not at Boulogne, but at Capécure, which is a faubourg of Boulogne. It is a long yellow building, with no pretensions to any style or beauty of architecture, with "Hôtel Brighton" in monster black letters painted on the outside. The front looks towards some extensive gardens which belong to it, and which are very tastefully arranged. The building is commodious. A temporary *corps de garde* for the Imperial Grenadiers—who are dressed like the Vieille Garde of Napoleon I., minus the *queue*—and temporary stables for the Imperial stud, have been erected. The private hotels and houses in the vicinity are occupied by the Emperor's staff and household. The stables for the horses of the Cent Gardes are within five minutes' walk. The horses are very fine animals, chiefly dark browns, with black points. They cost each from eighty to one hundred guineas. The Emperor, who sits his horse uncommonly well, has a splendid stud, and is very particular in having first-rate horses. He is a competent judge of horseflesh. His carriage-horses are magnificent animals. His taste is adopted by his staff.

THE HOTEL BRIGHTON, BOULOGNE.

NEW DRESSES FOR THE ARTILLERY.

NEW DRESS FOR THE ARTILLERY.

In the Illustrated London News, for Aug. 5, we engraved the new uniforms of the Light Cavalry and Light Infantry. We now present our readers with a group of the new costumes of the Artillery, the Hussars, and the Rifles. Henceforward the dress of the Royal Horse Artillery will be unencumbered by a profusion of lace—very expensive, and at the same time useless. The jacket will not be changed as regards shape; but, instead of the lace, as heretofore, entirely covering the front, it will in future be in stripes, the cloth appearing between. It has no ornaments, except on the sleeve; and these denote the rank of the officer—viz., a knot of gold cord for Lieutenants; the same, edged with gold braid, for Captains; and gold lace, edged with braid for Field Officers. For full-dress, a rich gold lace shoulder-belt, with an embroidered pouch; having the arms worked in gold upon it, a wreath of gold laurel on the sides; and a motto underneath, edged with gold lace. The ordinary head-dress will be continued, as shown in the Illustration. In future, the Foot Artillery will wear a tunic, with little lace; a helmet of black felt, with the Royal Arms and a gun in front, figured brass ornaments; and a white horsehair Dragoon plume for full-dress, will be substituted for the Albert cap, as shown in the Engraving.

The Hussars will not hereafter wear the pelisse, or, as it is usually called, the slinging jacket; for which will be substituted an Austrian tunic, slightly embroidered with gold lace; the head-dress remains unchanged.

For the Rifles, will be substituted, for their present costume, a tunic resembling that of the Light Cavalry, embroidered with black braid.

The Rifle Brigade will have cuffs and facings of black velvet; whilst, for the 60th Rifles, the colour of the cuffs and facings will be scarlet.

The new dresses, which have been designed by the firm of Hamburger, Rogers, and Co., have been submitted to her Majesty by Mr. Rogers, and highly approved of.

The changes in the uniforms of the Guards, Heavy Cavalry, and Staff, remain as yet undecided; but we believe they will be such as we have before stated.

The Queen, on Friday week, decided on the new dress of Staff Officers. Henceforward, the Staff Officers, Adjutants-General, Quartermasters-General, &c., will wear a tunic of scarlet cloth, with lace of four Austrian knots on each side, with two behind. The tunic will be lined with white silk.

In reference to the discussions on the new dress for the Army, it is proper to state that there will be a great saving for the officers. According to the old plan, the Hussar jacket cost fifty guineas; it will now be but fifteen. The Foot Artillery, formerly costing eighteen guineas, will now be but six; and the Horse Artillery, now costing twenty-five guineas, will be but fifteen. The uniform of the Light Cavalry, formerly costing nineteen guineas, will, under the present arrangement, now cost but thirteen. The new Infantry coat, formerly costing fifteen pounds, will now be about eight; and the Heavy Dragoon dress, now costing twenty-five pounds, is reduced to the cost of about six pounds. The Aides-de-Camp will also be under this reduced arrangement.

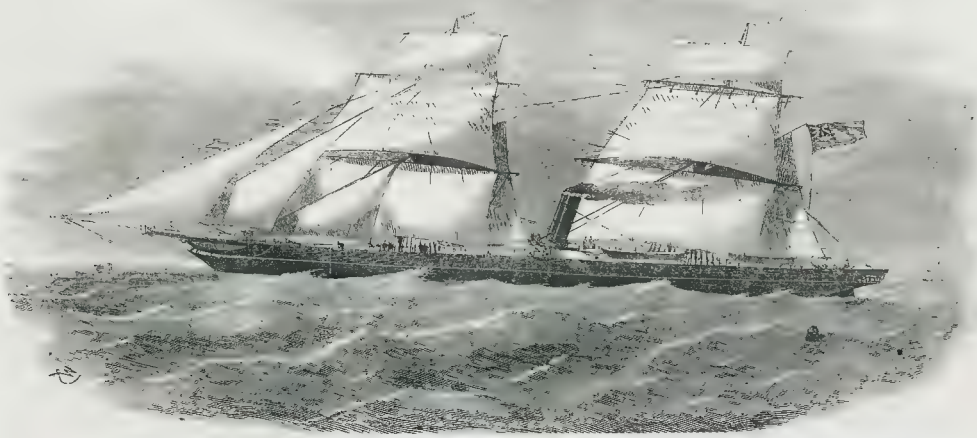
M. GONZALES BRAVO.—(SEE NEXT PAGE.)

THE SCREW-STEAMER "BARWON."

This vessel, constructed under the direction of Mr. Bourne, for the steam coasting trade of Australia, is one of the most perfect specimens of marine architecture yet produced, as she combines all known improvements with several which are peculiar to herself. She is built of iron, of about 500 tons (builders' measurement), and about 100 horses' nominal power; but her available capacity is nearly doubled by the addition of a large house on deck, which is not counted in the tonnage; and the engine works up to 400 horse power—a larger excess of actual over the nominal power than has heretofore been obtained. The speed of the vessel, under steam alone, is 14 miles an hour; and she has accommodation for about 130 passengers, and 400 tons of goods. The hull of the vessel is so built as to combine the maximum of lightness with the maximum of strength. The keel and stem are formed of one continuous piece of iron, without scarfs or joints; and the bottom of the vessel is made double; a water-tight platform of iron being carried on top of the floors from stem to stern, and being so planned as to be easily accessible for painting and repairs. This platform supports the bilges, gives longitudinal strength, and constitutes a second bottom, which would prevent the influx of water should the outer bottom get knocked in by the vessel striking upon rocks. The deck is made unusually strong by the introduction of iron plates riveted to the beams before the ordinary wooden deck is laid down. The purpose of this arrangement is to bring the deck into equilibrium with the bottom of the ship, since the deck and bottom constitute the upper and lower edges of a great hollow beam, which a ship in reality is; and, to ensure the maximum strength with the least materials, it is at the top and bottom edges that the strength must be chiefly collected. In the *Barwon* there are no breaks in the deck, such as are caused by the introduction of a quarter-deck; but the strength of the deck is carefully preserved in every part, and the deck and bottom are effectually tied together by numerous strong stanchions. One consequence of these arrangements is, that the vessel, though very strong, draws only eight feet of water with a considerable cargo on board—and, for entering the shallow harbours of Australia, this is an indispensable quality.

The engine of the *Barwon* is of a very simple construction, and occupies less space than any engine of the same power which has fallen under our observation. The engine and boiler embody various improvements, of which the main purpose is to economise the consumption of fuel. The screw is of a totally new description: it works with greater efficiency than ordinary screws, and there is very little of the usual vibratory motion at the stern.

The cabins are fitted up so as to combine comfort with elegance. They have the benefit of a most effectual system of ventilation, whereby the disagreeable closeness incident to steam-vessels is completely prevented; and all possible precaution is taken to obviate danger from fire. The beauty and costliness of the decorations surpass that of every vessel we have seen, with the single exception of the Pasha of Egypt's yacht built in the Clyde a few years ago: but here we have more taste displayed with less cost. There is an upper and also a lower saloon, with stained-glass windows, all round. The roof and sides are



THE NEW SCREW STEAMER "BARWON."

painted with arabesque work, with fruit and flowers introduced. The doors and other fittings are of rosewood and gold. The walls of the lower saloon are of red cloth adorned with mirrors, paintings on glass, and with gold scroll-work. Around the stairs the steps of which are covered with ornamental brass work, a large array of silver plate is displayed in receptacles tastefully formed of plate glass and looking-glass. The steward's pantry is fitted on an extensive scale; and the china, glass, &c., are of a handsome character. The floors of the steward's pantry and of the entrance to the saloon are covered with tessellated pavement, laid on an iron floor. The outside of the deck-house is elaborately ornamented with lion's-heads, and carved scroll-work. The cushions of the saloons are covered with velvet, interlaced with silk cord; and the elbows of the sofas are each formed of a lion's-head and claw in bronze, which adds to the strength as well as the beauty of the structure. In conclusion, we would recommend those of our readers who have an opportunity, to pay the vessel a visit and judge for themselves. She lies in the river immediately before Greenwich Hospital, and her owners have thrown her open to public inspection.

The vessel has been tried since her arrival in the Thames, and she beat the steamers *Rose*, *Lion*, and some others reputed to be among the fastest sea-going steamers afloat. It is pretty well ascertained, therefore, that in point of speed the *Burton* exceeds any sea-going steamer in the Thames.

M. GONZALES BRAVO.

THE name of this member of the new Spanish *corps diplomatique* is well, but not too favourably, known in Spain. He was, for a few years previous to 1840, an ardent, a rabid Liberal, verging on Republicanism. He was long the editor of a scurrilous publication, called the *Guirguay*, which employed the most degrading terms when alluding to the Queen-Mother, who was then not so generally unpopular as she has since become. Violence of language being the order of the day at that agitated period, he was elected a member of the Cortes. In the beginning of 1843 he joined the Coalition formed between a section of the Progressistas and Moderados; and, on the dissolution of the Chambers in May of that year, left Madrid for the provinces, with some of his colleagues, to organise the insurrection against the Regent Espartero, which soon after broke out. In 1844 the former lampooner of Maria Christina became her confidential adviser. As President of the Cabinet, he was used as an instrument by the most violent of the reactionists; and, on the occasion of disturbances in one or two of the provinces, placed nearly the whole of Spain under martial law. In 1846 he was appointed Minister to Lisbon. He joined the Opposition against the Bravo Murillo and Sartorius Cabinets, and did his best to overthrow them. It doubtless became necessary for the new Government to provide for him in some way, as he was a very active man; and he has been appointed to the embassy to Constantinople, which is generally regarded, to be less a mark of confidence on the part of Espartero or O'Donnell to Gonzales Bravo, than a means of getting out of the way a person in whom no party can place confidence.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. St. George Kirke to Martin, near Horncastle; the Rev. Charles T. Glyn, B.A., to Wycliffe, Yorkshire; the Rev. G. Cornwall, M.A., to Barnley, with A mediation annexed. *Vicarage:* The Rev. W. Evans to Llanfairnis, with the chapelry of Silian annexed, near Lampeter. *Incumbencies:* The Rev. P. Reynolds, B.A., to St. Stephen's Church, Birmingham; the Rev. T. Thomas to Tasley, in the county of Carmarthen.

OXFORD, SEPT 19.—MAGDALEN COLLEGE.—This day the venerable President of this College, Martin Joseph Routh, D.D., entered upon his 100th year. Dr. Routh, on the death of Dr. George Horne, in the year 1791, was elected President of Magdalen College.

THE Rev. Robert Bickerstreth, M.A., Canon Residentiary of Salisbury, and Rector of St. Giles's-in-the-Fields, London, has been appointed Treasurer of Salisbury Cathedral.

QUEEN'S COLLEGE PROFESSORSHIPS.—The following appointments have been made:—Mr. Bagley, of Cork, to the Professorship of Latin, Galway; Mr. Thomson, at present filling the chair of Natural History in Cork, to the Professorship of Geology, Belfast College; Mr. Tait, Fellow of Cambridge University, Senior Wrangler of the year 1853, to the Professorship of Mathematics, Belfast.

ADMISSION OF DISSENTERS TO OXFORD UNIVERSITY.—The new ACTON OXFORD University will take effect in the forthcoming Michaelmas term. It will not now be necessary for any person upon matriculating in the University to make any declaration or to take any oath, and a degree may be taken without a declaration or an oath.

NAVAL AND MILITARY INTELLIGENCE.

LIEUTENANT NASMYTH, the colleague of the late lamented Captain Butler, deceased, from his rank in the Indian army has been promoted to the rank of Captain and Major in the Royal Army, in consideration of his defence of Silistria. This is an honour almost unprecedented in the British military service.

GENERAL ROWAN, in command of the English troops in Canada, has received a notification from the Duke of Newcastle, Minister of War, that three regiments are to be withdrawn from Canada. This will leave only the 26th Regiment and the Canadian Rifle Corps for the defence of the province.

THE provisional battalion at Chatham can, if required, give immediately 1000 duty men to take the field; its present strength consists of 4 field officers, 20 captains, 36 subalterns, 8 staff officers, 229 sergeants, 114 corporals, 37 drummers, and 1864 privates—making a total of 2382 men; and recruits are daily joining.

THE Committee of Ordnance have had their attention drawn to a new projectile; it is a shell charged with a liquid which, when released by the concussion of the ball, becomes a sheet of liquid fire, consuming all within its influence, the smoke emitted also destroying human life.

A PRIVATE of the 7th, named O'Flaherty, has made such good use of his time since he has been at VARNA, that he understands both Greek and Turkish; and was passed as third-class interpreter by Sir George BROWN.

THE ARMY POST-OFFICE AT CONSTANTINOPLE.—In consequence of the great pressure of work in the Army Post-office, at Constantinople, it has been found necessary to appoint a second assistant to the Postmaster, and Lord Canning has selected Mr. Henry Melersh, of the circulation department of the London Post-office, for this service.

THIRTY English medical officers have proceeded to Varna during the past month to reinforce the medical staff of the British army; 52 more are ready for embarkation. One hundred medical men have also been sent from the hospital of Val de Grâce to the French army, and 20 English medical practitioners to the Turkish army.

THE LAST SABBATH IN THE CAMP OF GALATA, NEAR VARNA.—The following is the mode in which the last Sunday was spent in the Camp of the Third Division of Lord Raglan's army, previous to their embarkation to Sebastopol. In a picturesque and lonely spot on the south side of Varna Bay, with a fine commanding view of the Pontus Euxinus, on a glorious morning, when the sun shone brilliantly, the different regiments of the Division marched, on the 27th of August, with their bands, from their different encampments to the church parade-ground, selected by Major Wood, the Assistant-Adjutant-General, for the solemn worship of God. There stood the various battalions in silent reverence, still as death, rendering homage to the God of Armies; worshiping, beneath the blue canopy of heaven, the God of Nature; deeply impressed, as it were, with the works of His hands, which were scattered around in all their rich profusion. But a still more solemn and imposing scene followed on this last Sabbath. After the usual morning service, the Holy Communion was administered, by the Rev. G. Moeklar, the Chaplain to the Division, in the large hospital marquee at the head-quarters; the curtains of which had been partly raised, to give more air and freer access. To that holy feast came four General Officers, with their respective staffs; the Colonels of the regiments, and numbers of junior officers. There knelt in lowly and becoming reverence on the green turf, at the little rustic table, covered with a snow-white cloth, some of the best blood of England. Among the rest knels Lieut.-General Sir Richard England, the General of the Division; with his Brigadier-Generals, Sir John Campbell, Bart., and General Eyre; Sir George Catcart, the Adjutant-General of the whole army; Major Wood, and the Hon Major Colborne, the Adjutant and Quartermasters-General of the Division; also Colonel Bell, of the 1st Royal Regiment, and the Hon. Colonel Spencer, of the 44th Regiment; Lieut.-Colonel Adams, 28th, and Lieut.-Colonel Waddy, 90th Regiment; also the Staff-Surgeon of the Division—in fact Majors and Captains, Lieutenants and Ensigns, drummers and privates, kneeling side by side at the "table of their Lord." There were assembled, in uniforms of rich and varied hue, gallant officers with eyes fixed intent on their Prayer Books or Communion Manuals, or else deep in reverential thought, at the sacred service of the day—probably the last, prior to the gigantic undertaking in hand, that such a solemn service might ever be repeated.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 24.—15th Sunday after Trinity. Samuel Butler died, 1680
MONDAY, 25 — Person died, 1808.
TUESDAY, 26 — Marquis of Wellesley died, 1842.
WEDNESDAY, 27. Brindley died, 1772 Battle of Busaco, 1810.
THURSDAY, 28 — Battle of Marathon, B. C. 490.
FRIDAY, 29.—St. Michael Michaelmas-day.
SATURDAY, 30.—George Whitfield died, 1770.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING SEPTEMBER 30

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

TO CORRESPONDENTS.

E. J.—Earl Grosvenor's eldest son bears the courtesy title of Viscount Belgrave.

LOVELL SQUIRE.—A crest forms part of the heraldic bearings, and must be obtained in connection with the shield of arms. The cost of a grant of arms is about seventy-five guineas. Quakers are fully entitled to use armorial ensigns.

G. S., Cheltenham.—It was the present Lord Chancellor, then Mr. Baron Rolfe, before whom Rush, the murderer, was tried.

ANTIGONE.—The motto of the present Earl of Powis is "Ung je serviray."

M. X.—The registration at the College of Arms is quite sufficient.

PETA.—Apply at Doctors' Commons, St. Paul's, London. The cost depends on the length of the will.

E. E., Worksop, is thanked for the specimen of the new and mischievous weed, the *Aleucharis uinustrum*, now invading our canals and rivers with such rapidity. We shall engrave a specimen next week, to be accompanied by a full account of the economy of the plant.

A. G., Manchester.—Declined.

THE WAR WITH RUSSIA.

HISTORY OF THE FIRST CAMPAIGN.

On SATURDAY next, SEPT. 30, 1854, will be published,

A GRAND DOUBLE NUMBER

OF THE

ILLUSTRATED LONDON NEWS:

Containing a COMPLETE HISTORIC SUMMARY of the Events, by Land and Sea, of

THE FIRST CAMPAIGN

IN

THE WAR WITH RUSSIA;

Bringing the Narrative down to the present time. Illustrated with many

SPLENDID ENGRAVINGS

of Events, Scenes, and Incidents of the Campaign, including:—

OLTENITZA, from the Opposite Bank of the Danube (Whole Page).
SKETCHES IN CAMP at Constantinople (Two Engravings, from Daguerréotypes).
STREET SCENES at Constantinople (Two Engravings).
SURRENDER OF THE FORT OF BOMARSUND.
SCENES IN CIRCASSIA (Two Engravings).
VARNA ENCAMPMENT (Two Views—One Page.)

PANORAMIC VIEW

OF THE

TRANSPORT FLEET EMBARKING THE TROOPS AT VARNA.

SEBASTOPOL:

THE TOWN AND FORTRESS, FROM AN ORIGINAL DRAWING

And several other Engravings, illustrating the latest events.

(*From the Introduction to the Narrative.*)

"If the most intelligent man moving in common English or French society were suddenly asked to give a brief, a clear, and a connected account of all the transactions of the Russian war—from the beginning of it to its present stage—he would first, perhaps, be surprised that anybody should need such information. But he would immediately be still more surprised to find how difficult it was for him to furnish it; that, instead of being able to state, off hand, in their real order and due arrangement, the facts required, he would be obliged to ask time for reflection; and then, even, time to make some references. He would discover that he had, indeed, in his mind an idea of all the events; but that his impressions, though very vivid respecting the principal particulars, were, after all, a mass of anachronous entanglement and historical confusion. To preserve only what is valuable; to put even that in its right place; and to supply a compendious, lucid, and reliable narrative of a conflict which might be said to have been long impending, and yet which virtually took Europe and the world by surprise," is the object of this forthcoming extra Number of the ILLUSTRATED LONDON NEWS.

The usual Number will contain a variety of illustrations of the other Foreign News, and Domestic Events of the week.

With the above, a SUPPLEMENT of Beautiful Engravings, designed by John Gilbert, S. Read, E. Duncan, G. Dodgson, and J. Absolon.

Price of the DOUBLE NUMBER, ONE SHILLING; SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 23, 1854.

WE have mentioned in another place that Austria, like Prussia, sees in the conduct of Russia no *casus belli*, and leaves the Western Powers to bring Russia to reason by their own resources. Her conduct has excited the more surprise, inasmuch as she had explicitly stated that the rejection by Russia of the terms last proposed would be followed by the recall of the Austrian Ambassador from St. Petersburg. Looking at it, however, from an Austrian point of view, it is susceptible of a more favourable interpretation. Austria—we speak of the Government, not of the different nations it rules over—dreading revolution at home, has a strong desire, consistent with her best interests—not to say her safety—to keep at peace herself and restore peace to Europe. She is embarrassed, too, by her relations with Prussia and the smaller Powers of Germany, which look askance at the advantages she has already gained. In taking on herself the initiative of declaring war against Russia, she would not be supported by them. These are strong motives for avoiding war and retaining her Ambassador at St. Petersburg, though "every attempt has been made to insult and annoy him." It must be remembered that Austria has obtained all that she could well gain by war. In consequence of a direct treaty with Turkey, negotiated with the assent of England and France, Austria has acquired military possession of the Principalities, and completely secured her frontier on the Danube. Out of deference to her, Russia, says Count Nesselrode, "has evacuated the Principalities." If the pretext be false, it is extremely flattering; for the occupation by Austria of the Principalities, not for, but against, Russia, in the interest of Turkey, and in alliance with the Western Powers, was the strategetical reason which compelled the Russians to withdraw. Hence, it is not improperly said, the Czar is extremely angry with Austria; and is deeply mortified by having his right arm paralysed by her, and being compelled to withdraw across the Pruth, disgorging his booty. At any other moment Russia, it is said, would resent the conduct of Austria by an instant declaration of war. Looking at the matter from an Austrian point of view, this remark is a justification of Austria for not declaring war against the Czar. She has got all she wants. The Czar, not Austria, is the deeply-wounded and offended party as between the two. Even to secure the independence of Turkey, Austria, by being put into possession of the Principalities, has no longer a pretext for war. We have good reason to believe that her conduct is what the English and French Governments expected; that they think it has been extremely advantageous to their operations, by securing Turkey on the side of the Danube against Russia, and they did not expect her to declare war against Russia after the Principalities were evacuated. They expected, on the contrary, that the Czar would have declared war against Austria; and, deeply humiliated as Count Nesselrode's notes avow him to be by her conduct, and so much indebted as she lately was to him, that he has not declared war against Austria is another proof of his extreme weakness. His forbearance under the indignity put on him by a Power almost his vassal is a confession of present impotency. That the policy of Austria is high-minded, European, and calculated to win the confidence of nations, no one can suppose; but it is eminently Austrian, and in this sense it has been so far, in the great contest, eminently successful.

A MOST diabolical outrage has been attempted, and in part perpetrated, in Ireland. On Friday week a large body of Protestants went in an excursion train from Enniskillen to Derry, to celebrate a Protestant festival; and, on its way back, the engine came into contact with two heaps of stones designedly placed in its way. The engine broke adrift, the stoker was killed, but happily the great body of the excursionists were unharmed. Great mischief however, was intended. Close to the spot the rail runs over a high embankment; and the supposition is that the project was to cause the carriages to run over the embankment, and dash them all to pieces. Anything more coolly malignant cannot be conceived. Whatever the intention, one life was lost; but not the life, or lives, aimed at; and a workman, in the performance of an onerous and very useful duty, has fallen a victim to blind and bigot malevolence. The occurrence is deeply to be deplored—the dastardly villany much to be condemned; but we must not allow our just indignation at the atrocity to blind us altogether to the causes of the exasparated feelings which still exist amongst partisans in Ireland. Rather the greatness of the atrocity, and the conviction we have that human nature—though hunger make men cannibals, and revenge make savages drink the blood of their enemies—must be dreadfully perverted before such a malignant attempt to destroy life could be conceived, should stimulate us to inquire into the causes of the perversion. Only amongst the hunted Negroes of the United States, or men in a similar condition, should we expect to meet with such an enormity. Are the Irish, then, treated like slaves? Not now—nor have they been for several years—but they were; and for about seven generations similar festivities to those celebrated on Friday week were the annual jubilee of a triumphant and persecuting sect—a sect armed by the law and the power of England, to injure, to insult, and to goad the Irish; and vigorously it used the means placed in its hand. The present exultation, therefore, calls into life the acute remembrance of old sufferings. No doubt whatever is expressed on the part of the excursionists and their friends as to what class of men were the authors of the atrocity, by what motives they were actuated, and what were their intentions. They fix the attempt at once on their Catholic opponents—a conclusion quite as much the consequence of their own consciousness of triumphant wrong as of any facts bringing the deed home to any particular persons. We must say, in sorrow, but in earnestness, that we regard such an atrocity rather as the consequence of much-abused power through a long period, than of any peculiar wickedness in any faith or in any people. Man fashions man; the influence of one over another is mutual and great; and where one class or one sect is found very vindictive, or is very much complained of, we may be quite sure the complainers are not free from guilt. The worst crimes of which human nature seems susceptible are committed by irresponsible masters and degraded slaves. Such was, for a long period, the condition of the Irish. How thankful ought we to be, in England, for having long been lifted above such a mutually demoralising condition of society.

THE COURT.

The Queen and the Prince Consort, with the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice, and the Princess Louise, arrived at their Highland home on Friday evening (the 15th inst.), after a journey of unexampled rapidity from London. At Edinburgh, Perth, Aberdeen, and other places along the route, her Majesty and the Royal family were received with those demonstrations of loyal attachment which invariably attend the progress of the Sovereign.

On Saturday and on Monday his Royal Highness Prince Albert had the woods driven for deer.

On Sunday morning the Queen and the Prince attended Divine Service at the parish church of Crathie. The Rev. A. Anderson officiated.

The sojourn of the Court at Balmoral is not expected to exceed three weeks.

The Duchess of Kent and suite are expected to remain at Powlesse House, East Cowes, until the first week in the ensuing month, when the Royal Duchess returns to Frogmore-lodge, near Windsor.

Her Royal Highness the Duchess of Gloucester continues in the enjoyment of re established health at the Ranger's Lodge, Richmond-park. The Duchess takes daily drives in the peaceful vicinity, and has recently dispensed a gracious hospitality to several of the nobility resident in the neighbourhood.

The Duke and Duchess of Hamilton, and their youthful family, are sojourning at Baden-Baden, and will not return to this country until next month.

The Marquis of Breadalbane is at present enjoying the sports of the field at his shooting quarters, in Argyleshire.

Viscountess Melbourne has gone on a visit to her friends in Germany.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, SEPTEMBER 21.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading.	Thermometer: Lowest Reading.	Mean Temperature of the Day.	Departure from Mean Temperature.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches.
Sept. 15	29.927	71·6	53·3	60·3	+ 3·8	83	S.W.	0.01
" 16	29.834	72·1	52·1	64·6	+ 8·2	88	S.S.W.	0.00
" 17	29.745	74·0	53·0	67·0	+ 6·9	77	S.W.	0.00
" 18	30.070	68·6	50·6	59·3	+ 3·4	87	S.W.	0.00
" 19	29.963	71·0	48·6	61·9	+ 6·2	85	S.W.	0.02
" 20	29.870	71·0	50·0	57·9	+ 2·4	90	W.	0.09
" 21	30.071	64·4	46·0	53·6	− 1·8	78	W.	0·23

Note.—The sign + denotes above the average and the sign − below the average.

The reading of the barometer decreased from 29.93 inches at the beginning of the week to 29·74 inches by the 17th; increased to 30·07 inches by the 18th; decreased to 29·86 inches by the 19th; increased to 30.04 inches by the afternoon of the same day; decreased to 29.87 inches by the 20th; and increased to 30.07 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.921 inches.

The mean temperature of the week was 59·9°, being 4·2° above the average of 30 years.

The range of temperature during the week was 28°; being the difference between the highest reading of the thermometer on the 17th, and the lowest on the 21st.

The mean daily range of temperature during the week was 17·2°. The greatest was 21° on the 17th and 20th, and the least 13° on the 18th.

Rain fell during the week to the depth of rather more than three-tenths of an inch.

The wind has generally been from the south-west; at times it has been from the north, for short intervals; and it has frequently been in quick mot on.

The weather has been for the most part fine.

JAMES GLAISHER.
Lewisham, September 22, 1854.

HEALTH OF LONDON.—Within the week ending Saturday, September 16, the births of 766 boys and of 739 girls were registered within the metropolitan districts. The average numbers in the corresponding week of the nine preceding years were 702 and 663 respectively. The deaths within the same period were 1374 males, and 1457 females; spread over three different periods of life, as follows:—Children under fifteen years, 1127; above sixty years, 461; and 1339 men and women in the prime of life. The total number of deaths within the week was 2836—being less than in the preceding week by 577. The deaths from cholera fell, from 2090 in the preceding week, to 1549 in last week—or 501 less. The total deaths in the present eruption have been 7609. In the eruption of 1849 the deaths by cholera up to within one day of the same date, were 11,825. In both of the eruptions the mortality was highest on nearly the same day of September; its decline commenced in the corresponding week; and we may now sanguinely hope that it will descend as rapidly as it did in the autumn of 1849. But no exertions should be spared to save the thousands whose lives are still threatened; and the Board of Health, before ordered it, should never be forgotten, that men can no longer drink polluted water—breathe impure air—neglect sanitary measures, year after year, with impunity. The number of deaths from cholera last week in the West districts was 248, making a total of 1558; in the north districts 115, making a total in ten weeks of 575; in the Central district 108, making a total in ten weeks of 518; in the East district 64, giving a total in ten weeks of 373; and in the South districts of 826, giving a total of 4146 in the ten weeks ending September 16. In the week ending July 1, there was only one death from cholera; in the second, five; and week by week the numbers were 16, 133, 393, 614, 729, 847, 1287, 2090; and last week 1549; thus, then, its ravages have reached a culminating point; and it is a subject of thankful congratulation that it has done so. The first check given to it immediately followed the change in the weather on the 12th and 13th instant.

CHRIST'S HOSPITAL.—On Thursday, being St. Matthew's-day, Alderman Sir William Musgrove, Alderman Farebrother, Sir George Carroll, Moon, and Kennedy; the Sheriffs, Alderman Wire and J. S. Wallis, Esq.; Mr Under-Sheriff Smith (the Lord Mayor was not present), accompanied by the leading Governors of the Hospital, attended Divine Service at Christ Church, Newgate-stree.. The annual sermon, previous to the exhibitions, was preached by the Rev. G. A. Jacob, D.D., Head Master of the Hospital. At the conclusion of the service, the Aldermen, Sheriffs, and Governors repaired to the Great Hall in Chri-'s Hospital; where four orations on the benefits of the Hospital were delivered by Mr. C. J. Barker; in English, by F. A. Bousfield; in Greek, by J. W. Funell; and in French, by C. W. P. Watts. After the orations had been delivered, Messrs. Foster and Tebbutt recited some translations from Shakspeare and Longfellow, Mr. J. W. Funell reading an English Poem on Constantinople. The Prize Poem on the Don Cossacks concluded the exhibition. A large number of parents and friends of the Hospital and scholars were present on the occasion. After the orations and recitations, the senior boys went round with bags, when a most liberal contribution was collected towards the expenses of the two senior Grecian scholars, who are about to proceed one to Oxford and the other to Cambridge. At the conclusion, the organ of the great hall sent forth a grand peal with "God Save the Queen," the whole of the boys sing the National Anthem in their most splendid manner.

NEW ENTRANCE TO KENSINGTON GARDENS.—A new entrance to these gardens is in course of formation, consisting of a carriage entrance, with a pathway on either side for pedestrians. It is immediately opposite the new church now erecting in the Bayswater-road, and will form an entrance to the broad gravel-walk leading directly across the Gardens to Kensington-gore; the opposite end of the walk being occupied by the handsome gates purchased by the Government at the Great Exhibition.

CAPTAIN COOK'S CLOCK—UNITED SERVICE INSTITUTION.—To the many attractions with which this institution abounds, one that will be highly appreciated by the lovers of nautical chronometers has been added, it is understood, by the valuable chronometer by Larcum Kendall, London, 1771, which was twice carried out by Captain Cook on his voyages to the Pacific, and was taken out again by Lieut Bligh with Captain Vancouver. When Bounty's crew mutinied, it was carried by the mutineers to Pitcairn's Island. In 1808 it was sold by Adams to an American, Mr. Mayo Fletcher, who sold it in 1811 to Captain Folger, of the United States, by J. T. Herbert, from M. Coldclough, at Valparaiso, in 1813, and has now, owing to Sir Thomas's generosity found its appropriate resting-place among the valuable relics deposited in the institution.

EXTRAORDINARY SCENE IN THE CENTRAL CRIMINAL COURT.—During the progress of the business in the Central Criminal Criminal Court on Monday, great excitement was caused by an incident of a most extraordinary character. An elderly person, of most respectable appearance, who had been sitting on the seat under the Judge's bench, deliberately put up, and walked to the counsel's table, and, placing himself close to Mr. Giffard, who was the first gentleman on the seat, he said in an earnest and solemn tone, "Do you remember Cardiff?" and at the same instant placed the muzzle of a pistol close to his cheek, and pulled the trigger. The weapon exploded with a slight report; and, from what was afterwards discovered, it appeared that the bullet which it could had had dropped from the barrel. The effect of the discharge was merely to occasion a slight injury to the cheek of the learned gentleman who had been made the subject of so deadly an attack. For an instant the Court was almost paralysed, but the prisoner was at once seized. Mr. Serjeant Wallis at once directed that he should be searched, to see if he had any other deadly weapons about his person; and the prisoner with great coolness exclaimed "Yes, I have another pistol," and added, "it is loaded," at the same time taking a pistol from his breast-pocket, and handing it to the officers; and upon its being examined it was found to be loaded with ball. The escape of Mr. Giffard was most miraculous; for, if the second weapon had been used instead of the other, some serious injury, if not loss of life, must necessarily have been the consequence. When he had recovered himself sufficiently, he looked at his assailant, and was astonished to find that he was an utter stranger. The prisoner, who exhibited the utmost composure, but whose appearance gave strong manifestations of insanity, was then removed to the Sheriff's parlour; and Mr. Alderman Finnis and Sir John Musgrove at once proceeded there to take the necessary depositions. The prisoner gave his name Hugh Pollard Willoughby; and said that he was the brother of Sir Henry Willoughby; and that he was a clergyman, and resident at Oxford. Upon his being searched, a gold watch and chain, five pounds in gold, twelve shillings in silver, and four keys, were found upon him. He expressed a desire to have the assistance of a gentleman of the bar, and mentioned Mr. Clarkson. The prisoner was permitted to retire in the charge of an officer, and an opportunity was afforded him to have a private conference with that learned gentleman. In the course of a few minutes the prisoner was brought back, and Mr. Clarkson, addressing the learned Alderman, said, he believed that it would be found that the prisoner had truly represented himself to be a clergyman, and that he was a man of family. He was not aware what course the magistrates might think it right to adopt under such extraordinary and exciting circumstances; but he suggested that the most advisable course to be taken was to have formal proof given in connection with the charge against the prisoner, and then postpone any further inquiry to a future day. This having been done, a warrant for the commitment of the prisoner to Newgate was made out, and he was removed in custody. The rev. gentleman is Rector of East Leach, or Burthorpe, near Lechlade, Gloucestershire; to which benefice he was presented by the Lord Chancellor, in 1827. He is also Rector of Baldon Marsh, near Oxford; to which he was presented in 1830 by his brother, Sir H. P. Willoughby, Bart.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THERE is an office, just vacant by the death of its holder, which Government should give to some author of name, who would fulfil the duties with ability and honesty. It is that of "Editor, Manager, and Publisher of the *London Gazette*," vacant by the death of Mr. Francis Watts. The *London Gazette* is the father of the newspaper literature of this country. If originated, like all other really useful things, in a necessity. When the Plague broke out in London, in the year 1665, King Charles II. and his Court retired to Oxford, and then and there was established the first *London Gazette*—or, as it was then called, the *Oxford Gazette*. When the Plague was over, the Court returned to London, and the *Oxford Gazette* became the *London Gazette*, by which name it is still distinguished. It is published at least twice a week, and occasionally indulges in "Supplements," when the arrival of extraordinary news requires an intermediate publication. It has nearly reached its twenty-one thousand and six hundredth number. Mr. Watts was not, we believe, an author by profession; not that authorship is, indeed, particularly required for the editorship of the *London Gazette*; but the place he filled with tact and fidelity was once held by no less an author than Sir Richard Steele. Dick Steele was "the Gazetteer," as he was called or as he called himself, from his official position on the paper, "the *lowest* Minister of State." His duty, he tells us, was to keep the paper very innocent and very insipid; and it must be said that, with all his very sprightliness, Steele, as the Editor of the *London Gazette*, was a very different person from Steele, as Editor of the *Tatler* and the *Spectator*. Mr. Watts's salary was, we believe, £1200 a year; but his successor is only to have six hundred. Mr. Charles Knight has been named as the new Gazetteer: nor would it be easy to find a person better fitted for the office, or one whose many and varied public services better entitle him to the consideration of Government. It is more than time that profitable places under the Crown should be given from other causes than political interest or private friendship.

We duly chronicled, some time back, Dr. Waagen's return to this country on a further tour of inspection into our galleries and cabinets of art; and have now to record that he is once more on the wing for Berlin, having seen thirty-one additional collections to those described in his really useful work, "The Treasures of Art in Great Britain." Even our best connoisseurs are but slenderly acquainted with the extraordinary wealth of this country in works of ancient art; and, stranger still, there are many possessors of excellent pictures who are scarcely sensible of the value of what they possess.

Printers are complaining that little is doing. That this is usually a slack season with the successors of Caxton is not forgotten, we are told, when the complaint is put forth. Publishers, consequently, are not very active, and authors (we may assume) have been either idle or unsuccessful in their literary negotiations with publishers. All this is unpromising. Some attribute it to the war; others to cheap literature. We are ourselves rath er inclined to think that the newspaper press of the day finds such constant and immediately lucrative employment for the best authors, that men are content to forego the chance honours of regular authorship for the certain gain of newspaper pay. Southey (an author by profession) acquired independence not by his writings, that were set forth in volumes, but by his contributions to the *Quarterly Review* and other periodicals. At no period of our literary history has more talent been employed upon the newspaper press than we find there at present.

Antiquaries are finding fresh cause of complaint at the heedless and tasteless way in which Walpole's library was suffered to be dispersed by that mountebank among auctioneers, the late Mr. George Robins. Walpole had enriched so many of his books with notes of moment, derived from his own ample stores of reading, or from his equally ample means of personal observation and inquiry, that the scattterment of them, without a previous examination of them by competent inquirers, must ever be a subject of great regret.

Among the books scattered, no one knew whither, was his own copy of the Strawberry Hill edition of Gray's Monument. It has long been asked for in vain; but has at last, we are glad to think, turned up. We have seen it, and have been allowed to transcribe a note from it for our co lumn of "Talk." The note has hitherto been unpublished, and relat es to La Belle Jennings, afterwards Duchess of Tyrconnell:—"I rem ember her," writes Horace Walpole, coming, when a boy, to my mother, at Chelsea, to solicit a pension; and her eyes being dim, and she full of flattery, she commended the beauty of the prospect; but, unluckily, the room in which they sat looked only against the garden wall."

A curious and instructive folio volume has just been put forth by Parliament, on the subject of the "National Survey of Great Britain." The battle fought some few years back between the broad gauges and the narrow gauges, was not conducted with more difference of opinion than the scale on which the survey should be made. Persons of all ranks and conditions have been requested to give their written opinions upon the subject. We have peers and land-agents, members of Parliament and tithe-commissioners, astronomers and geologists, the President of the Geographical Society and the President of the Statistical Society; we have the Duke of Devonshire and Earl Rosse, Sir John Herschel and Mr. Airy, Mr. Babbage and Mr. Brunel, Mr. Vignoles and Mr. Walker, Sir Henry De La Beche and Sir Charles Pasley, and lastly, as a conclusion, Sir John Burgoyne, Mr. Blamire, and Mr. Rendel. The general opinion (as we gath er from the correspondence) is that six inches to a mile (the present scale) is too small—that cities and populous districts should be drawn on a much larger scale; and that sheep-land should be rendered with fewer particulars than at present. "If ever the Land-tax in England should be equalised or readjusted," says Mr. Vignoles, "it could only be effected by means of maps, on a scale to shew small divisions of property." Mr. Brunel is of opinion that even the five-fee t map of London is, as far as the public is concerned, "a useless map," as it does not give with accuracy what no published map can give, the details of private property. It is, moreover, he says, inaccurate. "Take for instance," he writes, "sheet 473, on which the basins of Trafalgar-square, or the base of the Nelson Monument, are nearly an inch square, one would expect to find them correctly laid down; all the dimensions of these parts are, nevertheless, totally incorrect." Mr. Brunel is also of opinion that the Ordnance map of Dublin may be taken as "a nearly a perfect specimen of a town map on rather a small scale, very nearly large enough for all practical purposes, except such as must always require special surveys." And yet he adds that this is on "a six-inch scale."

THE Belgian *Moniteur* of the 19th inst. announces the termination of the Ministerial crisis in the following terms:—"On Sunday the King presided at a Council of the Ministers, after the Council, the Ministers consented to withdraw their resignation." His Majesty left Brussels on Monday morning, at eleven o'clock. According to the *Emancipation* his Majesty is going to Prus-sia and Austria; but the *Independance* states that the King is going incognito into Switzerland and Austria, and will proceed as far as the Lake of Como.

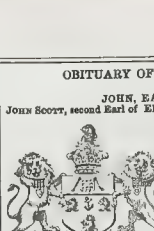
THE Queen has appointed the Hon. Charles Augustus Murray, C.B., now her Majesty's Minister-Plenipotentiary to the Swiss Confederation, to be her Majesty's Envoy-Extraordinary and Minister-Plenipotentiary to the Shah of Persia.

MISSING SHIPS.—The list of wrecks and casualties at sea registered at Lloyd's during the present year since the first of last January, discloses a frightful catalogue of ships missing, and which are now given up as lost, having, it is supposed, foundered with all hands on board. In all there appears to be no fewer than 48, which do not include the losses of the *Madagascar* (Mr. Green's ship, from Melbourne), and the ill-fated *City of Glasgow* (Liverpool and Philadelphia), screw-steamer, with which upwards of 480 unhappy creatures were lost.

OBITUARY OF EMINENT PERSONS.

JOHN, EARL OF ELDON.

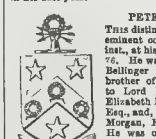
JOHN SCOTT, second Earl of Eldon, died on the 13th inst., in his 49th year, at his seat, Shirley, near Croydon, Surrey. He was only son of the late Hon. John Scott, by Henrietta Elizabeth, his wife, eldest daughter of Sir Matthew White Ridley, Bart.: she subsequently married J. W. Farrer, Esq., of Ingleborough, Yorkshire. Mr. Scott succeeded to the family honours and estates at the decease of his grandfather, the celebrated Lord Chancellor Eldon, in 1838. Like that illustrious nobleman, Lord Eldon was a strong Conservative, and was for many years



President of the Pitt Club. He sat in the House of Commons as member for Truro, at the time of the Reform Bill. The title of Eldon is taken from Eldon, in the county of Durham, where one of the family estates is situate; and Encombe is the name of the family estate and residence in Dorsetshire. The late Lord also enjoyed the Stowell estate, in Gloucestershire, under the will of his great uncle, Lord Stowell.

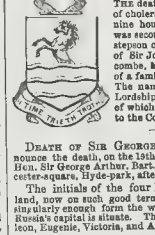
His Lordship married, 10th Oct., 1831, Louisa, daughter of Charles Duncombe, first Lord Feversham; and by her, who died 13th November, 1852, leaves one son, John, Viscount Encombe, now third Earl of Eldon, who will complete, in November next, his 9th year; and six daughters, of whom the eldest, Lady Charlotte Elizabeth Scott is now in her 21st year.

PETER BELLENGER BRODIE, ESQ.



THIS distinguished Equity lawyer, one of the most eminent conveyancers of his time, died on the 8th inst., at his residence, 49, Lincoln's-inn-field, aged 76. He was the eldest son of the late Rev. Peter Bellinger Brodie, Rector of Winterslow, Wilts, brother of Sir Benjamin Brodie, and first cousin to Lord Denman. Mr. Brodie married, first, Elizabeth Mary, daughter of Sutton Thomas Wood, Esq., and, secondly, Susan Mary, daughter of John Morgan, Esq.; and leaves issue by both wives. He was called to the Bar by the Society of the Inner Temple May 5, 1815.

WALTER TREVELYAN, ESQ., COLONEL COLDSTREAM GUARDS.



THE death of this gallant officer, from an attack of cholera, occurred at Varna on the 21st ult., after nine hours' suffering. Colonel Walter Trevelyan was second son of the late Rev. Walter Trevelyan, stepson of the first Lord Carrington, and grandson of Sir John Trevelyan, fourth Baronet of Nettlecombe, M.P. for Somersetshire, the representative of a family traceable in deeds to the 8th century. The name of Trevelyan was derived from the Lordship of Tre Villion, near Fowey, in Cornwall, of which the Trevelyans were possessed long prior to the Conquest.

DEATH OF SIR GEORGE ARTHUR.—We regret much to announce the death, on the 19th instant, of Lieutenant General the Right Hon. Sir George Arthur, Bart., K.C.B., at his residence in Gloucester-square, Hyde-park, after a long and painful illness.

The initials of the four Royal personages of France and England, now on such good terms in political policy and personal amity, singularly enough form the word NEVA, the name of the river on which Russia's capital is situate. The monarchs and their consorts are Napoleon, Eugenie, Victoria, and Albert.

THE RUSSIAN PRISONERS AT SHEERNESS.

THERE are now 1140 Russian prisoners on board the *Devonshire* and *Benbow*, at Sheerness. The Russian-Finnish and Russian cadets signed their parole last week, and went on shore on the subsistence money granted them, viz., 7s. per day. The Emperor of Russia does not grant them any pay while they are prisoners of war, nor allow them to return home on parole of honour not to serve. A return (obtainable) has been called for and made, specifying the names and rank of all the officers and cadets, and the number of soldiers, stating the several companies to which they belonged when taken from Bomarsund, for the purpose of removing them from those receiving-ships into other quarters. Lewes jail and Millbay prison, at Stonehouse, are to be their future abodes. The arrangements for their reception at the former place are nearly complete; and it is expected that they will arrive in the course of a few days. The prison-guard, consisting of a body of pensioners, with a Sergeant and Corporal, have already arrived at Lewes.

Mr. G. Hinchcliffe, a late resident in St. Petersburg, is the gentleman who has been appointed by the Admiralty as interpreter on board the *Devonshire*. The prisoners have the entire range from the knighthead to the taffrail, and do not abuse their indulgence. They are perfectly obedient to a request made, very respectful, appear to appreciate the confidence placed in them, and all strive to make themselves useful about the decks when required. Divine Service was performed on board the *Devonshire* last Sunday. A number of the prisoners have been supplied with the Old and New Testaments by Mr. Joseph D Haha, Missionary to the British and Foreign Sailors' Society. The prisoners, who are mad fully to appreciate the service, separated in a most orderly manner—men, women, and children. No cases of sickness have broken out. The change of food (from salt provisions to fresh), with the cleanliness carried out promptly by the officers, and willingly put in practice by the prisoners, have very much improved their health.

The officers are stout-built, powerful men; but the soldiers have that thin lathy appearance which is seen in the inmates of our workhouses and prisons, and which also may be observed in one or two agricultural districts, where the wages of labour constitute *minimum* in this country. There is hardly a single robust-looking man among them, and their hard, spare forms contrast strangely with those of our well-fed sailors. Nor is this the only point of contrast: truth compels us to state that there is a decided want of cleanliness among them. Making, however, every allowance, the Russian soldier, in his long grey pepper-and-salt great-coat, with faded facings, and no brass ornaments of any kind, is a very dingy-looking fellow. If there is anything about him calculated to give the alarm of a sharpshooter, undoubtedly all our sanitary reformers would be down upon him. A great number of the prisoners are young men, and have little about them of that military air and carriage which the nations of the West demand as the proper profession of arms. So far from being set up within an inch of their lives, they are quite in an opposite direction; squatting themselves on the deck with a freedom which reminded one of their Eastern origin. Their long great-coat, reaching to the ankle, appears a comfortable garment, wrapping closer round the body than in our service, and of the right colour for warfare. Their forage-cap also seems convenient, without being frightfully ugly, like that worn by our Sore Guards. The knapsack is of undressed skin apparently capable of holding very little, and held on the back by broad cross-belts of black leather. Of their dress generally it is perhaps unfair to speak as they came away in the clothes in which they fought, but they certainly appear in a dilapidated, having no under-coats. The stripes indicating grades of rank or good conduct, instead of being upon the arm, are on the lapel; the number of the regiment is marked upon the band of the forage-caps, but not in metal; and facings seem used as in other European services. A number of the prisoners belong to a Russian corps, and wear red facings; another division consisted of Finnish Chasseurs, and had blue facings. During the voyage they held entirely aloof from each other—the Finlanders disclaiming the idea of being considered Russians, and the Russians probably equally jealous of being confounded with the Finlanders. Both, however, as far as they could be judged of by their appearance, are vastly inferior in physical strength, in intelligence, in smartness of discipline, in clothing, and in appointments, to the soldiers of Western Europe. If the prisoners from Bomarsund are to be considered average specimens of the Russian troops, we need not despair as to the fortunes of the present war. Making every allowance for the circumstances attending their arrival, they have that expressed in their dull, submissive-looking faces which cannot conquer in an aggressive war.

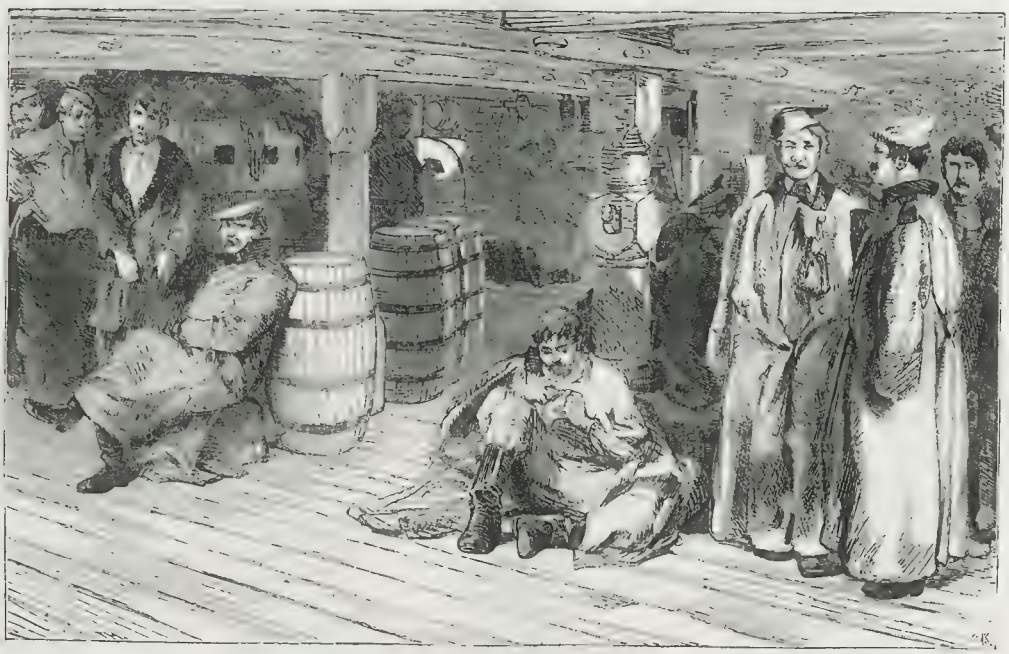
The wives of the Russian soldiers, who have been brought to England along with their husbands, are all plainly but neatly dressed, the majority having coloured handkerchiefs round their heads, and otherwise pretty much resembling the Bavarian brown girls who find their way to this country. Several of the women are of the Jewish persuasion.

RUSSIAN PRISONERS AT SHEERNESS.—(SEE PRECEDING PAGE.)

"THE DEVONSHIRE" PRISON-SHIP, AT SHEERNESS

RUSSIAN PRISONERS.

RUSSIAN PRISONERS



"THE DEVONSHIRE."—RUSSIAN PRISONERS BETWEEN DECKS.

INTERIOR OF ST. GEORGE'S HALL, LIVERPOOL, FROM THE SOUTH.—PERFORMANCE OF THE FIRST ORATORIO.

THE INAUGURATION OF ST. GEORGE'S HALL, LIVERPOOL.

(From our own Correspondent.)

THIS magnificent edifice will be a perennial monument of the energy and public spirit, in the nineteenth century, of the people of Liverpool; a place which, of all the cities and towns of the British empire, is surpassed only by the metropolis in magnitude, wealth, and importance; and which, in the quick yet solid growth of its commercial greatness, surpasses even the metropolis itself. Liverpool, though not a "city" in our English municipal acceptation of the word, is, in its true and universal sense throughout the world, a city to all intents and purposes—not only a city, but a great city; and every one who walks through its spacious streets, surveys its noble churches, its public buildings, and the palaces of its "merchant princes," sees its river with its docks and shipping, rivalling the Thames itself, observes its institutions for social and educational improvement, and discovers the progress which it has made in science, literature, and art, will be convinced that it might be the capital of a powerful state, and is, indeed, excelled by very few of the capitals of continental Europe. While most of them, moreover, are stationary or declining, Liverpool continues to advance more rapidly than it has ever done before; and if the people of Liverpool, when the nineteenth century began, could not have even dreamed of what it is now, so the people of Liverpool now are equally unable to imagine what their town will be when the nineteenth century shall close.

The building of St George's Hall was begun in the year 1838. Its first stone was laid, on the coronation-day of our Queen, by one of the "merchant princes" of Liverpool, William Rathbone, whose name will be long remembered as one of the great benefactors of the town. The architect was the late Harvey Lonsdale Elmes, a man of much genius and rising reputation. The edifice was designed by him, and he superintended its erection till 1847, when his career was brought to an untimely end by consumption, of which disease he died in Jamaica in the summer of that year. The superintendence was then committed to the able hands of Mr. Cockerell, by whom the building has been completed, I

believe, in entire accordance with the original plan. Some interesting particulars respecting Mr. Elmes, and extracts from his correspondence relative to this, his *magnum opus*, are to be found in a recent number of the *Builder*. The site of the edifice is admirable: it has the advantage, not possessed by a single public building in the metropolis, of standing (though in the centre of the town) in an extensive open space, so that its form and proportions can be viewed on every side. The architecture is Grecian—as pure as Grecian architecture can be when it is applied to purposes of modern utility. Its form is that of a parallelogram, or an long square; its axis running north and south. The south end forms a Corinthian portico, of exquisite beauty; the frieze of the pediment is filled with groups of allegorical sculpture, appropriate to the character and uses of the building, from designs by Mr. Cockerell executed under the superintendence of Sir Charles Eastlake. Beneath the frieze the following inscription is engraved, in antique Roman characters:—

Artibus, Legibus, Concilliis,
Locum Municipes Constituerunt,
Anno Domini MDCCCXLI.

Though the first stone (as has been mentioned) was laid in 1838, yet it was not till 1841 that the building was fairly commenced. The principal façade occupies the length of the building on the east side. Its great feature is a magnificent colonnade of sixteen fluted Corinthian pillars, two hundred feet in length, and reached by a grand flight of steps. This colonnade is extended, on either side, by ranges of square pilasrs, in the capitals of which the Corinthian order is preserved. The north end is rounded off, in a semicircular form, and enriched by eight Corinthian columns. The west side of the building is less ornamental than the opposite façade, but there is much grandeur in its simplicity. The building, as a whole, will some time hence be seen to still greater advantage than at present. Adjoining houses, still standing, are to be removed; and, when the plan is completed, "St. George's place" will be a piece of town property not surpassed in any city in Europe. The edifice contains not only the great hall for festivals and public assemblies, but the courts of law, and various apartments for municipal and other purposes. The great hall is 168 feet long, 100 feet wide, and 85 feet high. The ceiling is a semicircular arch, spanning from side to side, and extending over the whole length of the hall. Galleries run along the two east and west sides; and, along both the length and breadth of the hall, there is a range of noble Corinthian columns of red granite. In the decorations of the interior, the effect of colour, as well as of form, has been considered. The rich hue of the granite pillars, the gilding of the massive chandeliers, the delicate colours spread over the ceiling, the side walls, and the outside of the organ, afford the eye unceasing gratification.

On each side there are niches for statues, only two of which have as yet been tenanted—by Noble's statue of Sir Robert Peel, and Gibson's George Stephenson, both in white marble, and beautiful works of art. The organ, built by Willis, with the co operation of Dr. Wesley, is said to be the largest in England. It has 108 stops, and 8000 pipes; and the expense of its erection has exceeded £6000. It is an imposing object of sight; of its qualities as a musical instrument I do not as yet feel myself prepared to speak decidedly.

The arrangements for this Festival have been made with great rapidity, and their completeness does infinite credit to the energy of Sir Henry Bishop, by whom they were instituted. It was originally intended that the Inauguration of St. George's Hall should be a celebration similar to that which took place on the occasion of the opening of the Crystal Palace, at Sydenham. It was expected that the solemnity would be honoured by the presence of the Queen—her Majesty, when she visited Liverpool while the building was going on, having expressed great interest in its progress, and her desire and intention to be present at its opening. Down to a very recent period, it was hoped that the Queen would fulfil her intention; and it is little more than a month since an intimation was received, accompanied with expressions of regret, that circumstances rendered it impossible for her Majesty to do so. This disappointment rendered a change of plan necessary; and it was agreed to give a regular Musical Festival, on as grand a scale as could be accomplished in so limited a time. Instructions to this effect were given to Sir Henry Bishop; and his experience, promptitude, and resources have brought about a successful result.

The plan adopted was to give three great performances of Sacred Music on the mornings of Monday, Tuesday, and Wednesday last, and three Miscellaneous Concerts in the evenings of those days; the proceeds to be appropriated in aid of the local public charities of Liverpool. The ticket of admission for the Inauguration performance on Monday morning to be one guinea; for the other performances, fourteen shillings—excepting the last, which, being especially for the benefit of the people, was made accessible to the public for half-a-crown. The performance on Monday morning consisted of "The Messiah," on Tuesday morning, of "Elijah," on Wednesday morning, of the first and second parts of "The Creation," and of "The Last Judgment." The first and second evening concerts were similar in plan and selection to those usually given at the provincial festivals, consisting of favourite vocal and instrumental pieces performed at the Opera, and principal concerts of the metropolis. But the last was of a character unlike them both, either in the selection or the performers. The performers were all English, and the music was entirely vocal, consisting of English songs, duets, and concerted pieces—a measure of economy; the engagements of the instrumental orchestra and of the foreign singers not having been extended to that evening.

To raise a tuneful host, sufficient for so great an occasion, tasked Sir Henry Bishop's recruiting powers very severely. By dint of great activity, he secured a splendid constellation of foreign and English vocal sts, including Mdme. Clara Novello, Mdme. Castellan, Mdme. Viardot Garcia, Mdme. Weiss, Mrs. Lockey, Miss Dolby, Mrs. G. Hoden, Mrs. Millar, and Miss Stott; Mr. Sims Reeves, Mr. Lockey, Mr. Millar, Mr. Armstrong, Signor Gardoni, Signor Belletti, Mr. Weiss, and Herr Formès. His instrumental orchestra was composed of 45 first and second violins, 12 violas, 10 violoncellos, 10 double basses, with the usual complement of wind and percussion instruments; forming a total of 98. The choral band chiefly appertained to Lancashire being famous for chorus-singing) consisted of 85 trebles, 60 altos, 70 tenors, and 85 basses—300 in all. The entire band was thus four hundred strong—a number which, in my humble opinion, ought never to be exceeded on any occasion whatever. The orchestral performers were chiefly from the London Opera and Philharmonic bands, including Sainton, Blagrove, Lucas, the Messrs. Harper, &c.; with the addition of some local professors of superior ability, among whom we may specially mention Mr. G. Seymour, who was one of the principal violins, and Mr. Ward, who worthily filled the arduous part of principal double-bass.

Dr. Samuel Sebastian Wesley presided at the organ—the worthy son of the greatest organist that England has ever produced; and Sir Henry Bishop was ably assisted in the duties of his office by Mr. G. Holden.

The greatest disadvantage under which Sir Henry Bishop was placed, was the impossibility of having sufficient rehearsals. The Norwich Festival—at which almost all the principal performers, both vocal and instrumental, were engaged—terminated only on the previous Friday; so that those performers reached Liverpool only on Saturday, and it was on the evening of that day that the single rehearsal took place. It might have been better to have postponed the first performance for a day, so as to have allowed the Monday to be devoted to the business of rehearsing. As it was, the rehearsal of Saturday evening could be little more than a general muster of the troops just arrived. The principal attention was properly bestowed upon the "Elijah," of which the choruses and concerted pieces were gone through as well as the time would permit; while the "Messiah," the "Creation," and all the music of the Miscellaneous Concerts, were performed without any rehearsal at all. This was a great disadvantage, much greater than persons unaccustomed to musical performances are aware of. Even the "Messiah," well known as it is, demands rehearsal at a provincial music-meeting. At Exeter-hall, where it is near the full length after the band, the chorus and chorus rehearsal may become superfluous; but where a great host, gathered from various quarters, are brought into combined action for the first time, the case is very different. Everything, however, went much better than might, under such circumstances, have been expected; and the great steadiness and correctness of the performance reflected great honour both on the troops and their commander.

On the morning of the Inauguration the weather was bright and beautiful; as early as half-past nine Hall, and after that hour, had a bustling and cheerful aspect—crowds of people gathering round all the approaches, to gaze at the company as they entered. The town, I was informed, was very full; families of the nobility and gentry of Lancashire and the adjoining counties having been arriving for several days. The doors were opened at nine o'clock—two hours before the commencement of the proceedings. This had the effect of preventing any pressure or confusion; and, indeed, the company entered so slowly, that I began to apprehend the hall would not be full. By eleven o'clock, however, not only the immense area in the body of the building, but the side galleries, were filled by an assemblage of at least two thousand persons; and, considering that all of them, with the exception of the few who had free admissions, had taken guinea tickets, the receipts of the morning must have amounted to a great sum. By that time the principal performers, band, and chorus had taken their places in the orchestra. The most distinguished among them, as they severally entered, were received with applause; and special honour was paid to Sir Henry Bishop when he appeared, arrayed in his academic robes, and assumed his seat as conductor. At eleven precisely the Mayor and Corporation entered in full municipal state, accompanied by the Bishop of Chester, the Earl of Sefton, Lord-Lieutenant of the county, and a large number of distinguished individuals, forming a long procession up the body of the Hall to their places at the end opposite the orchestra. The public now heard, for the first time, the sound of music in this building. "God Save the Queen" was sung; two of the verses as solos, by Miss Reeves and Clara Novello; and the third as a trio for male voices—each being repeated, as usual, in full chorus. The arrangement was new—Bishop's of course—clear, simple, and masterly; and its effect was enhanced by the strikingly magnificent aspect of the hall; the immense assemblage standing up, and the light streaming through the windows upon the brilliant morning dresses of the ladies, which blended beautifully with the tasteful colouring of the building. When the music ceased, an appropriate and impressive prayer was offered up by the Bishop of Chester, the prayed that the Almighty would bestow his blessing on the work now completed, and render it an instrument for promoting the moral and social progress of the people. The Mayor then rose, and, in a few words, declared the Hall to be opened.

The "Messiah" then began. Any continuous or detailed account of a performance which necessarily could present very little novelty, would be superfluous. It is sufficient to describe its general character, and to make a few scattered remarks on some of its features. During the first place, it tested satisfactorily the sonoric capabilities of the building; and showed that musical sounds of every kind, whether loud or soft, whether masses of harmony or the notes of a single voice or instrument, are borne with the greatest advantage. The tones come out, freely and fully, without being attended with any echo, or other source of indistinctness. In the next place, the choristers acquitted themselves admirably, and maintained the ancient fame of this district. The "Lancashire choruses" were once indispensable at every great music meeting throughout England; and now, though Lancashire, through the more general diffusion of music, has lost much of its pristine pre-eminence, it has lost none of its pristine excellence. Performed as without a rehearsal, they sang together, taking up the points of fugue and imitation with a firmness and precision which showed how well every individual had been trained, and how thoroughly they had their Handel by heart. The instrumental accompaniments were perfect; and I cannot say that I detected, either on their part or on that of the chorus, a single positive mistake. The choral voices, however were not perfectly balanced. The trebles produced a fine and rich body of sound, and the basses were vigorous and resonant; but the *tenor parts* (the alto and tenors) were comparatively weak; and where there was an occasional wavering, it was chiefly among them that it occurred. The fault—and it was unavoidable under the circumstance—was a want of the *ensemble*—the graduation of sound requisite to produce a grand effect. The loud, when they get o choruses, as "Glory to God," and the mighty "Hallelujah," were almost faultless, and indescribably grand; but when soft and subdued tones were necessary, as in "Surely he hath borne our griefs," and the most pathetic of fugues, "He trusted in God," there was a lack of distinctness as well as of expression. The effect of the organ was not so satisfactory as I had been given to expect. This immense instrument certainly possesses great power; it "hath a giant's strength," but sometimes it "uses it like a giant." It is a great predominating more than enough over the chorus and the orchestra, and frequently uttering shrill and screaming sounds by no means pleasing to the ear. I cannot for a moment call in question the skill and judgment of the accomplished organist; and I cannot help thinking that he was unable sufficiently to control the power of the instrument. Perhaps, too, he was unfavourably situated for judging how its sounds blended with the general mass; for, instead of being placed beside the Conductor, at a key-board brought, by a "long movement," to the front of the orchestra, he was placed at the very back, close to the body of the organ. I am not to be understood, however, as expressing any general opinion as to the merits of an instrument of which I do not as yet consider myself in a condition to judge.

The sublime opening recitative, "Comfort ye, my people," was given by Sims Reeves, the only English tenor who is able to satisfy those who, in former days, were accustomed to hear it from the lips of Braham. Mr. Lockey, in many respects an excellent singer, is destitute of Braham's force and energy. Mr. Weiss, who has no superior among our English bass-singers, did ample justice to "Thus saith the Lord of Hosts," and "But who may abide the day of his coming?" And the execution of the rolling passages in triplets was round and articulate. Madame Viardot Garcia distinguished herself by the deep pathos which she threw into "He was despised and rejected;" but, somewhat to my surprise, she altered the accompaniment to the air, by the omission of leaving out the second part of the air, which, in the performances at Exeter-hall, has been properly restored to its place. Madame Cara Novello sang splendidly: her "Rejoice greatly" was especially beautiful—a jubilant burst of triumph as it ought to be executed. Madame Castellan sang "How beautiful are the feet" very sweetly; but her defective pronunciation is an obstacle to this charming singer's success in English music. Miss Dolby had little to do; only the recitative and air, "Then shall the eyes of the blind;" but I need hardly say that she did it admirably. Formès sang "The people that walked in darkness" with much power, though with some hardness of voice and manner. In short, all the solo singers acquitted themselves well, but still they were too many. The usual fashion of dividing a part for the same class of voice among two or three performers, produces an incoherent and fragmentary effect. There was no need for both Sims Reeves and Lockey, for both Clara Novello and Castellan, for both Mdme. Viardot and Miss Dolby, or for both Formès and Weiss. I have enjoyed the vocal parts of the "Messiah" more when they were sung of old by four singers, such as Braham, Mrs. Salmon, Mrs. Knyvett, and Mr. H. Phillips, than now that twice the number are employed, each getting a little bit to do merely for the purpose of making a show.

A sudden change of weather, from the pleasant sunshine of the morning to storm of wind and rain in the evening, was unfavourable to the miscellaneous concerts. The small attendance; but the illuminated hall, notwithstanding its vastness, looked bright, comfortable, and cheerful. As to the concert, it did not present the slightest feature of novelty, consisting of Italian, German, and English vocal pieces chiefly familiar to those who have been in the habit of singing in London during the season. The miscellaneous concerts at the provincial festivals are becoming less and less interesting even to provincial audiences. Formerly things familiar in London might be new in the country; but in these days of rapid and intercourse between the metropolis and the provinces, most of the persons who form a fashionable audience in Liverpool know very well what is going on in the fashionable world of London. There is no help for it, however; for it seems opportunistic to make these miscellaneous concerts of any other materials.

The performance of "Elijah" on Tuesday morning was, on the whole, very good. The solo parts were distributed nearly in the same manner as at Worcester: the principal singers being Formès (who sustained the great part of the *Prophet* with his usual power), Madame Novello, Madame Castellan, Madame Viardot Garcia, Mrs. Weiss, Signor Gardoni, Mr. Sims Reeves, and Mr. Weiss. The chorus, too, were well executed. The attendance, however, was by no means so good as had been expected, the hall not being more than half filled.

Complaints have been made of the high rates of admission; rates which have diminished the attendance, and will, I apprehend, be unfavourable to the pecuniary result of the Festival.

PANTGLAS, CARMARTHEN.—On Tuesday week this beautiful seat of the respected member for the county, D. Jones, Esq., was the scene of much festivity, in celebration of Mr. Jones's arrival to take possession of the elegant new mansion he has lately erected. On rising on a bright red flag (for the first time unfurled), on the high tower of Pantglas, could be seen floating. At the principal lodge a splendid arch of evergreens was erected, with the words "Welcome Home," in scarlet flowers. Another read "Long life and happiness." The pleasure-grounds and flower-gardens were in the finest order: and, as Mr. Jones stepped upon the new threshold for the words "Welcome Home," he was announced to the surrounding valleys and hills that their proprietor stood once more on home soil. Pantglas is built in the Italian style of architecture. Mr. Jones has sought little or no foreign aid in the substantial or decorative parts of his house, but has endeavoured, as far as lay in his power, to employ only his own countrymen in the erection and embellishment of the structure. The artisans and labourers, after a very joyous day spent in the grounds, being plentifully regaled with "cwrw da," and making the welkin ring again with many hearty and heartfelt cheers for the long life prosperity, and happiness of Mr. and Mrs. Jones, and of their young and promising family, retired fully satisfied and gratified with the events of the day. At ten o'clock a large bonfire blazed on the top of Penlan-hill, discernible for many miles round.

NATIONAL SPORTS.

From twice one hundred thousand throats rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course or more.
SIR FRANCIS DOYLE.

THE racing season in England has, virtually, three divisions. The first, ends with the Epsom week; the second, with Doncaster; and the third, with the Houghton Meeting. There are no small amount of stirring events to be heedled before there "falls on the heath, the bold November-day;" and Tuesday, Wednesday, and Thursday next, constitute the "First October." Dirk Hatteraick, if the dreadfully sore shins with which he left Doncaster, after his defeat, have come round again, may meet Rambling Katie in the Buckenham Stakes, on Tuesday; but, except he or Bonnie Morn face Rifleman on the Thursday, there is no great feature of interest in the entire list. The Cesarewitch and Cambridgeshire Stakes for the autumnal meeting have fifty-four and eighty-seven acceptors respectively; but, with 8st. 5lb in the one, and 8st. 3lb. in the other, the elegant little Knight of St. George seems quite shut out. Stockwell is in work to meet the somewhat stale Kingston for the Challenge Whip over the B. C. To the other meetings of the week are pretty numerous, and comprise Pain's-lane, on Monday; Chesterfield and Whitehaven, on Tuesday and Wednesday; Walsall, on Wednesday; and Northallerton, Perth, and Monmouth, on Thursday and Friday. The Londoners seem to have a monopoly of the sailing and rowing matches. On Monday, the Prince of Wales Model Yacht Club, launch their tiny craft on the Serpentine, at eleven; and on the same day there is the Wentzell annual regatta, at Lambeth; the Nelson Club second pair-oared match, at Mortlake; a match between Childs and Allen (£25 a side), to row from the Half-way House to Blackwall; and another between T. Searle and J. Newbold, to row a pair oar against R. Ware and Pindar, from Hammersmith to Batterses. Wednesday is the Excel Rowing Club's regatta, and G. Green and T. Coombes row from Putney Pier to the Ship, at Mortlake, for £10 a side. "The willow" is not yet idle, though "closing days" have become rife. The Barnes Club part, on Wednesday, with a match of eleven against twenty-two; and on Monday, "Town v. Country" is to be played at Rugby, and to be followed by the Anniversary Venison Dinner. Wilts opens the coursing season, next Thursday and Friday, at Everley (Amesbury); and, seeing that a Wiltshire farmer gave 180 guineas for Ascot Heath Stakes, Doncaster last week, the opulent spirit is not likely to flag. The above sale was the most wonderful one on record. The magnificent black Bedlamite (who has a great match on hand) created quite a buzz of delight as he was brought out. A 450-guinea bargain was made for him, but 500 guineas was the reserve price. His engagement, of course, greatly enhances his value: but we have some recollection of 300 guineas having been given a few years ago for a dog that had none.

The beer-garden riot at Doncaster on the Cup day, has naturally been the subject of intense discussion among sporting men. Lord Derby had specially arranged to have the Doncaster Stakes run for ten minutes sooner; in order that he might leave the town by an early afternoon train, and therefore he quitted the Noblemen's Stand the instant the horses were past the post, and was a mile away from the scene of action. Had West Australian not broken down, and his Lordship stayed to see the Cup race, public feeling was at such a pitch, that it is difficult to say where it would have ended. The scratch up of Acrobat for the Derby, the failure of Dervish, the victorious trial of Bolardo, and the extraordinary mystery which has hung over Lord Derby's movements in this place January had exasperated the Ring to such an extent, that, when they saw Acrobat confirm his York running with Ivan, and, after being beaten easily by that horse in the St. Leger, turn the tables on to him with so much ease, they could bear it no longer. The turn for some time past has been the conviction that Acrobat was Lord Derby's best horse, that not far short of a quarter of a million must have been lost about him this year up and down the country. With the stable he has never been a favourite; and the impression is, that, believing Bolardo good enough to win the St. Leger, they did not thoroughly prepare Acrobat for that race. This belief is somewhat confirmed by the fact that they did not consider Acrobat quite fit to win on the Friday, even after the St. Leger gallop; and, therefore, they brought him out on the second evening, and gave him a two mile gallop. A horse's health is proverbially uncertain; and the stable say, that not only did Dervish master him easily in all their Malton gallops up to the Derby, but that Bolardo beat him so cleverly in his trial, that, if he had not broken down, he was expected to win the St. Leger easily.

The folly of putting up a clever six-stone lad, instead of a jockey, to ride a great lazy horse like Ivan, no doubt just lost Lord Zetland the St. Leger. But still losers do not grudge Mr. Morris his victory, as he has been unlucky all the season, and is one of the most straightforward men that ever trod the Turf. To know that he owns a horse is to know that its backers will have every chance given them; and this season he suspected his favourite jockey for a month on the spot, because he suspected that he had been tampered with.

We did not hear much general news at Doncaster. West Australian broke down on the Monday, in spite of his ran gallop; but the ground was so hard there, that we should most certainly have broken down in his Cup race. He has only been beaten once (in his maiden race, by Speed the Plough); and, besides some walk-overs, he has won seven contested races—making a Cup, and about £13,500 in all (the Flying Dutchman's winnings were about £6000 more). There is little more general news. Lord Derby seems to think that, bad as Dervish is, he is 16 lbs. better than Lord Glasgow's Physalis colt, who ran behind him in the St. Leger; and he has, therefore, matched Dervish against it over the T.M.B. in the Houghton Meeting, for 300, h. f. Sir Gilbert Heathcote's old trainer, Sherwood, is anxious to become a private trainer; and it is also rumoured that William King will shortly cease to train for Baron Rothschild, in consequence of some differences about King Tom.

BEDFORD RACES.—TUESDAY.

Preparation Stakes.—Black Swan, 1. Gossip, 2.
Two-3 ear-old Selling Stakes.—Vulcan, 1. Silistria c., 2.
Bedfordshire Stakes.—Jessamine, 1. St. Clare, 2.
Two-year-old Stakes.—Gossip, 1. Rambling Katie, 2.
Town Stakes.—Chorus, 1. Mayday, 2.

MANCHESTER RACES.—THURSDAY.

Welter Handicap.—Hazlenut, 1. Rudstone, 2.
Chesterfield Handicap.—Cock o' the North, 1.
Wilton Handicap.—Miss Allen, 1.

FRIDAY.

Grand Stand Plate.—Patience, 1. Syren, 2.
Northern Metropolitan.—Guiscewar, 1. Spinner, 2.
Stewards' Stakes.—Bashy, 1. Field Marshal, 2.
Selling Plate.—Mirabeau, 1. Brideskirt, 2.
Selling Stakes.—Nelly Armstrong, 1. Donald, 2.

LEICESTER RACES.—THURSDAY.

Queen's Guineas.—Sharavogue, 1. Newbold, 2.
Scurry Handicap.—Butterfly, 1. Poacher, 2.

TATTERSALL'S.—THURSDAY.—Nothing do ng.

EGYPTIAN HALL.—MONT BLANC.—On Saturday night last Mr. Albert Smith closed his season, and delivered, amidst much applause, a characteristic farewell address, in which he stated that the entertainment had been represented 838 times, and attended by nearly 300,000 persons. "I start," said Mr. Smith, "immediately for Chamouni, to see what fresh subjects of amusement or interest may be collected on the route, which will be entirely changed. Instead of the Paris and Strasburg line, I shall convey you to Switzerland by Amsterdam, Holland, and the Rhine; hence by Berne to Geneva; and we shall stop, on our return, at Lyons and Paris." (Mr. Smith here read several communications, supposed to be from Mrs. Seymour, Mr. Prinsle, and other performers at the Entertainment.) "And now, ladies and gentlemen, until the end of November, wishing you all the health and good spirits that I hope to enjoy myself, I bid you, most respectfully and gratefully, good night. It may safely be predicted that, when Mr. Smith makes his 839th appearance in Piccadilly, he will be received by troops of friends, anxious to testify their sense of his unflagging exertions to add variety and interest with each successive season.

LYSDULAS, in Anglesey, the seat of Lady Dinorben, was on the 14th instant, the scene of a most interesting ceremony. The parish church of Llanwonllwyfn, being situate in a most inconvenient part of the parish, and in a dilapidated state, it has been resolved to erect a new one; and, through the liberality of the late Lord Dinorben, his widow, and the Bishop of the diocese (who is Rector of the parish), the parishioners have been enabled to begin their good work. The first stone was laid by the Hon. Gwen Gertrude Hughes, the only child of Lord and Lady Dinorben; in the presence of a large concourse of friends, and the clergy of the neighbourhood; a silver trowel having been presented to Miss Hughes by the parishioners, chiefly small farmers. After the ceremony, the whole party proceeded to the old family mansion, where a handsome collation was provided, and many hearts beat sincerely for the completion of the good work.

FINE ARTS.

TENTH REPORT OF THE COMMISSIONERS ON THE FINE ARTS.
